The price quoted on urotropin tablets (7½ grains each, 20 tablets in a box), in the Era Blue Book is correct, and it is the price asked by jobbers to-day. An examination of one of the boxes you send shows that the revenue stamps thereon were cancelled by Schering & Glatz, of this city, July 14, 1898. At that time urotropin was supposed to be taxable under the revenue act, and accordingly each package was so stamped. Later, and following the decision of Justice Brown of the U. S. District Court for the Southern District of New York, urotropin was declared by the Commissioner of Internal Revenue to be a "definite chemical compound," and as such was exempt from the operations of the stamp act. Packages containing urotropin are therefore no longer stamped (see list of these compounds in this journal Jan. 4, 1900, page 13). We have no way of finding out how much the druggist paid for the tablets you received. He may have paid 50 or 60 cents, but for a long time they have been quoted at 35 cents each, and you could have obtained them from any jobber or the American agents at this price. Under the circumstances we think it would have been more satisfactory in making a settlement with the druggist to have returned two packages of the tablets you could have purchased from the jobber. The price you charged the customer would not seem to be exorbitant.

Aromatic Toilet Vinegar.

Glacial acetic acid.....	350 grams
Camphor	28 grams
Dissolve and add	
Oil of bergamot.....	60 drops
Oil of cloves.....	60 drops
Oil of lemon.....	40 drops
Oil of lavender.....	40 drops
Oil of cinnamon.....	20 drops
Oil of rosemary.....	20 drops
Rectified spirit.....	q. s.

Dissolve the oils in the alcohol and mix with the solution of camphor in acetic acid. The solution may be colored with saffron if desired.—(Ap. Zelt.).

FOREIGN.

China.

The correspondence between Russia and the United States touching the relation of affairs in China shows that Li Hung Chang will be recognized as Envoy Plenipotentiary, and, pending diplomatic negotiations, that the troops of Russia and the United States, and possibly some of the other powers, will be withdrawn from China.

The Russians have made further advances in Manchuria; the Imperial Summer Palace at Peking is also taken by the Russians, Japanese and American troops being stationed at the city's gates.

It is reported that a large body of Boxers are concentrating at a point on the Pei-Ho river, about sixteen miles from Tien-Tsin, on the way to Peking.

Japanese troops in large numbers, it is stated, have occupied Amoy, as an answer to the Russian occupation of Manchuria.

Official dispatches from Shanghai announce the arrival there of the new German Minister to China, Dr. Mumm von Schwartzstein.

A massacre of foreigners took place in Shen-Se Province, directly due to the Governor of the province.

The position of Russia in regard to China has been officially announced; it renews its denial of any intention to secure territorial acquisition in China, expresses opposition to the dismemberment of the Empire and says that Russian troops will be withdrawn from Peking to Tien Tsin, and also from Manchurian territory as soon as order is restored therein.

South Africa.

It is reported that fighting with Botha's commandoes was resumed on August 27th; the Boer lines were broken and they are falling back; the British casualties were considerable.

The British troops occupied Machadodorp, President Kruger's latest capital in the Transvaal, the Boers under Botha retreating northward to the Lydenberg Mountains.

The British prisoners at Nooit Gedacht have been released by the Boers and are marching to join Lord Roberts; President Kruger is reported to be at Nelspruit, on the Delagoa Bay Railway.

General Baden-Powell got in the rear of a Boer force north of Pretoria commanded by General Grobelaar and demanded its surrender.

Other Foreign News.

Roumania's note to the Bulgarian Government on the Karadjoff case submitted a list of alleged blackmailers, and redemanded that they and the murderers of Karadjoff be immediately prosecuted. Not receiving satisfactory answer, Roumania has withdrawn her diplomatic representative.

The Viceroy of India, Lord Curzon, has telegraphed that good rains continues to fall, but that cholera still prevails in many districts of that country.

The second death from plague has occurred at Glasgow, and forty families are now isolated.

Advices from Yokohama state that Marquis Ito will in all probability ascend to power, with a strong party organization behind him.

After a brief trial at Milan, Gaetano Bresci, the murderer of King Humbert, of Italy, was found guilty and sentenced to life imprisonment, the extreme penalty for the offense under Italian law.

The Berlin papers have announced the completion of the German-American cable.

General Uribe, chief of the insurgent forces in Colombia, is reported to have surrendered to the Government.

The Erlangen scientific expedition to Abyssinia, which recently arrived at Addis Abeba, has been cordially received by Emperor Menelik II.

President Loubet has been accorded the Russian Order of St. Andrew.

DOMESTIC.

Politics.

The Populist National Committee substituted A. E. Stevenson for C. A. Towne as candidate for Vice-President.

The primary elections were held in New York last week by both parties.

Other Domestic News.

The population of Baltimore is given as 508,957, and of Denver 133,859.

The Grand Army reunion at Chicago is the occasion of a parade of the naval veterans and a dedication of the naval arch in the Court of Honor.

The Census office has reported the population of Boston to be 560,892, and of San Francisco as 342,782.

The United States battleship Alabama last week made an average speed of seventeen knots in her official speed trial.

The population of Wilmington, Delaware, by official report is 76,508, and Paterson, New Jersey, is 105,171.

Many of the destitute miners at Nome returned to the United States on an army transport, at the expense of this Government.

The Census Bureau announced the population of these cities: Detroit, 285,704; Wilkesbarre, 51,721; Allentown, 35,416, and Evansville, 59,007.

The Census Bureau bulletins have also announced the population of these cities: Manchester, N. H., 56,987; Pawtucket, R. I., 39,231; Covington, Ky., 42,938; Quincy, Ill., 36,252.

The Nicaraguan Congress has approved the commercial reciprocity treaty between Nicaragua and the United States.

Representatives of nine political parties in Cuba met in Havana and drafted a dispatch to President McKinley regarding constitutional questions and the relations between the United States and Cuba.

General Gomez has been nominated by the National party in Cuba as a delegate to the Constitutional Convention.

The steamship Deutschland arrived from Cherbourg on September 1, having made a new record of 5 days, 12 hours and 29 minutes, and a day's run of 584 knots.

DRUGGIST'S FLAT ROBBED AND JANITOR MURDERED.

During the early hours of Monday morning, Aug. 27, Mrs. Frank A. Gundlach, wife of Druggist F. A. Gundlach, whose store is at 940 Columbus avenue, thought she heard burglars in the kitchen of the flat in which they reside at 160 West 106th street. An investigation was made and it was found that a lot of the Gundlach silverware had been abstracted. Mr. Gundlach secured the services of a policeman and they searched for the thief, but could not find him. Tuesday morning after the burglary Acting Captain Kemp, of the West 100th street station, sent Detective John M. Walsh around to the house to look up the robbery. Walsh arrived, and after questioning Mrs. Gundlach, sought for the janitor of the building, Horton A. Bryant; together they discussed the merits of the case, and Walsh decided that a hunt through the flats would be advisable, inasmuch as there were several vacant apartments, and a thief might have concealed himself in one of these. This availed nothing, and then Bryant said the burglar might have stepped from the fire escape of the building, and as Bryant was also janitor for that flat, they might make a search there. This was done. Walsh went ahead of Bryant, who on opening the door of one of the vacant apartments, was suddenly confronted by Andrew Cogger, his assistant, who held a revolver and immediately shot Bryant, the wounds resulting in his death a few days later. Here comes the peculiar part of the story. Mrs. Gundlach says that she heard the shots fired, and that shortly afterward Walsh appeared at a small window in a bath room and asked that he be allowed to come in as he was pursued by a man with a revolver. He came in and immediately telephoned to Captain Kemp what had occurred. Kemp said he had his doubts about the statements made by Mrs. Gundlach, as Walsh had an excellent record. Mr. Gundlach lost about \$150 worth of silverware, which was later found by Kemp in the flat from which Cogger had escaped.

THE DRUG NEWS.

N. A. R. D. NOTES.

Chicago, Aug. 23, 1900.

The Entertainment Committee, having charge of the welfare of the delegates to the N. A. R. D. Convention to be held in Detroit Sept. 12-14, has elected Charles F. Mann, 845 Third avenue, local secretary. The Russell House will be official headquarters, the business meetings being held in the Convention Hall of the hotel. Rooms for committee meetings will also be furnished. The following will be the principal features of the programme of entertainment: On Wednesday evening, Sept. 12, the Detroit and Wayne County Retail Druggists' Association, assisted by local jobbers and manufacturers, will entertain the delegates at a smoker, where will be given an opportunity to become acquainted. On Thursday afternoon and evening the delegates will be the guests of Parke, Davis & Co. Immediately after lunch the gentlemen will be conveyed by boat from the foot of Woodward avenue to the laboratories of the firm, where several hours will be spent in inspecting the plant. Following this will be an excursion up the Detroit river, through Lake St. Clair, passing Grosse Point, with its beautiful summer homes, the ship canal, and the numerous private club houses and summer cottages of St. Clair Flats, the "Venice of America." Returning, the boat will arrive in Detroit between 9 and 10 P. M. The ladies will be cared for by a committee of ladies, who have planned a few pleasant outings, among which will probably be a tally-ho ride about the city and to Belle Isle Park.

Detroit's splendid system of parks and boulevards, and its wide streets and beautiful homes have made it a favorite city for conventions. Many picturesque spots and points of interest are easily reached. Ferryboats ply constantly between the city and Windsor and Walkerville, Ontario. Belle Isle Park, the crowning glory of its park and boulevard system, is deservedly one of the city's attractions. A programme of the business and social sessions will shortly be issued. The Committee on Entertainment is receiving many orders for accommodations, and is expecting a large attendance.

The several Passenger Associations have granted the concession of one and a third fares for the round trip to all who hold certificates from the agent from whom tickets are purchased at the starting point. All ticket offices will be notified of such action and authorized to issue certificates in connection with tickets purchased not earlier than Saturday, Sept. 8th. Return tickets will be good until Wednesday, Sept. 19th, inclusive. Full fare will be paid for the trip to Detroit, but only one-third fare will be charged for the return ticket upon presentation of certificate properly endorsed. Further information may be obtained of John W. Lowe, Chairman of Transportation Committee, New Haven, Conn.

Mr. Thomas Voegell, Chairman of the Executive Committee, of the Minneapolis Retail Druggists' Association, has this to say about the conditions in his city: "I look back upon the work of our association during the past year with much gratification. We are now a united and harmonious organization, and have settled the cut-rate question in a way eminently satisfactory to all concerned. The department stores are well pleased, and our daily papers are no longer filled with cut-rate advertisements. Druggists have all taken down their cut-rate signs, and the dove of peace hovers over all. Business is good and we are all happy. I thoroughly believe that our plan of dealing with the cut-rate question is the only one that will prove satisfactory, because by it we enlist the hearty co-operation of all the manufacturers, jobbers and retailers, which fact you will readily see must strengthen the movement in the right direction."

One of the largest New England proprietary manufacturers writes as follows to a brother manufacturer:

"As regards — of —, he has been a good customer of ours for a long time, but when it developed that he could not qualify under existing conditions, we at once notified him that we could not fill further orders. Of course this seems like heroic treatment, but we are determined to give the new plan our most cordial support until it is definitely shown whether or not it is the long-hoped-for solution of the cut-price difficulty."

Tennessee will be well represented at the Detroit Convention. The attendance from the South, generally, promises to be large.

The Seattle, Washington, Association is doing very effective work.

The advertising by cutters of proprietaries to the consumer at less than jobbing price is attracting the attention of proprietary manufacturers. It is becoming generally understood that this practice is the tap-root of the "substitution" evil.

A prominent member of the Knoxville, Tenn., Association writes:

"Our scale of prices has been maintained to the letter, and if there has been one single violation it has failed to come to my notice. . . . The partial restoration of prices has not only increased our business, but it has had a very soothing effect on the trade; in other words, the customer is better satisfied to pay one price everywhere than he is to pay various prices at various stores."

The Montana Pharmaceutical Association, at its recent meeting, passed resolutions reaffirming the organization's loyalty to the N. A. R. D., and directing its treasurer to pay the dues of its membership. The members were urged by resolution to advance the interests of the National Association, and arrangements were made whereby all the populous counties of the State are to be canvassed with this end in view.

The National Secretary is receiving letters from druggists who write that they are threatened with department store competition, and ask what they had better do. There can be but one answer, organize. Don't wait, do it now. Cast your lot with the N. A. R. D. and let us work together. By such an arrangement you have everything to gain and nothing to lose except, possibly, the notion that your ideas of the drug business are the only ones worthy of consideration. The inability of individual druggists to relinquish this impression is costing the trade thousands of dollars every year. Get your neighbors together and talk organization; there is money in it.

The secretary will gladly send, free of expense, to any address, copies of Bulletin No. 9, the revised Constitution and By-laws, or other literature issued by the association.

The St. Cloud, Minn., Association has joined the N. A. R. D. This organization includes all the druggists of St. Cloud, Melrose, Richmond, and Park Rapids.

The North Dakota Pharmaceutical Association held its annual meeting in Fargo Aug. 8th and 9th. The N. A. R. D. was reindorsed, appropriate resolutions in reference thereto having been adopted. In one respect this association surpasses all the other State bodies; the total number of its registered pharmacists is only 300, yet the membership of the State organization is 100. The meeting this year was very successful.

A member of the Executive Committee, D. E. Prall, writes that the recent meeting of the Michigan Pharmaceutical Association was better attended than for several years, and that interest seemed to centre in N. A. R. D. work more than in any other section. Mr. Webber made a report on behalf of the delegates to the Cincinnati meeting, and introduced a resolution endorsing the N. A. R. D., which was promptly voted. Mr. Prall made an appeal for financial support, and suggested that Michigan should

raise \$1,000, which should include the amount of the association's dues. It was voted to make an effort to raise the \$1,000 and give it to the N. A. R. D., conditionally that if this amount is turned over to the National Association an organizer is to be sent into Michigan. It was not stated how much of the money should be spent upon organization. Charles F. Mann was elected President, and James W. Seeley Secretary of the association. Messrs. Webber, Phillips and Brown were elected delegates to the

Detroit Convention. Those who were present subscribed \$177 toward the \$1,000 to be secured."

The most recent accession to the ranks of the N. A. R. D. is the Orleans Pharmaceutical Association, composed of the druggists of the city of New Orleans, La. Price cutting is reported as a serious evil in this city. Confidence in the efficiency of the National Association is generally felt.

New York and Vicinity.

DRUG CLERK HELD FOR CHILD'S DEATH.

Samuel Devine, a drug clerk employed by Lazarus Dillon, druggist, at 216 Clinton street, was arrested last week charged with being responsible for the death of Anna Kreiger, ten months old, of 242 Madison street. Levine had previously been arrested for selling poison in an unlabelled bottle in the same case. The story of the affair is as follows: Abraham Kreiger, father of the child, went to Dillon's drug store Sunday morning, Aug. 26, and asked for a small quantity of camphorated oil. Levine was on duty and waited on Kreiger. Kreiger took the liquid given him, and his wife Annie poured it on the child Annie, who was troubled with a rash. Immediately the child began to cry, but Mrs. Kreiger, presuming it was because it did not like the rubbing, poured on more of the liquid, and when she saw the child's skin begin to shrivel and blister, she hurried for Dr. M. Rosenthal, of 200 Madison street. After looking at the child, he examined the contents of the bottle, and said it was a strong solution of carbolic acid. He asked Kreiger where he purchased the stuff, and when told hastened to the Madison street police station, where he lodged a complaint against Levine for dispensing poison in an unlabelled bottle. The child meanwhile suffered great agony from the burns, and the mother was treated for injuries to her hands. The infant died early Wednesday morning, Aug. 29, and Levine was arrested. He was held on the charge of homicide pending an investigation by the Coroner. Dillon would say nothing of the case except that Levine furnished what Kreiger asked for, but he would not say why a label had not been attached to the bottle.

DRUGGIST ACCUSED OF ADULTERATION.

J. Bakst, of the firm of Goetzhoff and Bakst, which has stores at 42 Pike street and 189 East Broadway, has been accused by Dr. Oren G. Hunt, of 134 East Nineteenth street, of adulterating iodoform with chalk. Mr. Bakst is indignant and threatens to carry the case into the courts unless the doctor retracts his statement, which Mr. Bakst says has not only done him a grave injustice but has injured his standing as a pharmacist, and he believes that in the name of justice the doctor should make public apology. The case all came out of the treatment of a patient of Dr. Hunt's; a Mrs. Block, of 44 Pike street, was suffering from a large sore and the doctor prescribed iodoform as a dressing. Mrs. Block secured the iodoform at Mr. Bakst's drug store. When, after several applications of the drug, the wound did not improve, Dr. Hunt is alleged to have said that the iodoform was adulterated with chalk, and he advised Mr. Block to buy no more drugs at Bakst's store. As soon as Druggist Bakst learned of the doctor's accusation he wrote him a letter offering to test the iodoform in the doctor's presence, and also asking that he apologize. Dr. Hunt has made no reply to the letter, nor has he apologized to Mr. Bakst. The iodoform in question was pure.

C. OF P. ALUMNI TO HAVE AN OUTING.

The members of the Alumni Association of the Brooklyn College of Pharmacy are anxiously looking forward to Thursday, Sept. 13, the day set for their annual outing, which is to be held at Woodlawn Park, Twenty-second avenue and Sixty-fifth street, Brooklyn. President Andrew Myhr, assisted by his able co-worker, F. P. Tutthill, have been arranging the details of the event for weeks back, and have now prepared an attractive programme

for the delectation of the many friends of the association. The all-absorbing contest of the day will be the baseball game between teams from the Alumni Association and the faculty of the Long Island College Hospital. Two games have been played by these teams, resulting in victories for each side, and of course this contest will be the deciding game. About a dozen prizes have been secured, to be offered for the best scores in bowling, both for ladies and gentlemen, as a fitting interlude before the dancing; in the evening a fine dinner will be served. The grounds may be reached by the following trolley lines: The Brooklyn Heights Railroad, via Third avenue, Court street, Hamilton avenue, and all transfers from Brooklyn Heights Railroad, also Fifth Avenue Elevated Railroad direct to the park for one fare.

NEW YORK RETAIL DRUGGISTS' ASSOCIATION.

At a recent meeting of the New York Retail Druggists Association it was unanimously decided to join the N. A. R. D., and at a meeting held Friday evening, Aug. 31, Julius Hammer was chosen delegate to represent the association at the convention in Detroit this month. At the Friday night meeting the association also elected a grievance committee and an important case of alleged substitution was at once referred to the committee, which will conduct a searching examination. "The Retail Druggists' Association," so one of its prominent members said recently, "is determined to better the conditions of the pharmacist on the East Side, and to do this the members must have the co-operation of those interested in his welfare." The association has taken up the matter of shorter hours, and committees are at work securing the names of druggists willing to close their stores at 11 o'clock at night. A report from this committee shows the work to be progressing in a satisfactory manner. The membership of the association in the N. A. R. D. gives fifty members in good standing. Another matter the druggists took in hand was the offering of prizes to catch trade. It was unanimously agreed that such schemes should not be tolerated among the members. It was also decided that no member of the association should open a store within two blocks of a fellow member.

WOMAN BANKRUPT WHO OPERATED A DRUG COMPANY.

Marie Mott Gage, known also as Mary E. Gage and the Gage Drug & Chemical Company, of 121 East Eighty-second street, filed her own petition in bankruptcy without aid of an attorney in the United States District Court here last week. It was the first case on record in the court here where a woman had acted without legal advice. Mrs. Gage's liabilities are \$3,058, with no assets. Most of the debts are for advertising. One of the clerks in the court said that Mrs. Gage's petition in its "make-up" was a model that might be followed to advantage by many who made a business of framing them.

Refused to be Hunced by Cabman.

Edgerton D. Hill, a druggist, 221 West 133d street, was complainant against Joseph Walker, a cabman, in police court one day last week. Mr. Hill stated that Walker drove him a few blocks to his home and then charged him \$1 for the ride. The druggist thought this price was exorbitant, so he asked the cabman for his rate book. Walker did not have one, and Mr. Hill had him taken to the station house. In court Magistrate Zeller fined Walker \$5.

NOTES.

—Among those who visited the trade last week were the following druggists: W. H. Flandrau, Troy, N. Y.; S. L. Hadley, of Hadley Bros., Indianapolis, Ind.; A. Wirth and A. Rosenfeld, of New Orleans, La.; W. J. Becker, representing N. C. Becker, Amsterdam, N. Y.; W. R. Jones, Danville, Va.; C. H. Case, Jefferson, O.; Samuel Davis, Boonton, N. J.; Harry McDowell, president of the McDowell, Atkins, Watson Co., of Vancouver, B. C.; Mr. Snouter, proprietor of Conkling's Pharmacy, Oyster Bay, L. I.; E. E. Fisher, Bridgeport, Conn.; Bert Messner, with A. W. Musgrave, Scranton, Pa.; J. A. Leberty, of Leberty Bros., Bridgeport, Conn.; E. S. Schoonmaker, Ansonia, Conn.; W. H. Whiteside, of Whiteside & Walton, Washington, D. C.; W. H. Walter, Philadelphia; A. L. Williams, Detroit, Mich.; G. H. Lathrop, Livingston Manor, N. Y.; P. T. Troutman, Long Branch; George D. Pushee, Boston, and Miss Anna Raviler, of Detroit.

—A number of the druggist friends of Dr. George C. Diekman, surprised him and his new wife at their home, 279 West 71st street, Friday evening. The affair had been carefully planned without the doctor's knowledge and when he arrived in his parlor and found about a dozen of his friends there to congratulate him and his wife on their recent marriage, he was taken aback. The guests brought ice cream and cake with them and following its service, Dr. Diekman dispensed his favorite brand of cigars. After a pleasant hour's chat the guests departed wishing Dr. and Mrs. Diekman much joy.

—A large number of members of the Alumni Associations of the New York and Brooklyn Colleges of Pharmacy attended the family reunion and outing of Charity Lodge, No. 727, F. and A. M., at Donnelly's Park, College Point, yesterday and passed an enjoyable afternoon and evening. One of the attractive features of the programme was the ball game between teams from the New York College of Pharmacy and Charity Lodge.

—A petition to have Annie J. Lawrie, doing business as Lawrie & Company, wholesale dyestuffs at 13 Stone street, adjudged an involuntary bankrupt was filed by Benjamin Goldberger Wednesday of last week. Goldberger claims that she owes him \$588 on a loan, and that she is insolvent. He also states that she has transferred property valued at \$1,000 to other persons. The firm of Lawrie & Company began business in 1890.

—The will of the late Donald L. Cameron, whose death at his home in Rutherford, N. J., surprised the trade from its suddenness, was admitted to probate Monday, Aug. 27. His entire estate, valued at about \$25,000, is left to his widow. The will stated that not over \$50 should be expended for funeral expenses, and further it read: "Rather leave for the living that which unnecessarily goes to the dead."

—Frank Confalneri, a drug clerk, residing at 528 East 149th street, was arrested last week on complaint of Nicholas Biondi, a saloon keeper, who accuses him of forging checks drawn on himself and brother to the amount of \$71. Confalneri formerly worked for Biondi and familiarized himself with Biondi's signature through being paid by check.

—Charles Gutkint, Ph. G. of the class of '99 of the Brooklyn College of Pharmacy, and for some time head prescription clerk for S. Nauheim, Lexington avenue and Fifty-ninth street, has resigned, and after taking a few weeks vacation expects to open a store of his own.

—David Regar, of the class of '95 of the Philadelphia College of Pharmacy, and formerly manager for Frederick Kleinschmidt, at 579 Columbus avenue, has recently accepted a position with Hudnut's Pharmacy, at 205 Broadway.

—Dr. Samuel F. Brothers, of 227 Madison street, President of the New York County Medico-Pharmaceutical League, has returned with his wife after a very pleasant sojourn at Montvale, N. J.

—H. G. Shaw, with McKesson & Robbins, has returned from a fishing excursion at Seaconnet Point, R. I. Unlike many of his fellows, Mr. Shaw has no elaborate fish stories to tell his friends.

—Harry C. Yager, with Wm. R. Warner & Company, and who took "The Era Trip" to the Paris Exposition,

arrived home Saturday after a most delightful excursion of six weeks.

—The amount of drugs, chemicals, etc., brought into this port for the week ending August 31 reached \$584,441. The largest item was a shipment of nitrate of soda valued at \$142,534.

—Policeman Walter Boston, for a number of years night cashier in Perry's Pharmacy, in the Sun building, died suddenly at his home, 23 Manhattan avenue, Monday.

—Charles S. Erb has been named a member of the committee on Membership of the American Pharmaceutical Association for New York State.

—H. H. Wonters, a druggist formerly in business at Weehawken, N. J., has recently accepted a position in Kirstein's pharmacy at Rahway, N. J.

—T. J. Galligan, formerly in the Columbia Pharmacy, Belmar, N. J., has recently accepted a position in R. Hudnut's pharmacy at 205 Broadway.

—Col. E. W. Fitch, manager for the local branch of Parke, Davis & Company, returned last week from a vacation at Digby, N. S.

—The drug store of George Walthman, at 97½ Hester street, was damaged by fire to the extent of \$150 Friday, August 31.

—F. S. Warner, druggist at Seventh avenue and Thirty-seventh street, is confined to his home with rheumatism.

—Edward H. Buehler, Chicago representative for Schleffelin & Co., was in town last week for a few days.

—The amount of drugs, chemicals, etc., sent from this port for the week ending Aug. 28 reached \$63,025.

—Yancey Bartholow, president of the Texas Drug Company of Dallas, Tex., was in the city last week.

—F. W. Fletcher has recently accepted a position in Barnaby's pharmacy, at 193 Eighth avenue.

—George Minstrell, formerly with R. Hudnut at 205 Broadway, has resigned his position.

—Leo Dreyfus, of 69 Sixth avenue, has returned from a vacation spent in the mountains.

IN AND ABOUT BOSTON.

"Here's a State of Things."

Boston, September 1.—It recently has come to light that some parts of the Federal Building in this city, where the Post Office, United States Sub Treasury, United States Circuit Court and United States Weather Bureau are all situated, are simply overrun with the festive bed-bug, which has made life wearisome for the employes in the great granite building. So rapidly did the vermin multiply that the matter assumed a most serious phase. Clerks were being bitten and poisoned by the bugs and there was fear of spreading the trouble by the insects crawling into pieces of mail, especially newspapers, etc., and thus being introduced here, there and everywhere about the city. To fight the pest, a mixture has been used, composed of benzine, pennyroyal and mint. This is found to be effective upon either sex of the festive insect. The mail clerks are each supplied with a bottle of the remedy, and use it thoroughly. The bugs appear to like the concoction, but they soon begin to feel the effects of it and die. Visitors to the great building have noticed recently suggestive odors that completely permeate every nook and corner of the east end of the structure. A sweetish, not unpleasant smell it proves to be. It appears that the foreign mail, particularly from Mediterranean ports, brings in many bugs, and once in they have quickly multiplied.

NOTES.

—Among the counsel returns of Legislative expenditures during the past session, as required under the act relating to legislative counsel, is one showing that the J. C. Ayer Company, of Lowell, paid to Francis W. Kittredge, for services in opposing legislation relative to the formulas of medicines, the sum of \$125. William E. Weld is the paid secretary of the Massachusetts Wine & Spirit Merchants' Association, and as he is paid an annual salary it was stated to be impossible to determine what amount the association pays for legislative business on liquor laws. Eben D. Jordan, for Jordan, Marsh & Company, makes return that he paid to Everett

W. Burdett, as counsel, \$1,000 for his services in opposing the proposed legislation affecting department stores, when it recently was proposed to tax each department roundly. Also to the same, \$200 for his expenses, printing and stenographer. Also to Lawrence Whitcomb, for his testimony as a real estate expert on the same matter, \$100, making a total of \$1,300.

—Goods have been mysteriously disappearing from Green's drug store at Worcester, from time to time recently, and the police have now arrested a man for the larceny of a box of cigars and a bottle of wine, from that store. The arrested man is one of a gang which has made a practice of hanging around the drug store late at night, and he long has been suspected of being responsible for the strange disappearance of many articles from stock. An officer watched the gang and noticed that while the other members occupied the clerks' attention, the prisoner appropriated a bottle of wine and then, on his way out, he took a box of cigars, and the officer caught him with both in his possession.

—Arthur E. Webber, who has been prominent as a Springfield druggist, has filed a petition in bankruptcy with indebtedness of about \$1,850 and no assets. There are no secured claims. Among the creditors are Cutler Bros. & Co., Boston, for merchandise to the amount of \$196; Sharp & Dohme, New York, judgments, \$154; H. & J. Brewer, Springfield, drugs and medicines, \$155; Morris Barnett, Springfield, cigars and tobacco, etc, \$141. The other claims against Mr. Webber are mostly those of Springfield business men and range from a dollar to \$75.

—On complaint of the United States revenue authorities, a young man was this week brought before Commissioner Fliske, upon the charge of receiving and selling cigars which had not been branded and stamped. He pleaded "not guilty" and was held in \$200 for later examination. The authorities claim that the cigars were stolen from a firm in Waltham street, and changed hands several times until they were sold to the prisoner, who, in turn attempted to dispose of them.

—Westfield has had a sudden spasm of virtuous reform and a tight close of everything on Sunday was the result. Druggists could sell no cigars, soda water, candy, etc., and little shops for selling candy and cigars, Sunday papers and like things were shut up. Druggists draped their soda fountains with cheese cloth, to show that they were not "working." The whole situation was as absurd as it was unreasonable, in these enlightened times.

—The R. H. Gordon drug store, at the corner of Dudley and Greenville streets, in the Roxbury district, has just been sold out at public auction, including a fine soda fountain complete with everything, show bottles, and quantities of roots, herbs, drugs, medicines, toilet articles, sundries and the usual array of things ordinarily found in any good pharmacy. The fixtures of the store also were sold, counters, shelving, desks, etc.

—Samuel A. Nell, one of the senior salesmen of the Eastern Drug Company, and who for a long time was connected with the house of Geo. C. Goodwin & Co., Hanover street, before that firm became a corporate part of the Eastern Drug Company, has gone to Christmas Cove, in Maine, for his annual vacation, his wife accompanying him.

—While riding at Arlington Heights, one evening this week, a Lexington man fell from his bicycle and died in a drug store nearby before aid could reach him. The body was taken later to undertaking rooms at Arlington Centre, where the medical examiner pronounced death due to heart disease. The druggist had quite a scare.

—Citizens of Fall River are anxious that there be appointed in that city authorized places where spirituous liquors may be obtained for medicinal purposes. It is urged that druggists' licenses be granted to a few reliable druggists who can be depended upon not to abuse the terms of their licenses.

—Bouvler's drug store in the flint district of Fall River, was made use of recently, when an elderly man was badly bruised in a bicycle collision. The man was riding one wheel himself. His injuries were dressed carefully by the druggist.

—This week's exports from the Port of Boston include, among other things, drugs and chemicals, \$10,620; India

rubber manufactures, \$7,672; tobacco, \$4,350; wax, \$1,338; spirits, \$2,500.

—John E. Garfield, the leading druggist in the Maplewood district of Malden, is away at this time enjoying a vacation at several of the Maine summer resorts.

—Arthur L. Green, a prominent druggist at Manchester-by-the-sea, recently has been at Portsmouth, N. H., on a vacation visit to his parents.

PHILADELPHIA.

The Secret of Success.

Philadelphia, September 1.—A man of good commercial instincts, who has made a success of the retail drug business, thus discloses his secret: "Of course it is hustle, but that don't mean simply advertising per pamphlet or in newspaper—or by a general cutting of prices—or by the giving away of 'leaders,' at less than cost. I have found out that the people, and by the 'people' I do not mean the rich classes exclusively, are constantly on the look out for novelties—new goods—new packages—new methods. I don't sit in my store and wait for business. When I find a new thing in my exploring outside, I make it as well as I can, and put it up attractively, and charge a good round profit. These novelties sell. When the department stores or the cheaper concerns catch on, and the thing becomes common, I have something else ready. As a matter of fact, I have a number of customers, to whom I send all my new goods, just as soon as I get them out. They don't even come to the store to look at the things—know by experience that my novelties are all right and up-to-date. Never had a single package returned when thus sent out. The simple way to keep business alive is to keep constantly improving it—anybody can set up a store and fill it with things that have been called for, but hundreds of other merchants are doing the same thing. The question is, 'What will sell over your counters?'"

NOTES.

—H. K. Mulford writes from the steamship "Westernland" off the Lizard, that he has had a most delightful trip up to that point with none of the party sea-sick, and that he is looking forward to a pleasant jaunt on the continent, with a careful glance at the pyramids of pharmaceuticals at the Paris show. On the way over Mr. Mulford took photos of the Vesper eight, the Quaker City crew which was destined to sweep all before it at the International races. The negatives, which were recently published in one of the dailies, show the boys grouped 'round the ship's capstan, and at the different forms of exercise with which they kept their up muscle on ship-board. The exposures were made on a rather cloudy day, but otherwise they are excellent specimens of the photographer's art.

—Superheated gases in a furnace of Harrison Brothers & Co.'s experimental plant, plus the carelessness of an empyloye, might have caused the destruction of the entire establishment, had it not been for the prompt action of the firm's private fire brigade. Yesterday, while conducting some experiments along the line of the effect of the current on highly heated gases, the temperature rose beyond the safety limit, and finally the gases exploded, blowing the door of the furnace out, and wrecking a portion of the building. Before the city firemen reached the spot, however, the flames had been extinguished.

—Lit Brothers' drug store will occupy both sides of the first floor of an extension which the firm has run through to Seventh street. It is called the "arcade" and opens into the easternmost Market street property. Mr. Heckler, the manager of the pharmacy, could not be seen when your reporter called this week, but the store is far from finished, not even all the shelving being in place. From all appearances, the store will not be in condition to do business under three weeks. It is stated positively that the concern will not compound prescriptions.

—Shoemaker & Busch will remove in a few weeks from their present quarters, 602 Arch street, to a commodiously suitable building on the north side of Arch street, just

across the way. The new store was formerly occupied by the General Electric Company and has a big frontage on Arch street, and extends clear through to Cherry street, giving them good shipping facilities in the rear. The store at 602 has long been inadequate for their growing business and the office and store are delighted at the idea of having room in which to swing their arms.

—The members of the Philadelphia Association of Retail Druggists interested in the larger association were greatly pleased with bulletin No. 9 just issued by the N. A. R. D., and the local association in turn immediately mailed copies of it to every retail druggist in Philadelphia. J. C. Perry, by the way, has been elected chairman of the Philadelphia delegation—which body of pharmacists expects to join, on the 11th September, the special train bearing the New York and New England States delegation to the Detroit convention.

—Dr. Loesch and L. C. McClure of the St. Cloud pharmacy, Seventh and Arch streets, have purchased the Capitol pharmacy, Eighth and Vine streets, and will conduct it on the same basis as the other store, namely, medical advice gratis with usual charge for prescription.

—H. N. Nolte, Eighth and Race streets, has brought his family up from Atlantic City, and will wind up their summer vacation by personally conducting them over the Great Lakes.

—R. C. Cuthbert, Fortieth and Chestnut streets, is spending his time during the tropic-term at the sea, gaining strength and vigor for a prospectively busy winter.

—W. H. Pile, the wholesale druggist of Passyunk avenue and Catharine street, has been spending the summer with his family in a cosy cottage at Spring Lake, N. J.

—James Crumple, Broad street and Allegheny avenue, and T. D. McPhee are booked to arrive any moment from Paris and their European trip.

—T. N. Neel, one of S. K. F. Co.'s most popular city salesman, has dropped order-taking for a two week's rest at Atlantic City.

—Charles P. Kirby, Thirty-third and Chestnut streets, has left business for an outing covering ten days or a fortnight.

—C. Bender, manager of the E. Preston, Jr. pharmacy, is back from his two weeks' vake in the mountains.

—D. H. Shull, Thirty-ninth and Market streets is indulging in a holiday at Atlantic City.

—F. W. Shoch, Twelfth and Wolf streets, will be back from Paris in a few days.

BALTIMORE.

The Right to One's Face.

Baltimore, August 31.—A New York law firm has been instructed by M. A. Kraus, a business man of that city, to bring suit against the Goodwill Chemical Company, of Baltimore, for the unauthorized use of his wife's portrait in the company's advertising matter. The lady in the case is a former actress, who achieved some fame on the stage under the name of Anna Belmont. When the Baltimore company began to use the portrait Mr. Kraus protested and threatened to apply to the courts in this city for an injunction restraining the company from further utilization of the picture. The lawyer representing Mr. Kraus thereupon received a long letter contending that such use of the portrait was in no sense an injury, and promising compensation, if Mrs. Kraus would give her consent. The attorney claims to have secured the desired permission, and the Goodwill Company, which manufactures a facial remedy, holds his receipt for \$25 for services rendered in this connection. Now Mr. Kraus asserts that no authorization has ever been given, either by Mrs. Kraus or himself, and that, as the picture continues to appear in some magazines, it is his intention to sue for damages. The trial of the case will be rendered particularly interesting in view of the recent decision of a Supreme Court judge in the Empire State. Miss Abigail Robertson had brought suit on similar grounds, and the court decided that she had just cause for action; that she had suffered actual damages by the indiscriminate publication of her portrait, and could recover. Mr. Kraus says he is not after money, but merely desires to protect his wife against undue and objectionable notoriety.

"Mrs. Kraus," he declares, "is not now on the stage, and her face is as much a private matter as anything else she possesses. The fact that her photograph may be bought does not carry with it the right to indiscriminate use." He states that some time ago he warned the New York papers to cease publication of any advertising matter which contained a reproduction of his wife's face, and that the warning was heeded. In looking over some magazines, however, he discovered that his wishes were being disregarded, and he determined to teach the offenders a lesson.

Receivers Appointed.

Baltimore, August 25.—Receivers were appointed yesterday for the Snowden & Cowman Manufacturing Company, dealers in dental supplies and publishers of the American Journal of Dental Science, at 9 West Fayette street. The receivers, who were named with the consent of the company, gave bond in the sum of \$60,000, indicating assets of half that amount. The bill of complaint was filed by Mrs. Mary V. Snowden, who owns 298 of the 400 shares of the company's capital stock. The corporation was formed July 9, 1894. Recently it has become financially embarrassed and has had to borrow money to pay pressing obligation. A bill of sale of its stock in trade has been executed, and there is no cash available to meet maturing debts. Insolvency is admitted and receivers were applied for so as to avoid a waste of assets. It is expected that the embarrassment will be only temporary and that the concern, which also builds elevators and hoisting machinery, will be able to resume.

NOTES.

—Among the out-of-town druggists in Baltimore last week were T. E. Zimmermann, of Emmitsburg, Md.; William G. Burgess, of Newport News, Va., and J. E. Seltz, of Glen Rock, Pa.

—J. C. Muth, of the wholesale firm of Muth Bros. & Co., East Fayette street, is back at his desk again after a brief vacation in Hartford county. He enjoyed the outing very much.

—The pharmacy hitherto conducted by Dr. James A. Bailey, at St. Paul and Twenty-first streets, has been sold to Raleigh T. Lilley and will be managed by the new owner.

—Druggist J. J. King, has sold his store at the corner of Columbia avenue and Barre street, to Leeds & Peters. Mr. Leeds formerly clerked for Roe & Smith.

—The retail drug store of J. V. Singer, Druid Hill avenue and Dolphin street, this city, has been closed.

DETROIT.

Bees as a Side Line.

Detroit, Aug. 30.—John M. Sutton, clerk in the city department of the Michigan Drug Co., accompanied by Mrs. Sutton, has been in Chicago attending the convention of the National Bee-Keepers. Mr. Sutton spends all of the time out of the office in the study and culture of bees, and, with Mrs. Sutton's enthusiastic help, has established quite an apiary at their home in the outskirts of the city.

The story of Mr. Sutton's interest in bees is an interesting one. It seems that he has a sister teaching in the public schools who became much interested in some bee hives belonging to the janitor of the building. She wanted her brother to get a hive, but he had no such desire, and Mrs. Sutton was horrified at the idea. At last the sister bought a hive and its accessories and gave all to Mr. Sutton for a birthday present. In spite of himself he had to pay some attention to his new possessions, and it was but a short time before he became very much interested. Then followed a long, weary time for Mrs. Sutton in taking care of him when the bees stung him, and in looking after the bees themselves while he was laid up. Much to her surprise she began to be interested herself. It was not long before both became immune to the sting, and they were fairly launched on an enthusiasm for the wonderful little insect which has lasted four years and

grows every day. They now have a great many hives, among which are three glass ones, through the sides of which all the marvellous operations of the little creatures can be seen and studied. Mr. Sutton has had a travelling case built into which he can put one of his glass hives and take it with him when he goes out to lecture on the bees.

A visit to the Sutton home is very delightful. There is a workshop where Mr. Sutton makes the honey boxes and where the other mechanical part of the business of the apary is done. In Mr. Sutton's "den" is one of the glass hives, close to a window, and with an exit for the bees on the window sill. Magazines and periodicals published in the interest of the bee-keepers are on the table, and all the authorities on the subject are on the book shelves. Both Mr. and Mrs. Sutton are good talkers, and warm easily to their subject when talking of their favorites. Their bees know them, and they handle them fearlessly. In time Mr. Sutton expects to quit the drug business and to devote all his time and attention to bee culture.

K. of P. Convention Draws Country Druggists.

Detroit, Sept. 1.—The K. of P. Convention at Detroit, with its low railroad rates and other attractions, brought in many of the small town druggists of the State. Many of them took advantage of Parke, Davis & Co.'s invitation to look over the big laboratories. Many wandered around calling on old friends in the business and on the wholesale houses. Said an employee of one of the latter: "We have seen men in here this week whom we have not seen for years. It brought forcibly to my mind the difference between old time business methods and present ones. Formerly we would see our country customers every few weeks, or at the longest, months. Now years go by without a glimpse of them. Our travelers visit them so often there is not the slightest necessity for them to come."

Preparing for the N. A. R. D.

Detroit, September 1.—The local secretary, C. F. Mann, is receiving many inquiries from delegates to the approaching N. A. R. D. meeting at Detroit. From the number of letters received asking him to engage rooms for them, Mr. Mann thinks there will be between two and three hundred delegates in attendance. The committee will carry out the program as planned by them, and promise all who come an enjoyable as well as a highly instructive meeting. It is hoped that all of the thirty-six states which have affiliated will be represented.

NOTES.

—The Michigan Drug Company's baseball team defeated the team of the Ideal Manufacturing Company, on Saturday, August 25, by a score of 7 to 3.

—H. E. Harrison, druggist at Vassar, Michigan, was among the druggists visiting in Detroit during the K. of P. convention week.

LOUISVILLE, KY.

THE DUNBAR SCANDAL REVIVED.

Louisville, Ky., Aug. 30.—Mrs. Nora Bradley, who, with her paramour, Charles Dunbar, the New Albany druggist, attempted to commit suicide at a Kansas City hotel, arrived in Louisville last Saturday night and is now with her sister. Dunbar has not yet been forgiven, and his reception, if he now returned to New Albany, would certainly be warm enough. Both the man and woman are well known in Louisville. Dunbar, in fact, bought all of his goods from the local wholesale firms, and his drug store, which is just across the river, was the rendezvous for the Louisville druggists when they visited the Indiana city. The story of their elopement and their subsequent attempt at self-destruction is not without interest. Dunbar is married and the father of three children. He conducted a drug store in New Albany which was frequently visited by Mrs. Bradley. There was no suspicion that their relations were other than correct until they disappeared simultaneously on the 1st of July. Mrs. Bradley is the belle of Southern Indiana. Gradually the people

accepted the theory that the two eloped, but two months passed before anything was heard of their whereabouts. Then the story of their sensational attempt at suicide in a Kansas City hotel appeared in the newspapers. After writing letters which would reveal their identity, they took a quantity of morphine which the druggist prepared. But the rash act was discovered before the drug had time to take effect, and both were resuscitated. Then other letters were discovered. They told of the illicit love of the pair. A diary was also discovered. The first few entries were loving, but soon the happenings of the day grew monotonous and the tone disappointing. Both Dunbar and Mrs. Bradley expressed themselves delighted at their recovery, and immediately promised to reform and lead a model life. Dunbar made overtures to his wife and promised to ever treat her with consideration. But the woman was not easily appeased, and at the last account Dunbar was still in Kansas City. Mrs. Bradley was more successful, as her sister and mother clung to her and she is now living with them. Her husband who is one of the most prosperous business men in New Albany, has filed suit for divorce. During the absence of her husband Mrs. Dunbar conducted the drug store.

DRUG STORE ROBBERY.

Louisville, Ky., Aug. 28.—Schoettlin's drug store, Fourth avenue and Chestnut street, was the scene of a most daring robbery on Sunday. The robbery was committed in broad daylight, and the robbers succeeded in escaping with their booty, \$160. The thieves entered the building some time during the day and concealed themselves behind the prescription case. Four clerks were on duty, but the robbers were not detected. The first intimation of the robbery was when the head clerk went to lock the safe. He fell back in consternation. The safe was open and the money drawer missing. The thief evidently was an expert at opening safes, as he worked the combination without the trace of a burglar's tool. The detectives were notified, but they have not yet succeeded in obtaining the slightest clue.

DRUGGISTS NOT TOGETHER YET.

Louisville, Ky., August 30.—The mass meeting of the retail druggists of Louisville which was held on Thursday night broke up in confusion. The meeting was called especially that the druggists might decide whether they would return to the old scale of prices, but so quickly was it adjourned that the members are vainly crying, "where are we at." More than fifty druggists were present when Chairman Oscar Dilly called the meeting to order. The druggists were happy. They are tired of the cut-rate and felt happy at the prospect of a renewal of the old prices, which meant a fair profit and prosperity. The meeting opened harmoniously with several of the most aggressive cut-rate druggists present. They represented the brawn and the stamina of the recent fight and the legitimate druggist felt greatly encouraged at their presence. One of the committeemen appointed at the last meeting arose and reported that the manufacturers had been interviewed and had promised to sell only to the jobbers designated by the retailers. Everything looked rosy and all were confident of a return to the old scale. Several speeches were made and with one accord their gist was the same. A return to the old prices is the only sensible thing to do. They were ready for a vote and the outcome was certain, when Frank Cohen arose and asked to be excused for a few minutes. The request was considered extraordinary and the druggists awaited in silence his return. When he walked down the hall with a large box under his arm, those present awaited with expectancy the next development. Mr. Cohen walked to the platform and taking a knife from his pocket cut the lid from the box and revealed the name of a prominent proprietary medicine in large letters. Then he turned to his companions and asked to be excused. The druggists could scarcely believe their own eyes. After the assurance which they had from the manufacturers they could scarcely believe that the agreement had been broken so soon. The box had been found in front of the store of one of the most aggressive cut-rate druggists of the city and had been so packed that the name of the manufacturer had been concealed. The

vote which seemed imminent was never taken, and the druggists adjourned without the formality of a vote. They are much cast down at the sudden turn which affairs have taken. It is said that the package which caused the trouble was sold direct from the manufacturer to the druggist and that it did not pass through a jobber. There are many rumors in the air. One is to the effect that the preparation will be tabooed, and that it will no longer be found on sale at the Louisville drug stores. This, however, is merely talk, as no official action has been taken. The adjournment was so hastily taken that no time was set for another meeting.

NOTES.

—Harry Bowers, the former Louisville druggist, is expected to return in a few days after a two years' absence in the Klondike. Mr. Bowers has been very successful in his search for the yellow metal, and returns to Louisville a rich man. But it was only after showing a wonderful amount of staying ability that fortune smiled upon him. The first year was fraught with many dangers and hardships. But the most keenly felt misfortune which befell him was his surrender of a title of a mine that promised to make him a millionaire. He and a partner purchased a mine, and after demonstrating that it was indeed a gold mine, they were forced to surrender their claim on account of a defective title. Mr. Bowers is still extensively interested in the gold mines of the Klondike, and his visit to Louisville is only a pleasure trip.

—The committee appointed at a recent meeting of the druggists to canvass the city and secure the opinion of the proprietors of the stores upon the question of returning to the old scale has about completed its labors, and a meeting has been called for the first of the week to take final action. The committee met with many disappointments, and it is not yet an assured fact that the old scale will be adopted. Many of the druggists were in favor of an increase in the prices of drugs, but preferred a moderate increase to the old scale. The wholesalers were visited, and it is said that the aggressive cut-rate druggist will have considerable difficulty in securing their supplies from the local wholesale dealers.

—Harry Trague, an Indianapolis druggist, was thrown from a buggy while driving on the Jacobs Park boulevard on Sunday and seriously injured. Trague came to Louisville on an excursion to spend the day, and with a companion started out to the park. The animal which they drove was vicious and became frightened at an obstruction in the road and ran away. Trague's companion, who was driving, clung to the lines, but the Indianapolis druggist jumped from the vehicle. It required several minutes to revive him, and he was taken to the City Hospital.

—D. Ewing, one of the oldest druggists of Louisville, died of cancer at his home, 2,408 West Walnut street, on Sunday. Mr. Ewing was sixty-eight years of age, and for many years conducted a drug store at Twenty-fourth and Walnut streets. He retired about ten years ago. He was a member of the Second Kentucky Cavalry, C. S. A. He is survived by an aged wife. The funeral, which took place on Monday afternoon at the Jefferson street M. E. Church, was well attended.

—Mr. and Mrs. J. T. Crecelius and daughter, Miss Helen, are at the Indiana lakes on a vacation.

—Harry Jacobs, the druggist at Tenth and Jefferson streets, has returned from Atlantic City.

—Charles Scribner, of the Scribner pharmacy, will leave shortly for Atlantic City and the East.

The Silent Salesman Cigar Case which John Phillips & Co., Detroit, make, will sell cigars. The case itself will make the first sale by displaying the cigars in attractive manner, and as these cases keep them in prime condition, all that is required is to have the cigars all right to bring the customer back. The Silent Salesman Show Case is made in many different styles. In addition to cigar cases, they make cases for displaying several other kinds of goods. They also make an illuminated case, that is, a case with electric lights set in it, which is particularly desirable in stores that have not a great deal of natural light.

CHICAGO.

LYDSTON HITS AT DRUGGISTS.

Chicago, August 30.—In a recently published pamphlet by G. Frank Lydston, M. D., of Chicago, containing the text of a lecture delivered by him at the public meeting of the St. Joseph County Medical Association, of South Bend, Ind., the doctor pays his respects to the druggists in these words:

"The subject of the medicine fakir naturally leads to the question of our relations with druggists. Much has been said on this topic, but it is difficult to see wherein the status of our relations to our alleged co-worker has been improved thereby. Personally, so long as the drug business is overcrowded, as it is at present, I fall to see any possibility of improvement. Under existing conditions the motto of the druggist must necessarily be, 'every man for himself.' The pharmacist must live, and there's no way to live and be square with the doctor. Three things that are opposed to our interests the druggist must do or go to the wall: 1. Sell patent medicines; 2. Prescribe over the counter; 3. Charge exorbitantly for the medicines we prescribe. There is nothing in all this that is illegal, but it is opposed to the best interests of the profession. At first sight it appears an evidence of imbecility to send prescriptions to be compounded by a competitor. Yet we send them to the druggist, who is our most active competitor. Not only is he one directly, but he is often the agent of some other doctor or doctors whose merits he glibly contrasts with our demerits, for the edification of the patient. We tell him, time and again, not to repeat our prescriptions, but to no purpose. In some cases we know that he is giving commissions to one set of doctors, while his clerks are getting commissions from practice sent to others, yet we stick to him. Now, there's but one solution of the problem. Every doctor who can should dispense his own medicines. The people like it, and the profession will soon learn to like it. The doctor can furnish medicines cheaply and still make a profit. The patient pays a bill for services and medicines much more cheerfully than for services alone. Such success as homeopathy has attained has been largely along these lines. It is high time the regular took the hint."

A moment later, in attempting to clinch an argument that doctors ought to be more familiar with the drugs they prescribe he states:

"Most men enter practice without the least knowledge of the physical qualities of the drugs they intend to use. Many a man has prescribed over and over again remedies he never saw, smelt or tasted."

Such a condition of affairs would seem to argue that doctors should not dispense, or should take a good course in pharmacy before trying to dispense their prescriptions in their own laboratories. Hospital practice is said to cheapen rather than enhance the value of human life to those who indulge in it. The learned doctor may not entirely have escaped the hardening process. The patient is certainly unfortunate even in the hands of the best physicians, and much more unfortunate if the physician is not competent. To be ill is trouble enough, but to be at the mercy of an inexperienced doctor, for instance, and of a dispenser who dispenses "remedies he never saw, smelt or tasted" before, is surely too much to ask the sick man to bear. "Trying it on the dog" is a good plan sometimes, but let not the patient be the dog.

BANQUET TO THE IRON BRIGADE.

Chicago, August 30.—On Monday evening, August 27, Charles H. McConnell, of the Economical Drug Company, tendered the survivors of the "Iron Brigade" a banquet at the Chicago Athletic Club. Mr. McConnell was a sergeant in the Twenty-fourth Michigan Infantry, during the Civil War. The famous Iron Brigade was composed of the 2nd, 6th and 7th Wisconsin Infantry, the 19th Indiana Infantry, the 24th Michigan Infantry and Battery B, of the 4th U. S. Artillery. The reunion of the old brigade was in every sense delightful, except that so few were left to attend it out of the many who once answered the roll call. After the banquet the following toasts were responded to: "The Private Soldier of the Great War," Gen. Albert D. Shaw, Commander-in-Chief G. A. R.; "The New Birth of Our Country," Gov. James A. Mount, of Indiana; "A Poem, Recited by the Author," James Whitcomb Riley; "Wisconsin's Record in the Civil War," Gov. Edward Scofield, of Wisconsin; "The Song of the Iron Brigade," Comrade Oscar B. Knight, of Chicago; —Hon. Washington Gardner, member of Congress, from Michigan; "What the Younger Generation Owes to the Iron Brigade," Hon.

Chas. G. Dawes, of Washington; "The Duties of Good Citizenship," Hon. James G. Flanders, of Milwaukee; "Gen. John Gibben and His Children, the Iron Brigade," Gen. Edward S. Bragg, of Wisconsin; Mr. McConnell was the toastmaster of the evening, and is president of the organization.

DR. ERNST SCHMIDT DEAD.

Chicago, August 30.—Dr. Ernst Schmidt, for more than forty years a well-known physician of Chicago and head of the consulting staffs of the Alexian Brothers' and Michael Reese hospitals, died at 4 o'clock Sunday morning, August 26, at his residence, 424 North State street.

Dr. Ernst Schmidt was born on March 2, 1830, in the Village of Ebern, Bavaria, where his father was the licensed druggist of the district, holding at the same time the office of Mayor. Young Schmidt, after having graduated from the college at Nuremberg, entered the University of Würzburg the medical faculty of which was then the most celebrated in Germany. In 1848 and 1849 the revolutionary spirit of the times pervaded the seats of learning and created much interest. Young Schmidt, being of gigantic stature and lively disposition, soon became a leader among his fellows. But the revolution failed, and, with many others, Schmidt had to seek safety beyond the borders of his fatherland. After some months, during which he continued his studies at Zurich, Switzerland, influential friends secured the leniency of the university authorities for those who had been misled into identifying themselves with the revolutionary party, and Schmidt was allowed to return and finish his studies.

In June, 1857, Dr. Schmidt arrived in Chicago. He soon established an active practice and also found time to interest himself in the "underground railway" and to agitate the abolition of slavery. In 1858 he was prevailed upon to take the stump in favor of Lincoln. In December of the same year he was a speaker at the John Brown memorial service. In 1861 Dr. Schmidt joined the Second Missouri Volunteer Infantry and was present at the taking of Camp Jackson. He remained with his regiment until, in 1862, sickness compelled him to leave the service.

Since that time Dr. Schmidt has been a resident of Chicago, well known for his kind heart and his many good deeds as well as his radical views on social and political questions. He was elected Coroner on the Republican ticket in 1869, but resigned the office. In 1879 he was nominated as candidate for Mayor by the Socialists' Labor party, and he received 12,000 votes out of a total of 50,000. His followers were drawn from the ranks of the Republican party, and this gave the majority to the Democratic candidate, Carter H. Harrison. In 1886, Dr. Schmidt, following the dictates of his views, acted as chairman of the Defense committee for August Spies and others who were found guilty in connection with the Haymarket riot.

Of late years Dr. Schmidt has not been active in his work because of poor health, and his illness confined him to the house since last November.

Dr. Schmidt leaves a widow and four sons, Fred M. Schmidt, druggist; Dr. Otto L. Schmidt, Dr. Louis Schmidt and Richard E. Schmidt, architect.

From 8 A. M. Tuesday, August 28, until 11 the body of Dr. Schmidt was viewed by hundreds of his friends for the last time. At the latter hour a brief musical service was held, the musicians being former friends of the dead physician. The Pilgrims' Chorus and other selections from "Tannhäuser" were played, after which the body was removed to the hearse and, accompanied only by the pallbearers and the sons, was taken to Graceland Cemetery and cremated. The pallbearers were: Dr. Henry Banza, Dr. L. E. Frankenthal, Dr. C. B. Wagner, Dr. J. D. Lackner, William Urban, Edward Deuss.

NOTES.

—A traveling man tells this story as actually having occurred recently in a Chicago drug store in his presence. A well dressed woman entered the store and asked the proprietor if she might use his telephone, which was one of the "free" kind. Receiving his permission she went

to the 'phone, called up her husband and asked him to go to Siegel, Cooper & Company and get a bottle of "Palme's Celery Compound." When she had left the 'phone, the druggist met her and expressed himself somewhat as follows: "Madam this has gone far enough. I have given you free telephone service, run your errands, sold you postage stamps, for a long, long time. Now to save ten cents you send to a department store over my telephone for a patent medicine that I keep in stock. Madam, you need not come here any more. I don't want to give you the use of my 'phone or be your errand boy any longer."

—Robert H. Van Schaack, of Peter Van Schaack & Sons, returned last week from a sojourn in Maine with his family. He declares deep sea fishing to be uninteresting. It consists, he says, in "big hook, small clothes line and pull."

—Frank Rogers, general representative of the Searle & Hereth Company, has been spending his vacation in Massachusetts, and will return to his duties the latter part of the week.

—E. D. Searle, of Leadville Colo., a cousin of Geo. D. Searle, of the Searle & Hereth Company, is visiting his relatives in Chicago this week.

—Mrs. William Lynch, owner of a drug store at 4601 Wallace street, was arrested last week on the charge of keeping a "blind pig."

—O. T. Eastman, of the Searle & Hereth Company, and wife will go to Lake Maxinkuckee, Ind., next week on a brief vacation.

—Arthur Dawson, of Robert Stevenson & Company, was one of the veteran marshals in the G. A. R. parade last Tuesday.

—B. R. Smith, representing the Searle & Hereth Company in Central Illinois, was in Chicago this week.

—W. O. Steinmeyer, a well known druggist of Carlinville, Ills., was in Chicago last week.

—William Weller, a prominent druggist of Sigourney, Ia., was in Chicago this week.

—Mr. Brainerd, a druggist in Oak Park, has sold his drug store to a Mr. Hughes.

—E. Liebrecht, a druggist on Fullerton avenue, has sold out to L. J. Conrad.

CLEVELAND.

Cleveland, Ohio, September 1.

—Between two and three months ago E. M. Quackenbush and M. H. Howells were arrested in this city for the alleged offense of imitating Peruna and Lydia Pinkham medicines. In Justice Griswold's court they were bound over to the criminal court and the grand jury returned two true bills against them. On a requisition, after obtaining bail, the men were taken to Pennsylvania to answer the same charge there, when they again obtained bail and straightway came back to Cleveland. Detectives were hot on their trail, and they learned that Howell was at his aunt's house at No. 74 Luther street, last Saturday. The detectives wanted to get the plates of prints to make good their evidence. Consequently Constable Hudson, armed with a search warrant, went to the Luther street house yesterday. The result is that he confiscated plates and prints innumerable. One plate represents the likeness of Lydia Pinkham.

—No better evidence of improvement in the retail drug business could be brought forward than the marriages of three druggists in one week during the past month. The bridegrooms were, Mr. Grossman, of Riegelhaupt & Grossman, Woodland avenue; Jacob Lustig, of Broadway, and Arthur J. Peck, of Wade Park and Genesee avenue. Another good evidence is found in the fact that Strong, Cobb & Company and Benton, Myers & Company, report the largest business in the history of summer trade of both houses, notwithstanding that stocking of new stores is apt to be a semi-annual occurrence where formerly it was almost a weekly incident.

—A large number of druggists and their friends attended the first annual outing of the Northern Ohio Druggists' Association at Manhattan Beach, August 28. They put in a glorious day, with various kinds of amusements. The retailers defeated the wholesalers in a hot game of ball that was greatly enjoyed, and in addition there were sack, potato and peanut races, rag baby contests, peg

throwing contests and games too numerous to mention. The evening was spent in visiting and dancing, the whole day combining to form an outing of unusual pleasure. —Far-sighted druggists who rely on a high class of patronage are taking a hand in the anti-cigarette crusade. Yesterday the following sign made its appearance in front of a West Side drug store:

"We don't sell cigarettes.

"We never did.

"But we do sell good cigars."

—The Northern Ohio Druggists Association is still booming, the membership is fast approaching 400 and half a thousand will be the enrollment by New Year's Day. Mr. Holliday was in town recently consulting with the Board of Control of the Association.

—J. J. Weiler, of Woodland avenue, has opened a very nicely furnished branch store at the corner of Willson avenue and Sibley street.

—C. J. Bechberger, who has been ill for some weeks, is rapidly recovering and expects to be in his store again in a few days.

THE NORTHWEST.

A Chemist's Edifying Discoveries.

St. Paul, August 24.—John A. Hummel, the official chemist of the State Dairy and Food Department, is setting his house to rights preparatory to his retirement from the department, September 1, when he will assume charge of the laboratory at the State Experimental Farm at St. Anthony's Park. He has embodied the result of his researches in adulterated food in an exhaustive report. Referring to the growing sentiment against food adulteration, he states that the field for spurious articles is being extended even in the States where the laws are strictly enforced, the percentage of adulteration being much higher than it ought to be. The chemical preservatives used in human foods, he adds, are generally injurious, and he especially condemns their use in milk. Of coal tar colors, he finds that some are violent poisons, and, therefore, the use of all ought to be prohibited. They are now used extensively in the manufacture of cheap and highly-colored candies, which are eaten principally by children. They are also used in sausages, catcups, butter, cheese and preserves, and most of the highly-colored fruit syrups and crushed fruits at soda fountains contain the dangerous colors, as do also bottled carbonated beverages. The wholesale adulteration of vinegar, lard, flour, spices and syrup is alluded to, and to such an extent has the dishonest practice been carried that no one short of an expert can detect the cunningly contrived deceits from the real and genuine articles they are supposed to represent. Prof. W. F. Kunze, superintendent of the Hastings public schools, was, as the Era has already chronicled, elected to succeed Mr. Hummel and accepted, but now he has concluded to remain at Hastings. Commissioner J. M. Bowler has tendered the position in the food department to Julius Hortvet, teacher of physics in the East Side high school, Minneapolis, and it is probable that the offer will be accepted.

NOTES.

—C. J. Anderson, of Cokato, Minn., one of the pioneers of the State, died recently at the Fergus Falls Hospital for the Insane. His age was sixty-six years. The deceased was postmaster at Cokato for many years and afterwards a druggist until two years ago, when he was sent to the hospital. He was a bachelor and a miser. When his guardian was appointed cash and property to the amount of \$18,000 were found in his store and rooms tucked away in many peculiar hiding places. Mr. Anderson's sister, Mrs. Sundberg, died at Cokato less than a month ago and two other sisters are living in Sweden, his native land.

—Kjarlang & Hermark, proprietors of the City drug store at Battle Lake, Minn., have been arrested for selling intoxicating liquors illegally. They gave \$200 bonds. The defendants, on examination before Justice Strain, were discharged from custody. The complaining witness, Louis Hallum, claimed he purchased some liquor at the

drug store, and placed it in his trunk to produce at the trial, but when he came to produce it he found it was only sweetened water. He claims that the lock of his trunk had been tampered with and the water substituted for the liquor.

—Through the agency of the Enforcement League, injunctions were served Tuesday on the three drug stores and three private blind pigs in Kulm, Lamoure county, N. D., restraining the proprietors from selling intoxicants. The district is inhabited by Russians and Germans, and it has been very difficult to obtain evidence against the keepers of these places.

—Successions: Mrs. C. M. Crocker, Faribault, Minn., by Crocker & Hawley; F. W. Mills, Keb., Ia., by J. A. Hull; R. W. Ady, Osage, Ia., by W. P. Kane; Ray Humiston, Worthington, Minn., by F. A. Groezinger & Co.; Fleming & Leweaux, Grafton, N. D., by H. Leweaux.

—W. J. Howard, price for Noyes Bros. & Cutler, St. Paul, is taking his vacation in the woods of Northern Wisconsin, angling for fish instead of for bargains. W. E. Dockstader, head of the order department, is in Chicago enjoying his annual recreation.

—Romans & Rohrbach, St. Paul, who have for several years occupied the southeast corner of East Fourth and Wabasha streets, will remove to the corner diagonally opposite, where a fine building is being erected.

—Harry Filbert, who has been for the last two months in charge of Schweitzer's store at Mapleton, has returned to the city, and will now look up a suitable location for himself.

—J. S. Griffin, of Winthrop, was in the city on business this week; also Dr. J. Lonsdale, of Royalton & Benham, of Latimore, N. D.

—New: W. H. McLeay, Gandy, Neb.; S. I. Belknap, Prairie City, Ore.; M. A. Black, Pomeroy, Wash.

—Nels Carl Nelson, clerk for F. M. Parker, St. Paul, spent his vacation at Owatonna and Wells, Minn.

—T. H. Kibbee, of Drayton, N. D., was in the city this week, having been to look after his gold mines.

—F. I. Schulte, who has been lately with Rudow & O'Donnell at Foley, has returned to this city.

—Koehler & Frank have started in at Cavalier, N. D., and the Veblin Drug Co., at Veblin, S. D.

—A. E. Grout has gone to Aitkin to relieve John Danewick, who takes a short vacation.

—Miss Edith Mory, Larimore, N. D., and R. E. Collett, Pleasant Grove, Utah, have sold.

—O. P. Schwartz is now engaged as pharmacist in Bradley's store at New Paynesville.

—L. C. Weber & Son, Arlington, Neb., have been burned out. Fully insured.

—E. E. Lorton, Cambridge, Idaho, has sold his branch at Salubria.

—George H. Reed, West Salem, Wis., has moved to Fotteville.

—Louis Meyer, the Milwaukee, Wis., drug man, died this week.

—J. D. Barnes has bought out Ed. Johnson at Fullerton, Neb.

—Roy Poehler is now working for A. A. Campbell in this city.

—Barber & Melville, Cromwell, Ia., have given a bill of sale.

—H. L. Gibbs has returned to the city from Breckenridge.

—Peter J. Arbes has left Cloquet and returned to St. Paul.

—Eugene Babo is working in a Minneapolis drug store now.

—The Mayville, Ore., Drug Co. has been incorporated.

—N. Johnson & Co., Miller, S. D., have sold.

—Walter J. Kemper, of the firm of Kemper & Terrill, druggists, La Junta, Col., formerly of Harrisonville, Mo., has bought out Mr. Terrill's interest in the Arcade Pharmacy, of which he is now the sole proprietor. Mr. Kemper is a young man and has been in the drug business for eight or nine years.

ST. LOUIS.

At The County Fair.

St. Louis, September 1.—Three druggists of St. Charles, Mo., attended the county fair in a body. There were H. T. Meyer, Sr., H. T. Meyer, Jr.; C. E. Meyer, Mr. Meyer in charge of the Mercantile Pharmacy; T. Hlackman, and the gentlemanly manager of the F. A. Vinke Drug Co. They examined the champion fat hog and discoursed on its chemical constituents. After that they took in the side shows and were just about to settle down to a trade conference, it is alleged, when Michael Orendes, the hustling and temperately thirsty representative of the J. S. Merrell Drug Company, spied a red lemonade stand. That ended the conference, and as the drug trade in St. Charles is fairly peaceful it has been postponed until the next county fair.

NOTES.

—The committee in charge of the silver jubilee of the Alumni Association of the St. Louis College of Pharmacy, September 21, have decided on the Liederkrantz Hall, 13th and Chouteau avenue. Supper will be served at \$1.50 per plate. Charles Lips, chairman of the committee said to-day that they have assurance of a good attendance and can promise all who attend a most enjoyable and memorable evening.

—Doctor D. V. Dean, who for ten years was superintendent of the city hospital, died on Sunday last. He was also at one time a member of the Board of Trustees and Prof. of Physiology at Beaumont Medical College.

—C. F. Simmons, the St. Louis patent medicine manufacturer, has permanently located on a ranch recently purchased about sixty miles northeast of Corpus Christi, Tex.

—A. G. Rockel, formerly with Meyer Bros. Drug Company, now represents James A. Kirk & Company, Chicago, to the large local jobbing trade.

—The Boston Drug Company, Franklin and Twelfth streets, has opened a branch, corner Chestnut and Fifteenth streets, in charge of A. P. Gest.

—E. J. Koeberlin has returned from Denver in improved health and goes to southeast Missouri to engage in mining.

—Louis Schenck, druggist of New Athens, Ill., has recovered from his serious illness and is again at the store

—The August meeting of the Louisiana State Board of Pharmacy was held in New Orleans, August 4. Twenty-five applicants presented themselves for examination, of which number three were successful. They are: J. W. Brown, Shreveport, La.; T. Lobenhopper, New Orleans, La.; M. C. Judd, New Orleans, La. Two papers were forfeited on account of communication during the examination, and one applicant was refused examination as he was not yet twenty-one years of age. Two qualified assistants were granted certificates as registered pharmacists by virtue of four years' experience in the retail drug trade. They are: C. W. Perkins, Ruston, La.; A. P. Irwin, Clinton, La. The next meeting will be held in New Orleans on November 3. F. C. Godbold, secretary.

—The Georgia Board of Pharmacy will hold its next meeting in Atlanta, November 26. Chas. D. Jordan, of Monticello and J. Glisswell Dodson, of Americus, are the new members appointed to succeed J. P. Turner, of Americus and Harry Sharp, of Atlanta. The board has just awarded to O. W. Bethen the Sprague medal given by John F. Sprague, of New York City, to the pharmacist who each year passes the examinations with the highest rating. Mr. Sprague is a member of the Georgia Pharmaceutical Association and takes great interest in Georgia pharmacy affairs. Mr. Bethen has accepted a position at Florence, S. C.

—W. H. Wilson, a pioneer druggist of Topeka, Kansas, has just been elected president of the Board of Education of that city.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,
New York.

ALABAMA.—Clayton.—C. H. Feagin & Co., sold to O. B. & J. G. Pruett.

Greensboro.—A. Stollenwerk, deceased.

ARKANSAS.—Argenta.—G. M. Street, deceased.

Conway.—J. F. Kinchloe, deceased.

CALIFORNIA.—Long Beach.—Wilson & Jackson, succeeded by E. H. Jackson.

COLORADO.—Denver.—Mrs. I. R. Broadwell, 2200 Downing, sold to F. Lawrence.

CONNECTICUT.—Hartford.—James A. Kennelly, of the firm of Kennelly & Co., deceased.

New Britain.—M. J. Halloran, sold store at 365 Main street, to James R. Halloran.

FLORIDA.—Dunnellon.—J. L. Davis, burned out.

IDAHO.—Wieser.—Hubbard Drug Co. sold to Davis Drug Co.

ILLINOIS.—Forrest.—N. Hurt & Co., sold to D. T. Torrence.

Newton.—St. Clair Andrews, sold to George W. Crail.

Smithfield.—George W. Newberry & Son, damaged by fire.

INDIANA.—Logansport.—O. A. Means, sold to C. R. Beard.

Tipton.—D. B. Coppess, sold to W. G. Alford.

Warsaw.—C. E. Wahl, sold to Dr. C. W. Burket.

IOWA.—Minden.—Henry Pieper, sold to M. J. Lehman.

Redfield.—C. B. Walsh, removed to Reasnor, Jasper County, Iowa.

Runnells.—E. E. Draper & Co., succeeded by Draper & Switzer.

KANSAS.—Wakefield.—J. W. Thomas, sold to Claud Rankin.

KENTUCKY.—Bethany.—Watson & Taylor, succeeded by J. A. Watson & Co.

MICHIGAN.—Oxford.—C. F. Tunstead, sold to Brooks Drug Co.

MISSOURI.—Koshkonong.—L. J. Wood, sold to J. M. Huff.

Sturgeon.—M. H. Harris, deceased.

Wellsville.—J. M. Enslin, sold to J. W. McKibben.

Wheeling.—T. D. Taggart, sold to A. V. Fore.

MONTANA.—Helena.—John Schonborn, succeeded by Schonborn Drug Co.

Lewistown.—Charles F. Little, sold to Hemphill & Allen.

NEBRASKA.—Fullerton.—E. Johnson, sold to J. D. Barnes.

NEW YORK.—Buffalo.—A. C. Anthony, 384 Seneca street, deceased.

Dansville.—G. Bastian, succeeded by E. N. Bastian.

New York City.—Charles Veprovsky, 1430 First avenue, should be added to D. D. List.

NORTH DAKOTA.—Grafton.—Fleming & Leweaux, damaged by fire.

OHIO.—Dayton.—John E. Wenz, 1516 East Fifth street, deceased.

Marietta.—Mason & Dorr, succeeded by A. I. Dorr.

OREGON.—Junction City.—Lee & Hill, succeeded by Mueller & Hill.

RHODE ISLAND.—River Point.—Brayton A. Round, sold to Parker & Matteson.

SOUTH CAROLINA.—Greenville.—Davies & Mullins, succeeded by R. P. Mullins.

SOUTH DAKOTA.—Hettingland.—S. J. Austin, sold to A. Shelby.

TEXAS.—Dallas.—Q. O. Bradley & Co., 238 Main, sold to Geo. W. Bowman.

Galveston.—C. J. Michaelis, Tremont and Post Office streets, succeeded by Michaelis & Wilder.

Waxahachie.—E. A. DuBose, succeeded by DuBose & Co.

WASHINGTON.—Ilwaco.—Parks & Rogers, succeeded by C. D. Rogers.

WISCONSIN.—Marinette.—Fairchild Drug Co., sold to Robert A. McDonald.

RICHARD N. WHITWORTH, a Piedmont (W. Va.)

druggist, died at the Johns Hopkins Hospital in Baltimore,

last month. He had been taken to the institution to be

treated for cancer of the lungs. He is survived by a

widow and several children. His age is given as 49 years.

SECRETARIES OF BOARDS OF PHARMACY.

Alabama.—E. P. Galt, Selma.
 Arizona.—Has no pharmacy law.
 Arkansas.—W. W. Kerr, Russellville.
 California.—S. L. Waller, San Francisco.
 Colorado.—A. W. Scott, Fort Collins.
 Connecticut.—Willis L. Mix, New Haven.
 Delaware.—C. D. Sypherd, Dover.
 District of Columbia.—R. N. Harper, 609 Pennsylvania avenue, N. W., Washington.
 Florida.—Thomas Clarke, Jacksonville.
 Georgia.—George F. Payne, Atlanta.
 Idaho.—Law provides for boards in each county.
 Illinois.—L. T. Hoy, Springfield.
 Indian Territory.—Has no pharmacy law.
 Indiana.—C. E. Crecelius, New Albany.
 Iowa.—C. W. Phillips, Des Moines.
 Kansas.—W. C. Johnston, Manhattan.
 Kentucky.—J. W. Gayle, Frankfort.
 Louisiana.—F. C. Godbold, New Orleans.
 Maine.—D. W. Haseltine, Portland.
 Maryland.—D. R. Millard, Baltimore.
 Massachusetts.—A. K. Tilden, Boston.
 Michigan.—A. C. Schumacher, Ann Arbor.
 Minnesota.—H. G. Webster, Minneapolis.
 Mississippi.—S. L. Crain, Columbus.
 Missouri.—A. T. Fleischmann, Sedalia.
 Montana.—J. B. Lockwood, Helena.
 Nebraska.—H. H. Barth, Lincoln.
 Nevada.—No law.
 New Hampshire.—G. F. Underhill, Concord.
 New Jersey.—Henry A. Jorden, Bridgeton.
 New Mexico.—W. C. Porterfield, Silver City.
 New York (State).—E. S. Dawson, Jr., Syracuse.
 New York (City).—Sidney Faber, 1102 Second avenue.
 North Carolina.—W. Simpson, Raleigh.
 North Dakota.—W. S. Parker, Lisbon.
 Ohio.—W. R. Ogier, Columbus.
 Oklahoma.—F. B. Lillie, Guthrie.
 Oregon.—W. C. Blakeley, The Dalles.
 Pennsylvania.—C. T. George, Harrisburg.
 Rhode Island.—W. R. Potter, Providence.
 South Carolina.—M. H. Sandifer, Rock Hill.
 South Dakota.—E. C. Bent, Dell Rapids.
 Tennessee.—R. L. Eves, Nashville.
 Texas.—Board for each judicial district.
 Utah.—J. L. Boyden, Coalville.
 Vermont.—J. G. Bellrose, Burlington.
 Virginia.—E. R. Beckwith, Petersburg.
 Washington.—J. W. McArthur, Spokane.
 West Virginia.—W. S. Hamilton, Fairmont.
 Wisconsin.—E. B. Heimstreet, Janesville.
 Wyoming.—J. J. Steffen, Douglas.

MONTANA PHARMACISTS IN SESSION.

The Montana Pharmaceutical Association held its tenth annual meeting at Butte, August 7. In his annual address President Newbro recommended that some means be found to induce drug clerks to become members of the association. Regarding the existing pharmacy law he said: "The law as it stands to-day is like all other laws, it could be improved; it should be amended so that the secretary of the State Board of Pharmacy can tell from his books just what registered pharmacists are employed in each drug store or place where medicines are sold. This would give us an advantage, because if you prosecute a man for selling drugs who does not employ registered pharmacists, the burden of the proof lies entirely with the Montana State Board. I would also suggest in this amendment that the fine of \$250 be decreased, because I believe the pharmacy board could much easier get a conviction on a fine of \$25 or \$50 than they can where the fine is so large." He thought that the National Association of Retail Druggists would be able to stop the price cutting on proprietary medicines. This class of goods forms an important part of every druggist's business and in order to make money out of proprietary medicines prices on these goods must be upheld, and this can be done only by getting the goods

out of the hands of those who exploit them for advertising purposes. He said the wholesaler must be brought to realize that his interests are served by giving his assistance to this end and the result will be that the manufacturers, the jobbers and the legitimate retailers must work together. He understood that sixty-one of the largest proprietary manufacturers of the country have adopted a definite class of jobbers as distributors of their products.

The address was referred to a committee and later a motion was made and carried admitting drug clerks to membership in the society upon the payment of an initiation fee of \$1 and yearly dues in the same amount. A motion to amend the constitution providing for the election of one vice-president was also made and this provision of the association's laws changed to permit three vice-presidents to hold office. Butte was chosen as the place to hold the next meeting. The officers elected were: President, E. E. Gallogly, Butte; vice-presidents, L. G. Smith, Lee Warren, Bozeman; Emil Starz, Helena; secretary, S. J. Coffee, Missoula; treasurer, F. A. Warner, Great Falls. The meeting closed with a banquet at which speeches and responses to toasts were made by various members. The attendance was much better than that of any previous year.

ASBESTOS.

By EDWARD W. PARKER.

The commercial product of asbestos in 1897 was limited to two localities—Sall Mountain, Georgia, and Elsinore, California. In amount the product in 1897 was 580 short tons, exceeding that of 1896 by 15 per cent., while the value increased from \$6,100 to \$6,450, a little more than 5 per cent. The domestic product is entirely true asbestos, which usually occurs associated with soapstone, and is in fact a fibrous variety of hornblende. Mineralogically it is entirely distinct from the Canadian product, which is a fibrous form of serpentine, and which should be properly classed as chrysotile. Both minerals, however, are, similar in their heat-resisting properties, and both are usually classed commercially as asbestos. Manufacturers of asbestos textiles in the United States obtain their supply of crude material almost exclusively from the Canadian deposits of chrysotile at Black Lake and Thetford, as is shown by the reports of the Bureau of Statistics of the Treasury Department. The total value of the asbestos imports for the fiscal year ending June 30, 1897, was \$191,097, of which the imports from Canada were worth \$190, 971, the difference (\$126) being made up by two small shipments from Germany.

Canadian asbestos, or chrysotile, possesses greater strength and elasticity of fiber than the domestic product, and is consequently much preferred for the manufacture of woven fabrics. Occurrences of chrysotile similar to that of the Canadian product have been noted in the United States in Loudoun County, Virginia, and near Casper, Wyoming, but conditions have not been favorable to their successful development, and, except for specimens and the necessary assessment work to maintain title, they have not been exploited. Fibrous hornblende, or true asbestos, which is produced commercially in the United States, is not so well adapted for the manufacture of textiles as the Canadian chrysotile, owing to the brittleness of fiber, but for such purposes as fireproofing paints, boiler and safe packing, etc., where strength of fibre is not essential, its heat-resisting qualities make it valuable. The use of the domestic product is, therefore, confined to these lines.

Workable deposits of asbestos have been found in several States, notably in California, Georgia, Maryland, Montana, Oregon, South Dakota, and Washington. Most of these have been worked at one time or another, but with the exception of the Sall Mountain, Georgia, mines, which began producing in 1894, the production has amounted to very little in the last ten years. In Mineral Resources for 1882 and for 1883-84 the production was reported at from 1,000 to 1,200 tons principally from California, but fell off to 300 tons in 1885, 200 tons in 1886, and 150 tons in 1887, after which time it did not exceed 100 tons in any year except 1892 (104 tons) until 1894, when the Sall Mountain mines were opened. The richness and

proximity of the Canadian crysotile deposits, added to the superior quality of the fiber, have been potential factors against the successful operations of our eastern deposits, while the long distance from the manufacturing centers, and the consequent expensive freight costs, have militated against the development of the western localities.

PROCESS OF PRESERVING WOOD.

Mr. Fritz Hasselmann has invented a process for preserving wood. It is called the xylose process, and consists in boiling the wood in a solution of metallic and mineral salts, under a pressure varying from 15 pounds to 40 pounds per square inch. The solution is composed of the sulphates of copper and iron crystallized together in the proportion of 80 per cent. of copper and 20 per cent. of iron, alumina and a salt which is mined at Stassfurt, in Germany, called "kainit." This latter chemical is a compound of sulphate of potash and magnesia and chloride of magnesia. The properties that this solution exercises upon the woods so treated are the withdrawal of the sap and its dissolution with the liquid, the destruction of the germs of decay by the action of the copper, and a chemical formation, by the iron, which is insoluble in water, with the cellulose or woody fiber. Several experiments have been carried out with wood which has been treated by this process near Vienna. The treated wood was utilized as props in the vineyards and never displayed the slightest tendency to decay. Sleepers treated by the process have also been employed on the Bavarian government railways, and it has been found that even the softest woods are rendered as strong and as durable as oak by the solution.

FULLER'S EARTH.

Fuller's earth is found at a number of localities in England, but though of wide distribution geographically the individual occurrences are generally of limited extent.

The original use of the English earth was for fulling cloth, and at one time it was considered so valuable for this purpose and sought after so much by foreign as well as English manufacturers that the British Parliament passed a bill prohibiting its exportation. Since then large quantities of the material have been used in the clarification of oils and for many years the English earth has been the only satisfactory one. The recent discoveries in the United States have, however, made themselves seriously felt in England.

CEREAL TOOTH POWDER.—In a paper read before the American Medical Association and reprinted in the Journal, Dr. M. H. Fletcher recommends a tooth powder made in part from the hard parts of cereals, such as rice and indian corn. He said the grit in this powder does the work most thoroughly without the least injury or wear on the teeth. The formula most followed is pulverized cereal, 75 parts; sodium borate, 18 parts; potassium chlorate, 7 parts; Mix, sweeten with saccharin, and flavor to taste. This dentifrice may be used freely and often enough to prevent any accumulations whatever on any surfaces accessible to a good brush.

CRURIN is a double thiocyanate of bismuth and quinoline, of the formula $(C_9H_7N)BiSCN)_2$. It is described as a reddish-yellow powder, melting at 76° C. and insoluble in the usual organic solvents. It is recommended as a strong antiseptic.—(Chem. Ztg.).

BEVERLY E. SHORE, a prominent young business man and for years head of the drug supply house of B. E. Shore & Co., of Richmond, Va., died there on the morning of August 28. His demise caused profound regret among a large circle of friends and acquaintances.

One of the best known whiskies now on the market is Hunter Baltimore Rye. It has been advertised attractively and extensively in the newspapers for so long that probably every discriminating consumer knows it. Hunter Rye appeals to the druggist as a whiskey which he can put on his counter and sell to his fine trade without question. It is a credit to his store, and its widespread reputation ought to put it foremost for recommendation to druggists everywhere as a type of the purest whiskey.

STATE OF TRADE.

Business of a Hand-to-Mouth Order.

New York, Sept. 5.—Weather conditions have not been favorable to a resumption of activity, and business has been mainly of a hand-to-mouth order, pending the opening of the Autumn and Winter campaign. The vacation season is on the wane, and general affairs are shaping themselves for an early revival of trade, but no material change is looked for until the advent of cooler weather. The general market, however, continues steady in tone and the outlook is considered promising to a renewal of the satisfactory conditions which have prevailed for several seasons past. There have been no developments of consequence in quinine during the past week, and the market has ruled quiet without quotable change in values. On Wednesday last there was an auction sale in Batavia of 140,000 ozs., Java quinine, and similar monthly sales are announced for the balance of the current year. The result of the last sale was evidently satisfactory, as the entire quantity was sold, and the average price was considerably higher than that of the previous auction. Spot trading has been limited to the light current requirements of consumption, but all domestic and leading German brands are steadily held on the same basis. The London market is a shade easier presumably on account of speculative influences.

The easier undertone which has been reflected in the opium market for some time past has resulted in a modification of holders' views regarding values, and quotations for both the gum and powdered show a slight reduction. Similar conditions are said to exist in primary markets, but the concession in prices has not stimulated interest on the part of buyers, either here or abroad. Camphor has continued to harden in price under the influences heretofore noted and domestic refiners have further advanced their quotations $\frac{1}{2}$ cent per pound. Foreign markets for both crude and refined are correspondingly higher and it is believed that extreme prices are probable owing to an expected material increase in demand for manufacturing purposes. Aqua ammonia has undergone a material reduction in manufacturers' prices, on account of sharp competition between the article made from coal tar direct, and that manufactured from the sulphate.

Among the essential oils general business has continued of fair seasonable volume. Lemon is firmer and sweet orange easier, both in sympathy with the Messina market, where similar changes have occurred. Cube oil is again higher on account of the upward tendency in values of the berries. Pennyroyal is weaker, owing to more abundant supplies, new crop having begun to arrive more or less freely. Cod liver oil is stronger and wholesale prices are fully 50 cents per barrel higher, with indication of further improvement as the active consuming season advances.

German Ergot is somewhat unsettled owing to a light inquiry from the consuming trade, together with low offers to sell by holders in Hamburg, and spot values show a decline. Manna continues very firm. Large flake is about out of market, and quotations for small flake are a shade higher with limited quantities offered. Grains of paradise have undergone a sharp further decline in price owing to liberal arrivals which have entirely relieved the stringency of the market. Continued firmness prevails in senega and golden seal roots with values somewhat higher. It is estimated that the crop of the latter will be about 60 per cent. short of last year's.

Pretty Good on the Whole.

Boston, Sept. 1.—With a week beginning intensely hot and soon changing to one of delightful weather conditions, the drug trade has been pretty good on the whole. There are evidences of returning summer travelers and families with children are getting home, as school time draws near, and their presence in the neighborhood is sure to bring trade to the nearby drug store. In the districts where trade is not thus influenced by these conditions, business has been good, and there is found no complaint at all with present conditions.

In the general market no special activity of one line over another is found. There is something going on in chemicals, in drugs and in the dyestuffs and other lines, but with no feature to make any one article more prominent than the others. There seems to be an undertone of strength, as if underlying coming good trade, and this is confidently expected to be brought to the front a little later in the season.

A Very Dull Week.

Philadelphia, September 1.—In the drug and allied trades, this has been one of the dulllest weeks of the Summer. The weather is largely responsible for it. It drives people out of town, and although reducing the vital energies to a minimum, it has had no compensating advantage, from the dispenser's standpoint, of causing a plague with a resulting large demand for medicines. It has been a fatiguing but very healthy Summer. Nevertheless, there is not the faintest suspicion of blueness in trade circles, and everybody is quite certain that, with the first breath of cool air from the north or southwest, buyers will swoop into town from the surrounding landscape, deplete stocks and inaugurate one of the biggest booms yet recorded. Some surprise was expressed that quinine made no further ascent. The Fall, it is asserted, is quinine time, and it may yet advance. There were a number of good orders in town to-day, buyers stocking up in several lines for the holiday of next Monday. It is always more or less dull at the end of the month, so that the quietness of the current week should excite no comment.

Business Quiet.

Baltimore, September 3.—Business among the jobbers of this city was decidedly quiet, a condition which frequently characterizes the close of a month. Retailers put off sending in their orders, so that the bills to be met on the first may be as small as possible. Of course this means merely a postponement of purchases, which is followed by a corresponding increase in orders later on. But it serves the purpose of deferring obligations and is resorted to in many instances. The manufacturers of pharmaceuticals are also affected by this state of affairs, but the laboratories continue busy, their activity being on the whole uniform. The market for botanicals remains uneventful, and the retail trade is practically unchanged. No especially noteworthy developments have taken place in the movement of heavy chemicals.

A Good Week in Detroit.

Detroit, Aug. 30.—The local druggists kept the wholesalers hustling the first part of the week, everybody wanting to be well stocked up for the big K. of P. crowd in attendance at the convention here. The Eastern end drug stores, in particular, have done a good business, the camp being located in that direction. "Very little trade" is reported in the country departments of the jobbing houses.

Quiet Trade in Chicago.

Chicago, Sept. 1.—Business has been only fair in drug circles this week. The warm weather, added to practically a week of festivity incident to the G. A. R. Encampment here, has caused a slackness in local trade. There is a tendency to good Fall orders, but the heavy part of this business will come later on. Sundries are in good demand and staple drugs hold about as usual.

Manufacturers say that, considering the season and the fact that many salesmen and druggists are still away on vacation, business is as good as could be expected.

Dull Trade, But Bright Prospects.

St. Paul and Minneapolis, Minn., August 31.—It is a tale of woe that Twin City retailers are telling. Nearly all who were questioned said business had been rather slack the past week and collections "dead." The last three or four days in the month are prone to be dull. But "the flowers will bloom again and the springs will gush anew." September 1st and the days immediately following always bring the lake dwellers back to town—most of them, at any rate. To their absence is ascribed the trade dullness from which retail drug men are bound to suffer as regularly as summer comes. There are one or two happy exceptions to the foregoing conditions. For example, the proprietor of one of the down-town drug stores in St. Paul generally reaps quite a harvest the last few days of the month, while everybody else has more time on his hands than he would wish. Another St. Paul retailer, who occupies a prominent corner in the aristocratic St. Anthony Hill district, declares that he has experienced none of the disadvantages accruing from the wonted "dull season" this summer. His prescription work and general trade have prospered "from start to finish." The jobbers represent themselves as well satisfied with conditions, there being not the slightest falling off in the volume of orders, which has been larger than ever before known in a so-called dull season. At last a change is to be noted in quotations for Western products, which have for many weeks remained stationary. Linseed oil has dropped 2 cents per gallon and ground oil cake is \$1.50 per ton lower.

Encouraging Reports from St. Louis.

St. Louis, Sept. 1.—Country trade is of satisfactory volume for the season. Locally, business with the retailers is picking up. Next month the return of the vacationers, including very many absolute and quasi-invalids, will stir up the prescription trade with a vengeance, the druggists say.

MARKET REPORT.**NEW YORK MARKET.**

New York, September 5.—Warm weather continues to retard the opening of the Autumn and Winter season, but there is no abatement of steadiness in the tone of the general market, and the outlook for improved conditions in the near future continues satisfactory.

OPIUM.—Round lots are again slightly easier, but there is no further change in jobbing quotations and the ruling figures are \$3.45@3.55 for 9 per cent. and \$3.55@3.65 for 11 per cent. according to quantity, the higher prices for single pounds.

POWDERED OPIUM.—A continued slow inquiry is noted with transactions small and unimportant, but jobbers are still quoting \$4.50@4.65 for 13 per cent. and \$5.10@5.25 for 16 per cent.

MORPHINE.—Dealers report a continued good demand from the consuming trade with prices ruling steady on the old basis of \$2.40@2.60 for eighths, according to brand and quantity.

QUININE.—There have been no further developments during the past week and a quiet feeling has prevailed with all leading brands of both domestic and foreign steadily held on the basis of 44@45c. in ounces, according to size of order.

CAMPHOR.—The influences noted in last week's report, together with an increased demand from large manufacturing consumers, have caused a further advance in jobbing quotations, and the revised figures are 60½@61½c. in bbls. 61@62c. in cases, and 66@72c. for broken lots. Japanese also is higher and ounce cakes are held at 61@62c. by the case and 67@72c. for less; half ounce cakes, 61½@62½c. by the case, and 68@73c. for less.

ERGOT.—An easy feeling prevails owing to unsettled conditions abroad and spot quotations for German have been reduced to 60@70c. for whole and 70@80c. for powdered.

MANNA.—Crop conditions continue unfavorable and the tone of the market is firmer with quotations for small flake advanced to 48@53c. as to quantity.

OIL PENNYROYAL.—Supplies are more abundant and the market is easier, jobbing quotations showing a decline to \$1.55@1.75.

OIL ORANGE.—Sweet is lower in sympathy with primary markets and local jobbers have reduced quotations to \$1.95@2.20 as to brand and quantity.

GOLDEN SEAL ROOT.—The market continues to harden owing to reported crop shortage and jobbers have advanced quotations to 75@80c. for whole, 80@90c. for ground and 85@95c. for powdered.

SENEGA ROOT.—Stocks are light, and with primary markets strong, spot holders are firmer in their views, jobbing quotations showing an advance to 55@65c. for whole and 60@70c. for powdered.

GRAINS OF PARADISE.—The market is abundantly supplied, and decidedly easier in tone, with quotations for jobbing parcels reduced to 30@35c. for whole and 35@40c. for powdered.

BUCHU LEAVES.—Only a limited inquiry is noted and prices for short have reacted to 27@32c. for whole and 32@37c. for powdered.

QUICKSILVER.—An advance in the primary markets has influenced a firmer feeling among holders and jobbing quotations have been advanced to 75@80c. as to size of order.

RALSAM PERU.—Market firmer with an advance in jobbers' prices to \$1.75@1.90.

GUM KINO.—The market is quiet and easier with quotations reduced to 75@90c. for whole and \$1@1.15 for powdered.

GUM SANDARAC.—Jobbers have modified their views to the extent of reducing quotations to 25@30c.

LEAVES.—Both henbane and belladonna have been reduced by jobbers to 25@30c. for whole, 25@32c. for ground and 30@35c. for powdered.

SALICYLIC ACID.—Jobbing quotations have declined to 60@70c. in pounds, 65@75c. in halves and 70@80c. in quarters.

RAYBERRY WAX.—There is an easier feeling among holders and jobbers have reduced quotations to 30@35c.

LOBELIA SEED.—Market firmer and quotations have been advanced to 45@55c. for whole and 50@60c. for powdered.

THE ERA COURSE IN PHARMACY.

The lectures will hereafter be issued in monthly instalments, and the entire work of the Course can be completed within twelve months.

NEW CLASSES FORMED EACH MONTH.

The first instalment of lectures will be issued in October, and the remainder at intervals of thirty days thereafter.

Recitations and examinations are conducted by correspondence directly with each regularly matriculated student.

Especially valuable as a preparation for examination by a board of pharmacy, to those who cannot attend a college of pharmacy, and to all desiring to review their former study of the subjects embraced in the curriculum.

TOTAL EXPENSES FOR FULL COURSE, \$10.00.

For fuller particulars see announcement facing third cover.

Write for new descriptive Prospectus, now ready.

THE DRUG ASSOCIATIONS.

The entire drug trade is awaiting with interest the result of the work which will be accomplished this week and next at the annual meetings of the three national associations representing the three branches of the trade.

At Detroit, Mich., September 12 to 14, occurs the third annual meeting of the National Association of Retail Druggists; at Chicago, September 17 to 20, will be held the yearly meetings of the National Wholesale Druggists' Association and the Proprietary Association of America.

These three bodies represent respectively the interests of the retailer, the jobber and the patent medicine manufacturer. These interests have by many been considered and without doubt they have been in the past antagonistic in some respects. But the work of these national organizations has tended and is tending to a unification of interests and to a broad feeling of sympathy and harmony between what were three factions formerly, three allies now. The jobbers and proprietors, through the N. W. D. A. and P. A., have come so close together that it is hard to differentiate them, as a large proportion of the members of one organization are members also of the other. But the retailer, until very recently, has been, in effect, left out in the cold. The retailers have never had an efficient national business organization which shall look after trade matters purely, although many attempts have been made in this direction.

The N. A. R. D. is an infant in years, but in purpose and accomplishments it has already attained maturity of growth. During the three years of its existence it has impressed the other two branches of the drug trade with its power as a factor in settling the problems which concern all. It has won the respect of the wholesaler and the manufacturer, and, to a certain extent at least, has forced compliance with its wishes. But this body of retailers has not followed a policy of intimidation, rather one of arbitration and conference. It has tried and is trying to get together with the other two, whom it would consider its friends and co-workers, rather than its enemies. The prime work of the N. A. R. D. is, as everyone knows, to secure the decided amelioration, if possible the abolition, of the abuse of cut prices upon proprietary medicines. It has thus far succeeded in securing the co-operation of a large number of the leading proprietary medicine houses and of the majority of the jobbing trade, and a practical test of its plans is about to be made. It is fair to state that the jobbers and proprietors have met the retailers upon the com-

mon ground of good-fellowship and community of interests. The last named two sections have not waited to have pressure and the spur applied to them, but have, apparently at least, willingly come into the tripartite agreement.

This tripartite agreement is, as every drug man knows, very simple in theory, and great things are expected of it in practice. It requires of the manufacturer of proprietary medicines that he shall sell his goods only to a recognized selected list of wholesale dealers, which list of wholesalers shall include none who violate agreements regarding prices and none who sell under any conditions to the cutters and price demoralizers. The second part of this agreement is that the selected jobbers in turn shall sell to no cutters, and to all retailers at same prices, thereby giving the large retail purchaser no advantage over his competitor who may purchase in smaller lots. The third feature concerns the retail druggist. In return for the agreement on the part of the jobber and proprietor to maintain prices and confine trade to legitimate channels, the retailer undertakes to maintain prices on his own account, not to supply cutters and traitors, and, what is most important, to give the customer every time the particular proprietary article he inquires for, and not to substitute therefor something of the druggist's own make.

The keynote of the whole problem is, of course, good faith and honesty of act. While it will be impossible to bring into the fold all of either branch of the trade, and while some who do get in may be traitors at heart, yet it is believed that the majority sentiment and the majority influence of the manufacturers, jobbers and retailers will be sufficient to keep the trade in line, and make it impossible for the would-be traitors to undermine the fortress.

At Detroit the N. A. R. D. will discuss the plan in detail and will doubtless have definite information to render, and the following week at Chicago the wholesalers and jobbers will take action upon the matters brought before them by the retailers.

The success of this movement depends entirely upon the support given it. It will not succeed unless the retail druggists are so organized that they represent the great majority of the retail trade of the country, and unless this great majority emphatically demands that its desires be complied with. The N. A. R. D. is founded upon broad lines, but it does not yet represent so large a proportion of the trade that there will be no possibility of failure. It should be the mouthpiece for at least 75 per cent. of the retailers, but up to date it has but little over half of them. One bad man can do infinitely more harm in amount than a dozen good men can accomplish good, and if the retailers expect to control this patent medicine business they must be so strongly organized that the mere weight of their influence will be sufficient to hold the scheme together. There are some jobbers who in their keenness for trade

will not hesitate to violate the spirit of the agreement, though they may live up to its letter, and the risk of such an act must be made so great and so terrifying that the dishonest jobber will not dare attempt it. Similarly among the retailers, among the proprietors, the same element of danger exists.

The whole may be summed up in the statement that if the majority of the proprietors, the majority of the jobbers and the majority of the retailers desire and will work for this one thing, they can get it. If they do not honestly desire and work for it the plan will be a failure. Its success is possible, and probable, too, its advocates believe, and these three annual meetings will show whether this optimism is warranted.

A full news report of the N. A. R. D. meeting will be published in this journal next week, September 20, and of the wholesalers' and proprietors' associations in the following issue, September 27.

A GOOD SUGGESTION.

From the number of letters received from St. Louis correspondents and published in Our Letter Box this week, it is evident that the writers are determined to put into effect the suggestion made in our St. Louis news letter a week or so ago, that the Alumni Association of the St. Louis College of Pharmacy celebrate its twenty-fifth anniversary by establishing a scholarship. Though this combination of effort is so evident it is none the less praise-worthy, for the suggestion is an eminently good one. Alumni associations too frequently seem to exist only to keep up a little college spirit, which as years pass gets feeblér and feeblér. Some of these associations have had success to a greater or less degree in maintaining an alumni journal, but none of them has ever done or suggested a more practical and beneficial act than the establishment of a scholarship as now proposed. We hope our St. Louis friends will be enabled to realize their hopes in this direction, and that a sufficient sum may be available to make the scholarship a credit to the Alumni Association, to the college, and well worth winning by any student. Certainly the men who write us that the idea is a good one know what they are talking about, and their desires and influence should not fail to bring about the desired result.

PRIZE TRIPS TO THE YELLOWSTONE.

Conformable to previous announcement the prize of two free trips to the Yellowstone Park has been awarded by those in charge of the Era Course in Pharmacy to two students, one each in last year's junior and senior classes respectively. The fortunate recipients of these prize trips are Mrs. Maude E. Warnock, of McKeesport, Pa., of the senior class, and Miss Laura B. Hemens, of South Lyons, Mich., of the junior class. These ladies, previously supplied with the necessary railroad tickets, stage transportation, cash for incidental expenses, etc., met, according to pre-arrangement, at Chicago,

Monday morning last, September 3, thence to proceed in company throughout the trip. The itinerary laid out leads from Chicago to Omaha, to Monida, to and through Yellowstone Park, to Cinnabar, Livingston, St. Paul, and return to Chicago, requiring some fourteen days. Nothing need be said in advance of the sights and experiences of this trip, but when the young ladies return we shall publish as soon as possible thereafter a fully illustrated story, which is sure to prove of interest to all the Era Course students and our readers in general. The Yellowstone trip is the greatest of scenic excursions in this country, perhaps in the world, and the story of what these young ladies see and what they do will be a narrative of intrinsic value.

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

INDEED, IT IS A GOOD SUGGESTION.

I refer to your correspondent's item in the Era for August 30, relative to the silver anniversary of the St. Louis College of Pharmacy Alumni. He refers to the establishment of a permanent fund by subscription from the members, the interest to be used for the establishment of some useful memorial of the occasion.

I had the honor of being president of the Alumni Association ten years ago when it celebrated its crystal anniversary. I have ever since felt guilty of a dereliction of duty for not making good my opportunity to urge the establishment of a similar fund at that time.

Banquets and other usual celebrations are very pleasant affairs, but soon over and almost forgotten. It is said that those who plant trees love posterity. It is not necessary to wait for a new generation in order to see the benefits of a properly established memorial fund.

Let us follow the suggestion made in the Era, raise as large a fund as possible and have it invested in such a way that either the investment or the interest thereof will contribute to the education of some worthy but needy young pharmacist each year. We will be able to see the fruits of our labors from season to season, and when the time comes for our golden jubilee twenty-five pharmacists will be unanimous in testifying to the wisdom of our judgment and the success of our good intentions. The association is in a financial position to vote a substantial nucleus to start the crystallization of a silver anniversary memorial fund.

St. Louis, Mo.

H. M. WHELPLEY.

The reference in your issue of August 30 to the matter of having a lasting memorial arranged on the occasion of the silver jubilee of the Alumni Association of the St. Louis College of Pharmacy is, in my opinion, a particularly appropriate one. The celebration of the quarter centennial of the foundation of that organization should not be permitted to pass without some permanent memento remaining that may be pointed to in the future as having originated at this interesting period of its existence. This memorial may take the form of an annual prize, a scholarship, or possibly it might be deemed best to place in the college building some fixture, apparatus or appliance for teaching, which would be in constant evidence of the thoughtfulness of the alumni for their Alma Mater. I would be glad to see the suggestion in the Era result in the arousing of sufficient enthusiasm within the association's membership to result in a successful carrying out of some such plan as here outlined.

St. Louis, Mo.

J. C. FALK, President, 1893.

In your journal of August 30, page 249, I notice a "good suggestion" for the Alumni Association of the St. Louis College of Pharmacy. It is needless for me to say that the idea strikes me favorably. This association has in the past shown a vital and practical interest in the success of the College and the progress made by the students by bestowing a gold medal upon the one in the senior class showing the greatest proficiency in all of the branches of study. To take the necessary steps to provide a fund, the interest of which should be used to found a "scholarship" in the institution, would be an admirable way for the Alumni to celebrate its silver anniversary.

J. M. GOOD.

St. Louis.

I am pleased to note the suggestion made by some member of our Alumni Association of the St. Louis College of Pharmacy, as published in your issue of August 30, 1900, viz.: That on the occasion of the celebration of the silver jubilee on September 21, 1900, a free scholarship be established.

What could we do that would be a more worthy object than this?

Inasmuch as the present administration is bent upon advancing the youth, let this good suggestion be put into effect on that night.

Very respectfully,

FRANCIS HEMM.

An ex-President.

St. Louis.

ERA COURSE OF GREAT BENEFIT.

My diploma arrived to-day. Please accept my sincere thanks for same. I am certain that my connection with the Course for the past two years has been of very great benefit to me.

I can speak only in highest terms of the Era Course in Pharmacy and everything in connection with it. I again thank you for your kindness and courtesy, wishing the Era Course the best success.

A. J. URBISH.

Flatonla, Texas.

ERA COURSE HELPED HIM 100 PER CENT.

The diploma was received some days ago, and I highly appreciate the kind attention and promptness with which you treated me. I advise every boy ready to enter into the study of pharmacy to take the Era Course first, for it certainly will help him. It helped me 100 per cent. I will help the Era all I can.

Brenham, Texas.

EUGENE STARCKE.

ENGLISH RED.

Iron oxide is a material of considerable importance, though not wanted in very large quantities, as a polishing agent for glass, etc., and also as a coloring matter. It is not used in the pure state, but the admixtures and impurities must be restricted to within certain limits. It is a bye-product from the manufacture of sulphuric acid, alum, and of vitriol from pyrites. Hardness and fineness are the chief requisites. In testing such natural or artificial preparations, the substance is not further ground, but dissolved in hydrochloric acid, and the iron, aluminum, calcium, magnesium and copper contained in the filtrate are determined. The residue is essentially silica; further mica, quartz, feldspar, substances which can be distinguished under the microscope, and which give clues as to the origin of the material. Good English red is an expensive substance, and should contain a high percentage of iron oxide, 90 per cent. and more. No hard impurities can be tolerated.

Cantharides Pomade.

Ox marrow.....	900 grams
White wax.....	100 grams
Oil of mace.....	3 grams
Oil of cloves.....	3 grams
Essence of rose or geranium.....	30 drops
Tincture of cantharides.....	28 grams

(Durch Ztschr. f. Kosm.; Ap. Ztg.).

(Written for the Era.)

STRAMONIUM VS. BELLADONNA.**A Plea for an American Plant.**

FREDERICK T. GORDON, Pharmacist, U. S. N.

On my daily trips to and from my office at the Navy Yard, League Island, Pa., and my home, I pass by clumps, rank and vigorous in growth, of a plant whose virtues and possibilities seem to be sadly neglected in this, its adopted country, a plant which asks no more than a little soil, air and water to thrive and spread further and further with each year's growth. Cut it down to the root and come back in a few weeks, new shoots will have sprung up from the old stem; let its fruit ripen and next year the tiny black seeds will have been scattered far and wide, each now a lusty plant to send off its offspring in new colonies to grow and gain. Indeed it is astonishing to note how this plant will flourish under the most adverse circumstances. I have counted dozens and dozens of plants growing between the rails of a street car track, ballasted with broken stone at that. In the short space of a hundred feet, and outside the rails, well, I did not have the time to count a tithe of the number there. It is in moderately rich soil, though, that it reaches its best and fullest growth; in a vacant lot on Philadelphia's famous Broad street I counted over fifty plants in the small space of twenty square feet; at that time (the end of July) from two to four feet high, with magnificent spreading leaves, dozens of white and palest purple blossoms and promise of yet larger growth in the tiny crest of unfurled leaves and stems at the top of each branch. From one of these plants I picked seventy-five large leaves, not one of them less than five inches along the mid-rib and many of them nearly nine inches in length. There is nothing of the hot-house about this plant's growth.

What is it? some one asks. The farmer calls it "jimson weed," "thorn apple," "wild okra," or "stink weed," according to his locality, and swears at its rapid growth along his hedges and field sides. We, more scientific, give it the name "*Datura Stramonium*," with the added information that it is of the order "*Solanaceæ*" and that all parts of it contain more or less of a powerful principle allied to atropine. Our Dispensary states that its administration produces effects precisely similar to those of belladonna, and that its physiological action is precisely similar to that drug. Hence, for its action, doses, uses, etc., the reader is referred to the article on belladonna. Furthermore, the active principle of our plant is pronounced by competent authorities (Von Plante, Trommsdorf, et al.), to be exceedingly like that of belladonna; indeed, "daturine" has been found to be nothing more than a mixture of atropine and hyoscyamine, the former in greater proportion.

What of this similarity in two plants? Has it any useful, scientific or commercial bearing? I think it has all three and more besides, for we have at our very door-steps, one might say, a plant that may to all intents and purposes replace a much more costly and less abundant drug, in an unlimited quantity at that.

Belladonna leaves, common, are quoted at 27@32c. a pound; English, best, at \$1.35. Stramonium leaves are quoted at 15@20c. per pound. Atropine sulphate is now priced at \$5.75@86 per ounce in eights. As the tendency of the age is to the use of pure, isolated active principles instead of preparations of the crude drug, let us compare the two plants, commercially, on the atropine basis. Belladonna averages 0.25 per cent. alkaloid, stramonium averages 0.30 per cent., a difference in favor of belladonna (taking it for granted that this will exist, although the difference may vanish when stramonium is gathered and cultivated as carefully as belladonna) of one-sixth. This would make atropine manufactured from stramonium cost, at the highest figures per pound for drug of similar quality, \$4.30 per ounce against \$5.75@ \$6.00 per ounce for belladonna, a difference of \$1.45@ \$1.70. These figures take into consideration the lesser percent-

age of alkaloid in stramonium, as well as the relative cost of the two drugs. But, some will say, pure atropine cannot be obtained from stramonium without an excessive cost for manipulation, and that the active principle of stramonium is a mixture of two alkaloids difficult to separate. Neither can atropine be obtained from belladonna without tedious operations, and, as the manufacture of atropine from stramonium has not yet been attempted save in laboratory and scientific work, it is begging the question to argue that commercial chemistry could not be applied as well to stramonium as it has been to other plant principles. Cocaine goes through many different manipulations between the leaf and the five-gram bottle. As far as I have been able to learn, the various species of belladonna and scopolia alone have been used in the manufacture of atropine; the process of separation and purification of this alkaloid is long and tedious, especially in the case of drugs of low percentage, but chemistry, somehow, seems to have solved the problem. Could not the same science solve the problem of isolating and separating the alkaloids of stramonium so that it would pay commercially?

Even granting that there will be more difficulty (and cost) in the making of atropine from stramonium, there will be a "by-product" that will go far to lessen this expense and make it of little moment to the manufacturer. Hyoscyamine is a very costly drug, its price is quoted by the grain, and it exists in stramonium, in company with atropine, to a considerable proportion. The old "daturine" is but a mixture of the two alkaloids, and their separation is easily accomplished already in the experimental laboratory. So, we see, that not only is the source of atropine cheaper in stramonium but that we have at our disposal another most valuable constituent that may be made to yield a handsome profit above and over any excess in the cost of manufacture of the drug.

But I do not base my plea for stramonium against belladonna on the question of alkaloid alone, nor on the initial cost; these are questions more for the manufacturing chemist to take up. I have merely chosen this point to bring out clearer the comparative value of the two plants. What seems to me to be the strongest arguments in favor of the utilization of stramonium are "the vastly greater quantity of the former to be obtained with lesser cost, 'the supply of belladonna of strictly high-grade on the market being no where near the demand,'" and "the constantly increasing disproportion between the supply and the demand for the latter drug." Indeed, so important is this question becoming that efforts are being made to introduce the culture of belladonna into this country, the supply from natural sources being entirely inadequate and the cultivation of it in foreign countries not yet being sufficient to give the needed quantity.

Any person in this country who will cultivate and supply a high quality of belladonna may be assured of finding a good market for his product without going very far, and the more he raises the more will be the demand. During the past summer, in an attempt to solve the problem of the successful culture of belladonna in these latitudes (Pennsylvania) I have had occasion to go to some length into the question of supply, demand, cost, etc., as well as into the more strictly agricultural portions of the proposition, seeking to find some factor on which to base a calculation of the possible profit to be made on the cost of raising the drug here. The further I went the more I became impressed with the fact that something must soon be done or we will not have enough belladonna to supply our wants, but I had no thought at that time of looking for a substitute. The thought of a substitute came from observing the rank growth of an allied plant, at first because of its relation to belladonna and hence the affording from it of a hope that the latter would also thrive here, later, because of its own merits. When my "jimson weeds" shot up in vigorous growth and towered high above their English cousins, the thought came unbidden "Why seek to cultivate an exotic with doubtful results when nature has given you an equally valuable plant in lavish abundance and without cultivation?" And the only answer I could give was that I had never thought of the question in this light: Nor do I think many Americans have either. Bel-

ladonna has the prestige of centuries of tradition and romance, conservatism in medicine holds to it, the very name is a household word and besides, it is a foreign product, that alone would be enough to make it sacred in our eyes and worth more than a native drug. Who will be so bold as to be first to make his "belladonna plasters" from extract of stramonium standardized to 0.3 per cent. alkaloid? Possibly some shrewd manufacturer is doing this now, but none will admit it. Poor stramonium goes into the market under its own name in a very limited quantity, and if it passes for belladonna the maker is very careful not to say anything about it.

I could go on and on with this topic, but I see that I am already taking up too much space. Let me, then, sum up in brief and leave the case to my fellow druggists, scientists and manufacturers. Stramonium, a plant of the same order as belladonna, grows wild in great abundance in the United States; it need not be cultivated to furnish an ample supply. Stramonium contains the alkaloid of belladonna—atropine—with another of equal value medicinally and of far more value commercially—hyoscyamine—hence it may be used as a cheaper source than belladonna and hyoscyamus for the manufacture of both, the details of which may safely be left to the manufacturing chemist. Stramonium offers a surer supply than belladonna, growing by every roadside, almost, and can be gathered and put on the market without need of going beyond the farmers' fields. Stramonium is a native drug, one for which we need not pay custom duties, ocean freight, the charges of foreign brokers, etc., a drug whose supply we in the United States can control, whose price we can fix. Our manufacturers could be independent of foreign growers and brokers in getting their crude supplies for extracts, plasters, alkaloids, etc. As far as the therapeutic question goes, competent authorities have declared the action and effects of the two plants to be exactly alike; this would be a matter easy to decide by a fair and extended trial. It would be easy to make plasters from stramonium and compare effects with some made from belladonna.

All in all, why should we pass by our own native product to pay a higher price for an inadequate supply of a foreign drug that has only its halo of medical tradition and veneration on which to base its claims of superiority? I do not say "cast out belladonna;" its worth has been tried and found true, but let us give an equal chance to its rival, our own product. Our Pharmacopœia is now in the hands of the Revision Committee. If this should reach their eyes and notice, let its plea cause them to consider the question. Could they not make the use of stramonium in plasters, say, just as official as belladonna; could they not authorize the formulæ for stramonium preparations alongside of those of belladonna and make the use of either optional with the medical user? Then the court of last resort, the physician, would have a chance to compare the merits of the two, but if a fair trial is desired, we druggists must take part in it to the extent of calling these stramonium preparations to the attention of the physicians, for few of them read the Pharmacopœia. It would be presumption on my part to offer any suggestions to the manufacturers; the relative cost of supply of the two drugs will show them where their interests lie.

Why should we be seeking to add another foreign substitute for belladonna into our Pharmacopœia, "scopola," when we have one just as good of our own? Scopola is a very valuable plant and no doubt it could be used to advantage to eke out the deficiency in the supply of belladonna, but so can stramonium; stramonium grows here.

If my enthusiasm has carried me away, I beg the indulgence of my readers for my ardor; a further favor, though, I ask, that they too, give a little thought to this matter, and if they find in it the same importance that I have, let them, too, take up the cause of a plant that is our very own.

DRY DEPILETORY.—Barium sulphate, 10 parts; zinc oxide, 5 parts; white starch, 5 parts. Rub into a very fine powder. Before use, make into a thick paste with water, and leave in contact for ten minutes.

DESTRUCTION OF THE MOSQUITO FOR THE LIMITATION OF MALARIA.

Celli and Casagrandi have made many experiments with reference to the action of different substances in destroying and preventing the development of the mosquito, either in the larval state in the water, or in its perfect form as a flying insect. Their paper contains many tables of different substances, showing the length of time required for killing the insects, the quantity, the cost, and other particulars. Their general conclusions are as follows:

(1) The condition in which the mosquito is most readily destroyed is either that of the larva or of the winged insect (not the egg). In the first case they are destroyed the more easily the younger they are.

(2) For destroying the larva the following substances have proved efficient in the order named:

(a) Among mineral substances, anhydrous sulphuric acid, potassic permanganate, common salt, potash, ammonia, carbonate of lime, bichloride of mercury, chloride of lime, sulphate of iron or copper, lime, and others of less efficiency.

(b) Among organic substances, powder of chrysanthemum flowers (pyrethrum) tobacco, petroleum, formalin, cresol, aniline colors, and tar.

Considering, however, the doses necessary to destroy the insects, and the questions of practicability and price, all mineral and some organic substances must be disregarded, and vegetable powders, petroleum, and aniline colors only can be considered.

(3) To destroy the winged insect, odors, fumes or gas may be employed. Among odors are turpentine, iodoform, menthol, oil of nutmeg, camphor, and garlic. Among the fumes are those of tobacco, pyrethrum, fresh leaves of eucalyptus, quassia. Among gases, anhydrous sulphuric acid. It is to be noted, however, that these gases, odors, etc., in order to be efficient, must fill or saturate all the surrounding air, otherwise they only cause apparent death, or at best the flight of the insects, by which means they are sometimes useful in protecting man from mosquito bites, and preventing the insects from settling in habitations and sucking the blood from malarial patients.

(4) The problem of destroying mosquitoes can be solved experimentally, but practically only when economic considerations demand it. In the latter sense it is worthy of note that the antiquated use of petroleum for killing the mosquito has never become general even in districts where it is very cheap, and it is probable that such substances will be preferred as will also destroy other forms of aquatic life which are injurious to agriculture, and such as may be cultivated on the spot. For example, if the cultivation on a large scale of the chrysanthemum cinerariæ is carried on, it may happen that the very spot infected with malaria will produce the material needed for the destruction of the mosquitoes which infest it.

(5) The best time to destroy the larvæ is the winter season, when they are few in number and new generations are being produced. Destruction of the mosquito in houses is always possible, but work on a large scale may be best conducted in winter. A better knowledge of their habits, places, and times of breeding will facilitate their destruction, which will, even in the most favorable cases (that is, when the drainage of the soil shall have been effected), be an undertaking not as easily accomplished as some have imagined. Nevertheless, we may hope, in view of the vast sums spent by nations in preserving the grapevine from noxious insects, that something may yet be done for saving the life of man from the malarial mosquito.

To this paper the authors have added an appendix containing the results of later experiments, with a new aniline color known as larycith III, a substance of unusual caustic action and comparatively low cost, when used for the destruction of larvæ.—Boston Medical and Surgical Journal.

(Special Correspondence.)

THE PARIS EXPOSITION.

THE FRENCH EXHIBITS.

PART I.—DRUGS AND CHEMICALS.

THE French exhibits, all through the 1900 World's Fair, are very complete and well arranged. The Chemical and Pharmaceutical Group is no exception to this rule, and the rank of Commander of the Legion of Honor, which has just (August 18th) been conferred on Prof. Troost, chairman of the Committee of Organization of this group, has been well earned. The French were a little late in arranging their Chemical Industries Court, but the work has been carefully planned and well executed.

One interesting feature of this 1900 Exposition is the

Retrospective Exhibit

Illustrating the history and progress of the art or craft from 1800 to 1900, which is to be found in most of the classes. In the Transportation building, for instance, we see the mule litter, the sedan chair, and the post chaise, side by side with the locomotive of half a century ago; and the costumes of the accompanying figures complete the illusion.

These historical sections are, as a rule, well organized, and of much interest. There are some—those in the perfumery, hygiene and other sections—where the pharmacist will find much to detain his steps. But for the present we must confine ourselves to the

Centennial Chemistry Court.

This section (about 40 ft x 50 ft.) does not evidently appeal to the general public, consisting as it does of some twenty odd, modest looking glass cases of specimens. But the grand work which France carried out in the pioneer days of chemistry renders it well worthy of a visit.

The desire of M. Guimet, who organized the exhibit, was to arrange all in strictly chronological order. But this idea had to be largely modified to suit the wishes of those who lent the objects; and who, in most cases, expressly stipulated that their collections should be shown intact and separately.

Lavoisier

does not come strictly within the present century, having been executed in 1794. But the great savant who laid the foundation of all modern chemistry could hardly be omitted on account of this unfortunate occurrence, and we accordingly find his bust surmounting the first case, and his experiments recalled by the instruments he used, the majority of which are lent by M. Etienne de Chazelles. The large scales, made by Fortin, are a creditable piece of work

TROOST.

for a century ago; with a charge of 600 drams the scales turn at 5 milligrams. Lavoisier's calorimeter aerometer, hygrometer, thermometer, microscope, and laboratory masks are also on view. The Museum sends

the first apparatus used in 1783 by Lavoisier and Meusnier for the synthesis of water, as well as a bottle containing the water thus produced, which has been religiously preserved by Gay Lussac and his successors. Of the two oil portraits shown, one (a monochrome which formerly belonged to F. V. Raspail, the pharmacist-politician), is said to have been painted on the eve of his execution. Grimaux's "Life of Lavoisier," and Berthelot's book on Lavoisier's "Chemical Revolution" find their appropriate places in the collection.

The objects loaned by

The Scientific Schools

like the Polytechnic, the College of France, the Faculties of Medicine and Sciences, the School of Pharmacy, the "Normal" and "Central" schools, etc., etc., and a few private collections, fill the rest of the cases. To describe all in detail would occupy a whole number of the Era and give a complete history of French chemical progress during the last hundred years. It is, by the way, curious to note how France, the very home of chemical science during the first half of this century, has been outstripped by other nations in latter years. But she is still proud, as she may well be, of the grand share she took in unveiling the secrets of Nature in the days when it was said that "Chemistry was a French science."

The portraits of chemists are in many cases accompanied by a summary of their principal discoveries, thus forming

An Illustrated History of Chemistry.

We read for instance:

"Vauquelin, 1763-1829. Chrome, 1797; Glucine, 1798, analysis of silicate, 1799; Asparagine, 1805 (with Petit);" and so we follow the work of Berthollet and Chaptal, Becquerel and Balard, Dulong, St. Claire Deville, Frémy, Gay-Lussac, J. B. Guimet, Kuhlmann, Proust, Peligot, Chevreul, Wurtz, etc., etc. Busts, engravings, photographs, etc., are all utilized, and, as a rule, a sample of the product is shown near the discoverer's portrait.

There are also many relics of interest; apparatus, autographs, etc. Here, for instance, is the pipette which Balard, the discoverer of brome, used at his college lectures on the new product; the barometer and sextant that J. B. Boussingault took to America in 1822, Brogniart's pyrometer and alkalimeter, the first ingot of aluminum forged in 1855 by St. Claire Deville, the first crucible he made with 80% of platinum and 20% of iridium, a platinum crucible given to Thenard by Dulong, the sample of silver by which J. B. Dumas proved the presence of oxygen in this metal, etc., etc.

The amateur of autographs will notice the note books in which Gay Lussac and Frémy sketched their chemistry lectures, letters by Gerhardt, Liebig, etc., Pasteur's book of notes on his ferment experiments, and other souvenirs of historical interest.

M^r GUIMET IN JAPAN

N. L. VAUQUELIN.

ANTOINE LAURENT
LAVOISIER.

Apparatus and Models

are numerous. We may just instance the first apparatus used by Gay Lussac and Thenard: (1) For the industrial preparation of potassium and sodium, in 1808; (2) For the analysis of organic substances by chloride of potassium, in 1810; the oxyhydric gas furnace used for the fusion of 2 cwt. of platinum by St. Claire Deville, and models of furnaces, etc., for producing sulphuric acid (1855), sulphate of soda (1859), chlore (Weldon Pechiney's process), phosphorus (primitive design compared with the one in use in 1882), etc.

Chemistry Up to Date

is represented by M. Moissan's electric furnace, with samples of vanadium, titanium, tungsten, chrome, molybdenum, and carbide of calcium; his apparatus for preparing fluor is close by. His artificial diamonds are also shown here; they are tiny little things, as many may be aware. While speaking of precious stones, we may name Fremy and Verneuil's fine artificial rubies and the handsome "diamond" necklace of Thallium made by Lamy and Th. Deck in 1869. A lady visitor remarked that "It was in this size that M. Moissan ought to make his diamonds." Hard by, the radio-active metals, polonium and radium, are exhibited by the discoverers, M. and Madame P. Curie, and gallium may also be examined.

M. Berthelot's researches in thermo-chemistry, synthesis, fixation of nitrogen and hydrogen, etc., are illustrated by a case of apparatus. M. Armand Gautier, another leading member of the 1900 International Chemical Congress, has also a special case. We note M. Andre Pontier's new "History of Pharmacy," recently reviewed in our columns, a sample of Pelletier and Caventou's quinine, and the case of the Paris School of Pharmacy, with its 250 specimens arranged by M. Jungfleisch, Professor of Organic Chemistry. Lyons shows us a case of dyed textiles, illustrating the tints popular in France for the last 500 years; and M. Polrier's collection of alizarine and other dyes, with names and dates of discovery, may be compared with the similar collection in the German Court already described in our pages.

There is indeed much to examine in this Retrospective Section, but we must, for the sake of brevity, content ourselves by simply naming the other chemists whose work is represented, but of whom we have not yet spoken. These are Berthier, Bebal, Combes, Cahours Ditté, Debray, Dessaignes, Etard, Friedel, Aime, Girard, Grimaux, Hanriot, Haller, Lamy, Personne, Moureu, Robiquet, Ruolz, Scheurer-Kestner, Schutzenberger, Troost, Geo. Ville, etc., etc.

Leaving the Retrospective Court we find still on the ground floor

The Machinery in Motion

which always draws the public.

M. Picard's idea was to show, in every case, the raw material, the process of fabrication, and the finished article side by side. Instead of grouping every kind of machinery into one vast hall, as was done in 1889.

In the Chemical Section the machinery department is but small. The "Congo" soap (a well known mark here),

has secured an excellent corner site, where the article is rolled, cut, and packed before the client, and good business seemed to be doing at the sale counter as we passed. Savy & Co. show us how printing ink is made and white lead ground, while Derriez manufactures "conversational" peppermint lozenges close by. Fournier & Co., of Marseilles, illustrate the production of stearine candles; they state that they not only produce 21 out of 53 million packets annually consumed in France, but that this figure does not include the 15 million packets made for export.

We may pass by one or two distilling apparatus, but pause for a moment at the

Petroleum Refiners' Exhibit.

Here the idea of exhibiting the process was a difficult one, for "They'll hardly let us make our paraffin in the Exhibition," an organizer grimly remarked. But the court is attractive and interesting, though less handsome than the exhibit of the Standard Oil Co. (New York) in the United States section. The raw material used here naturally comes either from Russia or America; the refining is done at several places in France. Various duties make it expensive (we pay 12 cents a litre in Paris for good lighting oil). It is usually put up in 5-litre rectangular cans to facilitate storage, etc., and labelled a fancy name—"Saxoline," "Oriflamme," "Luciline," etc., etc., the maker's name and address never being given.

A model of an oil well occupies the centre of the courts, and the carrying and distilling process is illustrated by models and photos of apparatus, tanks, tank wagons, tank boats—one notices the four-masted sailing ship "Quevilly" carrying 3,000 tons of paraffin, which ran from Philadelphia to Rouen in fourteen days in October, 1898.

Vaseline, ceresine, paraffine wax, gasoline, oleonaphtha, benzine, etc., etc., are all shown, and there are two large wall paintings in excellent taste, one allegorical of the industry in Russia, America and France, and the other illustrating "The Uses of Petroleum" for lighting, warming, heating, driving locomotives, boats, motor cars, etc.

But we must hasten upstairs to examine

The Pharmaceutical Exhibit.

Here all the cases are uniform, as will be noted by our illustration, but each bears the name of the exhibitor. In some instances several small exhibits occupy the same case, but are placed in separate compartments, and each name is given above. All is handsomely gotten up, well lighted, and arranged with an eye to picturesque effect. But there are few attendants, and little printed matter. By the way, why do people who design exhibition show cases never think of adding a box or any accommodation for circulars? A curious feature, here and elsewhere, are some most elegant cases disfigured by a packet of cheap circulars hanging on a string on a rusty nail in the most conspicuous position, instead of being placed in a neat box or case, or in a clip or roller.

French Pharmaceuticals.

The cachet or wafer form of administering medicaments is exceedingly popular in France, and the first case in the gallery makes a tasty show in this line. There is a series of flowers reproduced in cachets, etc. The machines for making this class of goods are in many cases suited for use in England and the United States as well as in France, being provided with a double set of moulds. Pinot's prices seem to be about \$4 or \$5.

Another form of putting up goods is the ampoule. Cacodylate of soda, atropine, cocaine, asepsics and anaesthetics, serums, ergotine and saline solution were among those we noticed in these little glass tubes. Capsules are of course common; some of cod liver and castor oil were attractively gotten up and prettily boxed. Fumouze makes a good show of ovules, suppositories, etc., etc., as well as bottled goods. Surgical dressings (gauze, cotton-wool, plasters) are shown by several firms; in Chazy, Mulsant & Co.'s case we notice the type of "individual dressing" adopted by the French War Department. There are few veterinary goods, but M. Volry (whose name will be familiar as one of the assistant secretaries at the last International Pharmacy Congress) shows a special mus-

stard plaster for stable use, and M. Mère also exhibits various veterinary remedies; he is a pharmacist at Chantilly, the great racing centre. The "Pharmacie Normale" shows quite a series of field, house and pocket pharmacies. The only homeopathic exhibit we noticed was that of M. Ecalé, pharmacist, who was treasurer of the recent International Homeopathic Congress.

Proprietary Medicines

are of course well to the fore. Remedies like Leprince's cascarrine, the Fer Bravals tonic, Penne's vinegar, Chaumel's ovules, Astier's granulated kola, Robin's peptonate of iron, as well as sundries well known to every Frenchman, Langlebert's ouataplasme, Rigolot's snapisms, etc., etc., are innumerable.

Well Known Names

in French pharmacy may be found on the cases. M. Bocquillon shows oxygen inhalers, alcohol meters, and his well known Formulary. The works of M. Petit (chairman of the last Congress), may be noticed in the stand of the "Federal Society of French Pharmacists," as his manufacturing business is called, now that it has been floated as a company. Prof. Verne, of Grenoble, an indefatigable "globe trotter," shows us botanical and other specimens he has recently collected in the Far East, with a few phials of his specialties. Adrian & Co. have samples of crystallized digitaline, etc. M. Tanret illustrates his successive discoveries by a series of specimens of the alkaloids, etc., he isolated. Of M. Fumouze we have already spoken. M. Labelonye (treasurer of the Pharmacy Congress), shows ergotine and other specialties; the list might be indefinitely continued.

Various Exhibits

more or less connected with the chemical and pharmaceutical lines are to be found in this gallery. H. Hamelle shows valvoline and other oils, Lorilleux has printing ink here (as well as in several foreign sections), and a very pretty show is made by the various colors. There is gelatine and glue from Lyons & Givet, guano and phosphates, blacking and polishing pastes, "Ripolin" (which is coming largely into use here) etc., etc. Two handsome camphor exhibits are noticeable, one by Roques, the other by Raspail. De Laire & Co. have a big case of artificial perfumes, which attracted some attention when the Chemical Congress made their visit. This is the firm that bought up the French rights for Baur's artificial musk patent; they make a long list of cheap perfumes, Tiemann's ionone, which replaces the violet, etc., etc. M. De Laire, like M. Petit, has just been named a chevalier of the Legion of Honor.

Local Industries.

The extraction of iodine from seaweed is an industry located in the rocky, storm beaten coasts of the Breton peninsula. A handsome collective exhibit of various factories fills a large case, and reminds us of the existence of a co-operative Society of French Pharmacists formed to exploit this industry, and which was somewhat unremunerative just at first.

The enormous and handsome stearine candles, familiar to all who attend Catholic churches, seem to be principally manufactured in the suburbs of Paris and other large towns. The cod liver oil exhibit comes from Dunkirk, one of the principal stations of the Newfoundland fishing fleet—the other chief centre is Brittany. The Riviera is the home of the raw perfumery trade, but this industry figures in a separate section. The "Bouillie Bordelaise" (as the chemical mixture used for dressing vines is called) appears to be made on the Mediterranean coast, and a good many chemical and salt works are located in the same region. The four sulphur exhibits are all from Marseilles, and very pretty effects have been obtained by placing the pale brimstone, arranged in statues and stalactites, in cases lined with deep blue velvet. But

The Soap Industry

is the great feature of Marseilles. Of the 250,000 tons annually produced in France, 140,000 are manufactured in this district. The yearly output in 1789 at Marseilles was but 20,000 tons, in 1866 it had risen to 55,000, in 1876 to 86,000. It is exported everywhere; in one case the exporter may learn an object lesson as to the size and kind

FRENCH CHEMICAL SECTION.

most appreciated in each country, for M. Eydoux exhibits specimens prepared for the West African, South African, Indo-Chinese, Japanese and Chinese, North American, South American, Egyptian, and other markets. The mottled bar soap, we notice, is labelled "for all countries."

This section is also very tastefully arranged. In many show cases the trade mark (a virgin, a bee, etc., etc.), modelled in soap, surmounts the exhibit; and in one case a book modelled in the same manner, gives some of the statistics above quoted.

The Chemical Exhibit

comes next. As we described in some detail the German and Austrian chemical courts, it is perhaps unnecessary to weary the reader with a detail of about a hundred show cases, many of striking merit. Suffice it to say that it is the only exhibit of this character which can compare with the German court in extent and variety; but the exhibits being individual, and not rigorously classified, it is less easy to describe. The most remarkable, perhaps, is the case of the St. Denis Color, Dye and Chemical Works (Poirrier's establishment), with its splendid show of aniline dyes presented in the most attractive manner, we may also notice the St. Gobain and several neighboring stands. Here again, for instance, is the "Rhône Works Chemical Society's" exhibit, with its array of synthetic perfumes, each perfume being accompanied by the flower whose product is thus replaced. The same firm show how they pack their colors for exportation to Oriental lands in neat little boxes or "catties" adorned with gay pictures in the Chinese style of art. Synthetic indigo is one of their specialties; a glass carboy of this product occupies the middle of the case, supported by two plates of glass, on which the dried leaves of the natural indigo plant have been pasted. The preparation of the indigo is illustrated by samples: (1) the coal; (2) coal tar; (3) toluol; (4) ortho-nitro toluene; (5) benzoic aldehyde; and (6) synthetic indigo; and statistics are given to prove the artificial dye is more durable than the natural. In fact, this case is an illustration of M. Berthelot's prophecy of the day when all that pleases the human eye or tickles the palate and the olfactory organs will be produced by chemistry!

We must pass over a number of equally interesting collections—there is enough to occupy one's attention for hours—and leave with regret this handsome court. We may just note the model of Solvay's Chemical Works, at Varangeville, near Nancy; and remark that these models (so largely used by American exhibitors), are the exception in French expositions. In fact, this is the only one of its kind in all this extensive section.

(To be Continued.)

COMPOSITION FOR COATING BLACKBOARDS.—A composition recently patented in England consists of 3 to 4 ounces of shellac, 24 to 32 ounces of sealing or bottle wax, 36 to 46 ounces of ivory black and 3 to 6 ounces of lampblack, mixed as directed with 1 gallon of methylated spirit. The product is claimed to dry quickly, and to yield a dead-black surface which offers a firm grip for chalk or crayon writing.—(Jour. Soc. Chem. Ind.).

THE NEGRO AS A DRUGGIST.*

By L. L. BURWELL.

"It is with profound gratitude that I appear before this audience in the city of Boston to discuss the Negro as a druggist in this country, along with other questions in connection with the organization of the Negro National Business League of America. Boston has the right to the honor of the organization of this league. It was here that, from a wooden house, grew up one of the largest and most flourishing congregations in America. This little hut is the most historic structure in this country; none has grander history, save Independence Hall in Philadelphia.

"It was here on Massachusetts soil that the Pilgrims from the Old World planted their feet and drew up the first constitution or compact in the world. It was here in Boston that the patriotic spirit and self-denial were first practiced, in the dark colonial days of British rule, establishing the fact that has come down through all the ages, that we must deny ourselves even of the necessities of life to gain such recognition and independence as will cause us to be known and respected by the nations of the earth. Upon a tree somewhere here in Boston was placed this inscription in golden letters: "This tree was planted in the year 1646, and pruned by the Sons of Liberty Feb. 14, 1766." Thus you see that in Boston was the beginning of many good things, and I think it is an appropriate place for the discussion of noble beginnings concerning the future prosperity and progress of any body of American citizenship.

"As we cast our eyes over the broad domain of the United States we see only a few Negro druggists. But there is a beginning, a substantial beginning, of this most important department of the medical profession by the Negro. A druggist is one who deals in drugs. A pharmacist is one who prepares medicines. He is a manufacturer on a small scale. So, in speaking of the Negro as a druggist, he is also comprehended as a pharmacist, the two being so closely related that to be the one is necessarily to be the other. This beginning has not come too soon. There has been, and is, a loud demand for Negro pharmacists and druggists. And sad, but true, the supply falls far short of the demand. In this, as in all things, that the greatest good should result to the race, this supply must coincide with the demand.

"In the South, during the dark days of slavery, there was no demand for Negro druggists. But since then, working through man and the all-wise providence of God, slavery has been abolished, and the Negro of the South has been born into a new life, bringing with him opportunities and possibilities that make him a servant of his people, a helper and contributor to the great sciences and arts of the medical profession and the alleviation of the ills of his people. In medicine the pharmacist is playing his part well. He stands with his co-worker druggists between the patient and doctor, with pestle and mortar in hand to compound the medical ingredients that are intended for the alleviation of suffering humanity. He stands with microscope and a knowledge of posology to detect an illegitimate dose or poisonous ingredient. He stands as an investigator of adulterated food-stuffs and water; thus protecting the people from malicious infringements and malignant diseases; and he helps to promote the health, happiness and lives of the people.

"Among our own people the Negro druggists have a wide field in which to labor. There are duties devolving upon them that are not upon the white druggists. The masses of our people, especially of the South, are void of proper hygienic knowledge, and their readiness to use all kinds of medicines for all kinds of diseases places them in a peculiar and unsafe position. Many a time medicines are taken to the druggist by these people to get his advice as to whether or not to use them. I shall never forget the day when a man came to my drug store with arsenic, thinking it to be quinine, but by due warning he was saved from an untimely death. No doubt

all druggists have had the same experience with some of their customers.

"The Negro druggist is functionary to the whole sale druggist, who in turn is functionary to the manufacturer, thus helping to promote the sciences and arts of medicine and the distribution of trade. The Negro must enter the medical field, not for pecuniary gain alone, but to help glorify his profession, promote and protect his people and to go down into the hidden mysteries of medical science and add to the already long list of medicinal preparations. He enters the field of medicine as an adjudicator of the public welfare and a searcher after pure food, pure drugs and pure water. He enters the field as an agent for medical preparations that he may accomplish the purpose of the physician, the manufacturer, and to dispose of the deadly poisons in such a way that no one is harmed. He stands between the insane man and the insane woman who seek to destroy their lives through the medicine route, and thus may save thousands of lives from disgraceful and suicidal death.

"Such an important position calls for thoroughly competent men. I believe that laws regulating the practice of pharmacy and the handling of drugs, should be so rigid as always to keep out of the profession the incompetent. The laws of the country would greatly assist medical science in regenerating the lost vigor and weak constitutions of the human race. In the hands of the druggists and pharmacists the lives of the public are largely entrusted, and sad should be the feelings of that druggist who, through ignorance or carelessness, should cause one person to lose his life, however humble it might be.

"Pharmacists and druggists should be chemists. A prescription coming from an incompetent physician going to an incompetent pharmacist places the life of that patient in a perilous condition. A slight chemical change, though apparently harmless, would produce a poisonous compound, the result of which might be certain death. The Negro druggist is preparing himself along these lines that he may be fully prepared and competent to detect the slightest mistake, whether chemically or physiologically incompatible.

"The Negro has not entered largely into the manufacture of drugs for several reasons. First, leaving school with the mere theory and the small amount of practical knowledge and void of the opportunity to associate himself with large manufacturing concerns so as to gain that practical knowledge so necessary to success, make it very difficult and almost impossible for some time for him to enter largely into the manufacture of drugs. Second, there are so few drug stores of the colored people that, with the existing prejudice, it would be difficult to find sufficient field in which to dispose of the goods. Third, the financial condition of our druggists, as a whole, is not sufficient to establish such a business as would do credit to the medical business world. These are some of the hindrances which the Negro druggists have to meet. But, as time rolls on, we trust that the day is near when we shall see large manufacturing establishments operated entirely by Negro pharmacists.

"There are between 150 and 200 colored druggists in the United States, the majority of whom are conducting respectable drug stores. In nearly every city and town of any importance in the South you will find from one to two colored drug stores are supported by colored trade. It was not easy sailing with the first druggist. The people not being accustomed to see colored people mixing medicines naturally had a strong prejudice against them; but, with tact, integrity, perseverance and will power, backed up by a qualified education, these new people in a new profession have gradually pushed their way step by step, till to-day they are gradually destroying this prejudice, and establishing themselves as competent business men and are receiving the commercial attention of the business world. We are pioneers in a new field.

"We have borne the hardness well, and hope to smoothen the pathway for our coming generation, that they may take up the work so nobly begun and place their names alongside of Remington, Prescott, Lowy and other hard students of medical science, who have done so much in

*Address delivered in Boston, August, 1900, at the organization of the National Negro Business League.

thwarting ravishing and malignant diseases and in protecting and prolonging the lives of so many people. We hope to see colored druggists in every State of the Union, as far as possible organized into an association where they may meet and exchange ideas with each other for the betterment of their race and for the advancement of practical and scientific education.

"Many, if not all, of our young men had to start business with but a few dollars. They had no rich parents to bestow gifts of money upon them. They had no commercial standing as an inheritance from some rich father or other relatives. They could not borrow money from the banks, but had to win their way through hardships and many privations to that place of confidence demanded in the world of commerce.

"The outlook for the Negro druggist is hopeful, and as time rolls on the Negroes in the medical profession will naturally divide themselves into specialists as their ability and education will allow. As I look over these broad fields of the United States from Maine to California, from the Great Lakes to the Gulf, I see an abundance of room for thousands of our color. There are rich fields that have never been touched by the reaper's hands, patiently awaiting our coming. In many places these fields are not waiting, only, but are calling for your appearance. There is yet room in the Pharmacopoeia and Materia Medica for additional drugs. There are plants and metals whose functions the botanists and the chemists have not yet found. Let us go and help make the investigations. When this shall have been done we shall in heart and hand be joined with the intelligent, progressive people of the world and be crowned with credit and honor as real contributors to medical science and art.

CHRONIC BRASS POISON.

Metallic poisoning in its various forms is quite frequent in certain industries. It is specially common in those employed in lead works and with painters who use lead colors. Those who use hair dyes and cosmetics containing lead also frequently suffer, and water passing through new lead pipes also is responsible for some cases. Other forms of metallic poisoning are less common. Copper poisoning is not generally observed, although it may occur in those engaged in operations in which either the metal itself, or its alloy with zinc, namely brass, enters. A study has been made of this condition as it occurs among artisans in brass in Birmingham, England, and the Medical Record recently contained an editorial upon the subject, from which we glean the following:

The patient is likely to be a young workman, presenting a more or less markedly anxious expression, with a thin and haggard face, a sallow complexion and an unhealthy and wasted appearance. He complains of gradual loss of strength, of a dry and hacking cough, and cold sweats, pain in the chest, loss of appetite, and progressive emaciation in addition raises a suspicion of pulmonary tuberculosis. The nature of the disorder is not clear, and treatment fails to give relief. An examination of the teeth shows a typical green line, probably due to deposition of copper. As the disease progresses emaciation becomes conspicuous, with loss of strength and tremor. Headache is almost always present, as well as neuralgia. As a rule, digestive disturbances are present, with loss of appetite and occasional nausea and vomiting. There may be a dry tickling cough. Symptoms of catarrh are not uncommon, and there is a sense of dryness or discomfort or contraction in the throat and a metallic taste. A feeling of oppression or nervousness, sometimes intense, is common, also repeated attacks of faintness and sinking in the morning or at work. There is profuse perspiration, staining the linen, the hair is green, and there also are many other bad features of the disease, but phosphorus pills and dilute phosphoric acid yielded satisfactory results. The use of milk as a beverage was found to be of distinct advantage.

Quinine Pomade.

Ox marrow.....	325 grams
Lard	225 grams
Oil sweet almonds.....	55 grams
Quinine sulphate.....	3 grams
Balsam of Peru.....	3 grams
Oil of cloves.....	7 grams
Essence of rose.....	30 drops

Pharmaceutical Celebrities.

AUGUST RENDIGS.

Rendigs is a name well known in Cincinnati, and the subject of this sketch, August R. Rendigs, is one of a family of young men all of whom have distinguished themselves either in business, professional or political life. Most of the citizens of Walnut Hills are well acquainted with August R., or "Gus" Rendigs, as he is known by his friends, who has for the past fifteen years operated two drug stores in that suburb, one at McMillan street and Gilbert avenue and the other at May and McMillan streets, both under the firm name of Rendigs Bros.

"Gus" first saw the light of day thirty-five years ago. He spent his boyhood in Walnut Hills and attended the Twenty-second District school on Locust street.

Three older brothers, Dr. John, Charles and William Rendigs, were druggists; Dr. John Rendigs owning a store at Spring and Abigail streets; Dr. Charles Rendigs at Woodward and Broadway and William Rendigs at Peebles Corner, than known as Rendigs' Corner.

During his youth, lured by the seductive fizz of the soda fountain and the candy displayed in the show cases, Gus spent considerable time about his brothers' stores, and became interested in the drug business. He attended the Cincinnati College of Pharmacy and graduated in 1884. Soon after he acquired a part interest in his brother William's store at Peebles' Corner and started in on a business career. The drug store at May and McMillan streets was opened by Rendigs Bros., and shortly after this William retired from the drug business, studied law and was afterwards elected to the position of County Solicitor. After William's retirement, "Gus" associated himself in business with his brother-in-law, Henry Brakenmann. The latter took charge of the store at May and McMillan streets, while "Gus" supervises matters at the Peebles' corner store. Dr. John Rendigs was elected county coroner for two terms and died some years ago. Ten years ago "Gus" Rendigs married a daughter of

Adam Mueller, a wealthy pioneer citizen of Cincinnati, and is at present the father of an interesting family of two boys, August and Walter. "Gus" is fond of athletic sports. He is a member of the Cincinnati Druggists' Bowling Club, and one of its experts; is short stop of the Cincinnati Druggists' Base Ball Club, and can handle a lot liner with the same ease that he draws a glass of soda or empties a slot machine of its hard-earned pennies at night. He is an Executive Committeeman of the Hamilton County Druggists' Association, and as an all-round good fellow he is hard to beat. He owns and occupies an elegant home on Hemlock street, Walnut Hills, where he resides with his little family.

THE CHEMICAL COMPOSITION OF ALL THE STRATA OF THE ATMOSPHERE.*

By Dr. GUSTAVUS HINRICHS.

The discovery, by Lord Rayleigh, of argon in the air, has led to renewed analytical examinations of atmospheric air. Helium and krypton are now known to be present with the argon. About a month ago, Prof. Armand Gautier completed his researches proving the constant presence of two volumes of hydrogen in every 10,000 volumes of air. Putting the amount of helium, not yet accurately determined, at half that of hydrogen, the composition, by volume, of the air surrounding us is as follows:

Old Constituents:			
Oxygen	21.00		
Nitrogen (by difference)....	78.00		99.00
Carbon dioxide		0.03	
New Constituents:			
Argon	0.94		
Helium (estimated)	0.01		
Hydrogen	0.02	0.97	1.00
Total by volume.....	100.00		

According to Dalton, each gas forms its own independent atmosphere. At the surface of the earth, the pressure of each single gas-atmosphere is proportional to its volume; the above values of the chemical analysis, therefore, give the pressure of each gas.

According to Laplace, the pressure of each atmosphere diminishes in logarithmic proportion to its density. The formula used for such calculation is well known, being in general use for the determination of heights by the barometer. The densities in question are here given:

Carbon dioxide	1.529	Nitrogen	0.9670
Argon	1.377	Helium	0.1380
Oxygen	1.105	Hydrogen	0.0695

With these data of experiences, my calculations are made. The results are given in the following table, for every second myriameter in height, corresponding very closely to strata twelve miles in thickness:

COMPOSITION OF THE UPPER STRATA OF THE ATMOSPHERE IN PER CENT. BY VOLUME.

Height, Myria- meters.	Argon.	Oxygen.	Nitrogen.	Helium.	Hydro- gen.	H'gt. Miles.
0	0.94	21.00	78.00	0.01	0.02	0
2	0.4	15.9	83.4	0.1	0.2	12
4	0.1	11.5	85.6	0.8	2.0	24
6	0.0	6.9	72.7	4.7	15.7	36
8	...	1.8	27.5	14.1	56.6	48
10	...	0.0	4.0	16.6	79.4	60
12	...	...	0.5	14.8	84.7	72
14	...	...	0.0	12.9	87.1	84
16	...	...	...	11.2	88.0	96
18	...	...	...	9.6	90.4	108
20	...	...	...	8.1	91.9	120
25	...	...	...	4.3	95.7	150
30	...	...	...	3.5	96.5	180
40	...	...	...	3.2	96.8	240
50	...	...	...	0.5	99.5	300
100	...	...	...	0.0	100.0	600

In our atmosphere we must, therefore, distinguish the following five strata or separate atmospheres:

I. The lowest atmosphere, containing the aqueous vapor and clouds—the real "atmosphere"—and, also, carbonic acid gas. The height of this layer is 2 myriameters, or 12 miles.

II. The oxygen atmosphere reaches to about 5 myriameters, or 30 miles, where the amount of oxygen becomes less than 10 per cent. in volume.

III. The nitrogen here forms 86 per cent. by volume of the air, and gradually diminishes to 4 per cent. at the height of 10 myriameters, or 60 miles.

*Reprint from the National Druggist.

IV. The helium atmosphere here shows the largest per cent., namely 16. It gradually gives way to

V. Hydrogen, which at the height of 17 myriameters or about 100 miles, already constitutes 90 per cent. by volume of the air, and finally is the only gas present in the upper layers of our atmosphere.

Meteorites are known to contain hydrogen and helium occluded in the iron; these gases may have been taken up while traversing the upper layers of the atmosphere.

The auroral beams are seen in those parts of our atmosphere where helium prevails, while lower forms of the aurora are indicative of the krypton in the lower strata.

These results are given as a preliminary notice of work begun more than thirty years ago; publications of 1899, 1894 and 1876 might be referred to. The work of Gautier has made it possible to bring this research to a definite conclusion.

The atmosphere of our globe consists of five well-defined strata, the outermost of which is composed of hydrogen.

BANANA FLOUR.

During the past two or three years many popular statements have appeared concerning banana flour or meal. Little reliable information, however, has apparently been available on this subject. Banana flour is prepared by cutting the fruit into suitable pieces, drying, and grinding. Several years ago the Royal Gardens, Kew, England, published a somewhat extended discussion of the food value of bananas and banana flour and stated that the latter article, according to the testimony of travelers, had been prepared by native inhabitants of tropical countries since early times. The Connecticut State Station recently published analyses of banana flour made from three sorts of bananas. In the following table the composition of these samples is shown. For purposes of comparison, the composition of fresh bananas, wheat flour, rice and fresh and dried apples is also included:

Composition of banana flour and other foods:—Banana flour, from Porto Rico fruit, water, 13.43 per cent.; protein, 3.50 per cent.; fat, 0.47 per cent.; carbohydrates, 79.82 per cent.; fiber, 0.54 per cent.; ash, 2.24 per cent.

Banana flour, from Florida fruit:—Water, 5.34 per cent.; protein, 2.81 per cent.; fat, .66 per cent.; carbohydrates, 87.45 per cent.; fiber, .84 per cent.; ash, 2.90 per cent.

Banana flour, from Honduras fruit:—Water, 10.33 per cent.; protein, 2.87 per cent.; fat, .50 per cent.; carbohydrates, 87.02 per cent.; fiber, .73 per cent.; ash, 2.55 per cent.

Bananas, fresh, edible portion:—Water, 75.30 per cent.; protein, 1.30 per cent.; fat, .60 per cent.; carbohydrates, 21.00 per cent.; fiber, 1.00 per cent.; ash, .80 per cent.

Apples, fresh, edible portion:—Water, 84.60 per cent.; protein, .40 per cent.; fat, .50 per cent.; carbohydrates, 13.00 per cent.; fiber, 1.20 per cent.; ash, .30 per cent.

Apples, dried:—Water, 28.10 per cent.; protein, 1.90 per cent.; fat, 2.20 per cent.; carbohydrates, 66.10 per cent.; fiber, nil; ash, 2 per cent.

Wheat flour, patent roller process:—Water, 11.50 per cent.; protein, 11.40 per cent.; fat, 1 per cent.; carbohydrates, 75.40 per cent.; fiber, .20 per cent.; ash, .50 per cent.

Rice:—Water, 12.30 per cent.; protein, 8 per cent.; fat, .30 per cent.; carbohydrates, 78.80 per cent.; fiber, .20 per cent.; ash, .40 per cent.

Dried ground bananas are seen to contain in the same bulk more nutritive material than the fresh. This would naturally be the case, since a large part of the water in them was removed in drying. Fresh bananas and apples are somewhat similar in chemical composition and the same is true of the dried products. The dried apples contain somewhat more water and hence less nutritive material than the dried and ground bananas. Banana flour contains much less protein than wheat flour.

As pointed out by the Connecticut State Station, the three samples of banana flour analyzed are quite alike in composition. They contain less than half as much protein as rice. Their nutritive value rests almost wholly in the materials which constitute nitrogen-free extract. In those countries where banana flour is prepared in con-

siderable quantity, it is used in combination with milk, sugar, etc., in the preparation of custards, cakes and similar articles.—C. F. Langworthy.

W. A. WRENN.

It may be remembered that a short time since a group of the citizens of Taunton, Mass., celebrated the 250th anniversary of the foundation of their township by a visit to Taunton, Somerset, England. This visit is about to be returned, Mr. W. A. Wrenn, Mayor of the English Taunton, having decided to cross the Atlantic this month (September) on an official visit to the Massachusetts town.

W. A. Wrenn has owned a drug store at Taunton for the last sixteen years, with branches at Langport and Wellington. He was the only representative (exclusive of journalists) of English pharmacy at the Paris International Congress of 1900. He also attended the 1897 International Pharmacy Congress at Brussels, where his paper on "Essential Oils; Should they be Valued by Chemical Standards?" gained him a gold medal.

Essential oils are Mr. Wrenn's specialty, though by no means his only study. In his youth he was a fervent wheelman, and his bicycling trips to Mitcham, Hertford and other districts famed for lavender, peppermint, etc., seem first to have drawn his attention to this matter. Later on, about the time he entered a tea broker's office in the city of London, he made the acquaintance of Charles Umney, of Wright, Layman & Umney, distillers of essential oils, who advised Mr. Wrenn to devote himself to chemistry. He did so, and is now well known in England as the author of several interesting contributions to leading drug journals on essential oils, the perfume of flowers and other subjects.

Mr. Wrenn is a licentiate of Apothecaries' Hall (the ancient London institution we described in a special article some time ago), a member of the Pharmaceutical Society of Great Britain, a fellow of the Chemical Society and one of the founders of the London Chemists Assistants' Association. Since he has settled in Taunton and married he has filled various offices in connection with the ancient borough and its Court Leet, having been constable of the borough, portreeve, etc., etc. He takes a keen interest in ancient institutions, and can tell many interesting tales of the Somerset town during the old historical times. A thorough globe-trotter, he knows half of Europe, and more particularly the South of France, home of the perfume industry, and a part of Asia and Africa. He has played chess with Arab sheikhs in Palestine, has bicycled right across Europe, has visited French, German, Swiss and Italian chemical works, and attended lectures at the Paris Biological Institute. There are probably few pharmacists of thirty-eight years of age who have traveled further or seen more, and none, we venture to say, who can better describe their experiences. Our Taunton friends will find Mr. Wrenn charming in conversation and eloquent in public; he spoke on behalf of English pharmacy at the banquet which terminated the 1900 International Pharmacy Congress at Paris. Our portrait shows him in his furred robes and regalia as mayor; we understand that he brings these to America on his official visit.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Violet Ammonia.—(N. L.) See May 3 and June 28, 1900, issues of this journal, pages 474 and 701 respectively.

Tasteless Chilli Tonic.—(N. L.) See the following issues of the Era: October 19, 1899, page 548; November 19, 1899, page 642; April 12, 1900, page 394.

Pills of Albuminate of Iron.—(S. M.) No special formula has been published so far as we are aware for the preparation of these pills. Probably as good an excipient as any is a mixture of powdered tragacanth and powdered elm bark in the proportion of 1 of the former to 7 of the latter. A very small quantity of the powder is needed (5 to 8 grains of the excipient to each dram of albuminate of iron). After thoroughly mixing with the albuminate of iron the mass may be made with a little syrup.

Paste Stove Polish.—(B. C. O.) We cannot give the formula for the proprietary article. Why not try one of the following: (1) Bayberry or vegetable wax, 8 parts; plumbago, in fine powder, 200 parts; mineral oil, 100 parts; oil of lavender, 1 part. Mix. (2) Soap, 4 ounces; boiling water, 16 fluid ounces; black lead, sufficient. Dissolve the soap in the water and add enough of the black lead to form a paste. (3) Mix together finely ground and dried plumbago with sufficient sodium silicate to form a smooth paste, then add to every pound of the paste 1 ounce of glycerin. A little aniline black may be added if a more intense black is required.

Books on Gems and Precious Stones.—(H. C. M.) The best work on this subject is "Gems and Precious Stones of North America," by Geo. F. Kunz, gem expert with Tiffany & Co., of this city and special agent of the United States Geological Survey. The price of this book is \$10 and it is said to be the best monograph published on American gems. Other works you may profitably consult are the various annual reports of the United States Geological Survey and also the various volumes of the "Mineral Industry," by Richard P. Rockwell. Some information on the manufacture of artificial gems may be found in "Workshop Receipts" (volume III.) published by Spon & Chamberlain, of this city.

Sterilizing Surgical Instruments.—(E. H. N.) wants a process for sterilizing dental and surgical instruments without the use of heat or corrosive sublimate solution.

Nearly all authorities are unanimous in the opinion that heat is the most effective agent for sterilizing surgical instruments, a method quite generally used being to boil the instruments after a preliminary cleansing in a covered vessel containing a 1 per cent. solution of sodium carbonate. However, we give the following formula by which the use of heat and corrosive sublimate is avoided: Borax, 10 parts; cyanide of mercury, 2 parts; distilled water, to 1,000 parts. In place of borax, sodium carbonate or sodium benzoate may be used. It is said that steel instruments will not become oxidized by use of this solution even after a long time, and softening of the cutting edge is avoided, which inevitably happens if the instruments are passed through flame.

Bismuth Subnitrate and Sodium Phosphate.—

(B. H. G.) submits the following prescription:

Bismuth subnitrate	4 drams.
Sodium phosphate	3 drams.
Tincture of gentian	3 drams.
Tincture of nux vomica	3 drams.
Milk of magnesia, enough to make ..	3 ounces.

Mix. One teaspoonful every four hours.

He says it forms a thick mass within half an hour after compounding and he wants to know if the substances can be combined to make a "proper" mixture. No, a thick gelatinous mass will occur, regardless of the order in which the substances are combined. Bismuth subnitrate reacts with both sodium phosphate and milk of magnesia, to say nothing of the tinctures. The prescription is a mixture of incompatibles and should not be dispensed.

Complexion Tablet.—(R. Z.) Arsenic is said to be much used in the preparation of tablets to be taken for the "purification" and whitening of the skin, but it is not to be recommended. It is too dangerous, and it should never be used unless by direction of a physician. Attention to the well known rules of hygiene and the practice of them will do more toward the production of a good complexion than anything else. To "stir up the liver" a tablet containing podophyllin might be given, with the remark that so long as the system is kept in order no medicine is necessary. An old fashioned complexion tablet consists of 5 grains of washed sulphur, 1-6 grain podophyllin, and 1 grain of cream of tartar, one to be taken every morning and night.

The following books on the toilet and kindred subjects are recommended: Shoemaker, "Heredity, Health and Personal Beauty;" Cooley, "Toilet in Ancient and Modern Times;" Wooten, "Toilet Medicines;" Paschkis, "Cosmetics, a Treatise for Physicians and Pharmacists." For several hundred formulas for toilet preparations consult the Era Formulary.

Menthol Cough Drops.—(E. H. G.) Try one of the following:

Gelatine	1 ounce
Glycerine (by weight)	2½ ounces
Orange-flower water	2½ ounces
Menthol	5 grains
Rectified spirit	1 dram

Soak the gelatine in the water for two hours, then heat on a water-bath until dissolved, and add 1½ ounces of the glycerine. Dissolve the menthol in the spirit, mix with the remainder of the glycerine, add to the glyco-gelatine mass, and pour into an oiled tin tray (such as the lid of a biscuit box). When the mass is cold divide into ten dozen pastilles.

Menthol pastilles are said to be an excellent remedy for tickling cough as well as laryngitis. They should be freshly prepared, and cut oblong, so that the patient may take half of one, or less, as may be necessary.

Chlorodyne Lozenges.

Capsicum	5 grains
Menthol, in crystals	6 grains
Benzolic acid	1 dram
Compound ipecacuanha powder	4 drams
Gum arabic, powdered	1 ounce
Starch, powdered	2 ounces
Sugar	16 ounces

The ingredients are made into a mass with water and divided into lozenges; they need no special care in drying, and are said to keep their strength well. Compound ipecacuanha powder used in the above may be prepared as follows:

Soluble saccharin	2 parts
Dover's powder	100 parts
Gum arabic	400 parts

Mix, and pass through a sieve.

Painting Tin and Shingle Roofs.—(B. and W.) We have had no practical experience with any particular formula, but we give the following hints and processes upon the recommendation of "House Painting and Decorating." (1) A good mixture for coating roofs may be made as follows: Heat 35 parts mica slate and about 35 parts of resin, both finely powdered, with 50 parts of tar. (2) Tin roofs should be painted at least once in two years. The paint should never be applied heavy, for this will

cause the tin to crack and to peel, particularly about the seams and edges. Light, cool colors are preferable, because they reflect the warm rays of light and thereby lessen the expansion and contraction of the metal and the shrinking of the boards underneath and so lessen the liability of the tin to crack in the seams. The temperature of attic rooms will be materially low red if the roof be painted with a light rather than with a dark color. A good grade of yellow ochre is probably the most economical pigment that can be used for that purpose. If, as is sometimes the case with country houses, where the roof is a conspicuous object in the architecture of the building, a darker color is indispensable, pure Venetian red, darkened with lamp black, is recommended as most economical and durable. Raw linseed oil, being less liable to become hard and brittle, and thereby to cause cracking and scaling, is preferable to boiled oil. The poorest oil paint is preferable to nothing or to neglect, and the truest economy consists in keeping tin entirely and thoroughly protected from the corroding influences of dampness. Old paint, or what has been mixed several days, is better than new for roof painting. Of course, turpentine should never be used in such work, nor too much drier.

Mercury, Nitric and Sulphuric Acids.—(F.) takes

the following prescription from the questions of the Nebraska Board of Pharmacy, published in this journal August 16, 1900, page 180, and asks how it should be prepared, what chemical reactions take place and for what the mixture is to be used?

Hydrargyrum	60
Acidum nitricum	60
Acidum sulphuricum	60
Cantharis	16
Antimonium nigrum	16

M. Sig. Apply as directed.

It is a question whether a mixture of this character should be prepared at all, and it is quite likely the formula was included in the examination questions more for the purpose of "drawing out" the candidate than anything else. Mixtures of this type with lard have been used by veterinarians in the treatment of scratches, foul ulcers, mange and the like. The reactions which may occur depend considerably upon the order in which the substances are brought together, the most probable reaction, however, being the formation of a basic mercuric sulphate and the evolution of NO. For a discussion of these reactions see U. S. Dispensatory, eighteenth edition, page 766. Taking some of the possible reactions separately, nitric acid with mercury forms mercurous and mercuric nitrates, nitric oxide being evolved; concentrated sulphuric acid, especially when heated, will dissolve mercury, sulphurous anhydride being evolved. Nitric acid with black antimony forms the nitrate and sulphate of antimony and, of course, the organic matter of the cantharides is charred by the sulphuric and nitric acids. There is considerable risk in compounding a mixture of this kind and the work should be carefully looked after, the mixture being made out of doors and in a capacious vessel not affected by heat or acid fumes.

Soluble Scale Salts of Iron.—(C.) propounds the following questions, which we answer categorically:

(1) Are the soluble scale salts of iron intended to be made into pills? Is not a solution more preferable?

Soluble scale salts are frequently prescribed in pill form, though many writers are of the opinion they are best administered in solution. All pharmaceutical manufacturers list coated pills of all of these salts. Iron and quinine citrate should never be prescribed in solution (U. S. D.)

(2) Are not all of the scale salts of iron incompatible with protochloride of mercury?

Yes, if water be present.

(3) What is the result of mixing the following prescription and (4) is it not incompatible?

Iron and strychnine citrate	100 grains.
Protochloride of mercury	16 grains.

Mix and make 61 pills. One pill 3 times a day.

The reaction here depends upon the excipient used. If resin ointment be employed and the salts be mixed

separately with portions of it before combination a satisfactory pill mass may be made. Iron and strychnine citrate may be made into pills with manna and powdered tragacanth as the excipient, using the smallest quantity of water, but such pills are best preserved by coating with sugar.

(5) Will a deliquescent mixture in pill form keep in damp or rainy weather and in a warm climate without a coating?

Not very well.

(6) I am aware that I can fill this prescription under certain circumstances but I do not make "pills;" I get "boluses" and they last only a short time with powdered licorice in damp or rainy weather.

Very true, if you use an excipient containing water or one which will allow the iron salt to absorb moisture. The surest way is to give the pills a protective coating.

(7) If I should use powdered gum arabic would it form a more compatible compound?

Not necessarily, but the use of gum arabic is not required.

(8) If I should use too great an amount of powdered licorice, which has a laxative effect, would it be filling the prescription correctly?

Powdered licorice is so mildly laxative that any quantity you might use in making pills would cut no figure whatever. It is demulcent in its action, and its principal use in the preparation of pills is to give them the proper consistence and also to prevent them from cohering.

(9) Is this prescription a practical one which may be carried in the pocket in damp weather, or in a trunk when traveling?

See answers to Nos. 5 and 6.

Your other inquiries are all answered in the dispensatories. In the official scale salts of iron the Pharmacopœia sets a limit on the content of ammonia and for the preparation of pills of these salts the so-called "soluble" varieties should be avoided. Iron and strychnine citrate, as stated above, is always best administered in pill form, for a solution of the salt upon standing invariably deposits a sediment which is likely to contain a large percentage of strychnine. Pills of ferrous iodide are official, and this form of administering ferrous iodide is preferred by many practitioners.

PHARMACY.

THE HYGIENE OF HIGH ALTITUDES.—It is well known that the chemical composition of the atmosphere differs but little, if at all, wherever the sample be taken; whether it be on the high Alps or at the surface of the sea, the relation of oxygen to nitrogen and other constituents is the same. The favorable effects, therefore, of a change of air are not to be explained by any difference in the proportion of its gaseous constituents. One important difference, however, is the bacteriological one. The air of high altitudes contains no microbes and is, in fact, sterile, while near the ground and some one hundred feet above it they are abundant. In the air of towns and crowded places not only does the microbial impurity increase, but other impurities, such as the products of combustion of coal, accrue also. Several investigators have found traces of hydrogen and certain hydrocarbons in the air, and especially in the air of pine, oak and birch forests. It is to these bodies, doubtless consisting of traces of essential oil, to which the curative effects of certain health resorts are ascribed. Thus the locality of a fir forest is said to give relief in diseases of the respiratory tract. But all the same these traces of essential oils and aromatic products must be counted, strictly speaking, as impurities since they are not apparently necessary constituents of the air. As recent analyses have shown, these bodies tend to disappear in the air as a higher altitude is reached until they disappear altogether. It would seem, therefore, that microbes, hydrocarbons and entities other than oxygen and nitrogen, and perhaps we should add argon, are only incidental to the

neighborhood of human industry, animal life, damp and vegetation.—(Lancet).

CULTIVATION OF NUTMEGS.—In the annual report of the Jamaica Botanic Garden for 1900 (Ph. Journ.) it is stated that one T. J. Harris has succeeded in grafting female nutmegs on strong, healthy seedlings, so that the planter can now ensure all his trees bearing fruit. Hitherto nutmeg cultivation has not been popular in the island because, after having waited six or seven years for the tree to flower, the planter found that often two-thirds of them were male trees. The plants to be grafted are used ten months after sowing, while still in bamboos. The strongest shoots of a fertile plant are then bent down to the young plants, placed on stages, and the surfaces of the two stems, of about the same diameter, sliced to the cambium, placed in contact and the stems tied round together with raphia or bast until complete union has taken place. The practical details are given in the report. Our contemporary is of the opinion that this discovery should increase the quantity of nutmegs grown, especially as the United States use a very large quantity of this spice.

"TOMMY ATKINS" DIARRHŒA MIXTURE.—The following formula is for a diarrhœa mixture used in the hospital camps of Lord Roberts' army in the Transvaal: Oil of cajuput, oil of anise, oil of juniper, of each 1½ drams; ether, ½ ounce; Haller's acid elixir (N. F.), ¼ ounce; tincture of cinnamon, enough to make 2 ounces. Dose, from 15 to 30 minims administered at intervals of 2 to 3 hours.—(Pacific Med. Jour.).

STERILIZATION OF THE NAIL BRUSH.—Winternitz (Berliner Klin. Woch.) finds that almost all nail brushes, even as they come from the maker, are contaminated with germs, and to a much greater extent, of course, after they have been in use. To sterilize them he recommends boiling for ten minutes in a one per cent. solution of caustic soda.

PROPOLISIN is a disinfectant and antiseptic, prepared by the dry distillation of beeswax, and occurs as a reddish brown, somewhat opalescent fluid. It is probable this product is identical with the well known "oleum ceræ."—(Phar. Zeit.).

FOUL BREATH.—L'Arte medica (N. Y. Med. Jour.) gives the following: Saccharin, 15 grams; bicarbonate of sodium, 15 grams; salicylic acid, 60 grams; alcohol, 3,000 grams. Mix. A few drops in a tumblerful of water.

A RIVAL TO CELLULOID.

The British Journal of Photography calls attention to the fact that nitrated cellulose has long held the field as the basis of a flexible glass, as celluloid has been called, but there sees a probability that before long Messrs. Cross & Bevan's invention, aceto-cellulose, may be found a formidable rival, for it possesses many advantages over the pyroxylin, which, in combination with camphor, is the main constituent of celluloid. . . . Perhaps the most conspicuous quality of the acetate compared with the nitrate is its non-inflammability—it burns very imperfectly. It differs further from the latter in that it is insoluble in methylic and ethylic alcohols, acetates of amyl and ethyl, acetone and ether, but is soluble in benzoate of ethyl, chloroform, epichlorhydrine, acetic anhydride, glacial acetic acid and nitro-benzene, the solution in the latter becoming a solid, completely transparent jelly. The solution in the other named liquids can be diluted with acetone without precipitation taking place. The aceto-cellulose resists most reagents in a remarkable manner. Dilute acids and alkaline dyes destroy nitro-cellulose; but, with the exception of dilute nitric acid, do not act upon the new substance, in some cases even when boiling. It is probable, too, that, used as a basis for films, it will be impossible to dry them quickly by the aid of alcohol in the usual manner, a process quite out of the question with celluloid, as any one knows to his sorrow who has tried it.

News and Trade Department.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

China.

The Powers are not taking kindly to Russia's proposal to evacuate Peking, and it seems probable that a considerable garrison will be kept there until the troubles are over.

It is reported that 2,000 Boxers have been killed or wounded in conflicts with the troops of General Yuan Shi Kai, Military Governor of Shan-Tung.

The Russian War Office is hurriedly preparing to provide its army at Manchuria with kits, showing that an extensive winter campaign is expected.

The Dowager Empress, the Emperor and the rest of the Chinese court are at Singan, about 500 miles southwest of Peking, in Shensi province. It is said that they intend to establish a new capital there, where they will be free from foreign interference, and will not return to Peking.

Reports of looting, outrage and inhuman atrocities on the part of the foreign troops in China, particularly the Russians, continue to come in. None of the American troops have taken part in these barbarities.

General Gaselee reports that the allied forces marched through the Forbidden City on Aug. 28.

The reported edict of the Chinese Government appointing Li Hung Chang, Yung Lu, Hau Tung and Prince Ching as commissioners to negotiate peace has not been communicated to the State Department, nor, so far as can be learned, have the Chinese authorities at Washington received such an edict.

A despatch to Berlin says that 2,000 additional Italian troops have reached Taku.

Emperor William has conferred the Order of the Red Eagle on Admiral Bendemann, commanding the German squadron in the Far East, for services rendered in China.

The War Department has received a despatch from General Chaffee describing the military situation in Peking as satisfactory.

The Hong Kong correspondent of the London Daily Mail says the Canton officials have been ordered to transmit all possible revenue to the North for war expenses, and that all pay of officials from the Viceroy downwards has been stopped during hostilities.

According to a despatch from Tien-Tsin to the London Standard, an epidemic of suicides has broken out among the Chinese in Peking, where entire families are hanging themselves.

South Africa.

The British have taken Lydenburg, the Boer stronghold, and the Boers are retiring to Krugerspost, twenty miles northward. The Boer leader Theron was killed in the fight at Lydenburg.

Boer raiders are busy in the Orange River Colony, and have captured a British supply train; General Botha has checked the columns of General Buller in the Lydenburg Mountains; the Boers have raised the siege of Ladybrand.

Lord Roberts has issued a proclamation annexing the South African Republic to the Queen's dominions.

The Philippines.

Thirty-one soldiers, fever stricken or wounded in the Philippines, were discharged from the general hospital at the Presidio last week and given transportation to Washington. Most of the complaints are incurable, and the men have applied for admission to the Soldiers' Home.

General Otis expects that with the defeat of Bryan in November the rebellion in the Philippines will collapse. He says the people are perceptibly improving in their attitude towards the Government. Aguinaldo, with a small band of followers, is in hiding in the mountains and is kept informed of the progress of events in this country.

A reign of terror exists in Southern Luzon outside the garrison towns, rebels and ladrones wreaking vengeance on natives who show friendliness to the Americans.

Other Foreign News.

Advices from Guatemala show restlessness and paralysis of business on account of the expected breaking out of a revolution. President Cabreraz's position is admitted to be insecure.

The weather in India is promising for crops. Excellent rain has fallen in all the famine tracts, and the winter sowings are practically assured.

The Stellar Polare, with the Duke of Abruzzi's polar expedition on board, returned last week. The expedition reached a point in latitude 86.33 degrees north, thus penetrating further north than Dr. Nansen's record; three members of the expedition perished.

An outbreak of the plague was feared in Glasgow last week, where 103 cases were under observation, many of them undoubtedly genuine; but it is now believed that the health authorities have the situation well in hand.

The coal famine in Germany is becoming very serious, and a demand is being made that the exportation of coal be prohibited.

DOMESTIC.

Politics.

Controller Coler of New York seems to be losing ground in his fight for the Democratic nomination for Governor. Mr. Croker's influence will probably give the nomination to some friend of the Tammany organization.

The New York State Republicans last week nominated B. B. Odell for Governor. The Utah Democrats nominated James H. Moyle; the Montana Republicans nominated David S. Folsom; the Utah Republicans nominated Heber M. Wells.

Senator Wellington (Rep.), of Maryland, and ex-secretaries Olney and Wilson, of President Cleveland's cabinet came out for Bryan last week, on account of his anti-expansion policy.

William W. Stickney (Rep.), was elected Governor of Vermont last week by about 30,000 majority, and Jefferson Davis (Dem.), was elected Governor of Arkansas by about 40,000 majority. John F. Hill (Rep.), was elected Governor of Maine last Monday.

Other Domestic News.

Thirteen persons were killed in a railroad wreck at Hatfield, Pa., last week.

Immense forest fires are raging in Wyoming.

Arthur Sewall, the ship builder of Bath, Maine, and Democratic candidate for vice-president in 1896, died on Wednesday of last week.

The American Steel and Wire Company has under consideration plans for the construction of an immense bessemer plant at Waukegan, Illinois, with a capacity of 1,000 tons a day, and to cost \$3,000,000.

Nineteen arrests have been made at Akron, Ohio, of persons alleged to have taken part in the recent riot in that city. A special Grand Jury will probably take up the cases.

A serious outbreak of yellow fever in Havana is confined to a large extent to the Spanish colony; eighty-five cases are under observation.

President McKinley has been obliged owing to pressing public duties to decline an invitation to attend the presentation of bronze tablets to the battle-ships Kearsarge and Alabama at Portsmouth, New Hampshire, on the 18th instant.

The annual meeting of the National Municipal League and the seventh National Conference for good city government will be held at Milwaukee, September 19. Small riots between the whites and blacks continued last week on the West Side in New York.

The census bureau announces the following city population: Lancaster, Penn., 41,459; Bayonne, N. J., 32,722; Albany, N. Y., 94,151; Dayton, O., 85,333; Canton, O., 30,667; Akron, O., 42,728; Birmingham Ala., 38,415; Salt Lake City, 33,531; Richmond, Virginia, 35,050; Charleston, South Carolina, 35,807; Hartford, Conn., 79,840; Fort Wayne, Ind., 45,117; Scranton, 102,026; York, 33,654; Portland, Me., 50,145; Yonkers, 47,931; Trenton, N. J., 73,307; Atlantic City, N. J., 27,828; Nashville, Tenn., 81,865; Mobile, Ala., 38,463; Galveston, Texas, 37,789; Peoria, Ill., 56,100, and Lincoln, Neb., 40,169. The latter city shows a decrease of 14,985.

—The Board of Pharmacy of Virginia will meet in Richmond the fourth Tuesday in October. Parties desiring to appear for examination will communicate with the secretary, E. R. Beckwith, Petersburg, Va., not later than October 10.

THE DRUG NEWS.

New York and Vicinity.

BUSINESS EDUCATION PART OF PHARMACY COURSE.

As was announced in the Era a few weeks ago, a commercial course is to be included in the regular line of study at the New York College of Pharmacy at the 1904 session. While the idea has not been finally adopted, the faculty preferring to await the results obtained by its practice in the Philadelphia College of Pharmacy and Northwestern College of Pharmacy, it is practically assured, as it is believed such a departure in the education of pharmacists is necessary. Prof. George C. Diekman, of the New York College of Pharmacy, introduced the idea at a meeting of the faculty held some time ago, and he is "booming" it. There was not sufficient time to prepare the proper sort of course for the current term, as the college work is mapped out a year ahead, and there was no place left to squeeze the commercial course in the regular program. It was deemed impossible to give the course at night as many of the students are employed in stores. Prof. Diekman believes that the course should be of the practical sort, including just such matters as come up in the daily routine of the druggist. "He ought to have an idea about checks, he ought to understand leases, chattel mortgages, notes, profit and loss, interest and a great many other things. Of course it is not essential that he should understand shorthand or typewriting, but his business education should certainly be complete. Pharmacists with this sort of knowledge will be in greater demand; it will also tend to draw them closer in business affairs, and I believe social relations would be effected to a better advantage." Prof. Diekman will consult with the heads of a number of business colleges during the coming months with a view to getting a prescription for a business education that will help the embryo pharmacists who mature in the New York College of Pharmacy.

BUSINESS IN THE WEST.

R. E. Queen, General Manager of the California Fig Syrup Company, of San Francisco, Cal., was in this city last week prior to sailing Saturday on the Campania with his wife, mother and sister for Europe, where he will remain until after the first of the year. Mr. Queen said that business on the Pacific Coast is in a highly prosperous condition, with a prospect of its continuance indefinitely. He said: "The condition of trade in the West at present is highly satisfactory. Despite the fact that this is a Presidential year the volume of business has been fully up to that of preceding years, and from my view point I believe the druggists are facing a season flush with new achievements. The outlook for fall could not be more encouraging. I am inclined to the belief that the time is coming when the East and West will be amalgamated in one giant of enterprise; that end is in sight by action already taken. The commercial interests of the West are more closely allied than ever before, and there is the satisfaction of knowing that the confidence of each in the other is unshaken."

ROBBERED HIS EMPLOYER.

E. Ruschke, a druggist at Seventh avenue and 137th street, is very anxious to know the whereabouts of a drug clerk employed by him recently, who left the city a short time ago taking with him \$50 of Mr. Ruschke's money. The clerk's name is I. Rutland, and he had no particular place of residence when he came to Mr. Ruschke. Being in need of work he was given a position which he kept for just thirty-six hours, when at noon, when all other employes were out, he calmly abstracted \$50 from the cash drawer and, locking up the store, took his leave and has not been heard of since.

CONTROL THE WORLD'S OUTPUT OF CAMPHOR.

A short time ago the firm of Samuel Samuels & Company, of London, which has contracts with the Japanese Government for the entire output of crude camphor from the Island of Formosa for five years, discovered that the Japs were marketing crude camphor that according to stipulation should not be sold outside of the Island of Japan. The firm protested and now the Japanese Government has agreed to include the entire product of its islands in the Samuels Company contract; this constitutes the camphor output of the world. The Island of Formosa, as is well known, gives 85 per cent. of the world's supply of crude camphor; the other 15 per cent. is made in Japan. Recently this 15 per cent. which was to have been reserved for domestic use was put on the market and as it was a violation of Samuels & Company's contract, the firm protested.

APOTHECARIES WHEEL TO PHILADELPHIA.

A large number of the members of the Apothecaries' Bicycle Club, whose "biking outings" during the summer have proved of such benefit, took a spin to Philadelphia on Thursday, Sept. 6, it being the "star" trip of the season. The start was made at 6.15 A. M. from the West Twenty-third street ferry, whence the wheelmen went to Elizabeth, N. J., by train and there took to their wheels. The stops on the way included Plainfield, Long Brook, Princeton and Trenton. At the latter place the druggists had chartered a steamer to take those who had become "weary" to Philadelphia. At the Quaker City the cyclists made their headquarters at Zeisse's Hotel, corner Ninth and Walnut streets, and here they stopped during Friday and Saturday, enjoying many of the excellent bicycle trips in and about Philadelphia. The return trip was made by train Sunday.

CROSHER IN VIEW AGAIN.

Henry P. Crosher, the noted drug swindler, and who has more judgments against him than most people have dollars, is again the principal in a judgment for debt. This time it is with John T. Milliken, whom Crosher owes \$95. Despite the repeated warnings and published stories of the crooked dealings of this scamp, now and then an unsuspecting victim is secured, but of course it is necessary that the person be unsuspecting," for a suspicion of Crosher would cause an investigation and then the deal would not be made. Crosher is located on Greenwich street, this city, and is still sending out his "kindly send me your list and oblige" letters all over the country. Although Crosher's letter-head sets forth that he is in the drug business, he does not hesitate to send to any manufacturer or dealer for lists.

FEAR STORM DAMAGED DRUGGISTS.

The news of the terrible devastation and loss of life caused by the immense tidal wave and accompanying storm which swept over Galveston, Texas, Saturday and Sunday, September 8 and 9, was received in this city with no little concern, as a large number of New York drug houses have customers in that section of the country. A member of the trade here said that the main part of the drug business of Galveston was located in about the center of the storm area and he was afraid that the loss of life and destruction of property would be great. Among the drug firms he named are J. J. Schott, C. J. Michaelis, Berger & Huebner, August Eysell, W. G. Jones' pharmacy, J. Smith Keene, F. G. Leinbach, Mrs. T. McGork, W. A. Schuchard and I. F. Orton. He was also of the opinion that the "Capt. Pix" reported as being drowned, was a bookkeeper employed by J. J. Schott.

NOTES.

—While Charity Lodge, F. and A. M., of this city, is not a pharmaceutical organization, it has many members who are pharmacists, and when the lodge held its family reunion and outing at Donnelly's Pleasure Park, College Point, Wednesday, September 5, a large number of these was present, especially from the Alumni Association of the New York College of Pharmacy. The feature of the day was the ball game between teams from Charity Lodge and the New York College of Pharmacy Alumni, and the latter crowd won by a score of 10 to 2. George E. Schweinfurth, won first prize, a gold medal, in the men's bowling contest, and Mrs. George C. Diekman, won the ladies bowling prize. Among the pharmaceutical celebrities present were: Prof. A. H. Elliot, Prof. Geo. C. Diekman and wife, Assistant Secretary O. J. Griffin and wife, Nelson S. Kirk, Eugene Lohr, Dr. Chas. H. Bjorkwall, Peter J. Erkgott, President Chas. S. Erb, H. B. Ferguson.

—Judgment for \$20,294 has been obtained by Mary J. Phillips against the Hart Drug Company, located at 114 West Thirty-second street, for money loaned. The Hart Drug Company deals in patent medicines and sells its goods through mail orders. Its managers claim the Egyptian Drug Company as a part of the Hart Company. The Egyptian people recently had a fraud order issued against them by the Post Office authorities. The company advertised Egyptian Tea, and agreed to give a set of furniture to every purchaser. When money was sent the furniture was found to be a miniature set, and the price was many times in excess of its value.

—Among the druggists who were in the city last week were: J. F. Whitney, Boston; W. H. Averill, Frankfort, Ky.; C. W. Sparks, Bristol, R. I.; T. Troupe, Springfield, O.; George B. Burns, Montrose, Pa.; H. L. McCoy, Smithport, Pa.; E. Du Bois, Bluffton, S. C.; C. F. Hepburn, Plainfield, N. J.; Fred Schneider, of Schneider & Irving, Troy, N. Y.; William Wilson, Jr., Amsterdam, N. Y.; Mr. Burke, of Marsh & Burke, Princeton, N. J.; Dr. Palmer, Elmira, N. Y.; Louis W. Brown, Rahway, N. J., and Mr. Arrington, of Curry & Arrington, Rome, Ga.

—The Youthful Tint Manufacturing Company, manufacturers of perfumes at Rochester, came near falling into the clutches of the wily swindler, Henry P. Crosher, of this city, recently. Crosher had the deal well arranged when a member of the Youthful Tint Company in reading the Era saw a notice of one of Crosher's swindles and immediately cancelled his order.

—Edward Pfaaf, a well-known German druggist, located for many years at Thirty-eighth street and Eighth avenue, where M. Arnemann is now located, died Friday, September 7. He was about sixty-five years of age and had been in business, up to a short time ago, for thirty years.

—The firm of Stillman & Hall, Limited, of this city, has incorporated under the laws of New York State as manufacturing chemists. The capital is given at \$25,000 and the incorporators are J. H. Servis, of this city, and F. C. Rowley and Alberto Dal Molin, of Brooklyn.

—William Montgomery, of Twenty-third street and Tenth avenue, is making an addition to his already large store at that corner. The improvements will include a thorough renovation and refitting and when completed the store will present a handsome appearance.

—The opening of the New York College of Pharmacy is scheduled for Oct. 1. The outlook is excellent for a successful year. The usual "cleaning up" has been made in the laboratories, and everything is in shape to meet the demands of a busy season.

—George A. Kelly, of the George A. Kelly Company, wholesalers of Pittsburg, Pa., was in the city last week calling on old friends in the trade. Mr. Kelly was formerly President of the National Wholesale Druggists' Association.

—The amount of drugs, chemicals, etc., sent from this port for the week ending Sept. 4 reached \$65,784. This is a material increase over preceding weeks. The largest shipments went to Southampton, reaching \$10,389.

—T. McGarvey, formerly clerk in Chumar's Opera Pharmacy, Twenty-third street and Eighth avenue, died at his home in Toronto, Canada, Thursday, September 6, after a brief illness with consumption.

—Daniel J. Fry, a well-known druggist of Salem, Ore., called on the trade last week. Mr. Fry was accompanied by his wife. They had just returned from a trip to Europe.

—Mr. Rosenthal, with the Yahr & Lange Drug Company, successors to the Charles Baumbach Company, wholesale druggists of Milwaukee, Wis., visited the trade last week.

—Mr. Butler, in the store of Caswell, Massey & Co., at Seventy-seventh street and Columbus avenue, has returned from a pleasant vacation in the Berkshire Hills.

—W. H. Ludlam, 184th street and Jerome avenue, has the sympathy of his friends in the death of his three-year-old daughter, Louise, which occurred recently.

—H. Gennen, formerly with Caswell, Massey & Co.'s Twenty-fifth street store, is now in Chumar's Opera Pharmacy, Twenty-third street and Eighth avenue.

—H. McK. Kirkland and Irving McKesson, of the firm of McKesson & Robbins, are on a shooting trip in Canada. It is expected they will return with several deer.

—A. Berman, formerly with N. V. Cody at Eighty-fourth street and Park avenue, has been spending a few weeks at Kenoza Lake, Sullivan County, N. Y.

—The next examination by the Board of Pharmacy will be held Sept. 17 at the Brooklyn College of Pharmacy, when a large number of candidates is expected.

—Charles H. White, Fifty-third street and Madison avenue, spent Labor Day blue fishing at Rocky Cove, L. I. He reported an excellent catch.

—W. O. Luttman, druggist, Eighty-first street and Columbus avenue, is receiving congratulations over the arrival of a baby girl in his family.

—C. B. Zaorskie entertained C. E. Pickett, of San Francisco, and Thomas Van Loan, of The Hague, Holland, at the Drug Trade Club last week.

—Joseph Bockar, of Bockar & Mitchell, at 270 Stanton street, has recently purchased his partner's interest and will continue the business alone.

—G. L. Kappes, manager for John A. Proben, Seventy-fourth street and Amsterdam avenue, is on a vacation at Liberty Falls, Sullivan County.

—Clarence G. Stone, Eastern agent for Mellins' Food, entertained F. J. Evans and W. S. Evans, of Toronto, at the Drug Trade Club recently.

—Otto Kleg, manager at L. F. Weismann's store, 106th street and Broadway, is on a vacation of two weeks at the Delaware Water Gap.

—James A. Hetherington, Forty-second street and Vanderbilt avenue, has returned after three weeks at Lake Placid, Adirondacks.

—Robert Baldwin, manager of J. F. Cummerford's store at 105th street and Columbus avenue, has returned from a ten days' vacation.

—John Oehler, head of the City Department in McKesson & Robbins, has returned from a three months' visit in Europe.

—A. Parman, manager for Charles Kunz, 104th street and Columbus avenue, is spending his vacation at the seashore.

—Charles Beck, one of the assistants to Mr. Simons in the city department of McKesson & Robbins, is away on vacation.

—H. A. Cassebeer, Seventy-second street and Columbus avenue, returned recently from a two month's visit in Europe.

—Miss Bord, cashier for J. N. Hegeman & Co., Broadway and Eleventh street, is on a visit to the seaside resorts.

—Wm. P. Zemplener, formerly of Hazzard, Hazzard & Co., has opened a new store at 142nd street and Hamilton Place.

—Eugene J. Ward, formerly at Perry's Pharmacy, has been enjoying the summer months at Budd's Lake, N. J.

—W. J. Dunham, one of the book-keeping force of the local office of Parke, Davis & Co., has become a benedict.

—O. H. Jadwin, of the firm of O. H. Jadwin & Company, has returned from a visit of several weeks in Chicago.

—Julius Tausig has accepted a position with Goldwater's pharmacy at 149th street and Willis avenue.

—William Smith, manager for Vredenburg's pharmacy at New Brighton, is enjoying a vacation at Saratoga.

—George Ramsey, vice-president of Hegeman & Co., is sojourning at his former home in Toronto, Canada.

—The local office of the A. R. Bremer Co. has been moved from 52 Maiden Lane to 1 and 3 Ann street.

—Arthur Higginbotham, Ninety-second street and Columbus avenue, is back from the Maine woods.

—The wife of Otto Koekler, druggist, 19 Rivington street, died Tuesday, August 28.

—P. G. Tenfer has resigned his position with W. E. Dennis at Far Rockaway.

—S. Wassell will shortly open a new store at 102nd street and Broadway.

—S. H. Carragan, with Parke, Davis & Co., spent last week at Boston.

IN AND ABOUT BOSTON.

Druggists of Lynn Accused of Illegal Liquor Selling.

Boston, September 8.—Backed by temperance people organized for the purpose of suppressing illegal liquor selling by druggists, the police of Lynn have this week descended upon the drug stores of that city, which, so it now appears, have been closely watched of late by the agent of a temperance fund established to secure evidence against druggists in particular and others who offend the law in this respect.

All kinds of stories have been abroad regarding the way in which some of the Lynn druggists, including several of the largest and most respectable establishments, have been violating the provisions of the liquor law. Many stores were openly mentioned where liquor could be easily obtained and where facilities were afforded for drinking it right on the premises.

The police, acting on evidence secured through spotters, have summoned into court Joseph W. Colcord, who has one of the most prominent drug stores of Lynn, situated right in the heart of the business section of the city, to answer to the charge of maintaining a liquor nuisance. As Mr. Colcord is prominent in Lynn business circles, and, moreover, is a member of the Lynn School Board, the accusation against him naturally has caused considerable excitement. He intimates that he will put up a vigorous defence, and the result of the case will be watched with interest by the public. It is thought that he will bring to light certain motives which have influenced his prosecutors in bringing him into court.

There was a raid on the drug store of Gilman E. Thomas, on Essex street, which resulted in the seizure of a large quantity of contraband goods—contraband, since he has not the customary druggist's license this year. Liquors, including whiskey, several cases of beer, etc., were confiscated by the police. This is considered as ample evidence against him.

Important Decision in Favor of the Moxie Nerve Food Company.

Boston, September 8.—The Moxie Nerve Food Company, of this city, last month obtained a temporary injunction against a rival and imitator, and the United States Circuit Court has just made this a perpetual injunction and gives the Moxie Company the right to destroy all goods resembling their own so closely that an infringement is easily apparent. The court decrees that "No one else shall expose, offer for sale, sell or distribute any liquid for and as Moxie, or Moxie Nerve Food, manufactured by the complainant, the Moxie Nerve Food Company of New England; nor shall any one expose for sale, sell or distribute any liquid resembling the complainant's Moxie in bottles so resembling in appearance the Moxie bottles as to deceive or be liable to deceive purchasers thereof, whether buying by the bottle or by the glass." The company further has the court's permission to seize and destroy any imitations found anywhere.

A Daughter of the House of Ayer Married.

Boston, September 8.—On the evening of Labor Day, Miss Louisa Ayer, daughter of Frederick Ayer, of the well-known Ayer family of Lowell, and Mr. Donald Gordon, a lawyer of Cambridge, were married at Mr. Ayer's summer home, the Norman Williams estate at Little Boar's Head, N. H. The ceremony was performed by the father of the bridegroom, who for the last quarter of a century has been a resident of Japan. He received from Governor Rollins of New Hampshire special permission to officiate on this occasion. The maid of honor was Miss Louise Taylor, of Brookline, and the best man was Mr. Malcolm Churchill, of Andover. There were three bridesmaids, Miss Beatrice Ayer, of Boston, being one of them. The spacious mansion was elaborately decorated for the occasion and an orchestra enlivened the general festivity. Many guests were present from Lowell, Boston, New York and other places.

NOTES.

—Hon. John Shaw, of Boston, president of the New England Chemical Association, has recently been in Washington, where he had successful conferences with the Treasury Department officials relative to the classification of various commodities handled by the drug and chemical trades. There have been many misunderstandings as to the proper duties assessed upon articles under the drug and chemical schedule of the Dingley tariff bill, and Mr. Shaw's expert knowledge has contributed in no small degree to bring about an equitable adjustment in several such cases. Seen since his return, he expressed satisfaction at the outcome of his mission and stated that in all probability the particular questions involved will not again trouble the domestic manufacturer while the present law is in effect.

—Trouble which Dr. Joseph Petluck, an apothecary having a shop in Leverett street, in the West End district of this city, had recently with a customer resulted in the wielder of the pestle and mortar being summoned into court and fined \$15. From this he appealed for a further hearing. It appears that the customer objected to some salve which he purchased and which it was claimed was not like some salve previously bought at this store. Before he realized this possibility, however, the customer had paid fifty cents for his purchase and he then demanded a return of his money. This was refused by the druggist, hence the little "misunderstanding," with the last act in court.

—Josiah Bryant, for a long time a valued senior salesman for Geo. C. Goodwin & Co., and who lately has been occupying a like position with the Eastern Drug Company, has been quite ill at his home in Roxbury, for some weeks. Overwork and too close application to business are stated to be the cause of his breaking down. Mr. Bryant is favorably known and liked by the drug trade throughout New England and far beyond its confines. His present empty chair at the Eastern Drug Company's plant is a cause for deep regret on the part of everyone connected with this place.

—The meanest man of the season appears to have been found right here in Boston. He was well-dressed and seemed to be well-to-do, as he entered a down-town drug store and asked for a glass of plain soda, paying the customary five cents therefor. Then finding that he was able to drink only half the soda he looked at the remainder and said, "Hanged if you'll get the benefit of this," and went to the door and threw the soda into the street. From his own mean view point possibly he thought the druggist would turn the soda back into the fountain.

—Some doubt regarding the cause of the death last week of Mrs. Ring, wife of Frank Ring, a clerk in the Harvard Square drug store at Cambridge, is to lead to an investigation. Mrs. Ring died the day after she reached the Cambridge Hospital, possibly from poisoning. She and her husband always lived amicably and as she had no reason for taking her own life, there is a mystery behind her death.

—William W. Cutler, formerly of Cutler Bros. & Co., and now of the Eastern Drug Company, has been spending the summer season at Magnolia, the "Newport of

Massachusetts," on the North Shore, his family being with him. They have been staying at the Oceanside Hotel at that place, where his father-in-law, N. J. Rust, who is well known to the drug trade, also has been with his family.

—Walter Baker, a clerk at the drug store of A. G. and J. E. Coleman, Dorchester, has just returned from a vacation pleasantly spent at East Winthrop, Me. His brother, Harry Baker, who has been serving as an extra clerk at this same store during the past summer, goes back to New York this fall to continue there his studies in college.

—L. C. Bentley, a druggist's clerk at Hyannis, recently met with an accident and, as he believed in and carried accident insurance, he has received damages to the amount of about \$15 for incapacity for a short time.

—The week's exports from the Port of Boston include drugs and chemicals to the amount of \$6,852; hops, \$175; india rubber manufactures, \$3,204; tobacco, \$1,328; wax, \$234; spirits, \$6,674.

—Alfred E. Packard, a popular clerk at Packard's pharmacy in the East Boston district, has returned from a well-deserved vacation and is again attending to his usual duties.

—John Gaudreau, the Fall River pharmacist whose place is on Pleasant street in the Flint district of that city, has been confined to his home recently because of illness.

—Mark Carpenter, a clerk at Ball's drug store in Holyoke, has been in Boston spending about two weeks in the "Hub" in the enjoyment of his vacation.

—Napoleon Hammond has entered the service of A. J. Brunelle, the Fall River pharmacist whose store is in the Golbe Village part of that city.

PHILADELPHIA.

DEPARTMENT STORE DRUGS.

Philadelphia, September 8.—If all signs do not fail, and 1900 is said to be a good year for "signs," the dwellers in staid old Philadelphia will soon have the privilege of shopping for their prescriptions and patent medicines along with their underwear, bonnets, clothespins and kitchen furniture. Special parties for visiting the "department stores" to get the benefit of reductions and bargain prices on medicines may soon be anticipated, and the fair purchaser of a bonnet may cross a few aisles and purchase a guaranteed preparation that will make her complexion to match. It is almost too soon to hazard a guess as to what the physicians will do when they see their carefully thought orders for potent remedies in the hands of \$5 a week sales gentlemen, but, perhaps the department stores have a card up their sleeves for them too. We may look for "competent physicians at bargain rates" as well, these being provided to diagnose customers' ailments while they try on the latest creation in millinery, while later, no doubt, full-fledged hospitals and staff will be provided to care for the injured in bargain-counter rushes or for those who have taken the medicines prepared by the firm. This latter will no doubt be a good advertisement. "We will give free hospital service to all who purchase a ten-cent bottle of our own make of pills!"

We Quakers can soon expect to see full-page ads. of "Prescriptions compounded for less than the cost of the bottle!" "Special bargains in patent medicines for family use," and "Great Monday sale of baby foods bought at sheriff's sale," and so on, ad nauseam, with the allded announcement in flaring letters that "This firm is not in the druggists' trust!!!" The fun is going to come, however, when the "money refunded if goods are not satisfactory" guarantee gets in its work; then one can imagine the rush to return pills that did not regulate, if the firm will only stand by its printed slips.

This innovation, as stated in a recent issue of the "Era," is soon to be made by Lit Brothers, proprietors of the big department store at Eighth and Market streets. Their drug department is to be in the annex opening on Seventh street, a few doors above Market, and Mr. Heckler, now owner of a drug store at Sixth and Dickinson streets, is to be in charge. When the Era corres-

pondent visited the place yesterday afternoon most of the counters, shelves and fixtures were in place and seemed ready for putting in the stock. In spite of the firm's intention to have an "up-to-date" drug store, the fixtures are far inferior to those of dozens of drug stores in the city, both in style and arrangement, the work seems of the cheapest. While the firm states that they do not intend to take up the prescription business, it is difficult to learn anything definite, the whole affair is shrouded in more or less mystery, but bearing this statement out, no arrangement for a prescription counter could be seen. Mr. Heckler, the manager to be, was not in, but the statement was made that this gentleman was in entire charge of the purchasing of supplies, and that he was to be the responsible head of the department.

This new project of Lit Brothers is meeting with earnest opposition from the retail trade of the city. At a meeting of the Philadelphia Association of Retail Druggists yesterday, the question was taken up and discussed at length, a committee being appointed to wait on Messrs. Lit to influence them to give up the idea before they had gone to great expense in fitting up the store and buying stock.

This association, composed of 500 of the leading druggists of Philadelphia, took a firm stand in the matter, going on record as opposing the innovation not only because of the demoralization of trade likely to follow, but also because of the danger to life and health coming from the dealing in potent remedies by those who have not been trained to such a career. As there is yet a hope that Lit Brothers may be persuaded to reconsider their action, further steps to be taken by the retail trade will depend upon what that firm does. Leading members of the P. A. R. D. seemed to think that the matter was one in which the National Association might rightfully be expected to aid the local association, and, if the worst comes, there certainly is going to be a lively time in local drug circles.

Considerable feeling was aroused among the retailers by a rumor that two of the leading wholesale firms of the city, Smith, Kline & French and Asschenbach & Miller, had accepted large orders from Lit Bros., and would supply them with stock. On investigation, the rumor was found to be entirely false; the latter firm declaring that they had not received an order, while the former not only denied the receipt of this, but positively affirmed that they would not supply Lit Bros. if an order was sent to them from that firm. As illustrating the stand taken by the wholesale trade of Philadelphia in this matter, a letter of Smith, Kline & French to the President of the P. A. R. D. is given in full.

Philadelphia, Pa., Sept. 7, 1900.
Mr. Wm. McIntyre, President,
Philadelphia Retail Druggists' Association.

Dear Sir:—

Information has been brought to our notice this morning to the effect that some one has maliciously started a rumor that we have in hand the order for the drug department which Lit Bros. are reported to be about opening, and are simply waiting the time when their room is in readiness, to make delivery. Since the report that Lit Bros. proposed opening a drug store in their department store has been brought to our attention, we have left no stone unturned, to do all in our power to give information to the retail druggists, to, if possible, stop this innovation which can only result in further demoralizing the business, already very unprofitable. Under date of September 4th, Mr. French, our vice-president, wrote them as follows:

Messrs. Lit Bros.,
Eighth and Market streets:
Dear Sirs:—

You have occasionally favored us in the past with orders for soap and a few sundries, which orders we very much appreciated and have been glad to fill. We understand, however, that you have now added to your general store a drug department. This, in our opinion, is inimical to the public interest, as the dispensing of medicines, affecting life and death, should be confined to stores carried on for that especial purpose. Under these circumstances we should not feel at liberty to fill any further orders from you.

We remain, etc., etc.,
It seems scarcely necessary for us to deny that we have received or accepted any order from Lit Bros., or that we should accept such an order if tendered to us, but as the report seems to have been accepted in some quarters, we take the liberty of making this statement as emphatically as we can for the information of your associates who have accepted it.

Signed,

SMITH, KLINE & FRENCH CO.

M. N. Kline.

In an interview with Mr. Mahlon Kline, of this firm, this gentleman stated emphatically that both personally and as a member of Smith, Kline & French Co., he was opposed to the scheme of Lit Brothers, and that as far as his firm could control their goods, none should reach a department store. He also stated that he would use his influence to line up the wholesale trade on the side of the retail druggists.

It is evident that Lit Brothers are going to have some difficulty in getting supplies, if the wholesalers will only stand by the position taken by these two leading firms, and only weakness on the part of the retailers will cause failure in the attempt to stop this threatened entry of the department store into the legitimate drug business.

NOTES.

Some little alarm was felt in local drug circles on account of the lateness of the Ocean City train one day this week, but all fear vanished when it was learned that three of Philadelphia's leading druggists were the cause thereof. It seems that Messrs. Benner, of Benner & Pennypacker; D. F. Shull, of Market street, and J. C. Perry, of Lancaster avenue, had somehow taken this train, and the cause of the delay was the discussion of raising prices on insect powder at the seashore, which, of course, could not be settled in the ordinary running time of the train.

—Fred. Davis, cashier of Smith, Kline & French, has stopped piling up the cash long enough to join his wife in Paris, and after taking in the great Exposition will return home by way of London, making a month's trip of it.

—Chas. Leedom, of Filbert street, is a very busy man at present; his head clerk has joined the noble army of married men and is now on his honeymoon. Here's hoping that he will not find the honey strained.

—W. J. Jenks, first vice-president of the Philadelphia College of Pharmacy, has fully recovered from a severe attack of la grippe, contracted last winter, and is now renewing his youth at the sea shore.

—The family of W. A. Rumsey, the financier of the P. A. R. D., has domiciled his family in West Philadelphia, at least, "domiciled" is the phrase reported, after a summer at Ocean Grove.

—The store at Sixteenth and McKean streets formerly occupied by Mr. Shock, has been recently refitted and opened as an up-to-date drug store by S. M. Benton.

—N. O. Harris, of Sixth and Pine streets, has returned from his sojourn at the seashore, where, it is rumored, he made some marvellous catches of crabs and fish.

—Mr. Smith, late manager for Dr. Holland, 600 Gray's Ferry avenue, is to open a store for himself, located about three squares from that of his former employer.

—Mr. Walcott, representative of the Welch Grape Juice Co., intends visiting Detroit during the sessions of the National Convention.

—Frank Morse has located in the northwestern section of the city, near Thirtieth and York streets, and has opened for business.

PITTSBURG.

Western Pennsylvania Retail Druggists' Association.

Pittsburg, Pa., Sept. 8.—On Tuesday next, Sept. 11, quite a party of Association members, chaperoned by Secretary E. C. Garber, will leave for the N. A. R. D. meeting at Detroit. The party leaves on special cars attached to the Cleveland flyer at 6 p. m. The Pittsburg headquarters will be at the Russell House. The delegates to the convention are B. E. Pritchard, H. J. Siegfried and J. R. Thompson. Those members in attendance at the convention are: H. W. Heckel, S. E. Zang, J. H. Rising, A. W. Boggs, Mr. Duncan, Dr. Reddick, Charles Graff and Mrs. Graff, J. A. Faessel, W. J. Forrest, V. B. Trouth, W. B. Chambers, B. E. Pritchard, J. A. Frank, P. P. Knapp, H. A. Spilker, P. L. Jones, Cyrus Evans, R. J. Hardy, H. J. Siegfried, Richard Mierzwa, W. P. Knk, John C. Smith, L. B. Hughes, W. S. Beach and family; H. Wurzell and Mrs. Wurzell, Mrs. J. W. Stein-

berger, A. L. Johnson and Mrs. Johnson, Hayes Smith, accompanied by three physicians of this city; J. B. Porter, W. G. Markell and Mrs. Markell, O. N. Ochsenhirt, J. R. Thompson, B. P. Welsch and Charles Urbau, A. L. Johnson, the resident agent of Parke, Davis & Co., with an office in the Park Building, this city, accompanies the party, which will be entertained by this hospitable firm during the stay in Detroit.

NOTES.

—About the last of August, two detectives from Pittsburg went to Washington, Pa., and made a tour of the drug stores for the purpose of learning whether the requirements in regard to having managers and assistants were being lived up to. They were sent there by the State Pharmaceutical Examining Board. The detectives found that these requirements were lacking in six of the drug stores. The penalty is \$10 per day for each day that it can be shown that the law has been violated. A strict espionage has been placed over Pittsburg druggists on the same delinquency, and interesting developments are looked for at a very early date.

—Trouble is in store for the Butler County druggists. Quarter sessions Court opened on September 3, with thirty-seven cases on the criminal docket, most of which will go to the Grand Jury. D. H. Muller, R. A. MacCartney and Dr. Lysander Black, all of Butler, are to be arraigned for alleged violations of the liquor law.

—Charles Hamilton, a son of Druggist L. H. Hamilton, of Walnut and Bellefonte streets, East End, was drowned in the Allegheny River, at Sandy Creek on September 3. He was 22 years old, and single, and lived with his parents. He was employed as a clerk in his father's drug store.

—Dick McNally, the popular Herron avenue druggist, while not getting the nomination for Senator on the Democratic ticket, is delighted, anyway, as a young Senator arrived on the morning of September 6.

—The firm of B. P. Welsch & Co., corner of Irwin and Western avenues, Allegheny, was dissolved by mutual consent on July 2. The firm consisted of B. P. Welsch and A. G. Duncan.

—A. J. Kaercher purchased the drug store opposite his store in Federal street, Allegheny, recently owned by Mr. Holden. The Federal Drug Company is the name of the store.

—V. C. Knorr, of Braddock, Pa., sold out his store to T. R. Wirsing, of New Castle, on account of ill health. The store will now be known as the Wirsing Pharmacy.

—The next meeting of the State Pharmaceutical Examining Board will be held at the Bellefield School House, Pittsburg, on October 20.

—L. T. Greenfield purchased the A. J. Kaercher Drug Company's store at the corner of Fifth avenue and Neville street.

—J. W. Cheswright and Mrs. Cheswright have returned from Europe.

—Miller Cook has bought the Penn Avenue Pharmacy.

EXPLOSION AT THE MERRELL CHEMICAL CO.'S LABORATORY.

Cincinnati, September 8.—An explosion of terrific force occurred in the laboratory of the Wm. S. Merrell Chemical Co. in this city about two o'clock yesterday morning causing a loss estimated at \$15,000. The explosion, which took place in the drug room of the laboratory, is thought to have been due to a blaze started by spontaneous combustion. A section of thirty feet of the rear wall on the third floor of the building was blown outward, leaving a gap from the roof to the floor. The fire spread with considerable rapidity, but was soon confined to the drug room by the exertions of the firemen, many of whom were made quite ill by inhaling the fumes from the burning drugs. About \$25,000 worth of drugs were on the floor where the explosion occurred, some of which were saved by the salvage corps. The loss is covered by insurance.

BALTIMORE.

The Sale of Poisons.

Baltimore, September 7.—The promiscuous sale of poisons without a doctor's prescription or other precaution to prevent improper use has been brought impressively to the attention of all persons interested in such matters by the recent suicide of a wayward young girl, and was made the subject of discussion at the meeting of the Board of Pharmacy held on the 4th inst. It was the sentiment of the members that a stringent pharmacy law is urgently needed and should be passed without delay. Speaking of the prevailing looseness of method, Dr. David R. Millard, secretary of the board, said:

"There is now no law which restricts or safeguards the sale of poisons. A druggist may sell what he pleases. All reputable pharmacists, however, are very careful about dispensing poisons. There are some poisons, such as corrosive sublimate and carbolic acid, which are extensively used for household purposes, and laudanum is a popular remedy in general use. Careful druggists sell even these only to persons they know, and under no circumstances do they supply morphine without the prescription of a physician. Many druggists are undoubtedly not so scrupulous when it comes to making sales, and for this reason a stringent pharmacy law is needed. Maryland is the only State without such a law." The board decided to extend the time for registration this year to September 15. The names of all druggists not registered by this date will be turned over to the State's attorney. An examination of candidates for registration will be held on the 13th and 14th inst. J. Webb Foster is president of the board, the other members being Dr. W. Millard and E. E. Quandt. The examination will be held at the Maryland College of Pharmacy.

Drug Trade Bowlers Astir.

Baltimore, Sept. 8.—The Baltimore Drug Trade Bowling Club is preparing to resume its regular fall and winter campaign. A meeting of the organization has been called for next Tuesday at the Diamond, when officers will be elected and committees appointed to arrange a schedule of games between the different teams. From present indications the same number of houses will be represented as in 1899-1900. An active interest is being manifested by all the bowlers, and everything points to a successful year. Last season the team of James Baily & Son suggested a system of handicapping as a means of making the race more even and stimulating interest. The proposition failed of adoption at the time, but its advisability is generally recognized, and it will probably receive favorable consideration at the meeting next Tuesday. Quite likely the matter of entertaining the delegates to the annual meeting of the National Association, to take place here next spring, will also come up for consideration, so that the gathering will possess unusual importance for the drug trade bowlers.

NOTES.

—The question who will go from Baltimore to the meeting of the National Wholesale Druggists' Association at Chicago, on September 17-22, has not yet been settled. It is thought that three or four local houses will be represented. Harry Gilpin, of Gilpin, Langdon & Co., is expected to attend, extending the trip into a lengthy Western tour. The Winkelmänn & Brown Drug Company and Mnth Bros. & Co., will probably also have representatives present. Ernst Stoffregen, chief of the New York office of Sharp & Dohme, will be on hand for this widely known house.

—Joseph Lee, who has managed the drug store of the late Joseph Denton, at Park and North avenues, for the widow, has accepted a position as clerk in the drug store of W. M. Fouch, North avenue and Charles street.

—Among the out-of-town druggists in Baltimore last week were J. L. Thomas, clerk for J. S. C. Smith, McKeesport, Pa.; Mr. P. Springer, of Moser & Springer, Uniontown, Md., and A. P. Shambler, of Altoona, Pa.

—The pharmacy of the late C. M. J. Englar, at Eutaw place and McMeen street, conducted under the firm name of Englar & Co., has been sold to Downe & Naylor.

—Leeds & Peters, who succeed J. J. King in the proprietorship of the drug store at Columbia avenue and Barre street, opened last Saturday.

—Dr. E. E. Wolff, a well-known druggist of Cambridge, Md., has resumed active charge of affairs after a five weeks' siege of typhoid fever.

—Mr. Russell, for some time past a clerk in the store of Joseph B. Hall, will go with Downs Bros. in a similar capacity.

—Theodore Koldewey has opened a new pharmacy at the corner of Calhoun and Cumberland streets.

LOUISVILLE, KY.

PHARMACY BOARD AFTER SALOON MEDICINES.

Louisville, Ky., Sept. 7.—The State Board of Pharmacy has declared war upon the Louisville saloons which dispense alleged headache medicines over their counters, and a victory seems probable. For many years the saloons have carried stocks of preparations which they dispensed as headache medicines, but which the druggists claim were sold to clear the befuddled brains of their patrons. In recent years the sales of the saloon keepers have reached mammoth proportions, and the frequenters of the grog shops came to recognize the dispensers of liquors as druggists as well. Naturally the sales of the legitimate druggists have diminished accordingly, and finally the worm turned. The members of the Board of Pharmacy claim that the sale of these preparations by persons other than registered druggists violates Section 2631 of the Kentucky statutes, and intend to prosecute the violators of this section. The statute forbids any one not a licensed druggist from retailing any medicines. The Board had an inspector in Louisville several days ago, and he visited all the Louisville saloons. In many of them the display of patent medicines and preparations was truly imposing, but when threatened with arrest and conviction they readily agreed to dispense with that part of their business. A few, however, remained obdurate, and it may require a few arrests and convictions to convince them of the sincerity of the local druggists. The action in Louisville is similar to the reform recently introduced in other parts of the State. Since the visit of an inspector to Lexington, the saloon counters have been free from their accustomed stock of alleged headache medicines and the plan is giving universal satisfaction. A few of the Louisville saloon proprietors attempted to become humorous after the visit of the inspector and said that they were compelled to keep the preparations to offset the awful effects of the whiskey dispensed by the druggists.

NOTES.

—It is probable that Indiana will follow the lead of Kentucky and attempt to secure legislation against the promiscuous selling of cocaine. Word comes from Jeffersonville that there is a great deal of objection there to its sale and that some action will be attempted at the next meeting of the Legislature. The objection received great impetus on Monday, when one negro prisoner struck another while under the influence of the drug. Cocaine seems to have secured more of a foothold upon the residents of the Falls Cities, Louisville, New Albany and Jeffersonville than upon the residents of any other part of the country. It is the cause of more crime in Louisville than all of the other drugs and whiskey combined. It is especially popular among the negroes, and an alarming amount of the drug is sold on Saturday night and Sunday. Central Police Station is often crowded with the victims of the drug, and the stage which some of them have reached can be imagined when it is known that it is now rolled into cigarettes and smoked, the old manner of snuffing it having been tabooed because of its ineffectiveness. But it must not be imagined that its sale is confined to the lower classes. One prominent druggist, who caters to the rich and exclusive, said that many of his customers were becoming addicted to the drug and that he had many orders for the finer instruments.

—Elizabeth, the five-year old daughter of Dr. Philip Heuser, who until the last three months conducted a drug store at Twelfth and Delaware streets, was criminally assaulted by John Brooks, colored, at her home on Wednesday night. Brooks was employed as a coach-

man and general houseboy at the Heuser home, and his behavior was such as to gain only commendation. He never displayed any viciousness and his excellent conduct took the members of the family completely off their guard. Shortly after dark on Wednesday night, the negro enticed the little girl under the steps at the rear of the house and there attempted to carry out his plot. The maid screamed, and the negro became frightened. Dr. Heuser immediately notified the police, and special detectives were placed on the trail of the fiend. An attempt was made to keep the affair quiet, but in some manner it became public on Thursday, and it was then given the widest publicity. Dr. Heuser conducted the drug store at Twelfth and Delaware streets for many years and was one of the most popular druggists in the city. He sold his store about three months ago and began the practice of medicine. Brooks was later caught by the officers, and at the request of Dr. Heuser himself, who appealed to the mob, was put into safe keeping for trial.

—The arm of an electric fan broke from its fastening in the ceiling at Crecellus drug store, Tenth and Market streets, on Sunday morning and for the next minute a threshing machine could not have been more effective in the work of demolition. The fan was revolving at the rate of 1,500 revolutions a minute, and apparently its speed did not diminish when the current was cut off. After leaving its fastening the fan struck the wall on the opposite side of the store. One half dozen bottles were swept from the shelves and fell crashing into a show case beneath. John Wharlon, the clerk, was drawing a glass of soda when the fan buzzed by the side of his head. The fan, after cavorting all over the drug store finally brought up before the prescription counter, where it buzzed out its remaining strength. The store appeared as though it had been in the direct path of a cyclone.

—James Harvey was arrested in Indianapolis on Tuesday, and a quantity of cocaine was found in his possession. The drug led to his arrest. He was disposing of it to Indiana druggists at about half of the regular wholesale price and the great reduction aroused the suspicion of the druggists. The wholesale drug store of Neat-Richardson Co., on Main street, was robbed about one month ago and more than sixty-five ounces of cocaine were taken. The Indianapolis officers are of the belief that the drug which was found on Harvey was some of the stolen goods.

—George Williamson, a local drug clerk, will leave for New York the first of next week to accept a position with a New York drug firm.

—Harry Jacobs returned from Atlantic City on Monday. The summer outing evidently did him little good as he returned here ill.

—William White, one of the clerks at Scribner's pharmacy, is ill of typhoid fever.

DETROIT.

P. D. & Co. Entertain Veterinarians.

Detroit, Sept. 8.—The American Veterinary Medical Association, in session at Detroit during the closing week, spent a very entertaining day at Parke, Davis & Co.'s laboratories. After viewing the plant, an elaborate lunch was served on the lawn for the entire party. Among the visitors were Dr. Frothingham, of Harvard University, and Drs. Liautard and Huidekoper, editors of journals devoted to veterinary subjects. The veterinarians were a remarkably nice looking lot of men and proved to be very well educated and agreeable. "They were as well informed, good-looking and pleasant a set of men as it has ever been Parke, Davis & Co.'s pleasure to entertain," said one of the managers of the laboratory.

NOTES.

—A. J. Stewart, proprietor of the Tunnel Pharmacy, Port Huron, will close his store to take a position with the Trommer Extract of Malt Co., Fremont, Ohio.

—Druggist E. T. Webb, of Jackson, Mich., has returned from Pt. Aux Pines, where he has been managing his own hotel for the summer season.

—O. L. Boice, of Port Huron, has moved his drug stock into larger quarters on Pine Grove avenue. New fixtures make the place very attractive.

—Mrs. C. A. Fatin, widow of the druggist Fatin, at Almont, Mich., has sold out the stock to Will F. Hammond, of Clarkston.

CHICAGO.

Annual Soda Fountain Attack.

Chicago, Sept. 8.—Twice during the present week articles have appeared in the leading evening paper of Chicago calling attention to the alleged unsanitary condition of many soda water fountains. It was asserted that block tin as a container for syrups is unhealthy in that the acid in certain fruit juices corrodes the tin and forms a tin salt; that tin containers are out of the customer's sight, and, not being air tight, the contents are a prey to the bacteria supposed to exist in the "foul ice air," which exhales its fetid breath from the dark and mysterious receptacles where the ice is stored, producing things in the beverage of innocence that vie with the horned toad and the octopus in looks, and leave the Yellow Terror clear back at the quarter post in the race of sheer destructiveness to human life. Now all this is received, of course, with whoops of approval by persons who own or manufacture fountains having glass syrup containers "in plain view of the customer," and looked upon with scorn by those who own or make fountains of the other kind. In order that joy may be unconfined, and that druggists elsewhere may see just what sort of "goblin ones" 'll catch us if we don't watch out," your correspondent has carefully amputated a few choice sections of the articles in question, and presents the excised portions herewith:

When the ice cream soda girl flounces, half wearily, up to the fountain in some of the stores in Chicago and glances at the dainty little flavor cards she doesn't know that she's going to take a little insect with the concoction. Nor is she aware that there are a few things in the soda water that under a microscope in the laboratory of a chemist would look like forty-legged sea serpents, pollywogs and other things to shudder at. Girls usually don't go prying into the internal apparatus of the soda fountains or they wouldn't chase riotously to the fountains as they often do.

There are good and bad fountains and tidy and untidy operators. Some of the fountains look very handsome in their marble and silver-plated fittings, but the syrup cans and other features screened from the public are not so comely. Lots of them are never cleaned and the tin becomes slimy and corroded and even poisonous.

Fountains of the unsanitary kind are likely to come in for an overhauling by the State Food Commission. It is said that the Legislature, when next in session at Springfield, will be asked to add a clause to the present pure food laws which will clothe the commissioner and his inspectors with specific authority to condemn all fountains not possessing perfect sanitary syrup receptacles and other parts which are protected from the public gaze by the more or less decorative onyx or other material so freely used nowadays.

Louis A. Becker, a registered pharmacist, said:

I have seen the Daily News article relating to unsanitary soda water fountains. It is unfortunately too true. There is no question but that the public, when fully aware of prevailing conditions, will demand to see syrup containers in their plain view. Most fountains in the market are entirely wrong in their construction. I do not attach the blame to the owners of fountains or the dispensers of soda water, as they have been practically helpless up to within two or three years.

The lives of the hundreds of thousands of children that drink soda water only too eagerly, because it has color and sweetness, should be protected. Soda water, served from a sanitary fountain, made with pure fruit syrup and wholesome ice cream, is delightful and absolutely healthful. Every doctor would recommend its use if prepared and drawn under proper conditions. It is only fair to say that many prominent dispensers of soda water have adopted modern sanitary ideas. A few manufacturers not in the combination have patterned their fountains after sanitary plans. Heretofore merchants embarking in the soda water business have had little choice. They had to buy the old line fountain or go without. Syrups should be stored in glass bottles, free from metal contamination, and in a separate compartment, permitting of no absorption of foul ice air and in plain view of the public.

Mr. Becker is a prominent local manufacturer of fountains having glass syrup containers. Being also a registered pharmacist, lends disinterestedness to the above interview with the Daily News man.

The reporter for the daily paper found several dirty fountains and some syrups that Prof. Mark Delafontaine, the chemist who finds things in mysterious murder cases, pronounced to be harmful and nondescript.

Druggists whom your correspondent has seen seemed

not to be alarmed at the disclosures of unsanitary fountains. Louis K. Waldron said the article was an annual thing, and hadn't missed regular appearance for twenty years. It came rather late, however, to be effective this year. George R. Baker laughed and said he presumed the reporter needed something to write about. Mr. Ebert brought out a block tin syrup can which had been in continuous use for seventeen years as a container for pineapple fruit syrup, yet its interior was smooth and bright, and showed no trace of corrosion. He declared that any kind of syrup has only the remotest effect upon block tin. Only lemon, pineapple, raspberry and strawberry contains acids at all likely to work upon tin. These are the most popular of syrups, and are necessarily frequently changed. A due and reasonable regard to cleanliness will prevent any danger of germ contamination. If there is danger in "ice air," why have not the refrigerators of the country killed more people? If ice air is full of germs, then ice must have them. Why don't the health authorities get after the mixers of mint julep? Another thing, the ice compartments are always wet. Do wet germs float in the air? Do germs of any kind propagate in air which is nearly 32 degrees in temperature?

Your correspondent found on investigation that in the better class of soda fountains having block tin containers the containers are enclosed in air tight compartments, having no connection with the air surrounding the ice. These containers are themselves practically air tight when closed.

NOTES.

—The following biographical note appeared in one of the local morning papers, just previous to the recent G. A. R. encampment. It will be of interest to all Chicago druggists:

CAPTAIN JOHN HEILAND,

popular charter member of America Post, proprietor of "City Prescription Drug Store," title familiar at West Madison and Desplaines streets, northwest corner, ever since the great fire, easily the West Side's leading as well as oldest drug house, won epaulettes and distinction in the Seventy-second Illinois Volunteer Infantry, one of the bravest, most impetuous commands that swept down upon Dixie and annihilated its ordinance of secession. General Committeeman on the encampment, Captain Heiland has set forward its success with the same concentration of energy that has won him confessed business pre-eminence, but modestly refrains from laudation of the management lest it sound like self-praise. To all of Chicago's soldier guests this week, and especially to his old comrades in arms of the Seventy-second Illinois, Captain Heiland bids the most cordial welcome, wishing for them all and confidently prophesying the happiest national camp fire in the whole history of the G. A. R.

—De Witt, the well-known South Side salesman for the Fuller & Fuller Company, is telling this story on himself: Recently he went to Michigan, and on returning the boat was late and did not reach the pier until after the last car for La Grange, a suburb a short distance from Chicago, where De Witt lives, had gone. Not wishing to remain at a hotel down town, he telephoned to the car barns and asked if they would send down a car for him. An affirmative answer was given, and in due time a car came and De Witt was taken home. Inquiring for his bill on his arrival, he was informed that the use of the car would cost him \$10. De Witt thinks it would have been cheaper to put up at the Auditorium.

—As a sort of aftermath to the G. A. R. festivities here, Mr. Ebert tells the following tale: During the encampment a good and respectable looking woman and a lad of some 15 years entered the store and indicated that they wanted a drink at the soda fountain. The boy asked for vanilla ice cream, and the woman requested a bottle of beer. On being informed that Mr. Ebert neither kept nor sold beer, she seemed much surprised, saying that in the place from whence she came—some town in West Virginia—they had no saloons, but the people got beer from the drug stores, not because it was an intoxicant, but for medicinal purposes. Any one who desired beer could always secure it at the drug stores. —Frank E. Elliott, night clerk in the Stolz & Grady drug store, No. 104 North Clark street, and Peter St. Clair, an alleged crook, who is said to have been the husband of Minnie St. Clair, the woman who was ar-

rested several days ago and died the day she was to have been tried, are locked up in the Chicago Avenue Police Station on the charge of stealing \$2,000 worth of drugs and stock from Elliott's employers. About \$200 worth of the goods alleged to have been stolen were recovered at the residence of Cora Wilson, No. 159 Indiana street.

—On Monday, September 10, a party of twenty Chicago druggists will, by invitation of Hiram Walker, of Walkerville, Canada, deliver themselves f. o. b. at the Michigan Central depot, where they will take a special car for Detroit, from whence they will be conveyed by yacht to Walkerville, where they will enjoy the hospitality of the proprietor of the "Canadian Club" brand of whisky. The next day the yacht will take them back to Detroit in time to attend the opening sessions of the annual meeting of the N. A. R. D.

—It was reported recently that the down town druggists, cutters and department stores had agreed upon a truce, and that price cutting in drugs and proprietaries would no longer be indulged in. The officers of the Chicago Retail Druggists' Association seem not to have been informed of the matter as yet, and whether the bird of peace will find her permanent abiding place among the heretofore warring elements must be left for time to tell.

—Mr. Taylor, of H. Bowman & Co., Oakland, Cal., was in Chicago this week. Mr. Bowman was one of the original druggists of Chicago. He sold out in the early days to Gale & Blocki and went West, where he continued in the drug business.

—A. B. Hunt, manager of the city department of the Fuller & Fuller Company, will leave on September 8 on a three weeks' vacation, which will be spent in Michigan. He will be accompanied by his daughter.

—George Yable, of Smith & Yable, West Madison street druggists, was married on September 15 to Miss Harriet Keeler, at the home of the bride's parents in South Haven, Mich.

—T. C. Ballard, manager of the sundries department of Morrisson, Plummer & Co., is attending the meeting of the Wisconsin Pharmaceutical Association at Wauwata, Wis.

—F. S. Catlin & Co. are opening a new drug store in Mason City, Iowa. They recently left a very satisfactory stock order with Morrisson, Plummer & Co.

—W. H. Shurtleff, credit man for Morrisson, Plummer & Co., has just returned from Lake Zurich, Ill., where he has been spending his vacation.

—H. J. Wilson has moved his drug store from Fifty-seventh street and Wentworth avenue to Fifty-seventh and Morgan streets.

—L. J. Conrad has succeeded E. Leibrecht as owner of the drug store at the corner of Seminary and Fullerton avenues.

—Joseph P. Plummer, of Morrisson, Plummer & Co., has gone to Mackinac Islands on a few weeks' vacation.

—Henry Biroth, a well known druggist of the Windy City, has returned from an Eastern trip.

—E. F. Hobart, a prominent citizen and druggist of Hobart, N. M., was in Chicago recently.

—C. C. Toogood, of the Owl Drug Company, Los Angeles, Cal., was in Chicago this week.

—E. B. Klinckowstrom has sold his drug store at No. 206 West Division street to F. Ruby.

—J. S. Frank, a druggist at No. 1144 Milwaukee avenue, was married on September 4.

—Clem. Corey has opened a new drug store at Fort Dodge, Iowa.

—E. C. Edwards has opened a new drug store at Manston, Wis.

An Additional Honor.

We have just been advised of the award by the judges of the Paris Exposition to Messrs. Wm. R. Warner & Co., of Philadelphia, New York and Chicago, of the highest medal prize, for their justly celebrated pharmaceutical products. This makes the seventeenth World's Fair highest prize, which has been awarded this well known and justly celebrated firm, and we join in congratulations to Messrs. Wm. R. Warner & Co. over their well merited and unbroken line of victories in competition with the world's manufacturers.

THE NORTHWEST.

Swarms of Fair Visitors at St. Paul.

St. Paul, Minn., September 7.—Following their regular annual custom, Noyes Bros. & Cutler, wholesale druggists of this city, this week furnished free tickets to the Minnesota State Fair to all out-of-town druggists who applied for them in person. Among others the following were here and accepted the courtesies of this house:

King Bros., Stillwater; C. B. Youngman, Wheatland, N. D.; Mr. Beebel, Fairfax; A. P. Brobeck & Son, Kenyon; Mr. Claten, Eau Claire, Wis.; J. W. Kamrar, Blue Earth; A. Gilmore, Bemidji; A. Herman, of Syme, Baldwin & Co., Glenwood, Wis.; C. R. G. Kellam, Heron Lake; J. G. Sieben, Hastings; J. P. Hansen, Winthrop; Mr. Blood, Catawba; A. Gilberson, Canby; A. T. Horsman, Devils Lake, N. D.; H. J. Kimball, Minneapolis; O. M. Olson, New Ulm; Olsen & Isaacson, Staples; C. F. Towne, Albert Lea; D. Robertson, Argyle; Hanson & Hanson, Mayville, N. D.; Mr. Lowthian, Glenville; Charles Quist, Madison; Dr. Fernalla, Bellingham; Dr. T. E. Williams, Eau Claire, Wis.; Dr. Smith, Bowdle, S. D.; Mr. Smith, Madison, S. D.; Dr. T. H. Watson, Zumbro Falls; E. P. J. Harms, Hutchinson; Mr. Beebe, New Richmond, Wis.; B. W. Huntley, Spring Valley; C. J. Wyman, Minnesota; George Enz, Red Wing; Mr. McCray, Prescott, Wis.; S. B. Rude, Hastings; W. F. Gearing, Maiden Rock, Wis.; C. A. Hलगren, Comerant; S. E. Peterson, Atwater; Mrs. M. Puehler, Arlington; H. W. Stringfellow, Howe; Mr. Vettis, Jackson; A. Olsen, Blooming Prairie; Dr. Re-walt, Fulda; Mr. Emmons, of the Emmons Drug Co., Buck Hill; Dorn & Co., Waterville; T. R. Shaw, Pembina, N. D.; C. J. Elklund, Vasa; M. V. Wutzel, Little Falls; Dr. Becker, Menomonie, Wis.; C. A. Haugen, Durand, Wis.; J. A. Schouweller, Red Wing; H. M. Tollefson; Kasson; Lars L. Urhart, Eau Claire, Wis.; Fox Bros., Washburn, Wis.; Milloy Bros., Austin; H. Piesinger, Montgomery; W. F. Sanger, Windom; J. A. Wallen, Den-nison; Mr. Atwood, Staples; T. R. Bjorngaard, Red Wing; J. Fessenmale, Rock Elm, Wis.; H. J. Gronberg, Hoff-man; J. R. Craig, Minnewaukan, N. D.; T. Gray, Farm-ington; Mr. Sheppard, Spring Valley; Reichert & Schenck, Long Prairie.

NOTES.

—Successions: J. A. Griffith & Son, Keswick, Ia., by Leonard E. Griffith; Henry Peiper & Co., Minden, Ia., by Max Lehman; Benson Drug Co., Cottage Grove, Ore., by Mrs. Jane Benson; Nauscawen Bros., Hartford, Wis., by R. H. Natschwen; Reinert Bros., South English, Ia., by Euber & Co.; Fred E. Palmer, Sparta, Wis., by John W. Palmer; C. Jelstrap, Albert Lea, Minn., by L. A. Hanes.
—New: Peterman & Curtis, Thief River Falls, Minn.; Fisher Bros., Velva, N. D.; Beadle & Kamrar, Brice-lyn, Minn.; Dr. E. H. Woods, Clear Lake, Minn.; T. N. Berg, Sebekia, Minn.
—R. L. Wood, De Smet, S. D.; L. A. Minster, Larch-wood, Ia., and J. E. Stevens, Seattle, Wash., have given bills of sale.
—C. A. Keissling has left his place in Jelinek's store, St. Paul, and will return to college again this fall.
—Liens for small amounts have been made on the Ranier Chemical Works, Ranier, Wash.
—F. I. Johnson has gone to Sisseton, S. D., to work for Cortelyou & Maldaner.
—R. F. C. Itlis has left Dickinson, N. D., and returned to Minnesota.
—George A. Holbrook, Webster City, Ia., has been burned out.
—Peter J. Arbes has gone to work for J. S. Griffin at Winthrop.
—C. C. Reinert, Richland, Ia., has sold.

—Woodard, Clarke & Co., wholesale and retail druggists, Portland, Ore., have just received a cash prize of \$100 awarded by the Eastman Kodak Co., for the most original and attractive advertisement of the Kodak camera. The advertisement appeared in the Sunday Oregonian, July 29. Last year Woodard, Clarke & Co. won the second prize offered by the Kodak people in a similar contest.

ST. LOUIS.

St. Louis, September 8.

—The Druggists' Cocked Hat League had a meeting and organized for the ensuing year with Wm. Graham, president; Wm. F. Kahre, vice-president, and Paul Schneider, secretary and treasurer. The teams have not been made up yet, but Meyer Bros., Moffitt-West and J. S. Merrell drug companies, Searle & Hereth, Parke, Davis & Co. and Eli Lilly & Co. have contributed \$50 each and there will probably be others. The teams will be named after the houses contributing. Druggists, doctors, dentists and employes of wholesale houses and manufacturing pharmacists and chemists will be eligible.

—Prof. Francis Hemm, his friends will be glad to know, is going back in the retail drug business at the corner of Broadway and Shenandoah street.

—The College of Pharmacy will open with a splendid attendance from all appearances.

—Mr. Stable, cashier of the J. S. Merrell Drug Company, has returned from his vacation.

—The Ozark Pharmacy, previously reported, opens up on Easton avenue next week.

—Harry R. Lower will represent Moffitt-West Drug Co. in Kentucky and Tennessee.

—Emil Stegner goes to Colorado Springs, Col., for a short vacation.

—The Delmar-Walton pharmacy, Dr. Loler proprietor, has opened.

—Druggist W. D. Temm has returned from the East.

—Louis Schurk has left on a ten days' vacation.

—A. Vogelsang has returned from Chicago.

—Druggist E. J. Waldeck has gone fishing.

MONTREAL.

Montreal, Sept. 8.

—It came as a surprise to the drug trade of Canada when it was learned that Kerry, Watson & Co., one of our prominent firms of wholesale druggists, were about to dissolve partnership. The dissolution came into force on September 1, when the junior partner, David Watson, stepped out. One of the stipulations of the agreement was that the latter should retain the proprietorship of Gray's Syrup, the firm's best known proprietary preparation. The latter has already leased premises on St. Paul street for the manufacture of this article, and in addition to this will act as agent for several houses in the United States and Europe.

—A meeting of the Board of Examiners of the Pharmaceutical Association was held on Wednesday, the 5th inst., for the purpose of distribution of subjects, with the following results: Practical Chemistry, to W. H. Chapman; Chemistry, Henri Lanctot; Materia Medica, Alex. B. J. Moore; Pharmacy, A. J. Laurence; Botany, R. W. Williams; Dispensing, Weights and Measures and Physics, Edmond Giroux. W. H. Stone and Victor Levesque have been appointed auditors for the association for the ensuing year.

—The bi-monthly meeting of the Pharmaceutical Association was held at the Montreal College of Pharmacy on the 5th inst. The president, S. Lachance, occupied the chair. Nothing outside of regular routine business occupied the attention of the board. It was decided to hold the semi-annual examinations in Quebec at Laval University on October 15.

—Very few of our city druggists have signified their intention of visiting Detroit this year for the purpose of attending the annual meeting of the N. A. R. D. Those who purpose going are Alexis Robert, S. Lachance, president of the Pharmaceutical Association, and W. H. Chapman. Harry Willis will be the only Quebec City representative.

—Alex. B. J. Moore has returned from a trip down the coast. He visited Gaspé, Douglastown, Perce, Grand River, etc. He obtained some splendid views as souvenirs of the trip and has promised the Montreal Camera Club to give a description of his outing at one of their weekly meetings in the fall, illustrated with lantern slides.

—The powers that be are about to start on a crusade against druggists who do not comply with the poison act, as several cases have been reported lately of people obtaining morphine corrosive sublimate and other virulent poisons at pharmacies, yet no record of the sale was registered in the poison book.

MALT TONIC AND HYOMEI EXHIBIT.
FRANK RICHARDSON, CAMBRIDGE, N. Y.

—Attempted suicides by drinking tincture of Iodine have been rather common in Montreal during the past month. The first case was that of a married lady who drank two ounces and recovered; since then two other cases have been reported, but neither proved fatal.

—I. E. Tremble has returned from a trip to St. Marys and other cities in the West. He also visited Toronto and called at the Ontario College of Pharmacy, where he met several of the members. The question of interchange was not broached.

—J. L. Roberge, M. C. P., '96, has purchased H. J. Pilon's pharmacy, on St. Lawrence street. Mr. Roberge was for many years head clerk with Alexis Robert, past president of the Pharmaceutical Association.

—John Lewis' pharmacy, which narrowly escaped destruction from fire which occurred in the opposite block, has been entirely renovated and shows no signs of the severe charring which it underwent.

—M. Albert, M. C. P., '90, has bought out A. D. Mann's branch pharmacy, corner of Coleraine street and Hibernia road. Mr. Albert formerly was manager of The People's Pharmacy.

—R. W. Williams, of Three Rivers; Henry Willis and J. E. Dube, of Quebec, spent a few days in town last week, and were also in attendance at the Pharmaceutical Council meeting.

—B. E. McGale has returned from Rouse's Point, after superintending the manufacture of his proprietary preparations for the American market.

—O. H. Tansey, formerly clerk with James H. Harte, in now assistant with J. A. Nicolle, corner of Bleury and St. Catherine street.

—J. A. Nicolle is at present on a trip down the Gulf of St. Lawrence, and will visit several of the lower port cities ere he returns.

—John Lewis has again returned to the city, having spent some time down at Old Orchard Beach, also in Western Ontario.

—James H. Harte is at present visiting his family at one of the numerous watering places down the Gulf.

—George Browne, head clerk at Wellington Medical Hall, has again resumed his duties.

—The Laporte pharmacy has been sold to A. D. Cantin.

The Success of Humphreys' Specifics.

The success of Humphreys' Specifics is due to their curative qualities—once introduced into a family, they are regularly used. To succeed in this introduction the distribution of Dr. Humphreys' Manual is necessary. It is strictly a medical book—no jokes, no recipes, but full of good medical advice to the sick and ailing.

A generous supply of these books are sent, prepaid, to any druggist on application. Address the Humphreys' Homeo. Medicine Company, corner William and John streets, New York.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,
New York.

ARKANSAS.—Arkadelphia.—E. M. Hall, sold to Crow Bros.

ILLINOIS.—Kewanee.—C. W. Payne, sold to Hirschy & Lorch.

Stronghurst.—George A. Cooper, sold to Edward Doty & Sons.

INDIANA.—Noblesville.—Truit & Son, succeeded by A. W. Truitt.

IOWA.—Keb.—F. W. Mills, sold to J. A. Hull.

Webster City.—G. A. Holbrook, burnt out.

KENTUCKY.—Corbin.—R. J. Carrier, sold to John J. Hogan.

Cromwell.—J. Z. Taylor, sold to Gentry & Martin.

MARYLAND.—Baltimore.—J. V. Singer, 1201 Druid Hill avenue, discontinued.

MICHIGAN.—Sparta.—Hastings Drug Co., sold to Milo Bolender.

West Bay City.—Brown & Tupper, sold to John E. Knapp.

MISSOURI.—Gallatin.—Chamberlin & Mynatt, sold to J. U. De Golla.

Paris.—H. P. Long, sold to O. T. Vaughn & Co.

MONTANA.—Townsend.—Matthew's Pharmacy, sold to J. M. Dunbar.

NEBRASKA.—Bloomfield.—J. G. Beste, sold to G. E. & N. L. Downs.

NEW YORK CITY.—Bleidner & Chambers, 795 Westchester avenue, succeeded by A. C. Bleidner.

RHODE ISLAND.—Pawtucket.—George T. Dana, of the firm of George T. Dana & Co., 98 Cottage street, deceased.

SOUTH CAROLINA.—Winnsboro.—W. E. Aiken, deceased.

SOUTH DAKOTA.—Miller.—N. Johnson & Co., sold to O. H. Collins.

TENNESSEE.—Chattanooga.—F. F. Wiehl, of the firm of Tritts & Wiehl, wholesale drugs, deceased.

TEXAS.—Palo Pinto.—W. S. Conatser, sold to Maddox Bros.

WISCONSIN.—Hartford.—Nanscawin Bros., succeeded by R. H. Nanscawin.

PRACTICAL URANALYSIS AND URINARY DIAGNOSIS.—A Manual for the Use of Physicians, Surgeons and Students. By Charles W. Purdy, LL. D., M. D., Queens University, Fellow of the Royal College of Physicians and Surgeons, Kingston, Canada; Professor of Clinical Medicine at the Chicago Post-Graduate Medical School, etc. Fifth revised and enlarged edition. With numerous illustrations, including Photo-engravings, Colored Plates and Tables for estimating total solids from Specific Gravity, Chlorides, Phosphates, Sulphates, Albumin, Reaction of Proteids, Sugar, etc., etc., in Urine; 6 x 9 inches. Pages xvi+400. Extra cloth, \$3 net. Philadelphia; F. A. Davis Company.

The various editions of this manual have been reviewed in the Era and a majority of readers are already familiar with the general character of the work. Purdy has always been practical and up to date and his book should be in the hands of every pharmacist and physician who have anything to do with this most important department of chemical analysis. The fifth or present edition contains a large amount of matter not found in its predecessors, including an extension of the author's discussion of the practical application of centrifugal analysis to urinary work. Many chapters have also been re-written and the whole character of the work bears internal evidence of the author's painstaking care. The numerous illustrations and colored plates greatly enhance the value of the book, and students are sure to appreciate Vogel's scale of urine tints which appears as the frontispiece.

PATENTS

Trade-Marks, Designs, Etc.

PATENTS

Issued August 14, 1900.

- 655,747.—George W. Winckfield, assignor of one-fourth to G. C. Fabens, Alameda, Cal. Electro-medical vacuum apparatus.
 655,783.—Carl Kellner, Vienna, Austria-Hungary. Electrolytic apparatus for decomposing metallic salts.
 655,895.—Edward R. Cooper and C. F. Thompson, Lakewood, assignors of one-half to L. C. Hopp, Cleveland, Ohio. Hair-drying comb.
 656,034.—Edward E. Murphy, Somerville, Mass., assignor to New Era Carbonator Company, Charlestown, W. Va. Carbonating apparatus.
 656,061.—Jean J. A. Trillat, Paris, assignor to La Société Chimique des Usines du Rhone, Anciennement Gillard, P. Monnet et Cartier, Lyons, France. Producing formaldehyde vapors.
 656,072.—Joseph O. Wild, Holyoke, Mass. Soda water apparatus.
 656,081.—Oscar Bally, Mannheim, assignor to Badische Anilin and Soda Fabrik, Ludwigshafen, Germany. Sulfonated anthraquinone dye.
 656,148.—James Walber, assignor of one-half to D. D. Lucas, Vineland, N. J. Non-refilling bottle.
 656,156.—William S. Horry, New York, N. Y. Producing carbide of calcium, etc.

Issued August 21, 1900.

- 656,191.—Eugen Hornung and R. Liebl, Vienna, Austria-Hungary. Compound as substitute for caoutchouc, gutta-percha, or the like.
 656,229.—Friedrich Valentiner, Leipsic-Plagwitz, Germany. Aromatic fluoro-hydrocarbon.
 656,253.—Josef Kunstner, Obersiedlitz-Aussegg, Austria-Hungary. Making sodium-carbonate crystals.
 656,259.—Charles B. Overbaugh, New York, N. Y. Non-refillable bottle.
 656,263.—Fritz Raschig, Ludwigshafen, Germany. Separating cresols.
 656,353.—Charles B. Jacobs, assignor to Ampere Electro-Chemical Company, Ampere, N. J. Alkaline-earth silicid.
 656,354.—Charles B. Jacobs, East Orange, assignor to Ampere Electro-Chemical Company, Ampere, N. J. Compound of silicon and hydrogen.
 656,388.—Ell Cindel, McKees Rocks, Pa. Non-refillable bottle.
 656,463.—Heinrich Laubmann, assignor to Farbwerke, vormals Meister, Lucius & Brüning, Höchst-on-Main, Germany. Tetraoxyanthraquinone disulfonic acid and making same.
 656,489.—Herman Strater, Boston, Mass. Apparatus for charging receptacles with measured quantities of liquid.
 656,552.—Nicholas Lanser, Allegheny, Pa. Filtering material.
 656,599.—Reuben Doolittle, assignor to M. V. Doolittle, Chicago, Ill. Means for manufacturing carbids.

Issued August 28, 1900.

- 656,646.—Adolf Israel and R. Kothé, Elberfeld, Germany, assignors to Farbenfabriken of Elberfeld Company, New York, N. Y. Urea derivative of amidonaphthol sulfonic acid and making same.
 656,657.—John Parette, Montreal, Canada. India rubber water bag.
 656,671.—August Sommerfeld, St. Louis, Mo. Non-refillable bottle.
 656,786.—Frank V. Gifford, Niagara Falls, N. Y. Milk-pasteurizing apparatus.
 656,992.—James L. Mortimer and J. H. Williams, Liverpool, England. Disinfectant.
 657,030.—John Ranald, London, England. Extracting bismuth from ores containing bismuth oxids, etc.

LABELS.

- 7,747.—Title: "Mothers' Preparator." (For a Medicine). A. Stocker Co., Des Moines, Iowa. Application filed July 30, 1900.
 7,748.—Title: "U. S. Army and Navy Tablets." (For a Medicine). Abraham Meyers, New York, N. Y. Application filed November 14, 1899.
 7,749.—Title: "Compound Kamphor Pills." (For Pills). Sanitarium Supply Co., Scranton, Pa. Application filed July 30, 1900.
 7,760.—Title: "Appollotonic." (For a Hair Tonic). Century Chemical Company, New York, N. Y. Application filed August 2, 1900.
 7,761.—Title: "Vaxo." (For a Medical Compound). Delbert A. Strock, Buffalo, N. Y. Application filed August 7, 1900.
 7,762.—Title: "Madam Sherman's Vegetable Compound." (For a Medicine). Worlds Electro-Medical Institute, Columbus, Ohio. Application filed August 3, 1900.
 7,763.—Title: "Anti-Gon." (For a Medicine). Winn &

- Hubbard, New York, N. Y. Application filed July 10, 1900.
 7,764.—Title: "Dr. Kay's Utiure." (For a Medicine). Dr. E. J. Kay Medical Company, Saratoga Springs, N. Y. Application filed August 4, 1900.
 7,765.—Title: "House's Baby Mixture." (For a Medicine). Robert T. Smoot, Paris, Texas. Application filed April 2, 1900.

PENNSYLVANIA BOARD.

At the examination held July 18, at Williamsport, ninety-five persons appeared for examination, fifty-three for registered pharmacist certificates, and forty-two for registered qualified assistant pharmacists. Of this number fourteen successfully passed for registered pharmacists and twenty for registered qualified assistant pharmacists' certificates. The following are the successful candidates:

Registered Pharmacists—George C. Fisher, Alonzo B. Farr, Frank E. Green, of Philadelphia; Fred A. Harting, Pittsburg; Louis N. Berube, Osceola Mills; Edwin L. Keyser, Williamsport; P. E. Grimmes, Plymouth; Robert L. Mead, Youngsville; Raymond Immel, Reading; Abraham H. Stocks, York; Francis Lyman, Oil City; William T. Green, Scranton; A. C. Saltzer, Monessen, Charles O'Connor, Wilkesbarre.

Registered Qualified Assistant Pharmacists—Calvin M. Reigle, Joseph T. Fisher, John H. Stittler, Philadelphia; Arthur W. Porter, O. C. Zellner, Pittsburg; Wilson Weigester, Troy; Mary E. Gould, Mansfield; Leroy E. Kipp, Milford; John F. Croghan, Honesdale; A. R. Snedden, Coulterville; G. C. Thomas, Camden, N. J.; Edward J. Gable, Reading; Charles E. Vernoy, Scranton; Edward P. Gannon, Wilkesbarre; Bert E. Messner, Scranton; Charles H. Terter, Camden, N. J.; Edward W. Yeagle, Emporium; H. W. Harcolte, Allegheny; Gilbert J. Heckle, Allegheny; Charles H. Davidson, Towanda.

The next meeting of the Board for the examination of applicants for registration will be held in Belfield school house, on Fifth avenue (Oakland), near Schenley Hotel, Pittsburg, and in the Central High School Building, Broad and Green streets, Philadelphia, on Saturday, October 20, between the hours of 12 and 5 P. M.

DR. E. L. GRAVES TOOTH POWDER CO.

A greatly increased demand for fine tooth powder has made its manufacture in late years a very important branch of trade. One of the best known powders is 'Graves', made by Dr. E. L. Graves Tooth Powder Co., at 457-459 Van Buren street, Chicago. This house was founded about thirty-three years ago by Dr. E. L. Graves, who successfully conducted it until about two years ago, when the business was sold to S. H. Gunder, well known in the trade from the Atlantic to the Pacific from his connections with Seabury & Johnson, Johnson & Johnson, and the Pezoni Co., of St. Louis. Mr. Gunder has greatly enlarged the business, and, under his management, the sales have been increased fourfold. Dr. Graves' Tooth Powder is recommended generally by dentists and physicians throughout the country. It is put up in 2 ounce bottles selling at wholesale for \$1.75 dozen or \$21 gross; 4-ounce bottles selling at wholesale for \$3.25 dozen or \$39 gross; 1-lb. cans selling at wholesale for \$6 dozen or \$72 gross, 1-lb. cans selling at wholesale for \$12 dozen or \$144 gross.

Your jobber is allowed to give you 5 per cent. discount in \$21 lots, assorted. This company furnishes samples to your trade. They do not ask you to make a purchase; you get samples and a package to hand to your dentist and some free powder for your trouble in making the distribution, express prepaid, if you send the names of your dentists with your request.

Tin Boxes.

There are no better tin boxes made for druggists' use than the plain and lacquered, seamless tin boxes made by Jos. G. Taite's Sons, Philadelphia. They are suitable for all purposes for which such boxes are made, are perfectly uniform, and can be had of all wholesale druggists and druggists' sundry houses.

IMITATORS OF MOXIE ON THE ANXIOUS SEAT.

The following clipping shows what the Moxie Co. is doing and proposes to do with the large list of dealers who have been serving imitations of Moxie when Moxie is called for.

Those who have been complacently patting themselves on the back and laughing in their sleeves over their seeming success in fooling their patrons should read the following from the Boston Globe;

The Moxie people are on the warpath after imitators. It is said that they have the best combination of legal talent that it is possible to procure and that they also have the best organized force of investigators. Including men and women in all walks of life of any concern in the world that caters to the public.

It is pretty well understood that they intend to protect the public against unscrupulous substitutes, and as to their rights, they have had many cases decided in their favor from 1888 up to August 27, 1900, when there was a case of more than usual interest in the United States Circuit Court, in which an order was issued for the destruction of the imitating goods.

The Moxie Nerve Food Company of New England has obtained a perpetual injunction to the following effect: "You shall not expose, offer for sale, sell or distribute any liquid as and for Moxie, or Moxie Nerve Food, manufactured by the complainant Moxie Nerve Food Company of New England, and shall not expose for sale, sell or distribute any liquid resembling the complainant's Moxie in bottles like exhibits C and D, being non-tox bottles filed with the bill in this cause, or in any bottle so resembling in appearance the Moxie bottle of the complainant as to deceive or be liable to deceive purchasers thereof, whether buying by the bottle or by the glass, and shall not use, sell, distribute or dispose of any of said non-tox bottles, full or empty, like said exhibits C and D, having the words "The American Non-Tox Co., Boston, Mass.," blown in them, and that you shall forthwith surrender to the complainant or its agents for immediate destruction, as goods imitating and infringing upon the goods of the complainant the supply of non-tox bottles, whether full or empty, in your possession."

It is said that the company has so systematized its war on imitators and substitutes for the purpose of protecting the public and themselves that they have a record of every place where there is anything kept in bottles resembling theirs or otherwise that could be substituted or is for Moxie when Moxie is called for.

What more effectual way could there be to destroy the goods of an imitator than to break them up and put them beyond the reach of unscrupulous people and thereby protect the public? Substitution is a very grave thing and it properly should be the duty of any person to lodge information with the manufacturers of any article which comes to their knowledge as being substitutes and thereby doing to their fellow man by protecting him as they would wish to be done by.

We believe that if any of the public who are imposed upon by having some substitute served to them when Moxie is called for, will make a complaint to the company in writing, the same will be thoroughly investigated and if found true the guilty person will be punished to the full extent of the law.

An Effective Respirator.

In the Hurd Respirator, sold by the Morley Respirator Co., Saginaw, Mich., the air is inhaled through a thin, wet sponge, and exhaled through an automatic valve, thus preventing the inhaling of dust or poisonous gases. This respirator is particularly desirable in factories where the workmen are engaged in thick dust or noxious fumes, and it is already in use in many such factories throughout the United States.

Trade Marks.

Most druggists have been, at one time or another, interested in trade marks, copyrights and labels, even if they are not also interested in patents. At any rate, every reader of the Era ought to have the book on these subjects, which is mailed free by O'Meara & Co., patent attorneys, 901 G St., Washington, D. C.

STATE OF TRADE.**General Market Decidedly Steady.**

New York, Sept. 11.—Although the vacation period has practically ended, the inauguration of the autumn and winter season has been retarded by continued warm weather, but there is no abatement of confidence among dealers, and the outlook is considered favorable to an early return to more active conditions. During the past week the more important changes in prices have been in favor of holders, and the general market has continued to present a decidedly steady appearance. The quinine situation has undergone no important variation, but the market for this leading commodity has a strong undertone, and in usually well informed circles it is confidently expected that manufacturers' quotations will show further improvement in the near future. The expectation is based on the continued firm position of raw material, and reports from abroad to the effect that sales of bark have been made privately in London, at prices considerably above the average unit value at the last Amsterdam auction. The purchases are said to be for American account, and are considered as indicating that manufacturers are short of raw material, or are anxious to secure additional supplies. The demand for consumption has improved, and the firmness of the market is evidenced by the fact that some of the domestic makers are turning down orders for prompt delivery and decline to enter additional contracts.

Opium has remained quiet and easy, and buyers in a large way have been able to secure supplies at a further slight concession, but the change has not yet had any material influence in the way of stimulating activity either here or abroad. Morphine has continued to move freely on consuming orders at unchanged prices. The principal change in values during the week was an advance of 75c. per ounce in manufacturers' quotations for cocaine, due to scarcity and a consequent stronger position of crude material at all distributing points. It is claimed that some of the manufacturers are oversold and are unwilling to take new orders even at the advanced prices, as the outlook for securing fresh supplies of raw material is rather unfavorable. Another important change in prices was an advance of 4c. per gallon in quotations for grain alcohol, attributed to the higher market for corn. Leading distributors report an active demand from the various consuming industries, and indications point to continued strong conditions, with the output under good control.

In the department of essential oils, sweet almonds has again been advanced 2c. per pound in sympathy with a corresponding improvement in primary markets. Caraway is higher on account of increased cost of seed. Pennyroyal shows a further decline under the influence of liberal arrivals of new crop from producing sections. Sassafras has developed considerable strength, and values for both natural and synthetic are higher. Bergamot and clove are both slightly easier. New crop rose has begun to arrive, and values are a shade lower.

Among the roots, golden seal and senega continue to show steadily increasing firmness, and higher prices are quoted for both, with holders of the limited spot stock indifferent sellers. Primary markets also are firmer and extreme prices are looked for. Coca leaves are moving upward in price, owing to scarcity at primary sources and difficulty in securing fresh supplies. Small flake manna is very scarce, and values are higher owing to the poor outlook for new crop.

Local refiners of glycerine have advanced quotations 1c. per pound, and the market is very firm in tone. Silver bullion is higher, and leading manufacturers of nitrate have advanced their prices 1c. per ounce. Gallic acid is 5c. per pound higher, the advance being due to increased cost of raw material.

Retail Trade Good.

Boston, September 8.—There seems to be a general impression that trade with retail druggists is good, and the most part they all appear to be well satisfied with the present condition of things. This is the season when families are returning, houses are being opened again, after the summer vacation, and schools are starting up once more, all bringing to town great numbers of people who have long been away from their usual haunts. All this serves to bring to the druggists considerable trade.

Except that quinine has come forward for more attention, there is little of importance transpiring. Chemicals as a class are inactive and show no feature which is noteworthy, trade being unsatisfactory on the whole. Alcohols hold fairly well in a steady way, without much life or activity. Sumac and indigo alone among the dyestuffs have come in for any attention, other things in this line being very quiet. Waxes are not active at all, but there is underlying them a certain strength which looks like higher prices to come.

Business Improved.

Baltimore, September 10.—The oft-repeated observation that trade always increases at the beginning of the month was again verified by results last week. All the wholesale houses experienced gains in the number and volume of orders and a fair degree of activity characterized the situation. Manufacturers of pharmaceuticals also benefited by this tendency, while the retailers reported practically unchanged conditions. Generally speaking, trade is very fair, and extensive gains for the year over 1899 are being noted. The botanical market was without special features, while heavy chemicals presented no unusual developments.

Detroit Reports Steady Business.

Detroit, September 8, 1900.—A very good steady business is reported for the week here. Conventions are the rule, and conventions are thirsty affairs. On the whole, however, there is very little sickness, and so the druggists' orders are rather more for the little luxuries of life than for medicines. Articles for the bath are a feature of many of the retailers' windows.

Tendency Toward Improvement.

Chicago, September 8.—Business shows a tendency toward improvement. The first week in September has been a good one for the jobbers. Manufacturers state that business has started out well and the fall trade bids fair to break the record.

Dealers in druggists' sundries are fairly busy, with a good demand and fair sized orders. The encampment of the G. A. R. brought many druggists to Chicago who ordered quite liberally.

Very, Very Busy in the Northwest.

St Paul and Minneapolis, Minn., September 7.—The State Fair has been the great event of this week. The number of visitors to the Twin Cities has consequently reached enormous proportions, not only breaking but making fine kindling wood of all previous records. Among these outsiders hundreds of druggists were included, and as a natural result many of them placed substantial orders with the jobbers here. The crowds of visitors also made themselves felt at the down-town retail stores, which have reaped quite a harvest. Retailers, not only in the part of town mentioned, but in all other localities, report a marked improvement over last week. They have been very, very busy. Most of them, too, are finding collections to be in somewhat better shape. In the wholesale trade there seems to be a reasonable percentage of increase in the volume of operations as compared with last week and with a year ago. The only inference possible is that drug dealers all over the Northwest are figuring upon a good-to-lively fall and winter trade. In Western products no change of prices has taken place since last report.

Picking up a Little.

St. Louis, Mo., September 8.—Wholesale trade is certainly picking up. The gain is made slowly but surely and materially. Holiday goods are being ordered freely. Locally the vacationers are gradually returning and that makes retail trade better.

Hot Soda Profitable.

James W. Tufts, Boston, opens the hot sodawater season with a cut of a handsome apparatus on page 18. Urging those druggists who do not already dispense hot soda to investigate its possibilities, he reminds them that it is cheaper to draw hot soda than cold; that there is more profit in the former, because fire is cheaper than ice and because it is cheaper to heat water than to keep it cold. Druggists who make the most money at their soda counters are those who draw soda the year around.

Pine-Aseptine.

The American Medical Co., 56 N. 12th St., Philadelphia, in this week's issue of the Era, announce to the retail drug trade their "Pine-Aseptine," for the radical and permanent cure of hay fever, catarrh and asthma. Mr. W. H. Hackett, their business and advertising manager, reports a healthy condition of trade locally and is confident that the drug trade as reached by the Era weekly can and will take hold of their remedy, and upon a fair trial, recommend it to the trade.

Druggists' Glassware.

To those druggists who are looking for chances to get the best prescription ware at the best prices, we call attention to the Star Glass Co's advertisements on another page. Their Philadelphia office is at 147 N. 4th St., and their factory at Medford, N. J. They manufacture flint, green and amber bottles and vials, and make a specialty of ware for druggists.

MARKET REPORT.**NEW YORK MARKET.**

New York, September 11.—Weather conditions have continued unfavorable to increased activity and business has been mainly in small lots to fill out requirements of the prolonged summer season, but the tone of the market continues firm with the more important price changes in favor of holders.

OPIUM.—Quotations have undergone no further change and the market has ruled quiet with jobbing parcels available at \$3.45@3.55 for 9 per cent. and \$3.55@3.65 for 11 per cent. as to size of order, the outside figures for single pounds.

POWDERED OPIUM.—There is no improvement in demand and a continued quiet feeling prevails, with jobbers quoting the old range of \$4.50@4.65 for 13 per cent. and \$5.10@5.25 for 16 per cent.

MORPHINE.—The market has a moderately active appearance and small lots are moving freely at prices on the basis of \$2.40@2.60 for eighths, according to brand and quantity.

QUININE.—An improved demand is reported with the market firmer in tone, but moderate quantities are still available to a limited extent at prices on the old basis of 44@45c. in ounces, according to brand and quantity. The tendency, however, is decidedly upward and an early advance is looked for.

COCAINE.—Manufacturers have advanced their quotations 75c. per ounce, and the revised jobbing prices are \$6 for bulk in 25 oz. lots, \$6.50@6.75 for large crystals and \$6.25@6.50 for small crystals in ounces.

OIL ALMONDS.—Sweet is again higher and jobbers now quote 60@70c. for prime English and 40@50c. for French.

OIL ROSE.—New crop has begun to arrive and as the yield is large, values are easier, the revised jobbing figures being \$5.50@6.25 for No. 1, and \$6.25@6.75 for extra.

OIL PENNYROYAL.—Under the influence noted last week jobbing quotations show a further decline to \$1.45@1.65.

OIL SASSAFRAS.—The market is firmer owing to scarcity and jobbers have advanced prices to 55@60c. for natural and 45@50c. for synthetic.

OIL CLOVES.—Manufacturers' quotations are slightly lower and jobbing parcels are now obtainable at 65@75c.

GLYCERINE.—Owing to an advance in manufacturers' prices, jobbers have marked up their quotations to 18@19c. for 30 degrees in 50 lb. tins and 22@25c. for smaller parcels. For 28 degrees 1c. less.

CAMPOR.—The market continues to harden, and jobbers have further advanced quotations to 62@62½c. in bbls., 62@62½c. in cases and 10@15c. for less; half ounce cakes 63¼@64c. by the case and 72@75c. for less.

ALCOHOL.—Grain is decidedly higher from first hands and jobbers have advanced quotations to \$2.45@2.46 by the bbl. and \$2.55@2.65 for less. Odorless \$2.47@2.48 by the bbl. and \$2.60@2.75 for less.

SILVER NITRATE.—Higher prices for the metal have caused a firmer feeling among dealers and quotations show an advance to 49@51c. for crystals and 51@56c. for cones.

MANNA.—Jobbing quotations for small flake have been further advanced to 50@55c.

COCA LEAVES.—Higher primary markets, due to scarcity, have caused an advance in spot jobbing quotations to 37@42c. for whole Truxillo, 42@45c. for ground and 47@52c. for powdered. Huanuco 10c. higher.

GALLIC ACID.—An advance in manufacturers' prices has caused jobbers to mark up quotations to 90@95c.

TANNIC ACID.—Under a similar influence jobbing quotations have been advanced to \$2@2.50c. by the barrel. \$1.10 in pounds and 12@14c. in ounces.

FLAXSEED.—The market is firmer, and jobbers have advanced quotations to \$6.75@7 by the barrel and 5@7c. per pound for less. Ground, 4@4¼c. by the barrel and 5@7c. for less.

BLUE VITRIOL.—Jobbing quotations show an advance to 5¼@5¾c. by the barrel and 8@10c. for less.

OIL CEDAR.—White, pure in jobbing quantities has been advanced to 75@85c., and ordinary, 65@75c.

THE ERA COURSE IN PHARMACY.

The lectures will hereafter be issued in monthly instalments, and the entire work of the Course can be completed within twelve months.

NEW CLASSES FORMED EACH MONTH.

The first Instalment of lectures will be issued in October, and the remainder at intervals of thirty days thereafter.

Recitations and examinations are conducted by correspondence directly with each regularly matriculated student.

Especially valuable as a preparation for examination by a board of pharmacy, to those who cannot attend a college of pharmacy, and to all desiring to review their former study of the subjects embraced in the curriculum.

TOTAL EXPENSES FOR FULL COURSE, \$10.00.

Write for new descriptive Prospectus, now ready.
Address, THE PHARMACEUTICAL ERA.

THE N. A. R. D.

This issue contains a full account of the proceedings of the second annual meeting of the National Association of Retail Druggists, held at Detroit, September 12 to 14. It will be seen upon perusal of this report that the association makes no very great departure from its former policy, but it reaffirms with greater insistence its desires and purposes. The various reports of the officers and committees show that much has been accomplished during the past year, and these gentlemen hold out sanguine hopes for the future. They have all been active in the discharge of their duties, and should be commended for the work they have done. There were present not only a large number of delegates of retail associations, but also representatives of the Proprietary Association and the N. W. D. A. All were on the best of terms with each other, showing that there is a unity of good fellowship in the trade, and that hereafter there is likely to be less trade demoralization than there has been heretofore. The jobbers and proprietors at Chicago this week will find much of the subject of their deliberations within the proceedings of the retailers. A full report of the meetings of these associations will appear in our next issue.

AFTER FOOD ADULTERATORS.

It is gratifying to see the amount of attention now being given by the public, by the daily papers, by the trade journals, and by sanitary and health authorities to the question of food adulteration. All this agitation cannot fail to have good results in the way of legislation which shall make it impossible, or at least a criminal offence, to adulterate, deleteriously, our food products. One of the most gratifying features of this interest is that it is occupying space in the daily papers and thereby attracting the attention of the public. The papers are telling the people just how their milk and butter supply is tampered with, preserved with the poisonous formaldehyde, colored with dangerous aniline dyes. They are pointing out how widely adulterated are all household supplies, how that valuable product, borax, must be examined in order to be sure that it is not all or mostly carbonate of sodium. When the people are taught these things, then will come such a demand for the proper sort of legislation that it cannot be withstood.

There is too much of this tampering with foods. There is unquestionably a demand for cheap goods, but the cheap should not be allowed to masquerade as pure, and they should not be allowed existence at all if through their cheapening they are rendered dangerous. The purchaser has a right to know what he is buying, and every

article of food should be distinctly labelled for what it is. Then, if the customer prefers a borax which is not borax, a pepper which contains no pepper; if the householder desires milk preserved with formaldehyde, they are at liberty to procure such articles at their own risk and with full information.

MATRICULATE NOW.

The first class under the new arrangement for prosecuting the work of the revised Era Course in Pharmacy commences work in October. The first of the ten monthly parts will be mailed to all students on October 10. We desire here to urge those who contemplate taking up this work to send in their matriculation orders at once, that we may be fully prepared for them and their names be enrolled in the October class. If the matter is delayed they will have to wait until November or until some subsequent month. Under the new arrangement students may enter any month and receive the lectures (Part I) for that month, and succeeding ones at thirty day intervals. It is therefore important that those who desire to get through as early as possible shall matriculate as early as possible, for the work requires ten full months. The matriculation orders for the October class should reach us promptly.

PHARMACY LAWS OF MARYLAND.

Every druggist knows what a lamentable condition as regards pharmacy laws exists in the State of Maryland. A good deal has been said in this paper about the abortive attempts to secure a State pharmacy law, and during the past winter and spring the latest effort was treated in detail. The bill presented to the Maryland Legislature was a good one, and the prospects for its passage were bright. Even up to the latest moment pharmacists and those having the interests of pharmacy at heart could see no chance for failure, but alas! like many previous attempts, there was no counting upon the whims of the law-makers, and the measure was killed in the last trench. This leaves the State without any protection against incompetency in druggists. The city of Baltimore has a kind of half-and-half law, which is better than nothing and under which some attempt is made to regulate the practice of pharmacy. But outside of that city there is a free-for-all condition. There are a lot of druggists in Maryland who are druggists in name only, and there are a lot of unqualified doctors also, who think they have a Heaven-given right to practice pharmacy if they express the desire. The Maryland Pharmaceutical Association, realizing the dangerous condition, has done what it can to make things safer. It has even taken the unusual step of advertising in the papers the names of druggists who are considered competent. These names are presented in alphabetical order, classified by counties, and anyone interested can, by reference to this list, ascertain what druggists are worthy of support and in whose hands his welfare will

be conserved. But the directories give the number of druggists in the State of Maryland at some 539. The list prepared by the State Pharmaceutical Association is much smaller than this. It is evident, therefore, that the great majority of so-called druggists in Maryland are hardly the class of merchants to whom should be entrusted the compounding of medicines. The legitimate qualified pharmacists in the State should get together and work together, and keep working until they get a pharmacy law which shall be enforced throughout the whole State, which shall debar incompetents and render it safe for the people to get their prescriptions compounded at any drug store.

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.
Please be brief and always sign your name.

ALUMNI PRESIDENTS INDORSE THE SUGGESTION.

In a recent number of the Pharmaceutical Era the suggestion was made that in celebrating its Silver Jubilee, the Alumni Association of St. Louis College of Pharmacy commemorate the event by something that would be permanent, such as the founding of a scholarship or an annual medal to be presented to the graduate making the highest average in examinations. I wish to say that I heartily concur with the Era, and sincerely hope that something substantial may result from the suggestion.

T. A. BUCKLAND,
President, 1888.

St. Louis, Mo.

I have read the article, "Good Suggestion," in the August 30 Era, and I wish to add my indorsement to the same. I heartily approve of the proposition. Keep up the good work.

St. Louis, Mo.

OTTO F. CLAUS,
President, 1899.

ERA COURSE COMPLETELY SATISFACTORY.

Enclosed you will please find the sum of \$3, with which I desire you to renew my subscription to your valuable paper, the Pharmaceutical Era. I consider it an excellent journal, and would not wish to be without it for even double the price of its subscription. A word or two in regard to your Era Course. I matriculated and recently completed the term of 1899-1900. The Course to me was completely satisfactory, and the diploma I received several weeks ago even surpassed my expectations, as it is attractive and fully recompenses one for his studies. While I was not fortunate enough to be included among the prize winners, I succeeded in getting in the honor roll both terms, with total average of 97.25 per cent. I most cheerfully recommend your Course to any young man, with the assurance of finding no better or beneficial \$10 investment.

Port Jervis, N. Y.

THOMAS J. BEIRNE.

ERA COURSE PROFITABLE AND ENJOYABLE.

I am glad the beginning of my second year's studies is so near, and trust that the ensuing year will prove as profitable to me, as well as enjoyable, as was the past one. I have devoted most of my spare moments during vacation to a review and study of the various topics contained in the Era, and have gleaned considerable knowledge therefrom.

Canon City, Colo.

CHARLES S. LEWIS.

NATIONAL ASSOCIATION OF RETAIL DRUGGISTS.

SECOND ANNUAL MEETING.

HELD IN DETROIT, MICH., SEPTEMBER 12-14, 1900.

THE PROCEEDINGS IN DETAIL.—THE N. A. R. D. PLAN REAFFIRMED.

FIRST SESSION.

WEDNESDAY, SEPT. 12.

Convention Hall of the Russell House, Detroit, was well crowded when, at eleven o'clock, Wednesday morning, September 12, President Simon N. Jones called to order the annual meeting of the N. A. R. D. About three hundred delegates, representing most of the States of the Union, were present.

Mayor Greets the Delegates

After an earnest invocation by Dr. De Forest, of Detroit, President Jones introduced the Hon. William C. Maybury, Mayor of Detroit, and Democratic candidate for Governor of Michigan, who welcomed the visitors in an unusually happy speech. Mr. Maybury spoke of the great changes which had taken place in the profession of pharmacy in the last twenty-five years. A convention of this kind would not have been possible twenty-five years ago. These days the world does not allow a man to keep a secret which is for the good of mankind. To-day great conventions meet and discuss publicly not only the difficulties of the trade, but its secrets. The world has been rich and then poor again many times because men did not recognize fellowship as they recognize it to-day. Pasteur's treatment for rabies has probably been known to individuals at different times in the world's history, and lost because these individuals died with the secret locked in their breasts. Men to-day recognize that such a knowledge as Pasteur had for the treatment of disease is a gift from God, and belongs to all men. Mr. Maybury closed by referring briefly to the history of Detroit, and to the claims of its early settlers for their hospitality. "That spirit of the early French hospitality has ever since fallen like a sweet benediction over the city. With that same spirit, I bid you enter."

W. C. Anderson, of Brooklyn, replied to the Mayor's address. He said that the visitors had been in the city long enough already to know that Detroit's fame as a beautiful city had not been overdrawn. He had not yet become well enough acquainted with her geography to know why she was called "The City of the Straits," but he thought it must be because her citizens were straight. He was sure it was not because her trolley lines were straight, for they were full of loops, and each loop had cost him five cents. After complimenting the city upon her several beautiful features, Mr. Anderson assured his listeners that the visitors he represented were men whose patriotism, honor, loyalty and devotion to their profession were not excelled. They comprised men of all creeds, all nationalities, but all were proud to be called American druggists.

James W. Seeley, president of the Detroit and Wayne County Retail Druggists' Association, then welcomed the visitors. Mr. Seeley said that no sooner was it decided that Detroit should be the meeting place of the N. A. R. D. for 1900 than the local association took on a new lease of life. Detroit has a very bad case of the cut-rate disease. Efforts to use heroic methods and cut out the festering sore had been ineffectual up to date. Perhaps the instruments had been too dull, or had not been of the best style and pattern. Mr. Seeley earnestly hoped that the present meeting would show how to overcome and cure the disease. The enthusiasm of such a body could not fail to help. He congratulated the N. A. R. D. on its success, and on its officers, but believed also that much of the future success depended on the men in the ranks. Forty thousand druggists all over the United States are watching this meeting and praying that it may lift from their shoulders their heavy burdens.

Charles F. Mann, president of the Michigan State Pharmaceutical Association followed. Mr. Mann hoped that the visitors would have such a delightful meeting in Detroit that they would come again soon. He congratulated himself on being a charter member of the N. A. R. D., and said that the enthusiasm which he acquired at St. Louis had lasted ever since, and he proposed to keep on being enthusiastic until every druggist in the country can put patent medicines over his counter at full prices.

Responses from Delegates.

President Jones then called on delegates from several different States to make short responses to the addresses of welcome. Delegate Pritchard, of Philadelphia, answered to the call in a witty speech on the two kinds of druggists in the world. The first kind is the man who says mean things of his neighbor druggist, substitutes, undersells and does all kinds of illegitimate business. "It is always the man across the street who is that kind of a druggist," said Mr. Pritchard. "The other kind is the man who always says pleasant things about you, shakes your hand and says he is glad to see you and that he sent you a customer just the other morning; never substitutes, gets full prices for his goods. That's the kind of a druggist I am. The man across the street was not elected a delegate to this meeting. You and I were."

J. C. Perry, of Philadelphia, answered for Pennsylvania. He spoke of the two very strong retail druggists' associations in Pennsylvania, the Western Pennsylvania Association and the Philadelphia Association. Of 700 druggists in Philadelphia, 450 are members of the association, which is now ready to put the N. A. R. D. plan in operation. Eighty-five per cent. of the Philadelphia druggists have signed their willingness to do this.

N. K. Forsyth, of Chicago, spoke for Illinois. He assured the convention that Detroit hospitality was all that the addresses of welcome had claimed for it. The Illinois delegation, having arrived twenty-four hours or so ahead of the others, had been "tasting" it to such an extent that they could vouch for it. To Mr. Forsyth organization seemed the only solution of the druggists' problems, and he urged repeated efforts in that direction.

L. C. Hopp, of Cleveland, represented Ohio, and declared the sentiment of his State to be illustrated by "America for Americans" in this struggle. "Ohio is with the N. A. R. D. first, last and all the time."

Otto Zwick, of Cincinnati, believed that what is said and done at the present meeting will decide much of the life of every druggist in the country for the next year.

Felix Hirsman, of New York City, assured the convention that New York was in line with the N. A. R. D., and believed in its principles. His heart had been full of joy when he read in "Bulletin No. 9" that preparations were completed to carry out the work as planned by the N. A. R. D. He hoped that there would be no waiting, no hesitation, but prompt work.

Henry Willis, of Quebec, responded for Canada, the only foreign association affiliated with the N. A. R. D.

Jesse Nelson, of Tennessee, established for himself a reputation for telling a good story, when he responded for his State. He claimed full cousinship to Kentucky, "known in the West for its balmy sunshine—in the East for its invigorating moonshine." He assured the convention that not only would Tennessee make good promises that her soldiers would follow the N. A. R. D. to victory, but that she would make her promises good.

Harry Kramer, representing the Proprietary Association of America, did not seem to need an introduction

to the assembly, which greeted him with applause. He believed that the druggists are laboring with a condition not found in any other line of business in the United States. Proprietors are ready to do what lies in their power to raise the druggists from this condition. They will consider any plans formulated by the N. A. R. D. on a business platform, and will take hold of the lines and pull with the druggists when the lines are ready.

E. C. De Witt, of Chicago, also representing the Proprietary Association of America, declared that cutting resulted in harm to everybody concerned, and stimulated substitution. He urged that the convention in its deliberations keep before its mind the three associations that must work together, viz., the wholesale druggists, the retailers and the proprietors.

James E. Davis and H. C. Clark, both of Detroit, representing the National Wholesale Druggists' Association, and William E. Hall, of Detroit, representing the American Pharmaceutical Association, responded for their associations, extending, in each case, hearty sympathy with the aims of the N. A. R. D.

The following gentlemen were appointed as assistant secretaries of the meeting: Messrs. Willis, of Quebec; Hopp, of Ohio, and Vaughan, of North Carolina.

The Committee on Credentials was appointed as follows: Messrs. Way, of New Hampshire; Lillie, of Oklahoma; Rumsey, of Pennsylvania; Arrington, of Georgia, and Pardee, of Wisconsin.

A motion to adjourn was carried.

SECOND SESSION.

WEDNESDAY, SEPT. 12.

The Wednesday afternoon session was called to order at 2.30 by President Jones, who then gave his address as follows:

PRESIDENT'S ADDRESS.

Another year of the existence of our Association is now approaching its end, and it has been filled with many experiences of both doubt and hopefulness, but finds us at its close in better condition and with a brighter future than has formerly been our good fortune. I can say truthfully that there is a greater feeling of confidence existing among our members, that in many portions of the country full prices have been restored, and that a spirit of friendship has been manifested among the three branches of the trade, proprietor, jobber and retailer, which will in the end, no doubt, solve the many difficulties that have befallen the retail trade in times gone by, and which promises in the near future to bring us closer together to the mutual advantage and profit of all concerned.

A Campaign of Education.

Commencing, as the Association did, with but few active members, we have carried on a campaign of education and have brought the retail druggists to a realization of the possibilities that can only be obtained by thorough organization and active co-operation. During my term as President it has been my pleasure to address a great many local and State associations, and wherever we have had these meetings favorable results have followed not that in all case prices on proprietary goods have been restored, but that the retailers have become cognizant of the advantages that will certainly result from the maintenance of strong associations, either local or State, and have been endeavoring to work together for mutual profit. Besides, I venture the assertion that the good influence of the N. A. R. D. has convinced many of our friends that "in union there is strength," and I do not doubt that the seed we have sown will bring forth abundant fruit in the future.

Pharmaceutical Press.

Before commencing a review of the work of the past year I wish to tender to the Pharmaceutical Press my sincere thanks, and in this I know every delegate will join me, because of the noble part the journals have performed in the endeavor to lighten the burdens of the retail druggist. Without exception they have given us willingly and freely the use of their columns, and the editorials that have appeared in them at almost every issue have proven of valuable assistance to the officers of the Association, besides helping greatly to bring about the spirit of good feeling, and allay the disposition to become dissatisfied because all that we wished had not already been accomplished.

Some of the journals have been more active and helpful than others, but I feel that this Association should acknowledge the lasting debt of gratitude that we owe all of these publishers, and I express the hope that with the return of prosperity this obligation may be made manifest in a more substantial way. If every retail druggist in the country would subscribe for not less than two pharmaceutical journals, this would prove to be not only the best investment he could make, but it would be of great assistance also in carrying on the campaign of education absolutely requisite to our success.

Executive Committee.

Soon after the adjournment of our last convention the chairman of our Executive Committee was employed by the N. W. D. A. as an assistant to the chairman of the Proprietary Committee of that organization. At first many of our active sympathizers believed that in taking this step a mistake had been made, but as events have progressed I believe the wisdom of this action has become generally recognized. The funds at the disposal of our Association have been at no time sufficient to allow us to investigate and ferret out the violations of the promises that have been made to us, and in order to perfect our plans, these violations had not only to be detected, but punished if possible. Acting in a dual capacity, representing both of the associations, that do all the distributing (to the retailer as well as that to the consumer) what more advantageous arrangement could have been offered to the N. A. R. D. than the one that the chairman of the Executive Committee has filled during the past year? Do we realize how completely we would have been at the mercy of those who are not in sympathy with us had this arrangement not been made? Do we fully appreciate how difficult it would have been to have perfected any agreement unless we had some one to represent our interest?

No one actively engaged in the retail drug business could have given the time; and if he could it would have been unreasonable to expect that he should in addition pay the expense. Those engaged in the wholesale drug business were in a similar position, and I feel assured that the work which has been done up to this time has proven that the arrangement was not only equitable, but to our advantage. It is believed the future will in even greater measure demonstrate the wisdom of this action, and that the advantage which will come to us through the work of our chairman (acting for both associations) will meet with the hearty approval of every delegate to this convention.

The interests of so large a number are represented by us that the matter of time has been one of very serious importance, and I believe the adoption and putting into effect the proposition that has been made to the members of our Association and to the N. A. R. D., and which is being enforced at this time by a very large majority of the proprietors of those preparations having an extended sale, is one of the greatest results of the work of the chairman of the Executive Committee. This alone required days and weeks of active work and frequent consultations before it could be placed in proper form for submission to the joint conference of the three associations.

We cannot say positively that the plan now in force will actually bring the relief for which the three branches of the drug trade so devoutly hope, but certainly when the manifest disposition of all concerned is to bring back prosperity to the retail trade, to re-establish prices on proprietary goods, to place the sale of all medicinal preparations in the channels through which they should be marketed from the manufacturer to the consumer—with all these evidently desirable objects in view, certainly out of the earnest efforts of the allied branches, all working for one cause, some method will in the end be devised that will accomplish what is sought by all, and which is absolutely necessary to the profitable conduct of business by the proprietor and jobber, as well as the retailer.

Personal observation during the past year has demonstrated to me that wherever the retailer can obtain the price which the proprietor claims his medicine is worth, then the standard goods have the best sale, and in proportion as profits vanish so does the sale of other goods (counterfeit and imitations) increase.

The work of the Executive Committee, both as individuals and as a committee, has been earnest and diligent, and will, no doubt, be completely covered in the report of the chairman.

National Legislation.

The Committee on National Legislation has had some very important matters to look after, and the work has been done faithfully and well. The most important of these is the effort made to have the Stamp Tax on medicinal articles repealed. At one time the prospect many interests apparently clamored for relief from the war tax that action was deferred. The good work has been started and will be vigorously pushed at the next Congress, and I would urge every delegate at this convention to use his utmost influence to secure prompt action at the earliest possible moment.

The vigorous assistance that our retail drug friends gave the Association last year should be renewed with increased force, because the burden becomes more unreasonable and unbearable every day that the "tax" is collected. We will thereby secure prompt relief and it should be prompt, as the tax is not only unnecessary, but class legislation, unjust and unworthy of this great government. The very efficient chairman of this committee, Mr. Thomas Stoddart, of Buffalo, N. Y., has given the matter, as well as all other pertaining to his office, time and earnest labor, and while the reward has not come as yet, through his active, earnest work every druggist has been enlisted in the cause, and no doubt every Congressman and Senator has been petitioned for aid in repealing the law.

The committee had the assistance of some of our officers and members at the hearing before the Ways and Means Committee at Washington, and we should be ungrateful if we did not acknowledge our indebtedness to several of our friends among the proprietors who

aided us financially in bringing our representatives to the National Capitol to assist in urging repeal of the Stamp Tax.

Trade Marks and Patents.

The Committee on Trade Marks and Patents, of which Mr. John C. Gallagher, of Jersey City, is chairman, has rendered efficient service in this cause, and the constituted authorities have been placed in possession of much valuable information as a result of his work, all of which will no doubt be submitted to the convention at the proper time. The duties devolving upon the committee were not only important, but necessitated a great deal of earnest thought and correspondence. The patent and trade mark laws of our country are very liberal, so much so that they have fastened upon us an injustice that it will require convincing arguments to remove, but the efforts of the committee in this direction promise to secure such a modification of the laws that while they will protect the inventor in his just rights, they will not secure to him a monopoly that is prohibitive of the exercise of inventive genius, and fix upon the retail trade of this country burdens which no other country permits or recognizes, and which ours should not longer allow. Our efficient chairman has labored earnestly in our behalf and deserves the approval of this convention.

FRATERNAL RELATIONS.

N. W. D. A.

Our relations with the other branches of the drug trade continue to be of the most agreeable kind, and the interest manifested in the success of our endeavor to restore the retail drug trade to its former prosperous condition has increased rather than diminished. We have found the members of the N. W. D. A. always willing to co-operate with us in every reasonable move that we have suggested, and the proprietors likewise have given our officers every reason to believe that they are thoroughly in earnest in all endeavors to improve our business.

We have given the latter every assurance we could that our members would be loyal to the resolution passed unanimously at our last convention in Cincinnati, namely, "to deliver the article called for," and I firmly believe that this resolution has been conscientiously observed, especially by the associations affiliated with the N. A. R. D.

It is our manifest duty to use every endeavor to strengthen these bonds of friendship; our interests are so thoroughly entwined that the nearer we are brought together and stay together the sooner we may expect improved conditions, and the sooner can we command their aid and influence in correcting the present, as well as any future evil, that may creep into our business.

The plans that have from the outset been advocated by the N. A. R. D., the distribution of goods through the wholesale trade only, have been so eminently just to the N. W. D. A. that these plans, since their adoption, have always commended their active help. We recognize that in adopting this policy we may have done an unintentional injustice to some of our friends who were formerly able to purchase in quantities direct, but we should not be oblivious to the fact that no great reform that was ever instituted did not for the time being do an injustice, or prove a hardship to some. Yet the benefits that will be secured by all in the final consummation of these plans and the restoration, not only of full price, but the placing of the sales of all medicinal articles in the channels in which they properly belong will more than compensate, even these, for the small sacrifice they are asked to make; that profits and prosperity may again return to all.

P. A. of A.

Our relations with the P. A. of A. have been of the most friendly nature. During the year that has gone by it has been my pleasure to confer with many of those whose interests extend all over the country, and I have always found them willing to make any sacrifice in order to aid us that would not jeopardize their business. This is but natural. We come into contact with the people who use these products, and when the time shall come, which I hope shall be soon, when the retailers can secure some profit on these lines, I hope that the good will of every retailer may be secured to the end that our relations may continue to grow more cordial, and that we may know that our interests are identical.

Organization.

In my experience the greatest difficulty we have had to overcome is that of convincing our friends that the evils that have come upon the profession in other sections are just as apt to be visited upon them, and that if they would form local organizations they would be ready in advance, and more likely to escape the misfortunes that have befallen others. "United we stand, divided we fall" is just as applicable to the retail drug trade as to the State. Our strength lies in local organizations, and to this point every effort that we can command should be directed.

We have abundant evidence of the value of this work in several localities where prices and the general conduct of the business is absolutely in the hands of the retail druggists, and the distribution of all medicinal products is controlled by the local organization. Naturally it might not be possible to obtain the same good results in the larger cities, but these smaller organiza-

tions, acting in concert, could enforce certain trade regulations that all concerned would be compelled to observe. Because full prices are obtained in their particular localities many of our friends do not realize that there is great responsibility resting upon them to contribute their help in advancing our cause.

Our fortunate friends here mentioned are to be congratulated upon the happy condition of affairs in their own localities, but there is no sufficient reason why any retail druggist should withhold his moral or financial help toward building up the National Association. No one connected with the N. A. R. D. has ever worked in the cause from selfish motives. Many of its members who have been most active, have given their time and money without any hope of compensation beyond that feeling of satisfaction which one experiences when he knows he has contributed all he could to the elevation of his profession and to its financial success. They should not forget "That he serves his God best who serves his fellow man." Our friends should also remember that they cannot foretell when a disturber of prices may come into their midst. By contributing to make the N. A. R. D. stronger, by organizing their own localities, they are only doing their share in placing the organization in a position to return to them with compound interest every dollar they find it necessary to contribute. The National Association recognizes no boundaries. We hope the day will come, and that soon, when, supported by local and State associations existing everywhere, the strong arm of the N. A. R. D. can be invoked with a certainty that any evils that may come upon our people can be speedily removed. In this matter it is the duty of every retail druggist to recognize his own responsibility. Whatever will bring profit and prosperity to the retail trade anywhere will certainly command the earnest efforts of the N. A. R. D., and every retail druggist should feel it incumbent upon himself to do his share for the good of all.

There is no association that it is possible to bring together that could not wield some influence, and with many of these distributed throughout each of the States, or consolidated into one larger organization, we would be placed in a strong position for either aggressive or defensive work, and could exert an influence that would prove of great benefit to all.

The State associations have, with few exceptions, reaffirmed their loyalty to the N. A. R. D. and have appropriated their dues, yet the number of druggists actually engaged in the work, or who are represented by the State associations, are too widely separated to act in concert or to produce any effect upon disturbed conditions; besides, the State associations do not contain in membership a sufficiently large majority of those engaged in the retail drug business to direct the important matters continually arising which really threaten the perpetuation of the business, rendering it neither profitable commercially, nor remunerative professionally.

I believe that all of the energy that we can husband should be used in forming and developing these small local or county organizations, and that every dollar that we can make available should be devoted to this one purpose. To this end I express the hope that it will meet with the approval of the convention, that the Executive Committee be authorized to secure the services of such organizers wherever they may be found, and that the compensation to be allowed such organizers be fixed by the Executive Committee.

With our income we have been unable to guarantee even expenses to those who have willingly aided us in forming organizations, but with the hope that some action may be taken at this convention that will bring us more revenue this suggestion is made. During the past year one of the members of the Executive Committee organized several county associations, simply as an experiment, and the receipts in the way of voluntary contributions at the time of organization almost paid his expenses, leaving the dues to be paid into the treasury of the N. A. R. D. However, these receipts did not include any compensation for his personal services. It is possible that if the suggestion should meet with your approval this work might be made a source of revenue, especially in the most populous sections of the country. I believe the Executive Committee should be given authority to make such arrangements, should it be found necessary or advisable. I merely refer to this as one of the means that might be made available, not only in organizing local and county associations at small expense, but in increasing the number of our affiliated associations and promoting a greater interest in the work.

Finances.

The finances of the Association have been during the past year a source of anxiety to the officers. I think the time has passed when we should feel any degree of hesitation in soliciting from our friends cash donations for the furtherance of our work and to assist in increasing the number of our smaller associations. At our first meeting we did not feel inclined to receive donations from any one except retailers in retail associations, subsequently this was modified so as to permit donations to be received provided they were given in the name of some local organization. I feel now that the benefits that would arise from having retail druggists thoroughly organized everywhere, with one central or national body to direct the course it should follow, would bring such results, not only to the proprietors, but to the jobbers that they would gladly contribute to such a fund.

If deemed advisable these contributions could be set aside for the sole purpose of organization, and the cur-

rent expenses of the association could be paid from the revenue secured from dues. I believe that such action as I have mentioned upon the part of this convention would be met with a prompt response from those whose interests are vitally wrapped with our success, and who are in a condition financially to render us this help. If the plans that we, from the commencement, have endeavored to carry out, supplying the retail trade through the jobbers only, it would mean hundreds of dollars of guaranteed profit annually to each of the jobbers and besides the proprietor's sales, and naturally his profits would be greatly augmented by having the influence and good-will of the retailers, if in the end we could control the price and distribution of the goods. I can see no other way except the two I have mentioned for increasing our revenue.

The per capita of 50 cents, as now assessed, is as much as the members will stand, and our revenue in addition must come either from donations or from an increased number of associations. I cannot too earnestly urge this convention to give this matter careful thought, and hope from these deliberations feasible plans for increasing our revenues may result.

I would feel that I had not completed my address if I did not take this opportunity of commending the work of our secretary, Mr. T. V. Wooten. No matter where his services have been required, in the office, as an organizer, as a correspondent, or wherever his duties called, he has been the painstaking, competent official. The N. A. R. D. has been exceedingly fortunate in having such an one as its secretary. During my term, we have been in almost daily communication, we have been together before local associations, and at important conferences, and his clear perception of his duty and what was due us has been a constant source of comfort and assistance to me. "There may be others," but I doubt it.

In closing, I wish to convey my earnest and heartfelt thanks to the various officers and committees who have labored assiduously in our cause, and to whose aid I attribute whatever of success may have come to the N. A. R. D. during my administration. Let each of us determine before we leave for our homes to go to work with renewed energy; let each of us resolve to do his utmost to make the coming year our banner year; let us pull together; let us concentrate all the energy that we can command upon strengthening the power of our National Association, let us assist in organizing local associations, and in uniting all of the retail druggists of this country in the one common effort to restore prosperity to our vocation! Our cause is just, and trusting to a Supreme Being to guide us and give us the strength to continue the fight for the retail druggists of this country until whatever belongs to them they shall have, I feel that in the end, if not in the near future, victory will be written upon our banner.

Upon its completion, it was moved and carried that the address be referred to a Committee of Five, to report upon at a later meeting. Vice-President Anderson named as the committee: Messrs. Voegeli, of Minnesota; Seeley, of Michigan; Gregory, of New York; Nelson, of Tennessee, and Bodemann, of Illinois.

Secretary Thomas V. Wooten then read his report.

SECRETARY'S REPORT.

As made obligatory by the Constitution I present herein the Secretary's annual report.

At the meeting of the Executive Committee, held immediately after the adjournment of the Cincinnati convention, the secretary was directed to secure in Chicago suitable headquarters for the association. The location selected is in every way well adapted to our needs. The furnishings which in addition to the desk and filing case already on hand involved an expenditure of less than one hundred dollars (\$100.00), are necessarily unpretentious, but the office and its appointments are in keeping with our character as a business organization.

Proceedings of the Last Convention.

Twenty thousand copies of the report of the Cincinnati convention were obtained, and about 18,000 distributed to members of the affiliated societies and to prospective members. The necessity of condensing a large amount of matter sufficiently to reduce the rate of postage to one cent per copy rendered the work of compilation very difficult. Preparations for sending out the proceedings were delayed on account of the committees having to discuss and decide as to number of copies to be distributed.

Work of Organization.

It was anticipated by the association that during the past year the secretary would devote a considerable portion of his time to the work of organization. It is believed a consideration of the several causes which have operated to prevent the fulfilling of this expectation will satisfy the membership that the failure to do this work was not due either to indifference to the organization's wishes or to the lack of appreciation of the necessity of advancing thereby the Association's interests.

One of the reasons this work was not entered upon with promptness and vigor was the slowness with which our plans matured in spite of the justifiable expectation that the obstacles which had already been overcome at the time of the Cincinnati convention would allow their

completion without further difficulty. The vexatious delays incident to our securing the needed co-operation of manufacturers and jobbers, without which co-operation the plans upon which we had been working were of necessity doomed, was considered a sufficient reason for not spending the Association's money in attempting to form organizations when there was nothing better to offer prospective members than the threadbare promises of the allied branches of the trade. When these difficulties had been removed sufficiently to allow the work to be started and pushed as it should be other obstacles presented themselves. One of these was the routine work of the secretary's office, which occupied practically all of his time. Specific mention will be made of this later. But the reason, above all others, which prevented needed attention being given to the work of organization was lack of funds, which unwelcome subject will be hereinafter mentioned.

The secretary made during the year only one trip at the expense of the Association. The cities of Cleveland, Toledo and Detroit were visited in November, in company with President Jones, the time occupied being four and a half days. The value of the work accomplished on this occasion is believed to be demonstrated by the sentiment in favor of our movement that since that time has existed in the section named, which sentiment has manifested itself in the formation of the Northern Ohio Druggists' Association, a vigorous body the co-operation of which the National Organization has a right to feel proud.

One other trip in the interest of organization was made at the Association's expense by President Jones at the request of Chairman Holliday and the secretary. This was a visit to the Virginia and North Carolina Pharmaceutical Associations' meetings in July, and included a visit to Richmond. The occasion of Mr. Jones being selected for this mission was the necessity of the secretary's attending the meeting of his own State association which convened at the same time, and it was felt that the opposition to our cause known to exist in Virginia rendered desirable the presence of one of our official members. It is regretted that owing to the meetings in the two States being held simultaneously (a fact not fully understood beforehand), this trip entailed considerable physical discomfort to our representative, and was not as successful as was desired. The actual expense incurred by the Association for organization work during the year is \$200.60, leaving untouched \$739.40 of the \$1000.00 set apart for this work.

Chairman Holliday attended the State meetings of Illinois, Iowa, Kansas, Missouri, and Nebraska. The secretary attended the meeting of the Indiana Pharmaceutical Association, which association, in keeping with its accustomed liberality, paid all the expense incident thereto. A somewhat urgent invitation was received by the secretary from the Minnesota Pharmaceutical Association, but inasmuch as no other work could be done, and the expense would have been considerable, the invitation was declined. The additional work in the interest of organization done by Chairman Holliday, and reported by him to the Executive Committee, may be thus briefly summarized.

While engaged in the prosecution of his work on behalf of the N. A. R. D. with the proprietary manufacturers, and while visiting different localities in the interest of the Proprietary Goods Committee of the N. W. D. A., Mr. Holliday conferred with numerous retailers in many sections.

In Boston an important meeting was held with the Executive Committee of the Massachusetts Pharmaceutical Association, and other retailers; as a result a special meeting of the Association was called at which affiliation with the National body was voted.

At Lowell, Mass., the retail business was badly demoralized, but the trade was induced to reorganize and adopt a price schedule which action placed matters on a very satisfactory basis.

At Worcester, Mass., a strong effort was made to secure better organization and more desirable conditions, but owing to the existence of unusual obstacles the result of the effort there was not at the time satisfactory; however, prospects have brightened since.

At Toledo a conference was held with representatives of that trade. There are reasons for believing that conditions have been steadily improving throughout the year.

At Pittsburg a conference was held with the Executive Committee of the Western Pennsylvania Retail Druggists' Association for the purpose of deciding some questions of policy for the guidance of this vigorous and influential organization.

In Detroit the local situation was discussed with members of the Detroit and Wayne County Retail Druggists' Association.

In March a visit was made to New England during which a retailers' meeting was held in New Haven, at which delegates were present from Hartford, Danbury, Bridgeport, and other places. The situation in Connecticut, largely through the efforts of active members of our Association, has improved to such an extent that New Haven is now said to be the only town in the State in which there is price cutting.

In New York City conferences were held with Committees of the Manhattan Pharmaceutical Association, the German Apothecaries Society, the Kings County Pharmaceutical Society and the Jersey City, N. J., Association.

In Philadelphia a meeting was held with the Executive Committee of the Philadelphia Association of Retail Druggists and a number of the directors of the Philadelphia Wholesale Drug Company.

Rochester was visited and a meeting of retailers was held for the purpose of securing more general organization.

In Cleveland a conference was held with the Executive Committee of the Cleveland Retail Druggists' Association. This organization afterward became the nucleus of the very effective Northern Ohio Druggists' Association.

In May a visit was made to Richmond, Va., and conferences were held with the retailers and jobbers of that city. At this time arrangements were made for a subsequent meeting, which was held in July and was attended by President Jones.

In May a trip was taken through Texas and conferences were held with retailers in the cities of Fort Worth, Waco, and Houston. During Mr. Holliday's stay in Houston the effort to induce the aggressive cutters there to join the local association was successful. This druggist was understood to be the last aggressive cutter in Texas.

A visit was made to New Orleans where conferences were held with the jobbers, the leading retailers, and cutters. The situation was left in good shape, and a promising local organization has since been formed.

A visit was made to Des Moines, Iowa. At this place it is a pleasure to note that druggists, as the result of purchasing the stock of the department store, have succeeded in restoring prices practically to full figure and have had no difficulty in maintaining them.

Mr. Holliday attended the 1000 meeting of the American Pharmaceutical Association in Richmond, May 7-12. The very satisfactory attitude of the members of that association toward our work is well illustrated in the fact that the commercial section is now under the direction of men who have been active in the National Association. The chairman of the section is Chas. A. Rapelye, of Connecticut, and the secretary, W. F. Meissner, of Indiana. The Executive Committee being composed of Messrs. Willis, of Quebec; Stedem, of Philadelphia, and Holliday, of Topeka.

Mr. Timberlake of the Executive Committee has done excellent work in organizing associations in Indiana; Mr. Prall has been active in furthering the interests of the National Association in Michigan; and Mr. DeLanz has done good service in Ohio, while President Jones has visited the States of Michigan, Ohio, Virginia and North Carolina, attending local meetings in the two first, and State association meetings in the two latter.

Mr. Hynson was present at the meeting of his State association. This organization voted "to affiliate with the N. A. R. D. in the future through an adjunct body to be formed by a board of directors composed of five members, four to be elected annually by the M. Ph. A. and these to elect the fifth member. This board shall make every effort to thoroughly organize the retail druggists of the state, collect all moneys due the N. A. R. D. and send delegates to said body."

Owing to Mr. Cheswright's ill health Louis Emanuel of Pittsburg was designated to perform the duties devolving upon the member from Pennsylvania, and the help given by Mr. Emanuel to the committee has been very efficient. The Western Pennsylvania Association, of which Mr. Emanuel is treasurer has done excellent work throughout the year and is in a flourishing condition.

The number of associations which have been added to our membership as the result of correspondence is not large, but these are in nearly all cases composed of good material as events have conclusively proven. The secretary believes that his two years of untiring painstaking effort to build up a strong organization by mail has demonstrated that this is impossible. During the past year the Executive Committee discussed the project of organizing one state thoroughly, a prominent proprietor having intimated his willingness to help to defray the expense, but the project, with its inviting possibilities never advanced beyond the stages of discussion.

After giving a list of the associations belonging to the N. A. R. D. the secretary reported the names of the

Associations Which Have Withdrawn.

During the year three State associations have withdrawn from our fellowship—New Jersey, Virginia and South Carolina. In New Jersey this action was the result of a determined opposition of a few strong men, led by the president of the organization. The reason most persistently and effectively urged as a proper cause for withdrawing was that affiliation with another body was contrary to the organic law of the association. Too much cannot be said in praise of the members of the New Jersey Association, whose gallant fight to hold their State organization in line with our work is deserving of the highest admiration.

Judging by the correspondence of your secretary with the officers of the Virginia Pharmaceutical Association, the unfavorable action of that body was caused by the disagreement of its members with the plans of our organization, especially the feature obliging retailers to relinquish the right to buy proprietaries at the manufacturers' best prices. It is understood that much dissatisfaction exists in the State as to the manner in which the decision to withdraw was reached. At the time the vote was taken only eleven members of the association were present, out of a total membership of 155.

The association of South Carolina seems to have withdrawn as a matter of economy. The aims and plans of our organization, probably as the result of indifference, seem never to have been well understood by that body

or its individual members. The secretary's letter, which conveyed the intelligence of the organization's withdrawal, contained a check in payment of four individual memberships in the National Association.

It is a pleasure to state that the Alabama Pharmaceutical Association, which a year ago withdrew from our fellowship, voted unanimously to renew her affiliation at its last meeting, and has a representative present in the person of W. E. Bingham, of Tuscaloosa. Notwithstanding the temporary disaffection of this splintered organization, she is entitled to the distinction of having devoted more money to the National Association's work in proportion to the number of her druggists than any other State.

Routine Work.

Rightfully, and as a matter of necessity, the Executive Committee depends upon the Secretary's office for a large amount of work. On all questions of importance the final decisions reached by the Committee are the consensus of opinion of the members, but the work of presenting clearly and concisely the questions to be decided, so as to enable its members to reach decisions intelligently and readily, has ever devolved upon the secretary. In order that the Committee may keep in close touch with the conditions that exist generally, thereby enabling its members to act with a full knowledge of existing facts, all correspondence that passes through the secretary's hands, as well as all the pharmaceutical journals, are scanned closely for important matters to be brought to the attention of the committee, a task by no means inconsiderable.

This duty, together with that of preparing such bulletins as may be issued; keeping up the correspondence of the office, at times voluminous, and much of it at all times perplexing; doing as great an amount of organizing as possible by mail; doing the clerical work of the Standing Committee; procuring, verifying and filing statistics; assisting the treasurer in the discharge of his duties; looking after imbursements and keeping the books of the association; supplying the associations in membership with the literature issued from time to time, and preparing a weekly or bi-weekly news letter for twenty-four pharmaceutical journals, besides giving attention to the exacting requirements of his own local association, constitutes the routine work mentioned as one of the reasons why the secretary could not devote as much time or organizations as might be desired, even if there were no other hindrances. One feature of the secretary's work especially worthy of attention is the duty which he is constantly called upon to perform, of assisting the associations in membership to correct local abuses and improve local conditions by bringing to their assistance the help of manufacturers and jobbers, and by inducing retailers themselves to work in harmony for the common good.

SPECIAL WORK.

Co-operation with the Executive Committee.

As early as possible after the convention the secretary addressed to the officers of the affiliated bodies a letter, from which the following is an extract:

"At its Cincinnati Convention the following (Resolution B), was adopted:

"RESOLVED, That the success of the plans of this association, being dependent upon the ready and cordial co-operation of the affiliated organizations which form integral parts of this central body, that such affiliated organizations should recognize the action of this association and its executive officers as entitled, in the fullest measure, to their approval and the unanimous co-operation of their members.

"In accordance with the wish of the association expressed in this resolution, the Executive Committee desires to obtain a statement from your organization as to its position with reference to the carrying out of the policies and plans inaugurated by the committee and the extent to which the committee can rely upon the support of your members. The importance of specific information on this point is evident.

"In order that its work may be effective, the committee must be in a position to exert a definite influence upon the affiliated branches of the trade as well as the retail trade itself; therefore no doubt should exist as to the loyalty of the affiliated societies, and the determination of these societies to carry out the instructions of the committee.

"You are urged to send with the least possible delay the decision reached by your association upon the important question, 'Will your members individually and collectively, stand behind the National Executive Committee?'

To this letter nearly all the local associations responded and the answers were heartily in the affirmative. Several State organizations also replied in a similar manner through their Executive Committees. As far as a great majority of the associations are concerned, this avowed willingness to follow the leadership of the committee has not been subjected to any severe test, but from its experience, the committee believes there would have been, and will be, no failure on the part of the associations to fulfill this promise.

Acceptable Jobbers.

As instructed by the Executive Committee, the secretary sent, in November last, to each of the affiliated bodies, a request that a list of the wholesalers acceptable to those associations be named, in order that the jobbers

so designated might be recommended by the committee as acceptable wholesale distributors. A list containing the names of all the jobbers recommended was placed in the hands of the Executive Committee at its meeting in April. The reports of the affiliated societies had been received very slowly, and at the time of submitting the list to the Executive Committee it was far from being complete.

Aggressive Cutters.

The list of aggressive cutters in process of formation at the time of the Cincinnati convention was finished, but it was incomplete, and for several reasons it has never been used by the Executive Committee. A new list is being compiled in accordance with the present needs of the association.

Work for the Committees.

The work done by the secretary's office on behalf of the National Legislative Committee has been considerable during the past year, requiring time and painstaking labor on the part of the secretary as well as his assistants. On behalf of the Committee on Trade Marks and Patents, the secretary appeared with a delegation consisting of Messrs. Bodeman, Ebert and Engelhard, before the Trade Marks and Patents Commission in Chicago. While the results of this conference have not become apparent, it is difficult to see how anything additional could have been said that would have given the commission a better understanding of the desires and needs of the drug trade. On behalf of the Committee on Transportation, considerable correspondence was carried on, a task which the secretary unintentionally brought upon himself and which, though prosecuted with the best of motives, he has some good reasons for regretting. It is believed the committee itself would have done the work more effectively. A small amount of clerical work was also done for the Committee on Pharmacy Laws and the Committee on Form of Organization.

Other Work.

A complete constitution and by-laws for the use of local associations, adaptable to the needs of both large and small organizations, was drawn up by the secretary, and approved by the Executive Committee.

Recently the secretary, under the direction of the Executive Committee, has corresponded with a number of manufacturers on the subjects of the hardship to retailers who desire to deal fairly by advertised proprietaries, of the practice universal among aggressive cutters of exploiting in newspapers their business methods, which methods (advertising proprietaries at less than cost in order to attract people to whom substitutes may be sold) are alike detrimental to the interests of the proprietor and the non-substituting retailer. The co-operation of the several proprietors with the retail trade, to the end that this hurtful practice may be abated is greatly needed, and it is hoped will be forthcoming. Definite promises to this end have already been received from several prominent proprietors.

During the year four bulletins outlining the work of the Executive Committee and giving other information about the Association's work, have been published; the demand for each issue has been large, indicating general interest in the subjects discussed.

The secretary in exchange for the news notes issued by him from time to time, has received the following journals: Pharmaceutical Era, American Druggist, The Druggists' Circular, The Practical Druggist, Merck's Report, New England Druggist, Omaha Druggist, Wisconsin Drug Exchange, Western Druggist, Western Drug Record, Meyer Bros.' Druggist, National Druggist, San Francisco & Pacific Druggist, Bulletin of Pharmacy, Texas Druggist, North-Western Druggist, Paint, Oil and Drug Review, California Druggist, The Spatula, American Journal of Pharmacy, Midland Druggist, Canadian Pharmaceutical Journal and Gazette, Drug Clerks' Journal and Rocky Mountain Druggist.

Finances.

Contrary to the procedure previous to that date the Executive Committee adopted, in November last, the plan of receiving donations directly from manufacturers, jobbers and retail druggists without requiring these donations to be submitted through affiliated societies. The treasurer's report presented at this convention will therefore give credit to firms and individuals in accordance with this change. It will be observed that aside from the donations promised at the Cincinnati convention very little has been received (none has been solicited) from other sources than organizations of retail druggists.

At the meeting of the Executive Committee held in April the financial condition of the Association was carefully considered. The committee realized the necessity of keeping expenditures within the bounds established by the condition of the treasury, and since it was evident that the work of organization contemplated by the Association at its Cincinnati meeting could not then be carried out, the secretary was instructed to hold the matter of organization in abeyance till the funds available should justify making comprehensive plans for carrying on this work. Justice to the committee and to the secretary requires that this embarrassment caused by a lack of funds should be given due recognition.

The following is an itemized statement of the expenses of the Association for the year:

Expenses.

Secretary's office.....	\$3,632.20
President's office.....	10.25

Treasurer's office.....	35.96
Committee on National Legislation.....	86.05
" " Commercial Relations	6.00
" " Transportation	6.00
Work of Organization.....	260.60
Executive Committee.....	455.71
Proceedings of Cincinnati Convention.....	496.07
Official Report of Cincinnati Convention.....	130.00
Appropriation to Miss Edsall, stenographer at Cincinnati	25.00
Additional Expense Treasurer Lowe's office.....	25.00

\$5,168.84

It will be observed that the estimated expenditures for the year (\$7,300) were \$2,131.16 in excess of the amount actually expended. This difference is accounted for principally by the secretary's having expended almost nothing for travelling expenses, and by the compensation and expense of the Executive Committee, and the printing and postage bill being less than estimated. The secretary takes pride in saying that the strictest economy consistent with good business policy has been practiced in his office.

Recommendations.

Close intimacy with the work of the Association prompts the secretary to recommend:

That provision should be made for competent organizers to work in the various States under the direction of some druggist designated by the State Association, the general supervision of the work to be given to the secretary. The secretary is mindful that without liberality on the part of the members this plan is not likely to succeed, but he knows of no other way in which the work can be successfully done, and he is convinced that the advanced prices on ordinary drugs, to say nothing of proprietaries, will many times over reimburse contributors to the expense fund made necessary.

It is believed that a few simple rules as to the time at which the dues of associations are payable, and specific instructions to the treasurer to collect these dues in some prescribed manner, will be greatly to the advantage of the Association.

The Association should at each session instruct the Executive Committee with reference to printing and distributing the proceedings, in order that adverse criticism of the committee may be avoided.

On the subject of loyalty to the organization, the secretary doubts the wisdom of making any recommendation, however much he would like to do so. He cannot, however, refrain from warning members against persons who, for reasons wholly discreditable to themselves, asperse the character of those who are engaged in prosecuting the work of your organization. If any of the officers, executive or otherwise, are suspected of unworthiness, let the charges against them receive painstaking investigation and let it be plainly understood that the National Association is infinitely larger than any man or set of men, and that no one's personality shall stand in the way of the organization's success.

In conclusion, the visible results of the year's work are not what the secretary would like to have them, but he feels that the fault is only partially his own. His efforts to increase the membership of the Association more than he has, by correspondence and the distribution of literature, has been to some extent a disappointment, but the hope is cherished that the hard work which has been done without visible results as yet, has accomplished much good, as the future will reveal. Two hurtful conditions, to counteract the baneful effects of which much time has been given, are the imagined security of druggists in towns and cities where price demoralization does not now exist, and the unwillingness of druggists to exert themselves in behalf of their less fortunate brethren of other nearby communities. The secretary has insisted that without the existence of the fraternal spirit little of permanent value can be accomplished; he has urged the value of fraternity as a matter of business and not of sentiment, and has done his best to induce the druggists to take a broader view of the situation than that which is bounded by their immediate personal self-interest. Scores of carefully written personal letters on these subjects, inspired by a consideration of bad local conditions, which there is every reason to believe a little public spirit could easily overcome, have apparently had no other result than brain-weariness to the writer. These things are spoken of here simply that you may comprehend more clearly the details of the secretary's office.

The secretary desires to thank the members of the Association, especially the secretaries of the affiliated societies, for the help they have given him throughout the year. He is glad of the opportunity to say that the unselfish devotion of some of those men to the interests of their fellow druggists has been to him a constant source of encouragement and inspiration.

This report was also referred to a committee of five, and the chair named the following gentlemen: Messrs. Chas. Huhn, Minnesota; Bingham, of Alabama; Wood, of Kentucky; Pritchard, of Pennsylvania, and Porter, of Maine.

TREASURER'S REPORT.

Treasurer Charles T. Heller's report covered in detail all of the receipts and disbursements of the time since he took up the office, November 1, 1899. At that time he received a balance of \$641.76 from ex-Treasurer Lowe.

He has received since then: Dues, \$1,397.00; donations, \$523.37; miscellaneous receipts, \$331.04. These, with the balance from Mr. Lowe, amount to a total of \$6,096.17. Total disbursements during the time, \$4,907.68, leaving a cash balance on hand of \$1,128.49.

The treasurer's report was referred to the Auditing Committee.

Proxies a Subject of Discussion.

The report of the Committee on Credentials followed, and was the occasion for a spirited discussion on the subject of "Proxies." Chairman Holliday, of the Executive Committee, called attention to the fact that nothing in the constitution arranged for voting by proxy, but that at a former meeting it had been decided that a "proxy" could cast the vote for an association provided he lived within a fifty-mile radius of that association. It was proposed to modify this arrangement so as to make it possible for a man to act as proxy provided only that he was from the same State. This suggestion did not meet with favor. It seemed to be the general opinion that any voting by proxy tended to detract from the best possible representation. One member even thought that an association which would not spend the money to send a delegate ought not to be entitled to a vote at all. Delegate Muir, of New York City, declared, "One man—no matter how good he may be—cannot possibly take the place of eight live men." After much discussion, the report of the committee was adopted, and those delegates credited who live within a radius of fifty miles, and the question of proxies for the future was referred to the Committee on Form of Organization.

Chairman Thomas Stoddard gave the report of the Committee on National Legislation.

REPORT OF COMMITTEE ON NATIONAL LEGISLATION.

As directed by Resolution "E", on page 33 of the printed proceedings, as adopted by the "Cincinnati Convention" efforts were made by this committee to secure the repeal of the War Revenue Tax upon medicinal and toilet articles.

The Committee at the earliest opportunity after its appointment placed itself in close communication with the Legislative Committee of the Proprietary Association of America and the National Wholesale Druggists' Association, as well as with others interested in the repeal of this tax.

Communications were received from the various interests, and on or near the first of December, 1899, a memorial to Congress was prepared, setting forth the injustice of a tax on medicinal and toilet articles, whereas other articles equally taxable bear no part of the burden of special taxation. Such arguments as the Committee deemed advisable to present to Congress were included in the memorial.

Ten thousand copies of the memorial, in the form of a petition, were distributed throughout the United States by your Committee, assisted by the associations affiliated with the N. A. R. D.

Letters were addressed to the Secretaries of the Associated bodies. In these letters the affiliated bodies were urged to secure signatures to the petition and to forward them promptly to their Representatives in Congress. They were also urged to call in a body upon their Representatives when the latter were at home among their constituents during the Christmas and New Year's vacation. Similar letters were likewise sent to thousands of druggists and others interested in this matter.

The committee is gratified to state that everywhere the affiliated bodies the leading retail druggists and others complied with the request to take determined action looking towards the repeal of this tax, and many hundreds of answers were received by the Chairman of your Committee and Secretary Wooten; all stating that they had forwarded the petitions, warmly commended the same by personal letters, and had called upon their respective Representatives.

Strong resolutions were passed by various organizations, particularly by those of Chicago, Ill., and Erie County, N. Y., and it will perhaps not be out of place for the Committee to incorporate in this report a copy of the resolutions adopted by the Erie County Pharmaceutical Association.

A copy of the same was mailed to every Congressman and Representative at Washington, and wherever they would be likely to be of any service in securing the Repeal of the Tax. Upwards of fifteen hundred of these resolutions were mailed. The resolutions read as follows:

Action of the Erie County Pharmaceutical Association.

In relation to the repeal of Section B, following Section 25 of the Internal Revenue Law of 1898, having been introduced in the House of Representatives by the Hon. Henry S. Boutell, of Illinois, known as House Bill No. 7663, and now in the hands of the Ways and Means Committee.

WHEREAS, At a meeting of the E. C. P. A., held in their rooms, at Buffalo, February 27th, 1900, the following fact was discussed, that.

WHEREAS, At a time when the Federal revenues are enormously in excess of public necessities; when the Treasury Department out of its vast cash balance can pay off \$25,000,000 of the public debt, and still leave nearly \$300,000,000 cash in the Treasury, we respectfully submit that the continuance of this tax is no longer justified; and it was therefore,

RESOLVED, That we, the Members of the E. C. P. A., feeling that the Stamp-Tax upon medicines and proprietary articles and preparations according to the War Revenue Act of 1898 is an unjust and burdensome tax, be it therefore,

RESOLVED, That we, the E. C. P. A., as business men, protest against the singling out and oppressing one line of business, and depriving them by burdensome taxation of the opportunity of protecting their homes and families.

RESOLVED, That we appeal to the present Congress of the United States to sustain the bill presented by the Hon. Henry S. Boutell of Illinois, known as House Bill No. 7663, and ask that the same receive their unanimous support and become a law without delay.

RESOLVED, That we ask this in the name of 60,000 business people, who are overburdened by unnecessary taxation.

GEORGE REIMANN,
President.

J. A. LOCKIE,
Secretary.

The resolutions of many other associations were couched in similar language, and will no doubt have great influence upon the furtherance of our undertaking. In addition to these resolutions, many influential druggists of the leading cities of the United States appealed to the local newspapers in their respective cities for assistance, and in many cases excellent articles on the subject were published, upholding the position and the contention of the druggists. After all this had been done, your Committee found that further pressure was necessary. Five thousand more copies of the memorial were sent out, and subsequently an additional ten thousand were distributed. Special attention was given to the druggists who lived in the various localities represented by Members of the Ways and Means Committee. These druggists were urged to write personal letters to their Representatives in Congress in order to bring all the pressure possible to bear upon the Ways and Means Committee. In response to these urgent demands, numerous letters were received, many of them enclosing the answers which had come from their Members of Congress, showing that their petitions and personal communications were receiving attention.

The Repeal Bill.

Your Committee felt that whatever the drug trade intended to do towards securing the repeal of the tax should be done early in the Session, and a large amount of literature sent out had for its object the two-fold purpose of supplying the trade with all needed information and keeping the subject prominently in view. The Chairman of the Committee, in an interview with Mr. Douglas, attorney representing the Proprietary Association, suggested the feasibility of having a bill drawn up and presented to Congress.

As the attorney lived in Chicago, the Chairman of your Committee referred the matter to Secretary Wooten, also of Chicago.

Mr. Wooten and Attorney Douglas framed a bill providing for the repeal of that portion of Section "B", which refers to the tax upon medicines and toilet articles, and this bill was embodied in the Repeal Bill presented to the House of Representatives by the Hon. Henry S. Boutell of Illinois.

After its introduction the bill was referred to the Ways and Means Committee, and was known as H. B. No. 7663.

The Committee, and in fact, the entire drug trade of this country, is indebted to the Hon. Henry S. Boutell for the great interest which he has displayed in urging favorable action upon this bill and appearing with us before the Ways and Means Committee.

The members of your Committee take pleasure at this time in heartily commending the druggists of the Sixth Congressional District of Illinois on their praiseworthy efforts to return Mr. Boutell to his seat in Congress for another term, and we sincerely trust that their endeavors will be successful, as we know that while he is there we can count him among our staunchest supporters. The bill introduced by Mr. Boutell was for the repeal of Schedule "B" of the Internal Revenue Law of June 13, 1898. This was decided upon after the committee ascertained that a reduction of the tax was out of the question. The cost of collecting the tax was so great that if the tax was materially reduced the cost of collection would equal the amount of the tax. Therefore, as a business proposition, total repeal was insisted upon.

The Hearing at Washington.

After considerable effort on the part of the introducer of the bill and its friends, a hearing was procured before the Ways and Means Committee of the House, at Washington, on April 17th. There were present, besides the Chairman of your Committee, Representatives of State and local pharmaceutical bodies.

The delegates assembled in the parlors of the Raleigh Hotel at Washington on Tuesday evening, April 16th, at eight o'clock.

The delegates heretofore mentioned were nearly all present. On motion, the chairman of your committee was selected to preside and a general discussion of the plans and arrangements for the hearing of the next day was held. It was decided at this meeting that Mr. Wooten was to open the hearing before the Ways and Means Committee, describing the organization of the N. A. R. D., and other details pertaining to the interests of those affiliated with us, and then to introduce the principal speaker. The meeting had selected G. P. Engelhard, of Chicago, to make the principal argument, as he had devoted very much time and care to this particular subject and was thoroughly conversant with the great injustice of the law in its present application.

Mr. Engelhard was followed by J. C. Gallagher, of New Jersey; Felix Hirsman, of New York, and R. L. Eads, of Indiana, each of them making an excellent address. After the chairman had summed up for the retail druggists he introduced O. W. Clarke, of Pennsylvania, in behalf of the manufacturers. Mr. Clarke was followed by J. H. Drabelle, of Missouri, and the final address was made by H. B. Harding, of the Drug Trade Section of the New York Board of Trade and Transportation. This concluded the arguments of the druggists before the Ways and Means Committee, but before the hearing closed, a very spirited speech was made by the Hon. H. S. Boutell, of Illinois, the author of the bill, as follows:

Mr. Boutell's Speech.

"Two years ago, on the 27th of this month, the War Revenue Bill was brought into the House. The late Nelson Dingley, the chairman of this committee, in explaining the purpose of the measure predicted that it would raise from ninety to one hundred million dollars.

"In 1897 the internal revenue receipts were about \$170,000,000, and in 1898 about \$273,000,000. For the present year they will aggregate about \$292,000,000, and for 1901 about \$300,000,000. The Secretary of the Treasury estimates a surplus for this year of \$70,000,000, and for the next year of \$82,000,000.

"We are now, therefore, face to face with three questions:

"1st. Is it wise or necessary to modify or repeal this act?

"2nd. What changes should be made?

"3rd. If the act is to be modified, should we make other articles taxable?

"The questions should be carefully considered, for the time has come when the people we all represent demand relief from this extraordinary tax.

"This law was hurriedly drafted, and it is to be modified as I believe it should be, we should alter it where the friction is greatest, in schedule 'B,' especially in view of the remarkable rulings of the Internal Revenue Department. The law makers certainly never intended that paregoric, arnica and antiseptic cotton should bear any portion of this tax. I hope and believe that the committee will give early attention to this matter, and grant this great trade the relief which it has justly demanded."

The appearance of so large a delegation before the Ways and Means Committee had great weight, not only the members of the committee, but with other members of the House.

We were honored through the courtesy of Congressman D. S. Alexander, of Buffalo, N. Y., with a special hearing before President McKinley. We were introduced to the President by Congressman Alexander, and Mr. Engelhard, who spoke so ably before the Ways and Means Committee, addressed the President upon the subject of our mission to Washington.

Your committee is indebted to Congressman Boutell and Alexander, and would recommend that official recognition of their efforts in our behalf be made at this convention, and that the same be communicated to them at the earliest possible moment in order to show our appreciation of what they have done for us. Although your committee was not successful in securing the repeal of the tax at the last session, we believe that what has been accomplished is a great step towards the repeal of this tax, and that we have opened the door so that with some little additional effort success will be attained at no distant date.

The members of this committee believe that the druggists of the United States are as patriotic a body of men as can be found under the shadow of the Stars and Stripes wherever the Stars and Stripes floats, and that they are willing to bear their full quota of civic or national burdens, that in times of national emergency as they were during the Spanish-American War, they are willing to bear even more than their share, but we submit that when the emergency has passed and the necessity for raising an immense war tax is ended, the druggists object to an apparently objectless continuation of the burden.

The drug trade has paid, and is paying, a very large percentage of the war tax, and the retail druggists are the sufferers.

The only way to obtain relief is through organization. Individuals have little weight as individuals, but united they can bring such pressure to bear upon the law-makers as will prove irresistible.

Recommends Organized Effort to Secure Repeal of the War Tax.

Therefore, your committee recommends that organized effort to secure the repeal of the war tax upon medicines and toilet articles be continued; that the new Legislative Committee be instructed to continue the efforts of

the present committee, and we believe that the present committee has so cleared the way that the new committee will encounter little difficulty in achieving success. Your committee would also recommend that the delegates here assembled interview the candidates in their respective Congressional districts who will seek nominations this fall, and demand from them pledges that they will do all in their power, if elected, to aid the druggists in securing relief from this burdensome and unnecessary tax. Such pledges would greatly strengthen the hands of the Legislative Committee of this Association.

It is only fair to say that this committee was somewhat hampered by the fact that no appropriation was made by the association for the heavy expenses necessary in performing its mission.

The members of the committee did not allow the interests of the association to suffer on that account, however, and freely paid their own expenses.

In the large amount of correspondence incidental to our work, Secretary Wooten's efforts were very valuable, and were greatly appreciated.

This committee did not consider it advisable to do anything in the matter of Trade-Marks and Copyrights, as this question had been placed in the hands of a very competent committee, which, will no doubt submit an able report upon the subject.

Advancement of Pharmacists in the Government Service.

The committee desires to call earnest attention to the advancement for the pharmacists in the Marine, Army and Government service, and we would recommend that this be given special consideration seeking to secure recognition of the title of "pharmacist" for those who are at present serving under the unjust classification of "hospital stewards" and endeavoring also to procure for these of our craft the proper compensation, which such of our profession rightfully deserve, to this end—we would urge that strong resolutions bearing upon this point be adopted by the N. A. R. D., and forwarded to the proper authorities at Washington.

Respectively submitted,

THOMAS STODDART, Chairman.

J. HAL BOBBETT,

F. W. MEISSNER,

WILLIAM GAUSEWITZ,

Committee.

The report was referred to the Committee on Resolutions, to be reported back at some future meeting.

Chairman Jesse Nelson read the report of the Committee on Commercial Relations.

COMMITTEE ON COMMERCIAL RELATIONS.

We, the Committee on Commercial Relations, conceive it to be our duty to deal with the commercial features of the retail drug business and its relations to the other two branches of the drug trade, the manufacturers and the jobbers, in order to assist in bringing about the closest business relations, each with the other, and to aid in shaping the business policy of the N. A. R. D.

This committee realizes that proprietary remedies constitute the most important factors of our consideration. We realize also that owing to certain anti-trust laws operating in some of the states of the Union which laws seem, to a certain degree, to interfere with some of our plans, together with the tendencies existing in strictly commercial circles to use these agencies as advertising mediums, makes this a most difficult problem to solve.

This committee appreciates the great amount of work done, and the good accomplished by our Executive Committee. We feel that in this great commercial conflict they have been truly "heroes in the strife." Notwithstanding this, at the present stage of action we feel that it is of paramount importance that we urge aggressive measures and early dates for decisive action.

We have communicated with a number of merchants and manufacturers in other lines who have been successful in maintaining the retail price of their output, in order to get some ideas from them and profit by their experience. Communications were received from Messrs. Earl & Wilson, The Oliver Chilled Plow Co., The Eastman Kodak Co., and Spaulding of sporting goods fame. With some ideas culled from these we believe we can offer some suggestions to this body that will be of value to the work already begun.

The courts of the land have decided that the inventor of a remedy has the right to fix the price of that article, and that he may lawfully insist that the purchaser or retailer shall not cheapen that article by selling or offering the same for sale below this stated price, providing such an agreement has been made, and that he has the legal right to close the door on that purchaser's procuring from his manufactory his product after violation of this fair agreement. (We refer to the final decision in the case of John D. Park & Sons against the N. W. D. A.)

Therefore we recommend that manufacturers of proprietary remedies be requested to begin the first day of January 1901, and enforce the contract or rebate plan through the jobber to the retailer, making it equally as binding upon one as the other, no goods sold until contract signed, be required of each, and at the expiration of each quarter if a sufficient amount of any one of these articles has been purchased by any one retailer from any one jobber, and the retail price of the

same maintained, that is contract kept, then the jobber by agreement with manufacturer shall rebate this purchaser.

This seems only fair to those who can handle a large quantity of these articles, and it does not conflict with his weaker brother or competitor so long as he maintains the stipulated price. Should the retail druggist violate his contract and cut prices, this to be decided by three-fourths of the druggists of his community, or the local association, then his supplies must be discontinued.

Furthermore, the jobber, as per rebate contract, must confine his sales of these proprietaries to the recognized retail drug business in communities where retail drug stores exist, for they alone can be expected to maintain prices in good faith.

We ask the manufacturer as an assistance to the retail druggist in regulating prices, and as an evidence of an existing contract, that he have stamped on the face of his package these words: "THIS ARTICLE IS SOLD UNDER CONTRACT THAT THE PRICE MUST BE MAINTAINED."

The retailer agreeing not to display any goods not bearing the above stamp, and to regard such as unfriendly to the retail drug trade.

We also ask the manufacturer to use some private mark whereby he may detect his goods when found in illegitimate channels.

We consider these demands conservative and reasonable, not in conflict with freedom of trade, and freeing all from the charges of violating the anti-trust laws. We hope this body will urge the inauguration of this plan.

A motion to refer this report to the Committee on Resolutions brought forth a heated discussion, and an amendment was offered by Delegate Harry Wise, of Chattanooga, to make the report a special subject for the Wednesday evening session. Mr. Wise said he had been sent with a definite end in view, the solution of the cut-rate problem. He believed that it was time for this question to come up. The sooner it came up for discussion the better. Not one per cent. of the 40,000 druggists of America who are watching this meeting are interested in the other questions as they are in this one. He believed that every man present had made up his mind and formulated some plan for the cut-rate trouble, and he would like to hear from some of them in a public discussion. Let the committee get the ideas from the men, then whip these ideas into some shape for use in the future and report on them. Delegate Hirsman thought that a public discussion of the subject could be made to better advantage after the hearing of the report of the Executive Committee. A motion made by Mr. Muir that the report of the Executive Committee be made Wednesday evening instead of Thursday morning was carried. It was finally decided that the discussion of the cut-rate question should come up on Wednesday evening after the report of the Executive Committee.

The report of the committee on Transportation, read by Chairman John W. Lowe was received and placed on file.

A recess of ten minutes was taken for the State delegates to select their members for the committees on nominations and resolutions. Then the following gentlemen were named:

The first name is that of the member of the Committee on Nominations and the second name that of the member on the Committee on Resolutions. Where but one name appears the delegate acts upon both committees.

Alabama.—W. E. Bingham.
Connecticut.—Jno. W. Lowe, Chas. A. Rapelye.
Georgia.—H. H. Arrington.
Illinois.—Jno. I. Straw, F. Lueder.
Indiana.—F. W. Schultz, F. W. Meissner.
Iowa.—A. A. Broadie.
Kansas.—F. E. Holliday.
Kentucky.—Simon N. Jones, T. B. Wood.
Maine.—M. L. Porter.
Massachusetts.—F. A. Hubbard, J. F. Guerin.
Michigan.—Chas. F. Mann, A. H. Weber.
Minnesota.—C. A. Huhn, Herman Rietzke.
Missouri.—F. N. Federmann, H. F. Hasselbrock.
New Hampshire.—F. L. Way.
North Carolina.—P. W. Vaughan.
Ohio.—A. O. Zwick, F. B. Stevens.
Oklahoma.—F. B. Lillie.
Pennsylvania.—W. A. Rumsey, W. G. Markell.
Tennessee.—Harry Wise, J. L. Nelson.
Wisconsin.—A. A. Pardee.
Province of Quebec.—Henry Willis.

THIRD SESSION.

Wednesday evening was devoted to the reading of the report of the Executive Committee, read by Chairman F. E. Holliday, as follows:

REPORT OF THE EXECUTIVE COMMITTEE.

In submitting to the Association this, its second annual report, the Executive Committee does so with the satisfaction to its members that, in spite of difficulties and

obstacles not expected at the last meeting, a substantial advance has been made in the furtherance of the plans confided to its care. It has taken longer to accomplish definite results than was expected, but the committee has deemed it wise to move with that degree of deliberation which assured certainty of success. Knowing that our policy is just, the committee has never faltered in its confidence in the ultimate acceptance of our proposals, and we have acted on the principle that a man who enters into the support of a business policy because he is convinced that it is right, just and commercially sound, is a more reliable supporter of such a policy than one who feels he is led to take a step the results of which he does not clearly foresee. The committee has endeavored to make it plain to all that it would accept none but whole-hearted, earnest, unqualified support for the plans of the N. A. R. D. We have proceeded on the belief that no plan can succeed permanently which contains an underlying element of friction or dissatisfaction. We have achieved, we believe, all that possibly could be accomplished in that time. We feel that we can now say to you that the plans proposed by the retail druggists in the convention at St. Louis have been accepted on an effective, workable basis by manufacturers and jobbers. Or, to make the statement definite, our plan for the prevention of cut prices on proprietary medicines has been accepted, not only by the representative National Associations of the manufacturing and jobbing branches of the trade, but has been accepted by nearly every one of the leading manufacturers of proprietary medicines, acting individually; and has also been accepted by the jobbing trade representing, it is estimated, 90% in volume of the jobbing drug business of the country, acting individually.

The committee has confined its efforts as closely as possible to the single proposition for the abolition of price cutting on proprietaries, and whatever proposals have been advanced which conflicted with the success of that proposition have been set aside in the interest of the undertaking of greater present importance.

The Committee and the N. W. D. A.

The committee held its first session in Cincinnati, October 5, 1899, and named as delegates to the conventions of the National Wholesale Druggists' Association and the Proprietary Association of America at Niagara Falls, October 10-13; Messrs. S. N. Jones and F. E. Holliday. These delegates, deeming it absolutely essential to the success of the N. A. R. D. plans that early and decisive action should be taken by the jobbing trade to prevent the failure of the plan through the action of the jobbers, used their strongest representations to secure such action, and it is believed aided to some extent in promoting the adoption of the N. A. R. D. of the following resolutions.

Resolutions of the N. W. D. A.

"Resolved, That, as it is as much for the interests of the manufacturer as the jobber that the contract plan should be continued, the active interests of both the manufacturer and the jobber should be secured.

"That the strength of the contract system lies in the manufacturers' adhering to a recognized list of wholesale distributors, to whom sales at their largest quantity discount should be restricted.

"That the Chairman of the Proprietary Goods Committee be requested to secure the acquiescence of each proprietor who sells his goods on the contract plan, to such a list.

"That the Chairman of the Proprietary Goods Committee be given control of sufficient funds to investigate all reported violations of rebate terms, with power to take such action as may be proper in the premises.

"That the recommendation made in the report that the rebate on leading proprietary articles be withheld for three months, be favorably recommended for consideration; provided, the other work contemplated by the committee does not result in a more thorough control of rebate articles."

Realizing that to make such resolutions effective a larger fund would be necessary, the N. W. D. A. increased the annual dues its members to \$50 for active and \$25 for associate.

Holliday's Relation with N. W. D. A.

The Proprietary Goods Committee of the N. W. D. A. stated that to maintain a policy of sufficient vigor in the collection of proof to warrant demands that manufacturers refuse their goods to offending jobbers, much time and careful attention would have to be devoted to the work. Upon these representations the chairman of the Proprietary Goods Committee was authorized to secure the assistance of some man whose familiarity with the work would assure the greatest possible advantage. This newly created position of assistant to the Chairman of the Proprietary Goods Committee was offered to the chairman of your Executive Committee. After due consideration and conference the plan was accepted. It is believed that the reasons for such action on the part of the chairman of the committee are fully understood and fully approved by the members of this Association.

It is proper, however, to state here that the committee was brought, at the time of this action, to a full realization of the fact that the plans for which we have labored so zealously would utterly fail unless the chances of betrayal by disloyal jobbers was provided against and the support of this branch of the trade placed upon

a more secure basis than it had ever stood prior to the Niagara meeting, or promised to occupy even under the resolutions adopted and the action taken at the time without active, persistent effort to secure united co-operation in the jobbing trade. Viewing the work of the N. A. R. D. from this point it appeared an act not only of loyalty, but of necessity, to the success of the work we had inaugurated that we also take up this additional labor, and thus vastly increase not alone the chances of success, but the measure of that success as well.

Interests of Retailers and Jobbers Identical.

The N. A. R. D. has inaugurated the plan, and induced the N. W. D. A. to give the movement its unqualified support, the interests of the retail and jobbing branches of the trade, as represented through the two national associations, became identical. No advantage could possibly come to the jobber through the efforts of the chairman of this committee while acting for the Proprietary Goods Committee upon lines originated and conditions determined by the N. A. R. D. which would not be reaped in equal measure by the retail trade.

Furthermore, the prosecution of the N. A. R. D. plan with the proprietary interests required funds. Our association was not prepared for aggressive action in this direction, as such action contemplated an individual canvass of the leading manufacturing houses. Such canvass seemed then, and has since proven to have been, essential to the measure of success we have achieved. For this additional reason the proposition of the Proprietary Goods Committee to relieve the N. A. R. D. of expense with reference to the work of the chairman of your Executive Committee in bringing about the individual endorsement of our plan, but the more influential proprietary interests was favorably considered.

The List of Drug Jobbers.

As a matter of record, the chairman of this committee, acting for the committee of the two associations, has done more for the retail trade than, in the nature of things, he could accomplish for the jobbing trade. The first important work to engage the attention of the committee was the preparation of a list of drug jobbers, which list should be accepted by the manufacturers, and to which they should limit the distribution of their goods. This work was attended with many unforeseen difficulties, retail druggists in some localities recommending lists which were not at all acceptable to the manufacturers. These cases required individual consideration and caused loss of time. The list, as finally completed and accepted by manufacturers and jobbers, is believed to be fair to the retail trade, and even smaller than we had expected. The committee believes that through the success of our plan, practically all of the causes for dissension between local jobber and retailer will be removed.

Buying Clubs.

In some localities retail druggists had associated themselves into buying clubs, purchasing proprietaries in quantities for distribution to their members. The committee in the discharge of its duties under the distinct proposition of this association, made and accepted by the proprietary and jobbing associations in session in 1898 at St. Louis, and reaffirmed at Cincinnati, was unable to recommend that such clubs be placed upon the jobbing list. It is believed that these retailers connected with such clubs have appreciated not only the justice of the action of the committee, but the fact that the committee, acting under the instructions of the N. A. R. D., had no option in the matter.

The committee convened in Chicago, December 18, 1899. The purpose of this meeting was to receive a report of progress by the chairman; to consider the action with reference to the list of jobbers; to estimate the finances of the Association with reference to work for the future, and to take such action as would appeal strongly to the associations in membership in support of the efforts of the committee with other branches of the drug trade. At this meeting the chairman of the committee was directed to use the full strength of the Association in securing, as early as possible, the individual signature of every prominent manufacturer to the support of our plan to maintain full prices.

Manufacturers Who Will Adopt the Plan.

In conformity with this action, and with the support of the National Wholesale Druggists' Association through its Proprietary Goods Committee, the following manufacturers agreed to adopt and abide by the plan:

The J. C. Ayer Co., Lowell, Mass.; C. I. Hood & Co., Lowell, Mass.; Lydia E. Pinkham Medicine Co., Lynn, Mass.; F. E. Greene, Boston, Mass.; World's Dispensary Medical Association, Buffalo, N. Y.; Dr. D. Jayne & Son, Philadelphia, Pa.; The Piso Co., Warren, Mass.; California Fig Syrup Co., San Francisco, Cal.; The Centaur Co., New York City; The Peruna Drug Manufacturing Co., Columbus, Ohio; Dr. Kilmer & Co., Binghamton, N. Y.; Dr. Miles Medical Co., Elkhart, Ind.; J. W. Campion & Co., Philadelphia, Pa.; Kickapoo Indian Medicine Co., New Haven, Conn.; J. M. Grosvenor & Co., Boston, Mass.; Sterling Remedy Co., Chicago and New York; Dr. Seth Arnold Medical Corporation, Woonsocket, R. I.; the Athlaphoras Co., New Haven, Conn.; Battle & Co., St. Louis, Mo.; Brown Medicine Co., Erie, Pa.; N. K. Brown Medicine Co., Burlington, Vt.; Chamberlain Medicine Co., Des Moines, Iowa; Chattanooga Medicine Co., Chattanooga, Tenn.; Crab Orchard Water Co., Louisville, Ky.; E. C. De Witt & Co., Chicago, Ill.; Ely Bros., New

York City; M. M. Fenner, Fredonia, N. Y.; William Fosgate, Auburn, N. Y.; Seth W. Fowle & Son, Boston, Mass.; Garfield Tea Co., Brooklyn, N. Y.; Gilpin, Langdon & Co., Baltimore, Md.; Graefenberg Co., New York City; G. G. Green, Woodbury, N. J.; J. H. Guild, Rupert, Vt.; W. T. Hanson Co., Schenectady, N. Y.; Henry Johnson & Lord Co., Burlington, Vt.; Henry Pharmacal Co., Louisville, Ky.; W. H. Hill Co., Detroit, Mich.; Hiscox Chemical Works, Long Island City, N. Y.; T. H. Jackson & Co., Quincy, Ill.; Lawrence-Williams Co., Cleveland, Ohio; Norman-Licht Manufacturing Co., Des Moines, Iowa; Lightning Medicine Co., Muscatine, Iowa; Eli Lilly & Co., Indianapolis, Ind.; Macee Emulsion Co., Troy, N. Y.; Meade & Baker Carbolic Mouth Wash Co., Richmond, Va.; Merchants Gargling Oil Co., Lockport, N. Y.; J. S. Merrell Drug Co., St. Louis, Mo.; Wm. S. Merrell Chemical Co., Cincinnati, Ohio; Morgan Drug Co., Brooklyn, N. Y.; Omega Chemical Co., New York, N. Y.; Pabst Brewing Co., Milwaukee, Wis.; Paris Medicine Co., St. Louis, Mo.; J. J. Pike & Co., Chelsea, Mass.; E. C. Powers, Boston, Mass.; Radway & Co., New York City; D. Ransom Son & Co., Buffalo, N. Y.; S. T. W. Sanford & Sons, Long Island City, N. Y.; J. H. Schenck & Son, Philadelphia, Pa.; R. I. Schiffman, M. D., St. Paul, Minn.; J. Harrison Whitehurst Co., Baltimore, Md.; I. O. Woodruff & Co., New York City; Orator F. Woodward, Le Roy, N. Y.; Woodward Chemical Co., Limited, Toronto and Buffalo; A. C. Meyer & Co., Baltimore, Md.; B. O. & C. C. Wilson, Boston, Mass.

While this list does not represent all manufacturers of proprietary goods, it does include a sufficient number to answer our purposes in the practical inauguration of the plan.

The plan was first presented for acceptance to the five firms of The J. C. Aver Company, C. I. Hood & Co., Lydia E. Pinkham Medicine Co., F. E. & J. A. Greene and Wells & Richardson Co., and by them approved.

When it came time to issue a new price list to the jobbing trade embracing the features of the plan, however, the last named house saw fit to withhold its support, and has refused to discuss the question.

Manufacturers' Communication to Jobbers.

Each of these manufacturers, acting individually, sent the following communication to the trade:

"To houses we appoint as wholesale distributing agents . . . who do not quote or sell our preparations, either directly or indirectly, or divide the above quantity with any party or parties, or permit our goods to be disposed of in any way by their salesmen or others at less prices than those above stated, a rebate of — per cent. will be allowed."

"Believing that the sale of our goods to aggressive cutters and brokers is detrimental not only to our business, but to that of the retail trade as well, we will decline to sell our preparations to any party supplying such cutters or brokers, either directly or indirectly, with our goods at any price."

"Should complaint reach us that parties violate these terms, or we have reason to believe that they have done so, we shall exercise our judgment, whenever we are satisfied that these terms have been violated, to decline the orders of parties who have failed to maintain them."

"The above conditions are imperative, and the violation of them will be regarded as an abandonment of the rebate plan by any parties who have been acting as our wholesale distributing agents."

The proprietors also submitted the following condition to the jobbers, who accepted their proposition as distributing agents:

"Jobbers, through their salesmen, must refrain from running down proprietary goods, and give instructions to sell what is called for, without preference to any particular article which may happen to pay a higher profit. Jobbers are to refrain from asking further discounts than those at present allowed. Each jobber for himself to discontinue his non-secret department. Jobbers to refrain from selling proprietary preparations at any price, either directly or indirectly, to aggressive cutters and brokers, or to any party supplying aggressive cutters or brokers."

Executive Committee's Resolution.

To secure an understanding of the attitude of the different branches of the trade with reference to the action of the proprietors, the Executive Committee met in Chicago in April. At this time a conference was had with representatives of the N. W. D. A. and the P. A. of A. This conference resulted very satisfactorily and marked the beginning of the execution of the N. A. R. D. plan to prevent price cutting. In view of the attitude of the proprietors, and to promote needful co-operation, the Executive Committee, at this meeting, adopted the following resolutions:

"Retailers, in exchange for this concession on the part of the manufacturers to limit the distribution of goods, and on the part of jobbers to refuse all orders from aggressive cutters and brokers, are not to substitute when standard proprietary articles are called for, but in each case will give the customer what is asked for without argument."

Proprietors Adopt a Resolution.

The Annual Meeting of the Proprietary Association was held in New York, May 2-5. The chairman of your committee attended this meeting and was ably assisted by J. C. Gallagher of Jersey City. The efforts of the com-

mittee secured the adoption of the following resolution by that Association:

"Resolved, That the Proprietary Association of America endorses the plan of the National Association of Retail Druggists, and commends it to the favorable consideration of the members of this Association."

"Aggressive Cutters."

The effective operation of this plan of this Association, in accordance with the understanding had at the conference of the joint committee which met in Chicago in April, depends upon the designation of aggressive cutters by the retail trade of each locality. It is understood that 75% of the retail trade of the locality shall have the right to notify the jobbers doing business in their respective localities of any person or persons who are selling the goods of the proprietor in violation of the terms made by the proprietor to those jobbers who have accepted distributing agencies for the proprietor. In presenting this matter for the action of the associations in membership the committee, because of great variance in local conditions found it necessary to leave the question of method in the designation of aggressive cutters to the judgment of the local associations. The committee recommended, however, and firmly believes it to be the best policy, that the wisest plan to pursue is that all consideration of past offences be overlooked, and that a schedule acceptable to 75% of the trade shall be prepared and submitted to every retail dealer in the territory of the Association, and that only those who refuse to abide by this schedule shall be regarded as aggressive cutters and be so reported. The committee believes that the N. A. R. D. has neither the time nor the disposition to punish any one for past offences. The Association looks only to the future, believing that its common sense and sound business proposition will command the loyal support of every honest retail dealer. It is therefore, but just that a clear proposition to be placed before each dealer, which action, it is believed, will greatly reduce opposition, dispel distrust and ill feeling and hasten our success.

The committee believes that in order to have the respective duties of the National Association and the various associations in membership clearly defined in this matter, and it is best for the local associations to confine their notifications with respect to aggressive cutters to the jobbers doing business in their respective localities. The facts concerning all such notifications should be sent the secretary of the N. A. R. D. This, it will be observed, leaves the notification of manufacturers as to aggressive cutters and as to disloyal jobbers in the hands of the National Association. In view of the local character of the business of the jobber and the National character of the business of the manufacturer, it is believed that this method of handling the details of the plan will be productive of the least labor and confusion.

Advertising Cut Prices and Newspaper Publishers.

It is well known that proprietary goods can only be handled at our prices through the aid of advertising. It is also well known that only goods which have come to be associated in the public mind with a definite price, which price is accepted as standard, are ever advertised at our prices. The cutter thus displays to the world the dishonest nature of his transaction in trading upon a popularity established by some one else. Believing that when these facts shall be brought to the consideration of the publishers of newspapers of the country that they will refuse to lend their columns to the aid of such unfair business methods, the committee has suggested to many large advertisers among the manufacturers of the proprietary medicines the justice of their soliciting the publishers to decline to publish advertisements of the manufacturer's products offered by persons other than the manufacturer at prices which can only be maintained upon the supposition that substitution is practiced and, therefore, a fraud worked upon the public and a loss caused to the reputation of the manufacturer's product. The result of this suggestion has been quite gratifying, many leading manufacturers readily agreeing to direct the attention of the public press to the matter. The committee believes that this question is worthy some formal action by this Association.

Co-operative Advertising by Retail Druggists.

In communities in which aggressive cutting may prevail for a time and for the purpose of setting the public mind right in its judgment upon the merits of our position, the plan of co-operative advertising in the local press by the retail druggists of the community may be productive of good results. There can be no question of the side the public will support. If the retail trade will go before it with a plain statement of the facts, it is a firmly established principle in the public mind that every line of commerce and industry shall stand upon its merits, and the production of one line cannot be diverted to another for the purposes of baiting the public without recoil upon those who so misjudge public honesty as to employ such business methods.

Committee's Expenses Small.

The expenses of the Executive Committee for the past year have been comparatively small, and are much below the estimate submitted at Cincinnati. Since the chairman of the Executive Committee became identified

with the Proprietary Goods Committee of the N. W. D. A. the N. A. R. D. has been relieved of any expense connected with his movements in different parts of the country, whether in the interest of the retailer or the jobber. A report of the work done by the chairman and other members of the committee in the interest of organization is presented in the report of the secretary.

Per Capita Tax Sufficient if Promptly Paid.

The committee would direct the attention of the Association to the fact that, notwithstanding the actual expenses of the Executive Committee, and the actual expenses for printing in arrear by the secretary's office are much below the estimate made to the last meeting, the funds of the Association have not been adequate when most needed to the proper promotion of the interests of the organization. It is believed that a per capita assessment of 50 cents of each member of the association connected with the N. A. R. D. would be sufficient, if promptly paid, to meet the expenses. It seems, however, that the question of payment of dues has not been satisfactorily settled between State and local associations. The committee refers to the matter here with the hope that during the next year local associations, which are in position to render more prompt support to the national body than State organizations, will be careful to collect and remit the per capita of every member, leaving the deduction in the case of duplicate membership to be made by the State association.

Importance of Thorough Organization.

We commend to the consideration of the Association the great importance to the full and final success of the work upon which this committee has been engaged for the past two years of thorough organization of the retail trade throughout the country. The progress in this direction during the past year presents features of encouragement. On the other hand, unwise action has in the instances of New Jersey, Virginia and South Carolina resulted from lack of strength locally. The committee believes that the action taken in Cincinnati in placing the work of organization under the direction of the secretary of the National Association was calculated to produce the best results. With sufficient funds in the treasury to push organization at the most propitious time, and with the aid of local associations now members it is believed that the secretary should be able to promote satisfactorily the more general organization of the retail trade.

Discussion was started immediately, but had not proceeded far before it was decided to defer it to Friday morning, and the session adjourned.

FOURTH SESSION.

THURSDAY, SEPT. 13.

The reading of the report of the Committee on Trade Marks and Patents by Chairman John C. Gallagher, of New Jersey, was the first thing in order at the Thursday morning session of the convention.

REPORT OF THE COMMITTEE ON TRADE-MARKS AND PATENTS.

Your Committee on Trade-marks and Patents, following out the recommendation contained in the report of the last committee, which report was referred to a special committee and reported on at the convention held in Cincinnati, in 1899, prepared a letter and with the reports of the above committee, forwarded the same to the Executive Committee, with instructions to have copies printed and forwarded to the Honorable Francis Forbes, chairman of the commission appointed by President McKinley to revise and amend the laws of the United States concerning patents, trade and other marks, and trade or commercial names to secretaries of local associations and through them, to their representatives in Congress. The Executive Committee deemed that the time was not ripe for the distribution of these reports, as the commission was still holding hearings and only submitted a preliminary report to Congress, which contained little of interest to our organization. Your committee concurred with their views that useless expense would be otherwise incurred until the final report of the commission has been made. The chairman of your committee called upon at New York the chairman of the Commission and asked for a hearing; at that time he placed into the Commission's hands a copy of the report of the last committee on Trade-marks and Patents, together with a copy of the report of the special committee, to whom the report of the first named committee was referred, and a copy of resolution "E," adopted at the same convention. It was then agreed upon that a hearing would be given to us at New York City; the committee set to work in preparing an argument which is to be given at the hearing, setting forth all the requests of the N. A. R. D., but a sudden change of mind on the part of the Commission in naming Chicago as the place of the hearing took us unawares; despite this action of the Commission, the N. A. R. D. was ably represented at the hearing held March 28th, 1900, by Messrs. Rodeman, Engelhard and Wooten. Our claims were forcibly urged upon the Commission as being of such a nature that justice and equity demanded that remedial legislation be applied to the present trade-mark and patent laws. The committee being deprived of the

opportunity of being present at the hearing, owing to the short notice of the change of location, from New York to Chicago, embodied their views of the existing defects in the present trade-mark and patent laws in a paper which they have forwarded to the members of the Commission. Our argument was as follows:

Unjust Features of the Laws.

To the Commissioners appointed to revise Patent and Trade-mark Laws of the United States:

Gentlemen, The Chairman of the Committee on Trade-marks and Patents of the National Association of Retail Druggists, has the honor to submit to you for your consideration, an account of the unjust features of the present Trade-mark and Patent Laws, in so far as they affect the pharmaceutical trade of this country. He trusts that the very apparent evils that have resulted and are continuing under the present law, will furnish a compelling and unresisting argument to your Commission of the urgent necessity to revise the existing Trade-mark and Patent Laws, so that the ends of fairness and justice may be forwarded and secured. Our objections are based against the unjust features as follows:

1. Of the Patent Laws in that they grant
 - (a) Monopolies on the drug itself, thereby stifling invention and encouraging exorbitant prices.
 - (b) Too liberal concessions to foreigners.
 - (c) Their laxity.
2. Of the Trade-mark Laws in that they grant
 - (a) Trade-marks on the name of the article.

1. Patent Laws.

(a) The present Patent Laws are supposed to grant a limited monopoly to the inventor, as a reward for the new good that his ingenuity and labor have conferred on the people at large; often this reward is out of proportion to the deserts of the inventor, for by granting Letters Patent on the article itself and not on the process of manufacture only, we stifle the inventive energy of this country, and deprive the community of the additional benefit that would thereby accrue by reason of the cheapness and improvement of the article itself, through the discovery of improved and more economic methods of manufacturing; hence, the monopoly is too extensive and stimulation of personal greed results as opposed to the general good. The classes and not the masses, are directly and indirectly benefited, exorbitant prices are demanded and exacted. An illustration of this fact may be adduced from the well known medicinal remedy, Antipyrine, which when under the protection of our Patent Laws, that throw too many safeguards around the article instead of the process of manufacture, retailed for one dollar and a half (\$1.50) an ounce; after expiration of the patent, the same article may be bought for eighteen cents (\$0.18) an ounce.

(b) Foreign countries, viz.: Argentine, Austria, Belgium, Bolivia, Denmark, France, Germany, Hungary, Italy, Japan, Norway, Portugal, Russia, Sweden, Turkey, Uruguay, do not grant patents on medicinal preparations and chemicals; some grant the patent on the process only—not on the product; surely our country which makes the proud boast of encouraging and protecting home industry, should not be less solicitous of its citizens' welfare than the countries already enumerated are. Some of these countries compel the inventors as a condition upon which the patent is granted to manufacture the article within the confines of the country that grants the Letters Patent; we do not, and the result is that an article patented in this country may be manufactured in another country, and imported, much to the detriment of our home industries; here again the general good is ignored and private gains augmented. Protection to other industries have produced such good results that to-day they are exporters instead of importers, while in the drug industry the opposite obtains, owing to the fact that our government grants by the present patent laws more concessions to foreign countries than they will give to us.

(c) It is a notorious fact that many Letters Patent are granted on drugs and chemicals that cannot substantiate their claims of conferring additional good on mankind. This is due to the laxity of our present Patent Laws, and owing to the failure of proper investigation and experimentation being instituted to attest these claims, the average time given to the consideration of an application is not sufficient to fully establish the merits or demerits of the invention.

The remedy we desire is:

FIRST. That adequate time be given to investigate the merits claimed by the inventor, so as to demonstrate that it is novel, and thereby confers additional good on the country at large.

SECOND. Patents should be granted on the process only—not on the product.

THIRD. Articles made according to the process patented must be manufactured in this country.

FOURTH. No foreigners be granted greater privileges in this country than is given to them by their own.

As an alternative for SECOND, we desire that the revised Patent Laws forbid the granting of Letters Patent of medicines, as the term is understood in the art of healing.

TRADE-MARKS.

The predominant iniquity of our present Trade-mark Laws is that they secure to the owner a too exclusive right to the name of the article. This name might be a word coined by him or one or a combination of two or more words in ordinary usage; they allow possessors of patents to continue the life of the monopoly granted by the Letters Patent by claiming a perpetual protection by reason of their registered Trade-mark or Trade-marks.

REMEDY.

(a) No Trade-mark be granted on a name or combination of names coined or otherwise.

(b) That the Trade-mark rights be confined entirely to brands, symbols, signs and devices.

Statutes Should be Amended.

IN CONCLUSION the Chairman of the Committee on Trade-marks and Patents of the National Association of Retail Druggists, prays the Commissioners appointed under the Act, approved June 4th, 1898, to revise and amend the statutes relating to patent, trade and other marks, and trade and commercial names; that they give due consideration to the argument as briefly stated by him, against the iniquities of the present Patent and Trade-mark Laws, as they affect the pharmaceutical industry of this country. He cannot too strenuously emphasize his objections to the injustice of granting patents on the product instead of the process, and of trade-marking the name instead of the sign, symbol or device as distinguishing the brand. "Charity begins at home;" under the present Patent and Trade-mark Laws, we have gone abroad to dispense the good, that we should have, to foreigners who will not grant to us equal if not similar benefits. The reciprocity that now obtains, puts us at the mercy of the foreign manufacturer; most exorbitant prices are demanded and received, against which the present laws contain no remedy. The chairman of the above named committee further prays the Commissioners that the results of their revision will be such that amelioration of the present dissatisfaction and unjust condition will ensue on the event of its acceptance and passage by Congress, so that an everlasting benefit may be conferred on the sick, sore and afflicted citizens of these, our United States. He asks this as the representative of thirty-eight thousand (38,000) retail druggists of the United States, who voice their wishes with the power that unity of organized efforts gives, and are determined to agitate these measures for relief, until Congress shall see the justice of their demands.

JOHN C. GALLAGHER,

For the Committee on Trade-marks and Patents, N.A.R.D.

We believe after due consideration, that many of the claims of the patentees of pharmaceutical products can be disposed of by proper litigation; many of the claims that these products are new will not stand the scrutiny of the court. In Philadelphia, concerted action on the part of a number of energetic druggists has set on foot and are maintaining the case of Dickerson against Maurer, in which the moot point is the validity of the Phenacetin patent. The defense rests upon two very strong points, either of which we are informed, will insure success. This case has been pending two years, but has been placed on the trial calendar for October next; in spite of the request of the plaintiff for a further extension of time. Your committee has not been able to accomplish much in the way of definite results; the delay on the Commission's part in not reporting has prevented us from taking the initiative in starting ways and means for relief; it is believed that their final report will be made at the next session of Congress. Should our demands receive no consideration at the hands of the Commission, we recommend that a bill be drafted, embodying the remedial legislation we desire; then let each affiliated association enlist the attention and co-operation of its Congressional representatives, apprise them of the injustice done by the present Trade-mark and Patent Laws to home industry, and if he possess that regard for the country's good that each and every one should have uppermost in his affections, then we may reasonably hope to secure the necessary number of votes to confer a lasting benefit upon the over-taxed and monopoly burdened retail druggist.

President Alfred De Lang, of Cincinnati, in his very able address to the Ohio State Pharmaceutical Association, in annual session at Put-in-Bay, June, 1900, set forth the past and future of the N. A. R. D., which received the closest attention of the members present and was enthusiastically received.

The following resolution of the N. A. R. D.: "That it be the sense of this convention that no imported product should be accorded a greater measure of legal recognition by the Government of the United States than such product is accorded by the country of its origin," was heartily endorsed, the sentiment being America for Americans first, last and all the time, and that the Ohio Association is with the Committee on Patents and Trade Mark Laws in their laudable undertaking.

Upon motion of Delegate Bodemann, the report was adopted by a rising vote.

At this point President Jones read a communication from the Castoria people which stated that they had just refused to fill a large order for a long-time customer of theirs because they recognized the fact that he was not in the legitimate drug business. The communication was greeted with applause.

Chairman Wm. McIntyre read the report of the Committee on Pharmacy Laws, which was voted to be received and placed on file.

Lewis C. Hopp followed with the report of the Committee on Form of Organization.

COMMITTEE ON FORM OF ORGANIZATION.

The committee on Form of Organization begs to submit to the consideration of the Association the following recommendations:

We recommend that Article III, on Membership, Section 2, be amended to read—

"Section 2. Each State and local association shall be entitled to one delegate for each fifty active members or fraction of fifty members. Such delegates shall be actively engaged in the retail drug business."

We recommend that Article IV., Section 2, referring to an Executive Committee, that said Section 2 be amended by the addition at the end of the section of the following:

"In the event of a vacancy on the Executive Committee the President shall have the authority to fill such vacancy by appointment."

We recommend that Section 2 of Article VI, on Standing Committees be amended by the addition of the following, as a Standing Committee:

"(c) On Form of Organization, five members."

Also that Section 3 of said Article VI, relating to special committees be amended as follows:

"Section 3. The following Special Committees are established:

"A Committee on Nominations and a Committee on Resolutions, one member from each State represented."

The number of changes the committee deems advisable to recommend in the By-Laws suggest the advisability of presenting a complete draft of By-Laws, which retain the present rules and incorporates in what is deemed the best from the changes we desire to submit to the consideration of the Association.

BY-LAWS.

First.—Each delegate shall be entitled to a vote upon all questions coming before the Association for consideration when present in person, or by alternate; and delegates present are empowered to cast the full vote of their delegate representation. Delegates receiving appointment as chairmen of standing committees at any annual convention, or otherwise, in accordance with the Constitution and By-Laws shall be entitled to all the privileges of membership in the Association until their respective successors are chosen.

Second.—Proxies shall not be recognized from any association when represented by a person residing in another State, nor when the person presenting such proxy resides at a greater distance than fifty miles from the headquarters of the association issuing such proxy.

Third.—All committee appointments not provided for in the Constitution or whose members are not designated by vote of the Association shall be made by the president, with the exception of the Committee on Nominations and the Committee on Resolutions, which shall be selected by the respective State delegations.

Fourth.—The fiscal year shall be identical with the calendar year, and the dues of the affiliated associations shall be payable at the beginning of the fiscal year. The collection of dues shall be placed in the hands of the Executive Committee.

Fifth.—The Association shall meet annually at such time and place as the Executive Committee shall determine. The President shall call special meetings at such time as the majority of the Executive Committee shall direct.

Sixth.—A delegate vote of twenty-five members shall constitute a quorum, provided not less than seven States are represented.

Seventh.—Order of business.

1. Call to order.
2. Appointment of Committee on Credentials.
3. Reports of officers.
4. Report of Committee on Credentials.
5. Reports of Standing Committees.
6. Selection of Committees on Resolutions and on Nominations.
7. Miscellaneous business.
8. Report of Committee on Resolutions.
9. Report of Committee on Nominations.
10. Election and installation of officers.

Eighth.—All resolutions introduced, together with the reports of the president, the secretary and the Executive Committee, as also the reports of the Committees on National Legislation, Commercial Relations, Trade Marks and Patents, and Pharmacy Laws, shall be referred to the Committee on Resolutions, unless otherwise determined by vote of the Association.

Ninth.—Any part of these By-Laws may be amended or repealed at any annual meeting by a majority vote if all the delegates entitled to voice in the proceedings of the Association.

Delegate Helms moved that it be received and the recommendations be taken up seriatim. By motion the rules were suspended and this was done. All of the recommendations went through very easily save the one which concerned the subject of proxies and their right to vote. A discussion followed in which Messrs. Muir, Voegell and Wooten were the principal speakers. Mr. Muir objected to the State limit. He believed that life, interest and spirit were given local organizations as the result of sending their own delegates. If one man could act as proxy for several organizations there would be danger that he might control in time several committees. The Association was established on the senatorial plan, so far as the Committees on Resolutions and Nominations are concerned, in that it provides for one member on each committee for every state represented.

Mr. Voegell believed that proxies were out of place in the N. A. R. D. convention and ought to be abolished. An association which would not spend \$40 or \$50 to send a delegate ought not to expect to be allowed to vote. He argued that it was radically wrong for one State to be represented by a delegate from another State.

Mr. Wooten did not agree with Mr. Voegell in the matter of abolishing proxies. He knew that it was very hard to send delegates from remote States. The fifty-mile limit would accomplish the object desired. He did not think that the convention ought to establish an arbitrary rule that a delegate out of a State should represent a State. If a delegate were persistent enough he could in time get all the proxies of his own State (in case the State limit were made) and the National Association would fall into the hands of a few while local associations would become indifferent.

The report of the Committee on Form of Organization was finally adopted as read, except that in the "Order of Business" clause it was decided to have the report of the Executive Committee follow immediately after the president's address.

Delegate Helms offered a resolution to issue a national salesmen's card, which should be respected by both wholesaler and retailer. In the discussion which followed A. E. Schellentrager, of Cleveland, took the floor and told of the workings of the association in Northern Ohio, which insists upon a monthly card for all salesmen. A Board of Control meets every week and all members are kept posted on affairs of interest. The card is a great success.

Delegate Lewis C. Hopp believed that a card is the only solution of the cut-rate problem, but he did not believe it could be done through the National Association. It must be done through the local associations.

Other gentlemen spoke upon the card question. Generally cards issued by local associations were conceded to be the better. It was agreed that a national card could keep travelers from selling to department stores, but not to cutters. Further, to issue national cards would discourage local organizations, which in the end would cut off the income of the national organization.

E. C. DeWitt, proprietor of Chicago, spoke for the proprietors' side of the card question. He said that no one would like better than himself to see the drug trade in a healthy condition. It had been his business policy to sell to dealers direct. He had always endeavored to elevate prices and had always refused to sell to cutters when he knew them to be trying to lower the same. He did not believe in the idea of a national card and he did not think the N. A. R. D. should legislate several legitimate, honest dealers like himself out of business by such an action.

After further discussion Mr. Helms' resolution relative to the card was referred to the Committee on Resolutions for action.

The report of H. E. Glick, of the Auditing Committee, was received and placed on file.

Invitations from Indianapolis, Milwaukee, Chattanooga and Put-in-Bay for the next N. A. R. D. meeting were received and referred to the Executive Committee.

Shortly after 12 the meeting adjourned.

At 2:30 P. M. Thursday by the courtesy of the Detroit and Wayne County Association, the visiting ladies were taken for a trolley ride around the city and to Belle Isle. The day was perfect and the ride was thoroughly enjoyed by all. On the return a stop was made at Frederick Stearns & Co.'s laboratory, where the ladies were received by the members of the firm and the heads of departments and shown some of the most interesting features of the plant. The making of perfumes and of headache wafers attracted more attention than anything else. A little surprise in the way of a refreshing luncheon served from beautifully decorated tables in one of the reception rooms awaited the visitors before leaving. At this time Mrs. Frank Hopp, of Detroit, expressed the pleasure it had been to the Detroit ladies to entertain so charming a body of sisters from other places, and at the same time urged the ladies to use all their personal influence for the principles of the N. A. R. D. Mrs. John Lowe, of New Haven, Conn., responded for the visitors in a happy little speech.

FIFTH SESSION.

FRIDAY, SEPT. 11.

Friday A. M. President Jones called the convention to order at ten o'clock. The first business was the reading of the special committee on the President's address by Chairman Voegell. Recommendation number 4 of the original report, relative to "substituting," provoked much discussion. Thos. Stoddart said there was no such thing as "substitution" in the handling proprietary articles. Substituting can be done only behind the prescription desk. He would like to have the very word struck out of the proceedings.

Thos. Voegell's idea of the meaning of substitution differed widely from Mr. Stoddart's. He understood it to mean the giving of a druggist's own preparation instead

of the patent medicine called for, as, the druggist's sarsaparilla instead of Hood's sarsaparilla.

Thos. Layton, of St. Louis, declared the word "substitution" as applied to the retail drug trade, was a word used by proprietors in the pharmaceutical journals and press, to force the druggists to do as they wished them to do—to force the public to believe that the druggists are dishonest.

Jas. W. Seeley, of Detroit, wanted no misunderstanding as to the relation of the N. A. R. D. to the proprietor. A druggist owed it to the proprietor to sell to a customer that which he called for; he also owed it to his customer to give him what he called for, irrespective of whether he had, of his own make, a preparation of like character or not. Druggists can not expect the loyal support of proprietors on any other basis.

It was finally agreed to refer the recommendation back to the committee "to be put into more acceptable terms."

Later, when the report was again submitted, it was adopted as a whole. It is as follows:

REPORT OF COMMITTEE ON PRESIDENT'S ADDRESS.

Your committee to which was referred the President's address beg leave to report as follows:

1. We approve the President's recommendation "that this Association should acknowledge the lasting debt we owe" to the pharmaceutical press for its "valuable assistance to the officers of the Association."

2. We recommend that this Association approve the employment of the chairman of our Executive Committee as an assistant to the chairman of the Proprietary Committee of the N. W. D. A.

3. We approve the recommendation of the President that this Association reaffirm its pledges made to the N. W. D. A. and the P. A. of A., and to that end recommend the adoption of the following resolution of our Executive Committee:

"Retailers, in exchange for this concession on the part of manufacturers to limit the distribution of goods, and on the part of jobbers to refuse all orders from aggressive cutters and brokers, are not to substitute when standard proprietary articles are called for, but in each case will give the customer what is called for without argument."

4. We recommend that the N. A. R. D. place itself upon record as being unequivocally opposed to all practices in handling proprietary medicines and to urging of private goods for advertised proprietaries for which a specific call has been made.

5. We approve the statements of the president upon the subject of organization, and recommend that every delegate leaving Detroit should consider himself a committee of one on organization, with full power to act in his own locality, whether such district be suffering from cut rates or not.

6. We approve the president's recommendation that special local organizers be employed; and that the Executive Committee be authorized to appropriate sufficient money to carry on the work of local organization.

7. We approve the president's suggestion that in some cases local organization may be made to yield an income to this association, and we recommend that this matter be referred to the Executive Committee for its careful attention.

8. We approve the president's recommendation that donations be received from all who will help, or ought to help us in our work, and suggest that this question is covered by the following statement, adopted at Cincinnati and appearing on Page 28 of the Cincinnati proceedings:

"That this committee recommends that the Executive Committee be authorized to receive any donation from any person, firm or corporation that is actually in sympathy with the principles and objects of the N. A. R. D."

9. We heartily approve the appreciative words of the president, commending the work of our secretary, Thomas V. Wooten.

10. We approve the recommendations of the president that the thanks of this Association be tendered to Secretary Wooten, Chairman Holliday and the Executive Committee, the Committee of National Legislation, Thomas Stoddard, chairman, and the Committee on Trade-Marks and Patents, Mr. John C. Gallagher, chairman.

11. In conclusion, your committee on its own initiative, recommends that a rising vote of thanks be given President Jones for his faithful and capable administration of this Association during the past year.

THOS. VOEGELI,
WM. BODEMANN,
WILLIS G. GREGORY,
JESSE L. NELSON,
JAMES W. SEELEY.

When the report of the committee on the Secretary's report was called for, Chairman Dr. Porter, of Maine, could not be found. Some one said he was at breakfast. President Jones created a laugh when he said they never heard of such a thing down in Kentucky as a man

breakfasting after ten o'clock. It was then decided that Secretary Wooten should read the recommendations of his report and that they be considered seriatim. The first one was carried, the second one stricken out, the third one carried by vote. In accordance with the third recommendation, it was moved and seconded that the Executive Committee be empowered to have a sufficient number of the copies of the proceedings printed to supply one to every affiliated association and to every delegate. Carried.

The secretary's report was then adopted as a whole.

President Jones read an invitation from Frederick Stearns & Company inviting the Association to visit their plant and extending to them a hearty welcome to the city. It was received and accepted with thanks.

The invitation of Raleigh, N. C., to hold there the next meeting of the N. A. R. D. was received and referred to the Executive Committee.

A telegram from Cincinnati was read, which contained the news that 75 per cent. of the Cincinnati druggists had designated the cutters there.

The next on the programme being the report of the Committee on Resolutions, Delegate Harry Wise spoke of the importance of the report and moved that it be considered in executive session. The motion was not seconded. W. C. Anderson said the proceedings of the N. A. R. D. had always been "open and above board" and that every proprietor in the country was welcome to the meetings. Chairman Felix Hirsman then read the report, which was received and considered seriatim.

The following clause of the original report—afterwards stricken out caused more discussion than any other circumstance of the convention:

That every association connected with the N. A. R. D. shall, at as early a date as is practicable under prevailing local conditions, adopt a schedule of prices on proprietary preparations, which schedule shall be presented to every retail dealer of drugs and medicines in their respective communities, with the earnest solicitation for the adoption and maintenance of such schedule. That any minority of retail dealers of 25 per cent. or less who decline to conform to the schedule recognized and maintained by the majority of 75 per cent. or more, shall be deemed antagonistic to the interests of the drug business in all its branches, and shall be immediately notified to the jobbers doing business in such locality as being aggressive cutters, and be treated accordingly under the terms contemplated in the plan of the National Association.

A. O. Zwick, of Cincinnati, thought the clause amounted to a boycott law and objected very decidedly to it. Seventy-five per cent. of the druggists to-day might not be composed of the same men in a few months from now. Men are sometimes forced to cut to meet competition, and such a clause would often force good men out of the association. He did not believe in doing anything which might bring on a big law suit. His objection was against the method suggested of finding out who are the aggressive cutters. He believed that each man on his own letter-head should do it.

Delegate Harry Wise, of Tennessee, spoke against the clause. He said that when the cutter is designated, when the jobber who sells to that cutter is known, when the proprietor who sells to that jobber is known, then only is the time to send the news to the N. A. R. D. That done, it will be time for the N. A. R. D. to notify every retailer who those jobbers and proprietors are. The organization must work as a unit or nothing will be accomplished. If the Cuticura people slap the face in one section of the country they must slap it in every section. Mr. Wise further believed that the N. A. R. D. ought to say what it was going to do, and to "do it quick."

An Indianapolis delegate suggested a plan for designating the cutter. He would secure an organizer to go to every druggist in the place and present to him a schedule of prices, asking him to write to each jobber saying that he believes, individually, in a certain uniform schedule of prices. As soon as the organizer secures 75 per cent. of the druggists to write such letters, notify the N. A. R. D. secretary. In that way the druggists would not be liable to the anti-trust laws of the various States.

Delegate Muir, of New York City, would like to have it left to each association to decide how it shall designate cutters, always in accordance with the laws of the State.

The report of the Committee on Resolutions as finally amended and adopted was as follows:

REPORT OF COMMITTEE ON RESOLUTIONS.

The Committee on Resolutions beg to report that it has considered with much care the recommendations contained in the various papers presented for the consideration of the committee and have embodied the result of its deliberations in the following resolutions, which are submitted with the recommendation that they be adopted by the Association.

RESOLUTION A.

Organization.

The Committee on Resolutions, after giving careful consideration to the recommendations contained in the reports of President Jones, Secretary Wooten and the Executive Committee, respecting the importance to the future of the National Association of Retail Druggists of organization of the drug trade, recommends that the Association provide for aggressive organization work as follows:

That the secretary of the N. A. R. D. is instructed to proceed as rapidly as may be practicable under the direction of the Executive Committee, to begin the work of organizing local associations throughout the entire country.

That authority is given the secretary, subject to the action and approval of the Executive Committee to employ state, local, or other organizers, to prosecute this work with the utmost vigor consistent with the financial ability of the National Association.

That the Executive Committee is authorized to accept donations from retail druggists, or allied branches of the drug trade, for the purpose of furthering energetically and unceasingly the work of general and effective organization of the retail druggists of the country.

RESOLUTION B.

The N. A. R. D. Plan.

RESOLVED: That the National Association of Retail Druggists is gratified in being able to announce the success which has attended the efforts of its Executive Committee to secure the adoption of its plan for the prevention of price-cutting on proprietary medicines, by the manufacturing and jobbing branches of the trade.

That we reaffirm our belief in the efficacy of the plan, and our fidelity to its provisions.

That the success of the labors of the Executive Committee brings home to the retail druggists of every section the duty to themselves, locally, and to the retail trade generally, of prompt and decisive action upon their part in conformity with the terms of the plan which became operative August 17, 1900.

That we call upon the associations affiliated with the N. A. R. D. and all organizations of retail druggists throughout North America, to proceed immediately to place their members in position to reap the benefits of the successful work of the national body; the manner of how best to designate aggressive cutters being left to the discretion of the local associations, under the advice of the Executive Committee wherever desirable.

That the Association approve the recommendation of the Executive Committee that local associations confine their notifications to the local jobber, reporting actual conditions to the National Association, and that the National Association pledges itself in each and every case to render to the local associations prompt, determined, and loyal aid in securing the rights of the members of the local body.

That the Executive Committee is instructed to immediately transmit to the officers of the associations in membership detailed instructions respecting the steps necessary for the guidance of the associations in the enforcement of the terms of the plan.

That, while the local associations have the right, under the plan, to employ their own judgment respecting the formation of a schedule of prices, the National Association urges these associations to prepare and maintain the most advantageous schedule possible, because of the great importance of the retail trade as a whole of such action on the part of the affiliated bodies.

RESOLUTION C.

Prevention of Advertising Cut Prices.

RESOLVED: That we approve the suggestion contained in the report of the Executive Committee that manufacturers of medicinal preparations should request the public press to refuse to publish advertisements of such preparations offered by others than the maker at prices below that fixed by the maker.

That such cut prices are never advertised except in the case of articles made widely familiar to the public by extensive and costly advertising on the part of the manufacturer, and on which preparations the price fixed by the manufacturer has come, in public estimation, to be recognized as a standard.

That we believe the public press which receives the money of the manufacturer is morally obligated to protect the integrity of the preparations of such manufacturer against the assaults through its columns of avaricious tradesmen who seek to reap a benefit for which they return nothing, and which action on the part of such tradesmen injures the reputation and diminishes the sale of such preparation.

RESOLUTION D.

RESOLVED: That, believing absolute good faith, the fulfillment of every promise made by the manufacturer, jobber, and retailer is essential to the success of the N. A. R. D. plan for the regulation of price-cutting on proprietary medicines, the Association urges the members of affiliated bodies to continue their loyalty to the terms of the plan; and that it demands of every other person or interest the same steadfast, unequalled loyalty of every part of the plan.

That failure to act with strict integrity in support of the plan after it has been accepted, shall be deemed to act of open hostility to the best interests of the trade as a whole.

That the attitude of the house of Wells & Richardson Co., in failing to fulfill its promises to the trade is such as to constitute an act of defiant hostility to the best interests of the trade in all its branches, and should receive the most emphatic expressions of disapproval from every association of retail druggists, and from the individual members of the retail drug trade in the United States.

RESOLUTION E.

RESOLVED: That we commend the efforts of the Committee on National Legislation to secure the repeal of the Special War Tax on medicinal articles, and urge that the new committee, when appointed, shall continue those efforts before the approaching session of Congress.

We earnestly request retail druggists in every section of the country to use their influence as local associations and as individual citizens to secure the support of their respective members of Congress for the early repeal of this unfair and unnecessary special tax.

We urge the drug trade to bring to the attention of Congressmen on every possible occasion the fact that the taxes of Schedule B are an extra and discriminating tax on a class, and therefore merit consideration independently of other taxes and without reference to the repeal or modification of any other tax.

RESOLUTION F.

TRADE-MARKS.

RESOLVED: That we commend the work of the Committee on Trade-Marks and Patents in its endeavor to secure more just provisions in the law respecting foreign pharmaceutical products.

That we renew our earnest recommendation that the law be so amended that no patented imported pharmaceutical products shall be accorded a greater measure of legal recognition by the government of the United States than such product is accorded by the government of the country of its origin.

That we assert it as an indisputable principle of public justice that the government should not grant a patent on the product itself, but should confine such patent protection to the process of manufacture. To patent the product is to create monopoly and retard progress in the healing art to the incalculable injury of our people.

That we assert that the present patent and trade-mark laws are operating to suppress inventive progress and to stultify the intelligence of our people in the opinion of other countries, the citizens of which countries have the legal power placed in their hands to force monopoly tribute from our sick and afflicted.

The committee has also had presented for its action the following resolution, and after due consideration begs to report the same to the Convention with the recommendation that it be adopted:

RESOLUTION G.

RESOLVED: That the present encroachments of the national government and the public institutions, upon the drug and allied trades, is a matter of much concern to this Association. The manufacture and supply of the medicinal articles of commerce by such bodies in competition with trade, is strongly opposed and condemned by this Association as detrimental to the interests of the entire drug trade, comprising manufacturers, jobbers and dealers.

The secretary of the Association is hereby instructed to transmit this expression of its conviction to the members of the National Senate and House of Representatives.

RESOLUTION H.

Pharmacists in the Army and Navy.

RESOLVED: That Congress be petitioned to advance pharmacists now employed in the army and navy under the classification of "hospital stewards" to the rank of first lieutenants, and with the title of pharmacists.

The discussion on resolution "C" of the above gave Harry Kramer an opportunity to tell the druggists of a decision he has recently made regarding his advertising contracts. He announced that all his future contracts with the press for advertising Cascarets would be made that he would not pay for his "ad." in case they advertised any cut-rate on Cascarets in the same issue.

Mr. Chamberlain went Mr. Kramer one better and said that he not only refused to advertise in any paper which advertised his own goods at cut rates, but also if it advertised any other man's goods at cut rate. E. C. De Witt of the E. C. De Witt Co., proprietors, announced himself

as a new convert in respect to the advertising matter and promised that he would immediately have new contracts made which would keep him out of the newspapers which advertised cut rates on his goods.

The morning session adjourned at 12 noon.

SIXTH SESSION.

At 2 o'clock Friday afternoon the meeting was called to order by President Jones for its last session.

L. C. Hopp, of Ohio, made an argument in favor of having the meetings of the American Pharmaceutical Association and the N. A. R. D. held at the same place, one immediately to follow the other, the order of precedence being optional. Mr. Hopp thought such an arrangement would be much more convenient for the delegates, as well as more economical. He thought, too, that the cities which did the entertaining would find it more pleasant and economical in the long run. A motion to refer the matter to the Executive Committee was carried.

Mr. Seeley, of Detroit, made a motion that the report submitted by the Committee on Form of Organization be adopted. Carried.

On motion of Delegate Hirsman, of New York City, the subject of providing national cards for salesmen was referred to the Executive Committee for action.

President Jones then called up the delegates from the different States represented in the Convention for an expression on the subject of the N. A. R. D. and its aims and projects.

Conditions in Various States.

Delegate Wm. E. Bingham, of Alabama, said that there had never been any cutting in his own town of Tuscaloosa; that Birmingham, Montgomery and Mobile are suffering from the disease. He hoped, however, to be able to exert enough influence through the N. A. R. D. in those three cities to bring them into line and get them to come into the tripartite agreement.

At this point Harry Kramer was asked to step on the platform "at \$1,000 a minute," President Jones heralding his approach with the statement that Mr. Kramer intended to make a magnificent offer to the Convention. Mr. Kramer said that without going into the details of his business he would merely state that his people were in receipt of from 3,000 to 5,000 ten-dollar orders for Cascarets every sixty days. He now proposed that for every ten-dollar order received from any retailer to donate one dollar to the N. A. R. D. "Have you your order book with you?" shouted several delegates at once. Mr. Kramer then went on to state that it would take some little time—say three weeks—to get the necessary printing and letter writing done for the project, but that his offer would hold good for sixty days after the matter was put into the mail. Great enthusiasm followed. Dr. Gregory, of Buffalo, moved that a rising vote of thanks be extended to Mr. Kramer "for his magnanimous offer," which could not fail to be of great value to the Association. The motion was adopted.

Wm. K. Forsyth responded for the State of Illinois. L. K. Waldron told of conditions in Chicago, saying that they were organized there by wards. Some wards have already adopted a schedule of prices which is being maintained.

Indiana reported that cutting is done in only one or two cities of the State, and the outlook is that things will be much better in the next six months.

F. E. Holliday, of Kansas, said there was but one town in his State where there is a cutter, and they expect to knock him out of such business in the next sixty days.

Jno. E. Peck, of Grand Rapids, Mich., told of conditions in his town, and D. E. Prall, of Saginaw, told of the harmony in the Saginaw camp. Six months after the Saginaw Association was formed, cutting was abolished.

Minnesota reported little cutting outside of the large cities. As a result of this N. A. R. D. meeting it was promised that a certain supply house which sells to cutters would be disciplined immediately.

Thos. Layton, of Missouri, said that his State would like to be better organized, especially because of the fear of engendering legal complications.

Frank L. Way, Manchester, N. H., said that a year ago considerable scepticism existed in his State regarding the success of the N. A. R. D. A delegate was sent to

last year's convention, however, and he so imbued the State Association with enthusiasm for the National Association they came into line, and at the meeting last week decided to affiliate with it.

John C. Gallagher, of New Jersey, believed that if the matter of the N. A. R. D. could be presented in the proper light the majority of the druggists in his State would be affiliated with it by next year.

Thomas Stoddart, of Buffalo, spoke of the cutters in his city. He said the druggists and the cutters had met and agreed upon a "free list." Certain articles were agreed upon to be kept up at a certain uniform price; then a list of twenty-five cent articles was made out and put upon the "free list;" the cutters may sell any of these articles at any price they please—they may give them away if they so desire. Mr. Stoddart said even this one step towards restoration of prices would never have been taken but for the N. A. R. D. The Buffalo druggists have then started out on a new basis. The man who now cuts the prices of the new schedule is to be considered an aggressive cutter.

P. W. Vaughan, of North Carolina, read several letters from the jobbers in his vicinity who had refused to sell to cutters.

F. B. Lillie, of Oklahoma, stated that there was no cutting in his territory.

Delegates from Pennsylvania, Tennessee and Wisconsin responded to calls for their several States.

Mr. Henry Willis, of Quebec, assured the Convention that the Society of Retail Druggists of Quebec would be as loyal to the N. A. R. D. as they were to the British flag.

The "experience meeting" being over, the report of the Committee on Nominations was offered. It was as follows:

Officers Elected.

President—W. C. Anderson, Brooklyn, N. Y.

First Vice-President—James W. Seeley, Detroit, Mich.

Second Vice-President—Jesse L. Nelson, Jackson, Tenn.

Third Vice-President—Frank L. Way, Manchester, N. H.

Secretary—Thos. V. Wooten, of Chicago, was the unanimous choice of the committee.

Treasurer—Chas. T. Heller, of St. Paul, Minn.

Executive Committee—

F. E. Holliday, Topeka, Kan.

D. E. Prall, Saginaw, Mich.

Simon N. Jones, Louisville, Ky.

Alfred DeLang, Cincinnati, Ohio.

A. Timberlake, Indianapolis, Ind.

Jas. C. Perry, Philadelphia, Pa.

No dissenting voices being heard, the several officers were duly elected, the secretary casting a ballot for each in turn.

In taking the chair, President Anderson said that he believed the day for conservatism had passed, and that the time was now ripe for aggressive action. He did not believe in waiting one, two or three months, but would begin now. He would like to have the world know that dollars and cents are not the only considerations of the druggist. Pharmacists protest against ruin and disgrace through unjust competition. The honor and dignity of their chosen profession must be maintained. Organization was the watchword of the '98 meeting; hope of the '99; aggressive action is the word for 1900; let that of 1901 be victory!

After speeches from the other newly-elected officers, a resolution was passed making an appropriation of \$100 to Mr. Heller for his services as treasurer for the past year, and also making the salary of the office \$100 for the coming year.

By motion the Executive Committee were instructed to send accredited delegates to Chicago to attend the meeting of the National Wholesale Druggists' and Proprietors' Associations.

By motion of Mr. Seeley, of Detroit, the President was instructed to select a delegation to represent the body at the American Pharmaceutical Association.

A special vote of thanks was ordered extended to the Detroit and Wayne County Retail Druggists' Association, to the Auxiliary Ladies' Committee, to the Local Committee, and to Parke, Davis & Co. for the delightful entertainment extended to the visitors while in Detroit.

All business being concluded, the meeting adjourned.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

China.

- A cablegram from Peking tells of terrible looting in that city which has excited the indignant protest of General Chaffee. Many other outrages in other sections are reported, and Chinese women are said to have killed themselves to escape assault. The Japanese commander and General Chaffee are operating to check these barbarities.
- A cablegram from Tien-Tsin says a Chinese town that had surrendered to the Allies under General Dordard was "thoroughly looted" and then burned by order of the commanding General.
- The Paris correspondent of the London Morning Post says: "France and Russia, I have been assured, have agreed to demand the complete disarmament of China, including the razing of the Taku forts and the fortifications and arsenals elsewhere."
- General Chaffee is preparing to make his troops comfortable for the winter. When asked his opinion regarding the situation, he is reported to have answered: "It would be better for the United States troops to leave; but in any event the Chinese Christians will be provided for."
- Russia has delivered to China an ultimatum favoring the restoration to power of the Emperor and the punishment of Prince Tuan. The terms are not acceptable to Li Hung Chang, who has abandoned the peace negotiations and will not go north.
- A Japanese officer at Chsong, Korea, reports that two Japanese and several hundred Chinese and Korean converts have been murdered on the frontier by the Chinese.
- Statements were current in the European capitals last week that all the Powers had replied to the Russian proposition: that Great Britain and Germany had declined to evacuate Peking; that Austria and Italy had decided to be guided by Germany's decision, and that the other Powers had agreed to modified withdrawal.

South Africa.

- President Kruger with several Transvaal State officials arrived at Lorenzo Marques, in Portuguese territory, last week. The Transvaal authorities say that he is on a leave of absence to enlist sympathy in Europe for the Boer cause, but the opinion prevails widely that he left the Transvaal because the Boer cause is on the verge of collapse.
- Lord Roberts has proclaimed the annexation of the Transvaal Republic to the British Empire under the name of the "Vaal River Colony."
- Lord Roberts has issued a proclamation to the Boers pointing out that the abdication of President Kruger and the sickness of Gen. Botha make futile further resistance.
- The occupation of Komatiport is expected to end active warfare, the task of the British troops being probably confined to subduing guerilla bands.
- A large number of American refugees from the Transvaal are said to be living in caves on the side of Table Mountain, at Cape Town, being unable to pay rent.

The Philippines.

- At the first public legislative session of the Philippine Commission in Manila last week, \$1,000,000 was appropriated for highways and bridges, to be disbursed under the supervision of the army.

Other Foreign News.

- Head hunting in Formosa by the aborigines still continues. On Aug. 21 300 aborigines at Taikakan went out on a head hunting expedition, killing a number of Japanese officials.
- A London cable says that it is reported from Northwich that the Standard Oil Company is trying to obtain control of the Cheshire salt trade.
- The plague is again increasing in India. Over 1,000 deaths from the disease are reported to have occurred in India last week.
- Experiments have been conducted at Honolulu with the extract of the Venezuelan shrub Tia Tia, which is said to be a sure cure for leprosy. The experts report partially favorable results.

DOMESTIC.

Politics.

- The American Anti-Trust League, with headquarters in Chicago, has issued a public address officially endorsing Bryan and Stevenson.
- The New York State Federation of Working Men, at

Utica last week, adopted resolutions protesting against "large standing armies as being a menace to the liberties of organized wage-earners and a heavy burden upon them."

Mr. Thielkuhl, a former employe of the Interior Department, accuses Webster Davis of having attempted while in office, to enlist Americans in the Boer ranks. The New York Democratic Convention, at Saratoga last week, nominated James B. Stanchfield for Governor and the remainder of the State ticket as selected by Richard Croker. Coler, the choice of the large majority of New York's Democrats, was named by ex-Gov. Hill, but his defeat was as overwhelming as had been expected.

The Galveston Disaster.

There is some improvement in the situation at Galveston, a large force of men being put at work clearing up the ruins; hundreds of people are leaving the city, and the suffering among the refugees is great. About \$1,500,000 have been contributed in the United States, France, England and Germany to aid the Galveston sufferers. The Government has given the services of the transport McPherson to take supplies from New York to Galveston. Officials of all the railroads running into Galveston have announced their intention to rebuild their costly terminals there, so that the commercial future of the city seems assured. There was considerable fear that the railroads might divert the traffic to some less exposed port, such as New Orleans or Port Royal. The Navy Department has ordered the gunboat Bancroft, now at New London, Conn., and the tug Somerset, at Pensacola, Fla., to proceed to Galveston to furnish what aid they can to the storm sufferers. It is estimated that more than 5,000 lives were lost in the Galveston storm, making it the most fatal disaster in American history. The property loss is estimated at from \$10,000,000 to \$35,000,000.

Other Domestic News.

- Germany has negotiated a loan of \$20,000,000 from New York capitalists. The Freisinnige Zeitung, discussing the floating of the German loan in the United States, points out that "the time is past when the United States has to come to Germany to borrow money." And the Berlin press generally recognizes that the government does wisely in view of the stringency of money to resort to American subscription.
- Rear-Admiral Montgomery Sicaud died of apoplexy last week at Westernville, New York.
- The old Bible House, at Fourth avenue and Ninth street, New York, home of the American Bible Society for nearly fifty years, is to be sold, and the great printing establishment of the society probably will be given up and the bibles printed by contract.
- The steamer City of Seattle has arrived at Seattle from Skagway, with 177 passengers and \$650,000 in gold.
- Five new cases of yellow fever have been reported in Havana, seventy-eight being now under supervision. The mortality report for August, including deaths from all causes, shows a lower total than for any previous August in ten years.
- Miss Mabel McKinley, niece of the President, was married last week to Dr. Hermanus Baer, at Somerset, Pa.
- A Burlington train was held up by an outlaw early on Wednesday morning of last week near Haighter, North Dakota, and the occupants of the sleeping cars were robbed of money and jewelry to the value of about \$1,500. The robber escaped.
- For the eight months ending with August 31, 1900, the total exports of domestic breadstuffs, provisions, cotton and mineral oils were over \$52,000,000 in excess of the same period in 1899.
- The buildings at the Pan-American Exposition grounds at Buffalo were damaged by the storm last week to the extent of \$60,000.
- A strike of all the miners in the anthracite coal region in Pennsylvania has been ordered.

The best known veterinary physician in New England is probably Dr. A. C. Daniels, 1 Staniford street, Boston, Mass. He puts up a line of veterinary medicines and specific remedies which are also very well known, and which are advertised on another page of this issue.

The Freck Tablet Machine is well known abroad. These machines are in operation in London, Paris, Berlin, Vienna, St. Petersburg and Yokohama, and are on exhibition at the Paris Exposition. This machine will make from one to six tablets with every stroke, and it has a capacity of from 60,000 to 200,000 tablets per day. It makes tablets up to $\frac{3}{4}$ of an inch in diameter, of any shape desired. The Freck Tablet Machine is sold under an absolute guarantee. Full particulars may be obtained by corresponding with the Wm. Freck Co., 116 S. Clinton street, Chicago.

THE DRUG NEWS.

New York and Vicinity.

KINGS COUNTY SOCIETY RESUMES MEETINGS.

The first meeting of the Kings County Pharmaceutical Society since the summer vacation was held in the Brooklyn College of Pharmacy, Tuesday afternoon, September 11, and although the attendance was small the gathering was none the less interesting.

President O. C. Kleine, Jr., called the ten members present to order shortly after three o'clock and Secretary F. P. Tuthill read the minutes of the preceding meeting held in May. These were adopted. The following members were then unanimously elected: Ralph L. Harloe, William Schroeder, Jr., Aaron Katz and Jacob Ochs. One application for membership was received. Treasurer P. W. Ray read his report which showed a balance in the treasury of \$489.81 on May 19, and since that time \$215 had been expended, leaving on hand at the present time \$274.81. Dr. Ray said that \$240 had been received from the Comptroller for fines collected from violators of the pharmacy laws. Adrian Paradis gave an excellent report of the meeting of the State Association at Newburgh where he was present as a delegate from the society. Secretary Tuthill reported that two members had died since the last meeting, D. L. Cameron and Charles Pezold, and he was instructed to leave two blank pages in the records of the society in memory of them. Letters of condolence from the society were sent the relatives of the deceased members.

Dr. Ray read a letter from Dr. George F. Payne, chairman of the Committee on Status of Pharmacists in the Army, Navy and Marine Service of the United States of the American Pharmaceutical Association, in which Dr. Payne urged Dr. Ray to write letters to President McKinley, Secretaries Gage and Root, Surgeon General G. M. Sternberg, of the United States Army, and Supervising General Dr. Walter Wyman, of the United States Marine Hospital Service, requesting them to accord the title of pharmacist and better pay to hospital stewards both of the Marine Hospital Service and of the Army. Dr. Ray said he had written these letters and had received a reply from Mr. Cortelyou, secretary to President McKinley, stating that the matter had been referred to the Secretary of the Treasury for action. Dr. Ray then made a motion that the secretary of the society be instructed to write to the officials mentioned urging the same request. Secretary Tuthill informed the members that that duty had already been performed, but it was deemed advisable to keep the matter agitated and Dr. Ray's motion prevailed. Secretary Tuthill stated that he understood a bill was to be introduced in the State Legislature at the next session for the repeal of the law already in force in this State giving the title of pharmacist to hospital stewards and raising their rank to that of a lieutenant. The only man to receive an appointment under the law is W. G. Tuttle and it was said he had been warned that he would be removed. Several present spoke on the subject and it was said by all that the reason for the belligerent attitude of the officers against the law was simply a matter of personal jealousy. Secretary Tuthill presented his bill for \$67.99 for three months' salary and expenses and it was referred to the Auditing Committee.

DRUGGISTS SUFFERED IN GALVESTON.

Although no word has been received from Galveston, Texas, to the effect that any of the druggists were wiped out in the recent storm and tidal wave, it is not improbable that such news will reach here before the next issue of the Era. Schieffelin & Co. received a telegram last week from the drug firm of Browse & Ogilvie, stating that they suffered little damage. J. E. Hertz, a well known retail druggist formerly of Houston, Texas, but lately associated with J. J. Schott, of Galveston, was in this city last week, having come from Canada, where with his wife he was spending a vacation when the news

of the disaster reached him. He has been trying to establish communication with friends in Galveston, but thus far has failed. Mr. Hertz is well acquainted with the drug trade in Galveston, and he says that from the descriptions given in the daily papers they must have suffered heavy losses. He was of the opinion that the searchers for bodies would unearth many more victims of the flood than those already found, when the cellars of the houses were examined, as he believed that the people hearing the heavy winds took refuge below-stairs, and were thus caught by the rushing waters. The W. P. Fisher mentioned in the papers was an employe of druggist Schott. Mr. Fisher with his wife and two children perished in the storm. The wholesale trade of this city has signified its willingness to extend to the druggists of Galveston unlimited credit, that they may re-establish their stores.

NOTES.

—One hundred barrels of Norwegian cod liver oil imported by Parke, Davis & Co., were sold by the Board of Underwriters at Campbell's Stores, Hoboken, N. J., Tuesday afternoon, September 11. The goods survived the fire of the North German Lloyd piers, and many of the barrels were charred, some of them were blackened, and when an examination was made by well known members of the trade who attended the sale to purchase the goods, the oil was found to be rancid, and unfit for medical consumption. The lot, however, was sold to B. J. Solomon, said to be in the tanning business. He declared it was too good for his use and he would endeavor to dispose of it to the drug trade.

—Among the druggists who visited the trade last week were: G. Good, of Good & Co., Allentown, Pa.; C. H. Sarles, Mt. Kisco, N. Y.; S. I. Vanderbeck, Islip, L. I.; Schuyler Rust, New Brunswick, N. J.; F. D. Brill, New Haven, Conn.; A. E. Pickhard, Roslyn, L. I.; P. C. Candidus, Mobile, Ala.; W. J. Butts, Brunswick, Ga.; C. M. Kuykerdale, Yorkville, S. C.; J. McIntosh, Colorado City, Colo.; J. R. Holt, of P. R. Holt & Son, Newnan, Ga.; T. A. Penn, of G. L. Penn & Son, Elfeld, S. C.; G. E. Blakelee, Los Angeles, Cal.; C. F. de Vies, Amityville, N. Y.; W. H. White, Nyack, N. Y.; Mr. Bunting, of Bunting & Son, Bristol, Tenn., and J. T. Blaser, of Waverly, Ohio.

—How often is the question asked: "Do you believe in signs?" but of course there are signs and signs, and the kind indicated or referred to in the query have nothing to do with those displayed on drug store windows to attract trade. The queerest of all the great variety shown by the apothecaries stands forth from the windows of a Third avenue druggist in Brooklyn. It is simple, to the point and full of meaning, but when read leaves a sense of vagueness as to its probabilities. It announces: "Children vaccinated."

—A certain newspaper gave prominence last week to a charitable act of its own doing in publishing a statement that it had purchased and dispatched "several car loads of drugs" to the sufferers of the Galveston, Texas, horror. Inquiry among the drug houses in the city failed to reveal the purchase of the drugs of the New York trade, and yet the paper positively declared it had sent the goods from this city. Members of the trade are skeptical because the hurried sending of the goods indicated that the purchase must have been made close at hand.

—For some time complaint has come to the New York office of the Humphreys' Homeopathic Remedy Company, that Humphreys' Specifics were being offered to the trade far below list. It is believed that drug swindlers have in some way secured quantities of the preparations, and are distributing them at prices less than those charged by the manufacturers. It has been hinted that Henry P. Crosher, the notorious fake dealer, is aiding in the work. —John McDonald, on iron moulder of 91 North Henry

street, Williamsburg, was arrested Monday, September 10, at the instance of H. L. Rehse, a druggist at 45 Graham avenue, Williamsburg, on the charge of stealing perfume to the value of \$20 from his store. It is stated that the case was settled by McDonald agreeing to pay for the goods.

—"It's a notable thing," said a druggist recently in discussing odd questions, "that not one person in one hundred would buy paregoric in my store if I sold it in its original straw color. No, sir, they would not recognize the stuff at all. It must have the color made by the addition of burnt sugar or it don't go. I know whereof I speak for I've tried it."

—Samuel W. Brown, a druggist who died recently at Manayunk, Pa., was well known in this city. Mr. Brown bequeathed \$5,000 each to the American Tract Society, and the American Bible Society of this city, and also left a legacy of \$10,000 to the Board of Foreign Missions of the Presbyterian Church of New York.

—The Sanitary Chemical Company has incorporated under the laws of New York State to do a general chemical business. The headquarters are at Buffalo. The capital stock is \$10,000. The directors are: J. H. Brown, G. K. Staple and T. A. Noonan, all of Buffalo.

—The daily press of last week contained a story of a man found dead in a hotel in Brooklyn, supposed to have committed suicide by taking oil of eucalyptus. This is the first instance of the adoption of this method of departure from the world known hereabouts.

—E. L. Sturtevant, of Henry Thayer & Co., Boston, Mass., paid a visit to the New York office last week. He afterward left for Washington and Philadelphia. P. S. Bricker, of the same concern, is on a business trip to Chicago and reports business excellent there.

—It was reported that a meeting of the members of the Middle Section of the All-State Board of Pharmacy was held at Albany last week for the purpose of discussing the names of the proposed officers of the board. It is not known what action was taken.

—Mason B. Wood, a druggist of East Providence, R. I., called on the drug trade in this city last week. Mr. Wood is president of the Board of Health of East Providence. He was accompanied by his son, and they remained here for several days.

—It was rumored last week that the Sovereign Remedy Company, which has offices in this city and Philadelphia, had been closed by services on the proprietors of judgments secured by firms in Europe.

—The Brooklyn College of Pharmacy will begin its regular course of lectures on Monday next with nearly seventy students enrolled. The year opens auspiciously and gives promise of much success.

—The marriage of Charles S. Erb, one of the best known and most popular members of the trade in this section, to Miss Anna Conway, of Philadelphia, was solemnized at the Quaker City yesterday.

—Dr. A. P. Sawyer, of the A. P. Sawyer Medicine Company, of Chicago, is in New York. He has just returned from an extensive trip abroad.

—M. H. McClintie, of Warm Springs, Va., was in this city last week. He left Saturday for Europe, where he will remain several weeks.

—After the 1st of October the Drug Clerks' Circle will hold meetings every Wednesday evening at the rooms, 235 East Broadway.

—The Board of Pharmacy met Monday at the Brooklyn College of Pharmacy, and nearly 100 candidates were examined.

—Exports in drugs, chemicals, etc., for the week ending September 11, from this port amounted to \$11,510.

—Hedwig Henn, 289 Broome street, is recovering from an operation of appendicitis recently performed.

—Eleven persons were elected to membership at the meeting of the Drug Trade Club last week.

—August C. Smith, with R. W. Robinson & Son, is spending his vacation at Portland, Me.

—Charles Theo has accepted a position in the Walton Pharmacy, 333 Columbus avenue.

—Ferdin Ferrer has accepted a position with Hege-man & Co., on Broadway.

—A. M. Heron has closed his drug store at Belmar, N. J., for the season.

IN AND ABOUT BOSTON.

C. I. Hood Farm Blooded Stock Wins Many Prizes.

Boston, Sept. 15. At this season's New England Fair the C. I. Hood Stock Farm at Lowell, owned by the well-known manufacturer of medicines in that city, walked off with many trophies won by some of the fine blooded Jersey cattle and Berkshire pigs which were put on exhibition. This is by no means the first time that this farm has captured similar prizes, for it has long been famous for the pedigree of its stock. Not only did the farm win all the Berkshire prizes this year, but also many prizes for Jerseys.

A Drug Store Offers Prizes for Yankee Shrewdness.

Boston, September 15. The drug store of the Walker, Rhinels Company, near the South Terminal Station, has one of its large show windows filled with an attractive display of prizes. These are to be given for guesses on the coming vote this fall for President McKinley. The first prize, a \$500 gold bill, is offered to the man guessing the exact number of votes which McKinley will receive. Then there are still other prizes for those guessing nearest the correct actual number. For ladies there is also an opportunity to win something. All customers are given the privilege of showing their shrewdness.

NOTES.

—In the cases of the two Lynn druggists, Joseph W. Colcord and Gilman Thomas, lately summoned into the Lynn police court for alleged illegal selling of liquor and maintenance of a liquor nuisance, evidence was submitted in the Colcord case by Horace D. King, an agent of the Tolman Temperance Fund, to show that sales were made on Sundays in his store without a physician's prescription and without requiring the purchaser to register. Two bottles of whiskey produced in court were said to have been bought on a recent Sunday evening by John A. Jewell. No defence was put up by Mr. Colcord, but a continuance was asked for and granted. The Thomas case also was continued until a later day.

—John F. Guerin is one of the few Massachusetts druggists at Detroit to attend the National Association of Retail Druggists' convention, September 12 and 13. Mr. Guerin will represent the Massachusetts Pharmaceutical Association, of which he is secretary, and also the Worcester retail drug trade. One of the chief items of business will be the cut-rate warfare, a matter on which Mr. Guerin can throw much light, as Worcester has had much experience and trouble along this line.

—A. E. Rose, general manager of the J. C. Ayer Company, at Lowell, has been with his family at Hotel Preston, Beach Bluff, Mass. A conspicuous addition to the private turnouts on Atlantic avenue, is his handsome four-horse brake.

—A new drug store opened at Fall River is that of Harry Panneton, which is situated in the Flint Village part of the city, near Tiverton. Mr. Panneton is a brother of J. C. E. Panneton, well known in the drug business.

—George A. Newman, of Louisville, Ky., general agent of the Eastern department of the California Syrup of Figs Company, has been a guest at the fashionable Hotel Preston, at Beach Bluff, Mass.

—Burdett & Barnard are soon to open a new drug store at Southboro, Mass. It will be located in the new Masonic Building in that town, on a prominent corner of two business streets.

—The N. C. Dodge drug store, at Springfield, is being well overhauled and improved to make it a thoroughly up-to-date pharmacy. When completed it will be about twice its former size.

—Included in the week's exports from the Port of Boston were drugs and chemicals, \$3,075; hops, \$1,566; India rubber manufactures, \$22,553; spirits, \$4,100.

—Messrs. Page and Amezem, both clerks at Moor's Beverly pharmacy, have enjoyed a vacation at Bates Park, Ryal Side, Mass.

—George E. Worthen, a druggist of North Main street, Fall River, is enjoying a three weeks' vacation.

—J. Holbrook Clark, of O'Brien's pharmacy, in Cambridge, is enjoying a two weeks' vacation.

PHILADELPHIA.

Crusade Against Adulterated Food.

Philadelphia, Sept. 15.—Because of the peculiar political situation in Pennsylvania at the present time, there is an unwonted activity in the Pure Food Department of the State Agricultural Bureau, and its agents are unusually zealous in their search for adulterated food stuffs. Oleo-margarine is their particular quest, a number of owners of "cut-price groceries" having been found to be selling this stuff for the best creamery butter, and a great many prosecutions have been made. Wherein this crusade against adulterated food is going to affect the druggists of Philadelphia will be in the quality of the spices, pepper, mustard, etc., that they may now be selling. Food inspectors of the Pure Food Department have recently been making a tour of the grocery stores and buying small packages of spices, which were turned over to the Department's chemist for analysis, and as a result of this various spices have been found to have from 17 to 25 per cent. of adulteration. One of the largest wholesale spice houses in the city is now under indictment for having supplied adulterated spices to various small groceries, and the prosecution is being pushed. Your correspondent has it from a very high authority that a similar visitation is soon to be made among the drug stores of the city, spices being purchased in small quantities and subjected to analysis and, if adulterations are found an indictment will be drawn in every case. Pepper, cinnamon, mustard, cloves, cream of tartar and allspice are mentioned as being the articles particularly likely to come under the eye of the chemist and it will be well for the druggists to overhaul their stock and cast out anything that is not wholly without reproach, for an unsuspected article may cause a lot of trouble.

NOTES.

—One of the neatest and most unique drug stores in the city if not in the whole country, is "Porter's Pharmacy" at Broad and Snyder avenue. The store proper, soda fountain, prescription department and laboratory are all in the small space of an ordinary room, yet nothing seems crowded. The cause of this condition is found in the desire of the owner of a Broad street dwelling to make more out of his property; a wing, one story high, was built out from the house in the space formerly occupied by the front yard and this was fitted up for a store. Mr. Porter is well known as the vice-president of the Schuylkill County Druggists' Association and is making a success of his city venture.

—F. W. Musson, son of Dr. W. A. Musson, of Broad and Dickinson streets, has recently sailed for England to assume management in London of a branch of the Faber Penell Company. Mr. Musson is the inventor of an ingenious device in lead pencils in which the lead is threaded and is fed out as used through a reverse threaded metal cone, a little invention that finds ready sale among men who use pencils steadily. So great has been his success that he now forsakes the drug business and hopes to pass his off hours in the pleasant pastime of collecting his royalties and clipping coupons from bonds.

—Dr. A. P. Chandler, of Eleventh street and Montgomery avenue, is jubilant over the success of his friend, Mr. Berkelbach, in the primary election for State Senator, held last Tuesday. In spite of the cares of his drug store and the calls of a large private practice, Dr. Chandler finds time to take an active part in local politics, deeming this the part of every good citizen and particularly the druggist because of his close relations with the people.

—Fifty-seven thousand, five hundred tablets seems a large order for a mining company to give, yet this is only part of an order received by Leedom, of Broad and Filbert streets, for one of the big mining operators up State. This concern employs a physician solely for its employees, and the order mentioned is for its "Model Dispensary," one of the finest of its kind in the State.

—A visit to Lit Bros.' proposed drug store shows that little progress has been made in the putting in of stock. A large stock of sponges, chamois skins, etc., fills some of the cases, while a lot of "Tooth Wash" occupies a

prominent place on the counter. An interview with Lit Bros. is expected early next week by the committee appointed by the P. A. R. D.

—The work of urinalysis is engaging the attention of pharmacists here more and more every day. J. R. Elfreth, of Twelfth and Columbia avenue, expects soon to fit up a complete analytical laboratory, the demand on his skill having far outgrown the present facilities. Expert analyses, chemical and microscopical, are to be at the service of physicians.

—At present there are seven hospital stewards at the Navy Yard waiting assignment to sea duty, a number greater than the old Richmond has ever held at any one time. Two of these hospital stewards have recently been promoted to that rank from hospital apprentice, this now being the policy of the Navy Department.

—Mr. Nicoud, of Fifth and Pine streets, has recovered from the painful accident of a few months ago in which he suffered a severe fracture of the leg and is once more on duty at his store. Mr. Ott has gone on a well-earned vacation, the entire work having devolved on him during his partner's illness.

—Hiers Busch, of Shoemaker & Busch, has returned from his long vacation. Mr. Busch spent considerable time in Europe, of course, taking in the great Paris Exhibition, with which he is well pleased.

—Mr. Rowe, of Broad and Dickinson streets, is away on his vacation.

BALTIMORE.

Apathy Among Druggists.

Baltimore, Sept. 15.—Interest in retail drug trade affairs here is at a low ebb at the present time. Baltimore was not represented at the annual meeting of the National Association of Retail Druggists in Detroit, and the local organization is in a moribund state. Calls for conferences elicit a very limited response, and those pharmacists who have hitherto sought to stimulate the flagging zeal of others are becoming discouraged. Not only does the life of the Retail Association hang upon a very slender thread, but the Commercial League movement, which took shape at the last meeting of the Maryland Pharmaceutical Association, has been practically abandoned. An interchange of experiences between the members of the league this week developed the fact that no replies had been received in response to the circular letter inviting druggists to suggest how the relations between the various branches of the trade can be improved. In view of this marked display of indifference it was resolved to discontinue further efforts in the same direction and to let the situation take care of itself. The few energetic members feel that they are wasting valuable time and effort which could be devoted to much better advantage in looking after their own private affairs.

Drug Trade Bowlers Ready for the Fray.

Baltimore, Sept. 12.—The Baltimore Drug Trade Bowling Club is ready for the ensuing season of games. Its annual meeting and election of officers took place to-day at the Diamond, when the necessary arrangements for beginning the prize contests were made. Dr. A. R. L. Dohme, the president of the club, occupied the chair. Secretary Henry Kornmann submitted a very interesting report of last season's results, which showed steady progress on the part of the teams and held out great encouragement for the future. Equally satisfactory was the report of the treasurer. President Dohme then addressed the meeting briefly. It was announced that Gilpin, Langdon & Co. will not be represented in the club this season, the breach in the ranks being filled by McCormick & Co., the South Charles street manufacturing firm. The proposition to place a handicap upon the different teams, based on their work for the previous third of the season, found acceptance. According to the arrangement adopted the handicap will be half the number of points which separate the higher team from one of lower standing. Thus, if there is a difference of ten points, the handicap will be five points. This arrangement will, it is expected, induce every team to exert itself.

The new Executive Committee was considerably enlarged and now consists of Dr. Dohme, for Sharp & Dohme; Lewis Davis, for the Root and Herb quintette; Paul Muller, for the Winkelmunn & Brown Drug Company; Thomas Pindell, for Parke, Davis & Co.; Charles Holzerman, for James Baily & Son; James Coyne, for Muth Bros. & Co., and Andrew Baumgartner, for McCormick & Co. Dr. Dohme was elected president; Col. Brent Waters, first vice-president; Andrew Baumgartner, second vice-president; Henry Kornmann, secretary, and Lewis Davis, treasurer. Henry Kornmann, Bruno Fairley and Thomas Pindell were appointed members of the Schedule Committee. There will be bowling on Tuesdays and Fridays of each week at the Diamond. The active work will begin on the first Tuesday in October. President Dohme was directed to name a Committee on Ways and Means and Entertainment to provide for the annual contest here of the National Association of Drug Trade Bowlers here next spring.

NOTES.

—Among the out-of-town druggists in Baltimore last week were George W. Westerholt, of Westerholt & Sample, York, Pa.; W. R. Rudy, of Mt. Airey, Md.; S. S. Van Trump, of Trump, Md.; Dr. J. T. Powers, of Millington, Md., and H. N. Fraser, president, and Mr. Hutchins, treasurer, of the Fraser Tablet Triturate Company. Mr. Hutchins is also the manager of the company's retail department.

—The fumes from a bottle of anodyne ignited yesterday in the cellar of Andrews & Thompson's drug store, 782 North Eutaw street, and there was an explosion, as a result of which George A. Thompson, a member of the firm, was seriously injured. He sustained severe burns on the face, head, neck and chest, but is expected to recover.

—The contents of the Simes' pharmacy, Fulton and Edmonton avenues, were sold at auction last week. They were bid in by Louis J. Roth, who intends to continue the business and make a number of improvements.

—Mr. Hoke, formerly of the firm of Hoke & Swartz, which occupied the location now held by Williamsen & Watts, has accepted a clerkship with W. L. Campbell, North and Park avenues.

—Arthur Nattans, trading as the Read Drug Company, announces that the Baltimore street store which was opened about two years ago, will be closed at the beginning of next month.

—Extensive improvements are being made in the pharmacy of Hynson, Westcott & Co., Charles and Franklin streets. New shelving and drawers of artistic design will be erected.

—Dr. S. C. Finley has established a new drug store at Delta, Pa. He was long a practising physician at Green, Lancaster County, Pa.

—Mayer & Campbell, Linden and North avenues, have dissolved partnership. Robert E. Lee Campbell succeeding the firm as sole proprietor.

—A new pharmacy has been opened by Ringgold & Rheinhart at Cumberland, Md.

Bristles in the Throat.

"Cheap tooth brushes are responsible for many obscure ailments of the throat and stomach," said a surgeon a few days ago. "The bristles are not properly fastened on, and come out in dozens when wet and brought in contact with the teeth. I performed an operation on a patient some time ago who had a regular crop of bristles in her throat. You can imagine how unpleasant it must be to have a single bristle in the glottis. You cough until you are exhausted, but nothing moves it."

There is one firm which guarantees every brush which leaves their factory. This is the firm of G. B. Kent & Sons, of London, Eng., who have been manufacturers of brushware for over one hundred years. They make the celebrated "Best British Brushes," which are as perfect as it is possible to make them. Every brush is guaranteed, and should any brush, from some unforeseen circumstance, prove in any way defective it will be at once replaced by a new one. These brushes are obtainable from the American agents, McKesson & Robbins, New York.

CHICAGO.

N. W. D. A. Programme.

Chicago, Sept. 15.—The twenty-sixth annual meeting of the N. W. D. A. will be held here next week. The headquarters will be at the Auditorium Hotel. At the same time the Proprietary Association of America will hold its regular semi-annual meeting. This will be perhaps the most important annual meeting the association has ever held. Upon the decisions arrived at may depend the tripartite anti-cut-rate agreement, and even the rebate plan itself. All the wholesale houses of Chicago will be represented. The Committee of Arrangements has made ample provisions for the comfort and entertainment of the members of the two associations during their stay in Chicago.

NOTES.

—Emma A. Goll, 259 Ashland Boulevard, died recently, leaving no will. Her son, Bruno H. Goll, Jr., took out letters of administration last week on her estate, which is valued at \$160,000. The other heirs are Mrs. Emma H. Dacy, Blanche T. Goll and George J. Goll.

—Geza Krevatsky, a druggist at Forty-eighth street and Ashland avenue, accompanied by his family, has gone to Fox Lake, Ill., for a few weeks. Mr. Krevatsky has been in poor health for several months and hopes to recover before his return.

—The postal sub-station which was formerly at 1218 Milwaukee avenue has been transferred to 709 Milwaukee avenue. Thaddeus Z. Xelowski, a druggist, is now in charge of the station.

—Bauer & Black have just issued a new illustrated catalogue of their lines and their extensive manufacturing plant at 283 Twenty-first street. The new catalogue is a superb piece of work.

—Hugh Wisdom, Mr. Ebert's head clerk, has begun the study of medicine. He has matriculated at the Harvey Medical College and in due time expects to become a fully equipped M. D.

—C. J. Brunskill's drug store at Union City, Mich., has been taken possession of by a trustee for the benefit of creditors. The principal indebtedness is to a local bank and to relatives.

—George Bronson, a druggist at West Van Buren street and Center avenue, has gone to Storm Lake, Ia., where he will spend two weeks fishing and hunting.

—Carl Jungk, a druggist at Fiftieth street and Ashland avenue, has availed himself of the "open" season and has gone away on a hunting and fishing trip.

—A Mr. Wiggins will start a new drug store in Eenton Harbor, Mich., about September 15. He was in Chicago on August 31 and bought the fixtures.

—An involuntary petition in bankruptcy has been filed against the Hyde Park Hotel Pharmacy by Charles Denby & Co., 219 Randolph street, because of an indebtedness of \$662.

—The firm of Gleason & Groschop, of Aurora, Ill., have dissolved partnership. Mr. Groschop will continue the business.

The Charleroi Oval.

Probably no prescription bottle ever jumped so quickly into popularity as the Charleroi Oval, advertised by W. H. Hamilton Co., Pittsburg. It is one of the neatest and most sensible prescription bottles on the market. It makes a nice package, is made of the best quality clear flint glass, and it drains every drop. The shoulder of the bottle is so made that the bottle can be entirely emptied of its contents, which cannot be said of many other styles on the market.

The Angeline Manufacturing Co., Grand Rapids, Mich., advertise the Druggists' three Favorites, Dr. Iman's Compound Blood Purifier, Kidney Cure and Nerve and Heart Cure, which retail at \$1.00 per bottle, but they are sold to the trade at \$5.50 per dozen for the Blood Purifier and \$7.00 per dozen for the other two. Circulars, booklets, samples and other advertising matter are sent free to all who write for them.

LOUISVILLE, KY.

Louisville, Ky., Sept. 14.

—The annual meeting of the Kentucky Board of Pharmacy will be held at Somerset, Ky., on October 9. One of the sad features of the meeting this year will be the retirement of President C. S. Porter, of Somerset. Mr. Porter has made an efficient officer and it is with regret that the druggists learn of his determination to retire. Under his administration the affairs of the organization have indeed been well conducted and the board has done much good. He will probably be succeeded by E. L. Peich, of Covington. Mr. Peich is one of the best druggists in the State and is well known. The quarterly examinations will also be conducted at the annual meeting. The class is a large one and made up of capable young men.

—The druggists of Louisville are still determined that legitimate prices shall prevail and another effort will be made to rid the city of the obnoxious cut-rate druggist. It has been decided to hold another meeting within sixty days, when it is expected that some definite and final agreement will be reached. The druggists are much put out over their failure to agree at the last meeting, but claim that the proposed restoration of prices was merely delayed. There is no doubt that eventually they will gain their point as the sentiment is clearly in favor of the increase in prices. They are also determined that no half raise shall prevail, but that the old price must be restored.

—John Dorsey, alias Brooks, alias Tate, the negro who assaulted Elizabeth, the five-year-old daughter of Philip Heuser, the druggist at Twelfth and Delaware streets, was arrested at Springfield, Ky., September 9 and was brought to Louisville. There was much excitement and it was feared that a mob would be formed and the negro hanged. The neighbors of Mr. Heuser were indignant and but for his advice they surely would have avenged the outrage. Mr. Heuser advised them to allow the law to take its course. The negro tells a most improbable story and a hanging will probably take place in Jefferson County.

—The druggists of Louisville are preparing for the Elks carnival, which begins September 17. The competition for the Southern trade is brisk and the Louisville wholesale druggists are bending every effort to secure their share of the drug business. They will have several floats in the flower parade, which takes place on Monday, and will erect booths at the carnival grounds. There they will entertain the visiting druggists in lavish style and they hope to convince their guests that Louisville should be considered when drugs are purchased. From the present outlook many druggists will be here during the fair.

—Charles Bradley, the New Albany merchant whose wife recently eloped with Charles Dunbar, a druggist, is insane and will probably be committed to the asylum. Worry over the disgrace which his wife brought upon himself and their children is responsible for the loss of his mind and his friends are indignant. His relatives kept his condition secret, but he became violent and on Thursday the New Albany officers took him in charge. It was feared that he would do himself some injury and it was decided to have him adjudged insane and confined. Dunbar has not returned to New Albany.

—Addison Dimmit, treasurer of the Kentucky Board of Pharmacy, will leave shortly for a trip through the State. He will visit every druggist and physician before he returns. Mr. Dimmit has just returned from Detroit.

Write to the Lightning Medicine Co. and insist upon their sending you one of their handsome papier mache window attractions. If you change your window frequently which you should, you can use the Old Pioneer: cut of which will be found in the display pages this issue of the Era—to profitable advantage. This attraction is becoming quite popular, and is furnished free by the Lightning Medicine Co., of Muscatine, Iowa, to advertise Mull's Pioneer Cures and Lightning Pain Killer. This offer remains open only for a short time. It's an expensive piece of work.

ST. LOUIS.

College of Pharmacy Alumni Memorial.

St. Louis, Sept. 15.—Preparations are going on apace for the silver jubilee of the Alumni Association of the St. Louis College of Pharmacy, which will occur next Friday evening at Lederkrantz Hall. The letters printed in last week's Era regarding the suggestion that the silver jubilee be used as an opportunity to establish a fund for a permanent memorial for the association has excited much interest among the brethren here and no doubt something along that line will be accomplished, if not at the "jubilee," at a not far distant time. Nothing could be more in keeping with the dignity of the association or react so to its benefit in the coming years.

NOTES.

—F. W. Lucke, druggist of Lee and Prairie avenues, has filed a voluntary petition in bankruptcy. His assets are scheduled at \$1,980 and his liabilities at \$3,544.76. On application of Meyer Bros. Drug Company, Charles E. Nall was appointed custodian to take charge of the property of the estate until a trustee is appointed. The first creditors' meeting was set for September 21. Mr. Lucke is a very popular man and his friends in the trade sincerely trust that he will soon emerge from his difficulties.

—A merry gang of St. Louis druggists and those interested in their welfare visited the Belleville Street Fair one day this week and took in the sights. They all returned alive. In the party were John Weipert, Louis Pauge, Mike Arendes, Paul Schneider, Theo. F. Hagenow, George W. Smith, F. E. Harris, Mr. Heckel, Dr. C. E. Reisse, Wm. Kempff, Otto F. Traubel, Mr. Van Dale and others.

Those who have decided to attend the convention of the N. W. D. A. at Chicago are George Merrell, J. S. Merrell Drug Company; D. P. Daugherty and C. W. West, Moffitt-West Drug Company, and E. J. Schall and Theo. F. Meyer, Meyer Bros. Drug Company.

—President Fischer, of the St. Louis Apothecaries' Association, has returned from a several weeks' vacation spent in Illinois.

—H. F. Hasselbrock and Thomas Layton have returned from the Detroit convention.

H. F. A. Spilker and Charles Gietner returned from Europe September 15.

—Dr. Kohler has sold his drug store.

Artificial Limbs.

We heard a druggist say the other day that the best side line he had was wooden legs, but he qualified this startling statement by saying that he did not carry them in stock, but took orders for them. His store is located in a section inhabited by railroad men, mechanics and others whose business might properly be called hazardous, and he had, he said, in the course of the past few months, taken orders for seven artificial limbs. We commend this to druggists in general throughout the country. While not every druggist has the opportunity often to sell an artificial limb, most of them may at some time or another, and to those who are interested, we are pleased to call attention to the advertisement of Geo. R. Fuller Co., 15 So. St. Paul street, Rochester, N. Y.

Decorative Plants.

We have called attention frequently in the Era to the desirability of druggists investing in the artificial decorative plants sold by Frank Netschert, 7 Barclay street, New York. He has advertised them in several issues of this paper, and a new advertisement appears on another page this week. These plants not only add to the attractiveness of the store, especially around the soda fountain, but they can increase a druggist's income. It will not be necessary to carry in stock more than a sample of each variety, for he can take orders for them, which will be filled directly from the factory, leaving him a liberal commission. An illustrated catalogue will be sent to any one who will take the trouble to inquire for it.

OBITUARY.

SAMUEL BRADHURST SCHIEFFELIN. A former member of Schieffelin & Co., wholesale druggists of this city died at his home, 978 Madison avenue, Thursday evening, Sept. 13, in his ninetyeth year. Mr. Schieffelin, although not actively engaged in the drug business for many years, kept up in active interest in it, and his loss will be none the less felt. Besides his drug business he was connected with many business interests in this city. In early life he was identified with the better class of political workers and served as field officer in the state militia. For nearly forty years he was ruling elder in the Dutch Reformed Collegiate Church, and afterwards the Fifth Avenue (Dr. Hall's) Presbyterian Church. His active co-operation in the various local and foreign religious undertakings continued till his death. On retiring from business he devoted a large part of his time to literary work, chiefly of a religious character. Several of his works have been translated and published abroad. Collecting pictures and coins were his recreations, besides his extensive pheasantries at Tarrytown. In 1835 he married Lucretia Hazard, of Norwich, Connecticut, and his married life lasted sixty-four years, as his wife died only one year ago. Mrs. Russell Stebbins and Mrs. C. C. Dodge are his only surviving children. His only son, William Henry Schieffelin, died in 1895. Mr. Schieffelin was a member of the National Academy of Design, and a trustee of the American Museum of Natural History. The funeral was held Monday morning last.

An Automatic Carbonator.

The Lippincott Automatic and Continuous Carbonator is claimed to be the most reliable, inexpensive and attractive machine offered to the drug trade. It is said to make better soda water and to accomplish more perfect saturation than any other machine. In fact, the absorption of gas is claimed to be instantaneous, with absolutely no loss. It is a saving of time, labor and expense, is economical and cleanly, and it enables the druggist to draw bright, sparkling, pungent soda water at about a cost of one cent per gallon. It may be arranged for hand power or electric pump. A portfolio containing models for 1901 is now ready for distribution and will be sent to any druggist who will write to Chas. Lippincott & Co., 230 Arch street, Philadelphia, Pa.

"Hold Fast That Which is Good."

In presenting their case to the druggist in this week's Era, the J. C. Ayer Co. head their advertisement with the above good old scriptural injunction. They say truly that this is good, hard sense which applies to every-day business. That a business cannot be upbuilt with unreliable goods, that your customers will surely judge you by the goods they buy at your store, and that the only sure way is to sell them those goods which you know to be good. As every druggist knows that J. C. Ayer Co.'s goods are good goods and popular goods, the moral would seem to be obvious.

We have a communication from the Home Soap Co., 54 Franklin street, New York, asking us to warn the trade against the representation of a party who seems to be traveling around in the interest of one of their competitors and spreading false reports about them. They say they have just received a communication from their representative in the South, who says that the party referred to had recently been in Knoxville, Tenn., and was there spreading the report that The Home Soap Co. had failed. This, of course, is absurd, but cannot help but do them injury in sections of the country where the truth is not known. Such business methods are a discredit to any house adopting them.

STATE OF TRADE.

Market Steady and Outlook Favorable.

New York, Sept. 18. Cooler weather during the past week was followed by the expected improvement in demand and the general movement has shown gradual but steadily increasing volume, with the outlook favorable to additional activity in the near future. There has been the usual exodus of members of the National Wholesale Druggists' Association to the annual convention which is being held this week in Chicago, but this has not interfered with the general trend of business affairs, and the autumn and winter campaign can be considered as fairly inaugurated. Price fluctuations have been limited in number and of no special significance, but the market has reflected continued steadiness and the declines reported are wholly the result of natural causes. The expected advance in quinine sulphate has not yet materialized, but dealers are still confident that the influences noted last week will shortly result in a higher range of prices. All the minor salts have been advanced 2c. per ounce by American manufacturers and this strengthens the belief that sulphate prices will soon follow. Another stimulating influence is the fact that at the monthly bark sale in London last week the unit value was further advanced about 11 per cent.

A continued quiet and easy market has been noted for opium and quotations for round lots from first hands have declined about 5c. per pound. Increased stocks, due to recent arrivals, more or less keen competition among importers and the slow demand for consumption are among the causes to which the weakness is attributed. Morphine continues in good demand and notwithstanding the apparent weakness in opium, there are indications that an advance in values is contemplated by manufacturers. Carbolic acid, copperas and similar commodities have been in demand for disinfecting purposes in the devastated districts of Galveston and vicinity, but while the available supply has been well cleaned up, holders have shown no disposition to take advantage of the situation by advancing prices, feeling, no doubt, that the unfortunate sufferers by the recent horrible disaster are entitled to all the consideration possible.

In the essential oil department the general demand has been fair, but chiefly for small jobbing parcels, and fluctuations have been within a narrow range. Cassia is easier under liberal stocks and some competition. Citronella also is easier and former quotations are being shaded on all grades. Sassafras continues firm and the tendency of values is upward. Supplies are below the average and the available spot stock is being gradually concentrated in few hands. Primary markets also are firm and in some of the producing districts prices are above the parity of local quotations.

All varieties of manna are higher owing to cable reports from primary markets that recent rains in producing districts have almost entirely destroyed the new crop. This is practically confirmed by the fact that efforts of dealers to obtain fresh supplies have met with the response that there is none to offer. It is considered probable that extreme prices will prevail before another crop will be available. Ergot is unsettled with values irregular owing to offers from Europe at comparatively low figures, but some holders are of opinion that foreign markets are being manipulated for the purpose of covering short sales. Rhubarb root is obtainable at lower figures, holders having ascertained that several parcels are on the way which were supposed to have been held back on account of the trouble in China.

Manufacturers of piperine have advanced quotations to correspond with the improvement in raw material. Menthol has improved under the influence of higher markets abroad and the tendency of values is still upward. Russian isinglass is very scarce and firmer in price. Carnauba wax is about 1c. per pound lower on all grades, some of the speculative operators have shown a disposition to dispose of their holdings.

Pretty Good Trade.

Boston, September 15.—A pretty good trade is the situation regarding this week's business conditions. Fine weather has helped in some measure toward bringing people out and about upon the streets and from there into the shops. An undertone of firmness seems apparent in the general merchandise market and different lines gradually are assuming a strength hitherto lacking. Quinine is conspicuous in this respect, although no advance in prices has come yet. Opium likewise seems a bit firmer. Balsams are without feature. Cod liver oil is stated to be stronger as to value. Essential oils are in fair demand only. Nitrate of soda alone, of the lines of chemicals, shows any activity and not over much of that. Alcohols and cologne spirits are developing a strength which indicate higher prices in the near future. Dyestuffs and tanning materials are in fair demand. Hops are firm. Waxes show only moderate trading at this time.

Decided Gain Over Last Week.

Philadelphia, September 15.—Business is showing a decided gain over that of last week and the wholesale houses have been kept busy filling orders from all parts of the city. There seems to be a tendency among the retailers to stock up in certain articles for the fall and winter trade, and as payments are good, the wholesalers are rejoicing. Most of the summer tourists have now returned to the city and the influence of added numbers is markedly felt in a brisker trade. A steady demand for house-cleaning prerequisites continues, and this will be greater after a few days cooler weather. Few complaints are heard of dullness; the only complaint heard at all is of the difficulty of securing competent clerks to help out the increased business. Last week is said to have been an exceptionally good one for the soda trade, even better than many weeks in July and August and way above the times of last year. Little of importance has occurred in general trade, no large sales being reported. This advance in bismuth salts is not looked upon as likely to affect the retailer, though one large firm is stocking up heavily in prospect of a further advance. Heavy chemicals and dyestuffs are feeling the impetus of fall openings, and the sales are brisk.

Business Decidedly Brisk.

Baltimore, September 17.—Last week was a decidedly busy one for manufacturing pharmacists and jobbers, although the aggregate of transactions was hardly proportionate to the number of orders. Many small bills were put up, entailing much work with relatively moderate returns. Still, the conditions are very satisfactory, and the outlook for a good business is encouraging. The laboratories are kept going, and the drug trade generally appears to be in fair shape. No important developments have been noted in the market for botanicals, and the movement of heavy chemicals is about normal. The retailers are meeting with a considerable degree of success.

Trade Very Good.

Detroit, September 15.—Helping to entertain the N. A. R. D. visitors has kept the Detroit wholesalers and retailers more than busy during the week. Aside from that, too, trade has been very good, one of the firms receiving yesterday the largest mail order of any day for more than a month. Country visitors to the N. A. R. D. took advantage of the opportunity to visit the sundry departments of the wholesalers, and some big orders were placed for delivery later on. Every druggist, wholesaler and retailer, every manufacturing chemist, in Detroit to-day is tired, but happy—happy in the success of the Detroit meeting of the N. A. R. D. Compliments for the way things were conducted are away above par.

Chicago Trade Outlook Good.

Chicago, September 15.—"Fall business is opening up well," said a prominent jobber yesterday. "It is beginning very well indeed. The political campaign as yet has had no perceptible effect, but no doubt later on some will be noticeable owing to its distracting attention from business." Other jobbers do not materially differ from the opinions expressed above. They say that the bills are being more promptly paid by customers now and many druggists are availing themselves of the regular discounts. The manufacturers are getting their lines in shape for the fall business and thus far the reports which have come in are of a very satisfactory character. Sundries and holiday goods are finding a ready sale.

Ahead of Last Year.

St. Louis, September 15.—Conditions remain without material change from those of recent weeks. Business with the wholesalers is moving along very satisfactorily indeed, and is generally reported as ahead of the first half of September of last year. The fall outlook is generally considered bright and local trade continues to pick up with the return tide of vacationers.

General Trade Continues Satisfactory.

St. Paul and Minneapolis, Minn., September 14.—The reopening of the public schools this week has resulted in quite an increase of the retail drug trade, of which the traffic in school supplies is an important item. Thanks to fortune (or the book trust), text books are changed so frequently that those who sell them realize considerable profit every year. There is no noticeable change in collections, which are fair. The general trade, both wholesale and retail, continues in most satisfactory shape. The only change in price of Western products this week was a drop of 2 cents in linseed oil, which is now quoted at 65 cents.

Medico-Malt Co., Syracuse, N. Y.

We advertise on another page a new diastasic extract of malted barley, to be known as Medico-Malt. It is claimed to be rich in diastase, highly concentrated and very nutritious. It is put up in combination with various medicinal agents, a full list of which is given in the advertisement. It is prepared by the Medico-Malt Co., Syracuse, N. Y., who propose to push it actively.

MARKET REPORT.**NEW YORK MARKET.**

New York, Sept. 18.—Cooler weather has been followed by an improved general demand and a consequent increase in the volume of business, but very few changes occurred in prices during the past week, and the market developed very little in the way of new features of more than ordinary interest.

OPIUM.—A continued quiet feeling has prevailed, without quotable change in values, and the limited requirements of consumption have been supplied at prices within the old range of \$3.45@3.55 for 9 per cent. and \$3.55@3.65 for 11 per cent., according to size of order, the outside figures for single pounds.

POWDERED OPIUM.—Dealers report a continued slow movement with a consequent quiet market, but jobbing quotations are maintained at \$4.50@4.65 for 13 per cent. and \$5.10@5.25 for 16 per cent.

MORPHINE.—The market has continued moderately active under a good demand for consumption, and values are well sustained on the basis of \$2.40@2.60 for eighths, according to brand and quantity.

QUININE.—A continued steady consuming demand is reported, with jobbing quotations for sulphate unchanged on the basis of 44@45c. in ounces, according to brand and quantity. The minor salts, however, are higher, and for leading descriptions the revised figures are 64@67c. for alkaloid, 60@72c. for bimuriate and urea, 64@69c. for hypophosphite, 56@58c. for hydrobromate, 60@62c. for lactate, 62@67c. for muriate, 62@64c. for salicylate and 67@72c. for valerianate; the latter in eighths, \$7@92c., all vials extra.

OIL CASSIA.—An easier feeling has developed under the influence of similar conditions abroad, and jobbers have reduced quotations to \$1.10@1.20.

OIL CITRONELLA.—Weaker primary markets and competition among local holders have caused a decline in spot values for jobbing quantities to 35@45c., as to size of order.

CARBOLIC ACID.—Exceedingly small stocks and an increased demand for consumption have resulted in jobbers marking up quotations to 37@41c. for pound bottles.

RUSSIAN ISINGLASS.—The market is stronger owing to extreme scarcity both here and abroad, and spot quotations for the Beluga variety have been advanced to \$4.90@5.15, as to quantity.

ERGOT.—Conditions abroad are very much unsettled under the influence of speculative manipulation, and jobbing prices show a decline to 60@70c. for whole and 70@80c. for powdered.

MENTHOL.—European markets are decidedly firmer, and spot values for jobbing quantities have been advanced to \$3.20@3.40.

PIPERINE.—Manufacturers' prices are higher, owing to increased cost of crude material, and jobbers have marked up quotations to 60@70c.

MANNA.—Advices from producing districts to the effect that the new crop will be a total loss on account of heavy rains, holders of the small available stock of old are decidedly firmer in their views, and jobbing quantities have been advanced to 47@52c. for small flake and 40@45c. for sots.

ABSORBENT COTTON.—Owing to the recent material improvement in raw materials, values are about 20 per cent. higher, and the former list of manufacturers' quotations has been re-established. The revised figures are 30c. in 1-lb. cartons, 35c. in halves, 40c. in quarters, 45c. in eighths, 50c. in ounces and 70c. in half-ounces.

A Jardiniere and Pedestal Free.

G. W. Meredith & Co., East Liverpool, O., are pushing Meredith's Pure Malt Whiskey and Meredith's Diamond Club Pure Rye Whiskey. In each case of these goods there is a coupon worth \$1.50. When ten coupons have accumulated, they will redeem them by sending a beautifully decorated jardiniere and pedestal, worth exactly \$15. They claim that this is what any art dealer would charge. It is a beautiful piece of furniture, and would make a fine ornament for any place of business or for any home. Full particulars will be given by corresponding with them and it would be worth any druggist's while to at least get an illuminated illustration of the jardiniere, which they will send to any one who will take the trouble to inquire for it.

THE ERA COURSE IN PHARMACY.

The lectures will hereafter be issued in monthly instalments, and the entire work of the Course can be completed within twelve months.

NEW CLASSES FORMED EACH MONTH.

The first instalment of lectures will be issued in October, and the remainder at intervals of thirty days thereafter.

Recitations and examinations are conducted by correspondence directly with each regularly matriculated student.

Especially valuable as a preparation for examination by a board of pharmacy, to those who cannot attend a college of pharmacy, and to all desiring to review their former study of the subjects embraced in the curriculum.

TOTAL EXPENSES FOR FULL COURSE, \$10.00.

For fuller particulars see announcement facing third cover.

Write for new descriptive Prospectus, now ready.
Address, **THE PHARMACEUTICAL ERA.**

THE JOBBERS AND PROPRIETORS.

A large proportion of the space in this number of the Era is given over to the story of the proceedings of the wholesale druggists and the manufacturers of proprietary preparations assembled in annual convention at Chicago last week. Aside from the usual routine work, the principal topic of discussion, the principal feature of interest, was the work inaugurated by the National Association of Retail Druggists and taken up by their wholesale and manufacturing brethren toward the placing of the traffic in patent medicines upon a sound, legitimate, profit-producing basis. This was the absorbing topic at the retailers' meeting in Detroit the previous week, and, as at that meeting great confidence was expressed in the ultimate and complete success of the plan and very satisfactory progress during the past twelve months, so at Chicago the same feeling and the same results were in evidence.

It was very evident at the conventions the past two weeks that a better feeling, an infinitely better feeling, prevails between the several branches of the drug trade than has existed for many years previous. What were formerly factions now seem to be, as they really are, brothers in unity of interest and harmony of sentiment. The proprietor and the jobber have found that their best friend is the retail druggist, in fact, that their very existence depends upon him, and all three are now working cordially, amicably and strenuously toward the common goal. The meetings referred to may be called really "experience meetings," all the experience being of one kind and in the same direction. The plan of the N. A. R. D. is working and working well, and with the hearty support promised to it and expected for it there is no reason under the blue canopy of heaven why it should not succeed.

The proceedings of the Chicago meetings are given in quite extended detail elsewhere in this issue, and their perusal will afford much material and information of profit and enlightenment.

COMMERCIAL TRAINING IN COLLEGES OF PHARMACY.

The great progress of the applied sciences, the present facilities for exchange and transportation and the severity of competition have given an importance to commercial training which was not appreciated in former years. Merchants in all businesses are awake to their present needs and the introduction of commercial instruction into the curriculum of the college of pharmacy is a step in the right direction and in keeping with the tendencies of the times. As will be seen on perusal of the proceedings of the Nation-

al Wholesale Druggists Association in this issue, resolutions were passed endorsing the innovation and commending it to the consideration of the teaching institutions of the country. Wholesale druggists and wide-awake business men supplying the drug trade have long been aware that by far the larger part of the pharmacist's business is of a commercial character and unless he has a considerable knowledge of business methods he can hardly hope to round out a successful business career. This knowledge with too many druggists is lacking, because in their apprentice days they had not the opportunities for acquiring it.

The coming druggist must know more about business methods, and it is proposed that the college of pharmacy shall give him instruction in those branches which tend to develop the business instinct. Along with laboratory investigations and other studies he is to receive instruction in counting house practice and all of the mercantile bearings of the calling. Under the existing state of things, this character of instruction is needed, and will continue to be needed so long as the standard of entrance qualifications of these institutions do not establish the possession of such knowledge beforehand. The scope of the work to be undertaken presents possibilities of the greatest good, but also of the greatest magnitude. The intricacies and ramifications of the drug business are so many they extend into nearly every division of mercantile economies. The instructor who attempts to teach the branches which go to make up "commercial instruction" must be a man of no mean intellect, and the more he can tell his students about merchandise, commercial arithmetic, counting house practice, bookkeeping, business correspondence, commercial law, banking, political economy and the practice of pharmacy, the better will he fill a present-day need. And his work may be ably supplemented, as is now done in some colleges, by occasional talks to his classes by prominent wholesalers, manufacturers and experts on subjects closely connected with the drug business and other mercantile pursuits.

THE N. A. R. D. PLAN IS WORKING.

The N. A. R. D. plan has become operative in at least two sections of the country, and some dealers who do a cutting business are very much perturbed thereby. These dealers charge local wholesalers and retailers with "conspiring to prevent them from obtaining goods" because they advertise to sell at cut rates. One of these suits is that begun last week by the Owl Drug Company, of Los Angeles, Cal., against F. W. Braun & Co., and Hass, Baruch & Co., wholesale druggists, and twelve retailers who are members of the N. A. R. D. The damages asked are \$50,000. The other suit is that entered at Wheeling, W. Va., by Charles R. Goetze against several retailers, and also the jobbing firms of J. T. Goodwin & Co. and the Ohio Valley Drug Company for \$50,000 damages on the ground

that they have injured his business by refusing to patronize drug firms from which he purchased goods because he has been cutting the rates on certain medicines. In this particular suit it is interesting to note that the plaintiff "further alleges that the druggists, who have an association, have been informing traveling salesmen for drug companies and also the wholesale drug companies of Pittsburg, Cleveland and other cities of the manner in which he conducts his business and conspiring against him. He claims that these firms have refused to sell him medicines that he needed for prescriptions, saying that if they did so they would not be patronized by others."

It is the wounded bird that flutters, and no better evidence is needed of the efficiency of the N. A. R. D. plan than the bare announcement in the courts that the cutter can no longer get the supplies with which to pursue his trade demoralizing business. The progress of both of these suits will be watched with interest, but retailers need have little fear as to the outcome. The courts will see that there is no restraint upon the freedom to trade, but at the same time the rights of the individuals who make up the rank and file of the trade must and will be protected.

Our monthly contemporary, the Western Druggist, celebrated the occasion of the recent annual meeting of the N. W. D. A. in the "Windy City" by getting out special daily editions recording the proceedings of that organization. A special edition issued the previous week contained the proceedings of the meeting of the National Association of Retail Druggists, held in Detroit week before last.

Pressure upon our columns last week made it impossible to more than allude to the entertainment features of the N. A. R. D. convention, held in Detroit, and we reserve for another issue an account of them. The efforts of Parke, Davis & Co. in this respect were lavish, and the welcome accorded to the visiting delegates was most heartily appreciated.

INDIA RUBBER AND LEATHER CEMENT.—The surfaces to be cemented together are cleaned and roughened with a glass scraper, and thinly coated with a solution of gutta percha in carbon bisulphide. Upon each surface a gutta percha sheet of 0.25 mm. thickness is placed, the two pieces then rolled between rollers, and finally the whole is pressed in a warm, but not hot, press. Where this method is inapplicable, the following composition may be used: 30 parts of india rubber are dissolved in 140 parts of carbon bisulphide, and this solution is mixed with a mass obtained by melting together 10 parts of india rubber, 15 parts of eclophony and 35 parts of turpentine.—(Gummi Zeit.; Journ. Soc. Chem. Ind.).

SATISFIED WITH THE BENEFIT HE RECEIVED.

I received my diploma of the Era Course in Pharmacy, and am satisfied with the benefits I have received from the study of the course.

Horton, Mich.

L. M. DELAVAN.

National Wholesale Druggists' Association.

Chicago,

Sept. 17-21.

W. J. WALKER, President-elect.

**Annual Meeting Held
in the Auditorium.--Semi-
Annual Meeting of the
Proprietary Association.**

**Proceedings in Detail.--
The N. A. R. D. Indorsed
and the Rebate Plan to
be Maintained.**

FIRST SESSION.

Tuesday Morning, September 18.

The first session of the twenty-sixth annual meeting of the National Wholesale Druggists' Association convened on Tuesday morning, September 18, at 10.30 a. m. Thirty minutes previously the informal joint session of the N. W. D. A. and the Proprietary Association was held, and E. Allen Frost, of the City Comptroller's office, on behalf of Mayor Harrison, extended the greetings of the city of Chicago to the members of the two associations.

President Frisbie, of the N. W. D. A., presided, and called upon J. C. Ellet to respond to the address of Mr. Frost. Mr. Ellet spoke in a happy vein, and his remarks evoked hearty applause.

The session of the N. W. D. A. began immediately upon the adjournment of the joint session of the two associations. President Frisbie occupied the chair. On motion, the roll call was dispensed with, and the secretary's register was accepted as a list of those present. Secretary Merriam read a telegram from Col. J. B. Purcell, of Richmond, Va., expressing regret at Col. Purcell's inability to be present, and extending his best wishes for the success of the meeting.

President Frisbie then introduced Vice-President L. A. Lange, who occupied the chair during the delivery of the address. The president's address was as follows:

PRESIDENT'S ADDRESS.

It is now twenty-five years since this Association, or its inception met in this city. It met here on Nov. 13, 1875, with President Arthur Peter in the chair, and at that meeting Deacon Thomas Lord was elected President.

In view of the eminent gentlemen who have served you in the past, each President can but feel a sense of honor at being placed in so honorable a position, succeeding men of such strong, sterling character as those who have in the past honored us with their leadership.

I feel it a most conspicuous honor, coming, as I do, from a small city down East, to preside over your deliberations in this great metropolis—this busy mart, probably one of the most noted examples of push, energy and prosperity to be found in the country, and as for that, upon the face of the earth.

The first record of business in this city, I believe, is in the form of a shipment of 78 bushels of wheat in the year 1838. During the past year the shipments of grains of all kinds were estimated at 222,000,000 bushels.

Chicago was first organized as a city in May, 1837, and cast a vote of 703. The population was then 4,170. In 1878, the time of the last meeting in this city, the population had grown to about 450,000; to-day Chicago boasts, by the last census, a population of 2,000,000.

We might go into details, and compare its growth in many lines, but if we should undertake such a task you would hear all about Chicago and nothing about our Association or the purposes for which we are organized.

The Association's Progress.

We too, have made great progress. In 1876 the Association was organized with a membership of 50. In 1878, at the meeting in this city, the number had increased to 84. To-day our roll of membership is 400. During the past twenty-five years the progress in our business has been wonderful. I might say Aladdin-like. We have, in truth, gone by leaps and bounds, until to-day, as com-

pared with the past, it seems almost incredible that such progress could have been made. The heavy chemical industry, by aid of electricity, has reached what would seem a perfect position. Research in chemistry has discovered new remedies, almost too numerous to mention. The proprietary branch of our business shows growth and progress equal to the other lines. So we may point with pride to our progress, due, not to chance, but to hard labor, and that indomitable push, pluck and energy which belongs to such a select body of men as compose our Association, and before whom all opposition must fall, if we once use our force to its full extent.

Deceased Members.

During the past year our Association has lost, by death, six members. I feel compelled to refer to three who died shortly after our last meeting.

The first was Colonel H. H. Osgood, who died Oct. 22 at Malone, N. Y., where he had gone with his wife after attending our meeting at Niagara.

I was a young man when I first knew him, and was fascinated with him, because of his sterling qualities. To know him was to love him and honor him. At his death the respect for his memory was expressed in a simple but universal sorrow, such as had never been shown but once before in his city, and that at the death of William A. Buckingham, the War Governor of Connecticut. He deserved all the good that was said of him, and in his death we who knew him feel that we have lost a true, personal friend.

The next to follow was F. S. Calhoun, of New Haven. He was a younger associate of ours in the trade—a most genial and cordial gentleman—a keen, bright business man, and had he been spared would have made his mark in the business world.

Frederick H. Chapin was next called. He suffered a long time, yet kept up a most heroic and cheerful struggle. Mr. Chapin and I were schoolmates and had always cherished our boyhood's ties. We often met for business purposes, but devoted more time to chatting about the pranks of our boyhood. This was our delight and pleasure rather than to discuss matters of business. Mr. Chapin was a scholarly gentleman, being the master of several languages, and his society was sought by students here and abroad. He was a great traveler and wrote several books upon his journeys. In his death we lose a good, true and honorable man, but he has left to his family, his associates and his friends a most notable example of noble manhood.

Committees.

Among the first duties of the President of your Association is the selection of committees. It is a most difficult task to select a chairman of an important committee and a large, active working membership at the same time. Immediately after our last meeting I set about gathering information, in order to select the best material for committees. Several reports were to the effect that the members of the committees seemed to be about the same from year to year; some wrote, "if you succeed in getting a good chairman, the other members do not cut much figure."

This is all wrong, and the sooner it is remedied the better. The ruts and rust must be put to one side so that push and energy may take their places. Progress is the order of the day, and our committees must be so organized that there will be no drones found in any one of them.

Again, under the present plan, the membership of a committee may be completely changed and some important measure left unfinished by reason of a radical change of the committee.

I believe that nearly all the committees should be continuous, and to that end I would recommend that of the majority of our committees one-third be appointed

each year, to serve for three years. I also recommend that at each meeting, on or before the last day of the session, each committee shall appoint its own chairman for the following fiscal year; that the President appoint members of each committee to fill the places of those whose terms expire. I also recommend that he do not appoint a member to the same committee within a year from the expiration of the term.

I have prepared a list of committees, showing the usual number appointed on each, and other information which will assist the Board of Control when they consider this question.

While each committee has rendered good and effective service during the year, I cannot pass the subject without calling particular attention to a few of them.

The Entertainment Committee.

It is difficult for even the most appreciative of us to realize how much care has been taken to provide for our comfort and enjoyment during this week. No committee has given me such a report of unanimity of work of its members. Therefore, after the hard work endured at each session, you can throw away cares and annoyances of business and partake of the delights provided for you by this committee. I am sure you will all have a cheerful word of praise for them, but if you are to complain, it can only be possible by reason of their providing for too much.

Fire Insurance.

The past year saw an innovation in the appointment of this committee. Firms, in place of individuals, were named as members. This was done with the idea of bringing out a more complete interest in the subject. Probably no committee has met with greater discouragement. Their reports have been most thorough and exhaustive, yet on the whole they have not seen their reward at the hands of the Association. I do not wonder that the chairman may at times feel almost discouraged and be tempted to recommend dropping the committee. However, I strongly recommend all chairmen to adhere faithfully to the work set before them; their recommendations may not always be adopted by the Association as a whole, yet their value is never lost. Individual benefit has been received by following the advice and suggestions of the first Insurance Committee, and they can feel that their efforts have not been in vain. They may not know that they have been appreciated, but I have positive assurance that they have. I believe if those who have been benefited by the report of this or other committees would take pains to confer with the committee, through its chairman, it would be most heartily appreciated, and I am sure would spur them to still further effort. Nothing is so appreciated as appreciation: "Do unto others as you would that they should do unto you."

Credits and Collections.

Year by year we see a gradual change for the better in our system of credits. Book-keeping has passed beyond the plane of memorandum keeping, and to-day true book-keeping is as much a science and a study of progress as any branch or department in your business.

Keen competition has burned the candle at both ends, reducing profits at one end and increasing expenses at the other, until the successful man must know for a certainty where his profit is made. As soon as he is satisfied that there is no profit in a certain department or branch of his business, he kindly passes it over to his friendly competitor, if he can, and thus secures to himself a stronger position and places his competitor in a weaker and less useful position to successfully urge a mercantile warfare.

Your Committee on Credits and Collections has this year made inquiry in lines not heretofore taken, and I commend the report of your careful consideration; not for to-day only, but to study during the coming year. Individual application of the suggestions they offer will be of great value to you. Heed them.

Proprietary Committee and Rebate Plan.

The report of this committee will be most eagerly anticipated. No other committee has had so much to contend with; no other has been called upon to make such personal sacrifice of time and to sink personal interests to such a degree. At the beginning of our last fiscal year the rebate plan was in great danger of abandonment; insidious plans were at work to counteract its operation; inroads had been made here and there, but Chairman Faxon and the heroic members of his committee, acting under his guidance, were able to keep the trade in line until a plan was formulated which comprised justice and equity, and which therefore met the approval of the three interests—the proprietor, the jobber and the retailer.

As was expected, many complaints were heard before the plan was put into operation, on Aug. 1. Quite a number complained because it did not entirely suit and was not perfect according to their ideas. Something certainly had to be done, and as certainly some sacrifice must be made. Anybody can succeed with success, but how in the name of decency can a man expect others to struggle along and carry him to success while he balks in the harness? The only way to win a battle is to fight; no army ever won by throwing down their arms and running from the field; so I say, when troubles arise, then is the time you should give your assistance. If you cannot act in one way, act in another. Use your energy to help yourself, and then you will, as a matter of course, help others.

The Rebate Committee should not be left to fight alone.

You should consider what Chairman Faxon and his committee have done and are doing for you. If you are not satisfied, say so in a kindly manner and give your views in a friendly spirit. Such aid and comfort will do good both to the committee and to you. No committee has in charge such a great percentage of your business as this one. Upon them you have placed a great responsibility, and it is due each of you, as gentlemen, to assist the chairman, for the sake of the great service he has rendered and the sacrifice made in your behalf, particularly during the past year. You have placed him in a position of great responsibility and you should uphold him, for his sake and for your own. You have done this in the past; I believe you will continue this support loyally in the future, because the work is not yet complete. The plan will not be complete until, as I stated in an address in New York, "the man who violates his obligations will no longer be considered a man among men."

This plan as now adopted must have your loyal and royal support to meet with success. I warn you that you cannot afford to let it go; it has cost too much time, thought, hard labor, anxiety and money to let it go, and it now remains with you to see that you do your duty by the plan and compel others, as well, to keep their part faithfully. The man who thinks to gain temporarily by a special cut of a small per cent. will do well to study his interests and the temper of his competitors before taking a rash step. He will do well to study the question from the point of an expert accountant. It is stated that the average per cent. of sales of patents, compared with the total volume of sales by wholesale druggists, is 60 per cent. On this the average profit is 10 per cent. gross. Twenty per cent. of the balance of trade is said to be without profit, leaving only 20 per cent. of the business to overcome losses and make a profit. Granting this as a fact, what will be the result if the rebate plan is abandoned? A great many say: "I turn my patents so many times a month, therefore I make money on them." This is fallacy. The average expense of the wholesale druggist is between 11 and 11½ per cent. of the total volume of his business; therefore he loses from 1 to 1½ per cent. on his sales of patents. It will not avail you anything if you turn your patents once a day, or thirty times a month—you cannot avoid the cold fact that your expenses are from 11 to 11½ per cent. and your profits on patents is but 10 per cent.

Put it in other words: With the same expense—11 to 11½ per cent.—suppose your sales are entirely patents at a profit of 10 per cent. Don't you see that you would lose money? You may rest assured, as the saying goes, it is now "up to you" to defend your business with more energy than ever before. To-day a break in the plan means selling patents at a price which will make a 5 per cent. gross profit seem a bonanza. A break in the plan would mean a speedy survival of the fittest, and consolidation of the large interests on a level which would make an expert promoter green with envy.

A few "thorns in the flesh" have apparently no regard for their agreements and violate their signatures with impunity. What will be the result if these people carry their ends? Patents will then be sold direct to everybody and the large customers, who are now refused by proprietors and who are now buying of these same firms at a profit of say 5 per cent. or less, will buy everything direct, with the result that not only will these firms lose this entire business, but the balance of proprietaries will be sold at a gross profit of from two to three per cent., and I claim at a net loss of from 5 to 9 per cent.

In my judgment there is no one department of your business calling for such careful study in book-keeping and finance as this one question of the selling of patents. Study it; study it carefully. If you consider the present plan not entirely adequate to fill the requirements of the period, you should adopt but one course; support it, and support it earnestly until you can add to it such elements as will make it perfect. It can be done, and you can do it by giving proper support to your able chairman of the Proprietary Committee. Remember that "United we stand, divided we fall."

Disturbers and Destroyers of Values.

During the past year one proprietor, claiming to have his goods on the rebate plan, sold direct to retailers quantities for division, giving the advantage of the lowest wholesale prices. After loading the retail trade at wholesale rates he dropped his price and refused to give redress, notwithstanding the fact that he was, at the reduced price, getting more than double the price asked for a similar class of goods.

One patent medicine firm selling on the rebate plan has within the past three years changed prices so often that if the changes were arranged to music you could whistle the "Bonny Blue Flag" upon the changes.

Another has changed prices several times. Proprietary articles are not placed on the market like any other class of merchandise and cannot be sold on any ordinary rules of supply and demand. Therefore the price should be constant. We should demand that they be sold on a basis of stability of price. This is another argument for the maintenance of the rebate plan. The remedy is in your hands. You should consider this carefully when deciding upon your plan of dealing in patents.

Sale of Pharmaceuticals.

There is a growing disposition on the part of some pharmaceutical houses to urge upon retailers quantities beyond their legitimate business requirements. Several instances have been called to my attention where retailers have been urged to take a thousand dollars' amount of pharmaceuticals at the lowest jobbing discount prices.

giving in payment a series of notes covering a year's time. On the basis of a credit of \$1,000 in pharmaceuticals, these same retailers would be entitled to a credit of \$10,000 on a general line, yet the jobbers in nearly all the instances mentioned to me say that they would not extend a credit beyond \$500 and a limit of sixty days. Such transactions mean that you find your customer running a larger account with you than usual, and extending his time of payment; or in other words, you are practically furnishing him with capital with which to pay another account and at the same time losing a profit on that line of goods, which by all business law and principle should belong to you as a distributor of this same amount of pharmaceuticals.

Here you get a practical lesson of credits and an opportunity to show business back-bone, by insisting that such unmercantile acts shall cease, or you will, as an act of self-defense, turn out the line and urge one of your own.

Criminal Negligence.

I have been surprised to find within the past year three pharmaceutical houses have put out medicines without label. One firm justified themselves on the ground that a few of their customers insist upon certain medicines being sent them without label. The other two houses can have no excuse whatever.

Goods are sent out with a blank label and nothing whatever, not even a number, to indicate the contents of the bottle. These goods are supposed to be sold to physicians only, yet the goods to a greater or less extent drift into the hands of druggists.

I cannot conceive how a physician of ordinary intelligence or one having any reputation whatever would dare to give to his patient a medicine sent him bearing no label. The risk is enormous, and will belong solely to the person dispensing the unknown quantity.

Immediate steps should be taken to present or forbid the handling of medicines except they are properly labeled. I claim, and I believe justly so, that it is a criminal act to send medicine in the manner mentioned above.

Organization.

To protect ourselves and to prevent such imposition as I have mentioned above, there is but one remedy. It is organization. I therefore recommend that a committee be raised to aid in forming sectional organizations and to assist in the harmonious working of organizations adjoining each other. I believe that with from twelve to fifteen, or perhaps eighteen, sectional organizations throughout the United States, we will see results which now seem impossible, and we shall increase our power beyond our fondest expectations.

The Stamp Tax.

This Association and all its allied interests have so fully stated their grievance and so properly shown the great injustice done, that it is not necessary to again present this case, particularly as there now seems to be a bright prospect for an early repeal of a large portion of this tax; and we shall, in this event, I hope, be nearly, if not quite satisfied. Good authorities seem to be of the opinion that we shall see our hopes fulfilled unless an expected and disastrous turn is given to our affairs in China.

Free Alcohol.

During the past year the free alcohol suits have not been successful. It is not necessary to go into particulars, as you are familiar with the results. However, the effort has not been abandoned. Justice should be done, and I hope a refund will be made at least to those who can prove that they took the Government at its word and reduced the cost of alcoholic preparations.

The tax as now levied on distilled goods is beyond the line of safety, and offers too great inducements to the illicit distiller. The tax should be reduced to such a low point as to legislate him out of business.

In this connection I am requested to call attention to the tax on rectified goods. There are those who believe that the tax should be raised from \$100 per year to a special tax of 50 cents for every gallon of rectified goods, the argument being that the standard of purity would be raised above the present level; that nothing is more harmful than most of the rectified, or so-called blended goods, and that the object of rectifying is solely to increase profits.

I have no recommendation to make regarding this, but leave it with the Association to act as they see fit.

The Park Suit.

Our Association has cause to congratulate itself upon the fact that Judge Russell sustains the demurrer filed by our attorneys. The details will be submitted by Chairman Kline.

Future Outlook Favorable.

The past two years have been years of unusual prosperity for all classes of trade, and we have, I believe, had our full share. During the past four months we have seen large advances in values of many articles and really some rapid advances in prices, and the year bids fair to end under pleasing and prosperous circumstances.

I have, in my address, intended to keep within practical lines and to speak with firmness, yet with moderation, so as to deserve your consideration of my views. I again ask you to stand firmly and bravely for your proper rights, and not to be swayed from that course; you will then fulfill our motto: "They builded better than they knew."

Following the usual course of procedure, the president's address was referred to the Board of Control.

TREASURER'S REPORT.

The report of Treasurer S. E. Strong was next heard. This report embodied the following conclusions. The total receipts of the Association for the present year of 1899-1900 have been \$17,227.56, and the total disbursements \$15,449.60, leaving a balance of \$1,777.96.

The reading of the secretary's report was postponed to the following session. On motion of M. N. Kline, the assessment on account of legal expenses was incorporated in the treasurer's report. This report was referred to the Auditing Committee, consisting of D. M. Cowan and H. B. Fairchild.

The president now announced that several members from other pharmaceutical organizations were present, and that the Association would be pleased to hear from them.

Albert E. Ebert, of Chicago, in response to the president's announcement, spoke on behalf of the American Pharmaceutical Association. He outlined the position which the A. Ph. A. has occupied in American pharmacy, alluded to the progress which that association had achieved along ethical and scientific lines and said that the efforts of the association had always made for progress in pharmacy and never for retrogression. It had been the constant endeavor of the A. Ph. A. to lift the profession of pharmacy, not only in its professional, but in its business aspects, to a higher plane and a more secure position professionally and financially. Upon request of the president, Daniel R. Noyes on behalf of the N. W. D. A. responded to the address of Mr. Ebert. Mr. Noyes said that the drug trade in all its branches needs the influence of the American Pharmaceutical Association. The scientific labors of the association had been of great benefit to the profession of pharmacy in the United States. The American Pharmaceutical Association has done valuable service to pharmacy everywhere, and the N. W. D. A. by its members and as an organization, cordially acknowledge its indebtedness to the Association for which Mr. Ebert was spokesman for its undaunted zeal in the pursuit of the best standards, and for its valuable service in elevating the professional status of the pharmaceutical profession. W. C. Anderson, the newly elected president of the N. A. R. D. was called upon and responded with an able, business-like address, none the less forceful because wholly spontaneous. He spoke at some length upon the causes of the present condition of the drug trade. He referred to the custom of long standing by which the retailers purchased their proprietary goods of the jobbers, and deprecated a breaking away from this custom. A departure from it had been first induced by the advent of the aggressive cutter. This individual was often able to sell at prices for which the average retail druggist could not buy his goods. Retailers seeking a remedy for these conditions, so destructive to their welfare, hit upon the expedient of buying clubs, or went into the manufacture of proprietaries themselves in a small way. The jobbers, or some of them, judging their own profits curtailed, in their turn began to put out proprietaries, thus adding more confusion to that which already prevailed. The retailers, said Mr. Anderson, as a body, favor the return to the old system of purchasing goods through the regular channels. The N. A. R. D. is committed to this proposition, which its members as a whole favor. The N. A. R. D. already has been the cause of bringing thousands of dollars from the coffers of the retailers into those of the wholesalers as a direct result of its associated effort. The enemy of one part of the drug trade is the enemy of all. It is the duty of all to stand together and to avail themselves of that strength which lies in union. The branches of the drug trade are co-ordinate. Each is necessary to the other and that which will help one division of the trade will assist the others as well. M. N. Kline responded to Mr. Anderson's address. He congratulated the wholesale drug trade on the direction in which drug interests were tending. He felt convinced that the N. A. R. D. is an organization deserving of support and that it is built upon those strong, prudent, conservative lines which make for success. Its action at its last meeting was wise and deserved.

as it would no doubt receive, the practical support of this convention. Contrary to the supposition entertained in some quarters, both proprietors and jobbers do care what profits the retailers make. The prosperity of the retail trade is synonymous with that of the other branches. The speaker believed that the day of old prices and profits had gone by. Evolution is an accomplished fact, and at least so far as some localities are concerned, former prices and conditions are things of the past. It is a question now, probably, not of the restoration of old conditions, but of how much the present state of the retail drug trade can be ameliorated.

William McIntyre, of Philadelphia, presented the greetings of the Pennsylvania Pharmaceutical Association, saying—"The Pennsylvania Association has for the third time sent one as their delegate to the meeting of your association. Our State organization considers its field of work as educational, legislative and including some of the business interests of druggists. I will not enter into a discussion of the relationship between jobber, manufacturer and retailer; but I will say I have listened with interest to the remarks of the representative of the City of Chicago and am imbued with the thought that each member present could give an encouraging statement of the success of business interests in their several localities, and should I endeavor to give such a statement you could recognize our State as the keystone in the wonderful development of the country."

The response to Mr. McIntyre's address was made by C. F. Shoemaker.

John Byrne, of Columbus, conveyed the greetings of the Ohio Pharmaceutical Association, and L. B. Hall, of Cleveland, responded.

On motion the proceedings of the last annual meeting were approved as printed.

The president called the regular order of business. The report of the committee on membership by I. J. Benjamin, its chairman was as follows:

REPORT OF COMMITTEE ON MEMBERSHIP.

Your Committee on Membership reports having received the following applications for membership on the active and associate list:

Active Members.—Nabers, Morrow & Sinnige, wholesale druggists, Birmingham, Ala.; W. H. Williams (H. W. Williams & Co.), wholesale druggists, Fort Worth, Texas; Hessig-Ellis Drug Co., wholesale druggists, Memphis, Tenn.; The Bodeker Drug Co., wholesale druggists, Richmond, Va.; McBride & Will Drug Co., wholesale and retail druggists, Butte, Mont.; Greiner-Kelly Drug Co., wholesale druggists, Sherman, Tex.; Houston Drug Co., wholesale druggists, Houston, Tex.; Alexander Drug Co., wholesale druggists, Oklahoma City, Oklahoma Territory; Texas Drug Co., Dallas Texas; Eastern Drug Co., wholesale druggists, Boston, Mass.; The Greenville Drug Co., wholesale druggists, Greenville, S. C.; The Christie Groover Drug Co., wholesale druggists, Jacksonville, Fla.; Chas. D. Knoefel, wholesale druggist, New Albany, Ind.; W. H. Terry & Co., wholesale druggists, Norfolk, Va.; The Patton-Worsham Drug Co., wholesale druggists, Dallas, Texas; Hutcherson-Elliott Drug Co., wholesale druggists, Paris, Texas; E. Steinbacher & Co., Akron, Ohio, wholesale druggists.

Associate Members.—Thomas M. Curtius, drug broker, New York City; E. N. Rowell Co., pill boxes, Batavia, N. Y.; Farbenfabriken of Elberfeld Co., importers of pharmaceutical products, New York City; R. W. Phair & Co., chemicals, etc., New York City; Pepsol Co., proprietary medicines, Nashville, Tenn.; The Hall Capsule Co., manufacturers of capsules, Cincinnati, O.; Andrew Jorgens & Co., manufacturers of soap, Chicago and Cincinnati, Ohio; S. W. Gould & Bro., drug millers, Malden, Mass., and General Chemical Co., Chicago.

The report was duly received, to be acted upon at a later session.

Charles F. Weller, chairman of the committee on Arrangements and Entertainment made a brief announcement. On motion of Mr. Schneider, a vote of thanks was tendered unanimously to President Frisbie for his very able and comprehensive address. Adjourned to 2.30 P. M.

SECOND SESSION.

Tuesday Afternoon, September 18.

The convention was called to order at 2.30 P. M., President Frisbie in the chair.

The presentation of committee reports was continued. The report of the committee on Legislation was read by Mr. Shoemaker, of the Board of Control, in the absence of W. O. Blanding, chairman of the committee.

REPORT ON NATIONAL LEGISLATION.

There has been little or no legislation affecting our Association the past year, but your committee will give a short report as to what has been done in the direction of future work on lines that will benefit us.

The most important, that affecting the abolition or reduction of the war revenue tax, has been thoroughly covered, more especially by the retailers, who have done great work in this matter. Congress has been flooded with appeals and petitions of all kinds. The results we hope to show in the future. None could have been expected at the beginning of the presidential campaign.

A hearing before the Ways and Means Committee was finally arranged for, which was held April 17, at which were present representatives from the National Wholesale Druggists' Association, National Association of Retail Druggists, the Proprietary Association of America, the American Pharmaceutical Association, and at least fifteen (15) local pharmaceutical associations, besides many other interested members of the trade.

(We omit the arguments made by the various representatives of these associations before the Ways and Means Committee, April 17, as these were fully reported in this journal April 26, 1900, page 452.)

Pure Food.

The pure food bills pending in Congress did not receive consideration during the last session, having gone over, with many others, to the next or short session.

The bill that has the most favorable position on the calendar, and the one indorsed by the Food Congress, is the one known as the "Brosius bill."

The Pure Food Congress was held at Washington on the 7th, 8th and 9th of March.

President Frisbie appointed as delegates M. N. Kline and George A. Kelly.

Following is Mr. Kline's report:

"I attended the meeting of the Pure Food Congress, held in Washington on the 7th, 8th and 9th of March.

"Congress convened in Harper Hall at 12 o'clock noon on March 7, with J. E. Blackburn, president, in the chair. Addresses of welcome were made by the Secretary of Agriculture, the Hon. Mr. Wilson, and Assistant Secretary Mr. Brigham, and addresses upon pure food legislation by Senators and members of Congress, including Senator Mason and the Hon. Mariett Brosius, who are in charge, respectively, of the bill in the Senate and House, commonly known as the Brosius bill, which is the one which has received the indorsement of the Food Congress at its several sessions of 1895, 1899 and again this year.

Your representative was elected by the delegates from this State a member of the Committee on Resolutions, and to this committee were referred the several bills now pending in Congress, some of which differ considerably from the Brosius bill above referred to. After carefully going over the features of the various bills, in which it is proposed to regulate the sale of food and drugs, the Committee on Resolutions, by a vote of 24 to 1, recommended, with a few somewhat minor modifications, the Brosius and Mason bill.

"A minority report in favor of the Babcock bill was brought in to the Congress by Mr. Adams, of Wisconsin. The two particulars in which the Babcock bill differs from the bill we indorsed, are:

"First, in its administrative feature, the Babcock bill, providing for the appointment of a Food Commissioner by the President, at a salary of \$5,000 per annum, while the Brosius and Mason bills place the matter under the jurisdiction of the Secretary of Agriculture, and the details under him, in charge of the Bureau of Chemists, of that department.

"Secondly, in the Brosius bill the penalty for the sale of goods that may be found to be adulterated, is placed upon the purchaser or wholesaler, if the retailer can show that he purchased them under guarantee, while in the Babcock bill the retailer is held responsible for the quality of the goods which may be found in his stock, without recourse.

"A very strong and persistent effort was made by a considerable number of the delegates to the Food Congress to secure an endorsement of the administrative features of the Babcock bill above referred to, but after a very full and prolonged discussion, the minority report in favor of this was voted down by a large majority and the Mason and Brosius bills respectively were again indorsed.

"These two bills, as has already been explained, are the same as the bills indorsed at previous sessions of this Food Congress and are almost identical in their provisions.

"The old officers of the Congress were re-elected, and as the work of the Food Congress involves the expenditure of some money, a Committee of Finance was appointed, which asks for contributions from those interested in this legislation, as the expenses have to be provided for altogether by voluntary contributions.

"It may be due to your body to state that your delegate was accorded the honor of taking charge on the floor of the congress of the majority report of the Committee on Resolutions and that he favored the indorsement of the Brosius and Mason bills, believing that it was unwise to indorse legislation creating a new office of a political character for the purpose of administering so important a measure, when the Secretary of Agriculture, a member of the Cabinet, with the assistance

of the Bureau of Chemists, is much more likely to be in a position to administer it equitably and fairly.

Respectfully submitted,
M. N. KLINE."

The Food Congress agreed upon the following changes affecting drug interests, in the Brosius bill, known as H. R. 6246:

"In section 3, under 'Definitions,' the words 'National Formulary' and the words 'and cosmetics,' are stricken out. This limits the application of the term 'Drug' to 'all medicines recognized in the U. S. Pharmacopœia, for internal and external use.' Wherever the words 'National Formulary' are referred to in this bill they are stricken out.

"Under the heading of 'Adulterations' in section 6, and the proviso to the eighth paragraph of this section, the words 'or a drug' were also recommended to be stricken out."

Rebates on Alcohol.

The Committee of Manufacturers, representing the various industries interested in the claims for rebates on alcohol used under section 61 of the revenue act of 1891, of which Henry Dalley, Esq., is chairman, has for more than a year past been carrying on an energetic and systematic movement to secure the enactment by Congress of legislation making it possible to recover their claims.

A bill for this purpose was introduced in the U. S. Senate on January 9 of this year by Hon. O. H. Platt, of Connecticut, and in the House on January 10 by Hon. Charles A. Russell, of the same State, and a strong effort was made to have it enacted at the last session of Congress.

Through the efforts of the committee, working in co-operation with Messrs. Allen Comstock & Co., of New York City, attorneys-in-fact for the principal claimants under section 61, practically all the leading newspapers of the country have published editorials favoring the bill and urging its enactment by Congress. In addition to securing this editorial support the committee was also able to enlist the active assistance of the editors and publishers of the various papers in bringing the merits of the bill to the personal attention of the Senators and Representatives from their respective States.

Action was also taken by the committee to have the manufacturers interested urge their Senators and Representatives to support the bill, and documents giving reasons why the measure should become law were sent out to more than 1,000 firms and companies. As the result of requests from these manufacturers, and from the leading newspapers, about one hundred and fifty members of Congress have pledged themselves to vote for the desired legislation.

At a hearing on the bill before the Committee on Ways and Means on March 20, at which Hon. Don M. Dickinson, of Detroit, and William B. King, Esq., of Washington, D. C., appeared on behalf of the manufacturers, it was developed that the only opposition to the bill was based on a doubt as to the equity in the claims for rebate. The Committee of Manufacturers thereupon undertook to secure letters setting forth the equities of the various claimants, and has already received and filed with the proper committees of the Senate and House several hundred signed statements showing clearly that through the failure of Secretary Carlisle to execute section 16, the writers have been subjected to a financial loss.

It is believed that the effect of these statements will be to convince the leaders in Congress that the claims are based on sound equities, and thus ensure their active support for the bill.

It is the intention of the committee to actively prosecute its work during the months of October and November, and as soon as Congress reassembles, the enactment of the bill will be strongly urged upon both the Senate and the House, it is believed that if the various claimants do their part in securing the support of their Senators and Representatives for the bill, that it will become a law at the next session of Congress.

Trade Marks.

Your committee regret that they have been unable to obtain in time for this meeting a report from the commissioners appointed to revise the trade mark laws.

E. C. De Witt, chairman of the Legislative Committee of the Proprietary Association, has had compiled by George L. Douglass, of Chicago, the trade mark laws of the various States. Copies may be obtained of Mr. Douglass.

Mr. Kramer, chairman of the Trade Mark Committee of the Proprietary Association, has a full and exhaustive report on this subject, which was presented before the Association at the spring meeting.

In conclusion your committee can only repeat the recommendations of the last two years, viz:

First.—Favoring the repeal of section 39 and its dependent clauses of the war revenue law of 1898.

Second.—The committee favor the passage of the Brosius pure food law, provided the interests of chemists and druggists are safeguarded in such particulars as may appear to them to be necessary.

Third.—The co-operation of the committee with the commissioners appointed to revise the trade mark laws.

Fourth.—In addition to the above, in case there is any agitation on the tariff question, the committee would favor having opium, which is the only crude drug now on which there is any duty, placed on the free list.

The report was referred to the Board of Control, according to the usual custom.

The report of Secretary Merriam, which was passed at the morning session, was next read. Secretary Merriam said:

SECRETARY'S REPORT.

On the 13th of November, 1875 the "Western Wholesale Drug Association," then in the early days of its existence, met in this city, and the record of the fourth annual meeting was made. That we have not been here since the change in the name of the organization is 1882 is not due to indifference on the part of the membership, or the wholesale drug trade of this city, but because the demands from other localities have made it impossible to accept the very kind invitations presented previously. We are here to-day without any invitation from the trade of this city, but the Committee on Time and Place of Meeting used their best judgment in the matter, and decided that it would be for the best interests of the three organizations now closely allied together to meet in the city of Chicago, and, in an informal way, to confer together.

We are not forgetful of the fact that at the convention held here twenty-two years ago a member of one of the old drug firms, Mr. Thomas Lord, was elected president of the association for the ensuing year. We are also rejoiced to know that during this long term of years his membership in the Association has been continuous, serving with signal ability on several committees, and still in active business life at the head of his firm; is still the genial companion and the honored and respected merchant.

The Increase in Dues.

It will be remembered that at the meeting at Niagara Falls last year the annual dues in both classes were doubled over previous years, making the active fifty dollars and the associate twenty dollars. When the convincing argument of the able chairman of the Proprietary Committee was made, showing clearly to the minds of all that this increase was absolutely necessary for the preservation of the rebate plan, there was not a single argument made against it. Several changes were necessarily made in the membership from active to associate, for the reason that many firms were elected as active members who did not do a wholesale drug business, and were, therefore, not properly placed under the constitution. Of course, when such changes were asked or made, it was promptly done, but it lessened somewhat the revenue of the Association. The radical change in the cost of membership was not disappointing in its results, for it was anticipated that many changes would occur and some resignations in consequence, causing some delay in making collections, with increased labor for our amiable treasurer, but, knowing he was a Strong man, with a back adjusted to the increased weight of his labors, he would be equal to the occasion, as his report confirmed.

Co-operation with Other National Associations.

During the past year I have received many communications from the associated organizations of several of our larger cities, having in charge the commercial interest of the country, both State and National. They have asked the co-operation of our body in petitions to the National Congress, appreciating the fact that as representing so large an element of the mercantile interests of the country, we could not be indifferent to the results desired to be accomplished by the combination of potential influences operating in joint action upon special legislation, State and National. In reply to many of these I could only express my personal opinion of the value of these efforts in the plans to be pursued, and could only refer them to the official action to be taken by the general sentiment of our Association at the next convention of our organization, to be held at a later date. I could not presume to pledge the Association by the action of one of its unimportant officers, to the approval of measures which would require the best thought and consideration before reaching conclusions which might be largely to the general good or injury to important interests involved, and in prefacing these remarks, as I do, before presenting in this report the matter which I desire to submit for your consideration, I would say it is no longer any secret that the great railroad corporations were strongly entrenched, with the aid of immense capital and powerful influence and persistent opposition to override the just demands of an enlightened and conservative business element; to conserve what was just and right in the proposed new legislation where the old law and the original bill had proved so elastic for evil and debasement in the hands of unscrupulous manipulators, working in the interests of their own wicked and malicious conceptions.

In a communication under date of April 25 from Secretary Frank Barry, of the League of National Associations, I make the following extract:

"Mr. A. B. Merriam, Secretary National Wholesale Druggists' Association, Minneapolis, Minn.

"Dear Sir—This is not for publication in the form of a communication, though you are at liberty to use any of the statements of fact made herein and to quote the undersigned as authority therefor.

"Assuming that you are informed as to the pressing necessity felt by the commercial interests of the coun-

try for the amendment of the 'Interstate Commerce Law,' so that the Commission may be clothed with the authority and power contemplated at the time of its enactment, February 4, 1887, of which it has been stripped by decisions of the courts, and that the shipper may obtain relief from the serious discriminations and oppressive injustice now suffered at the hands of transportation companies; supposing also that you are aware of the organized effort that is under way to secure remedial legislation during the present session of Congress, through the League of National Associations, which has as its constituent supporters practically all of the national associations of producers, manufacturers and traders of the United States, the National Live Stock Association, the National League of Commission Merchants, the Millers' National Association of the United States, the Carriage Builders' National Association, National Wagon Makers' Association of the United States, National Wholesale Druggists' Association, etc., I desire to report the status of Senate Bill 1439, the measure which has been carefully prepared for the purpose stated, and which has received the unqualified approval and endorsement of some forty national associations and over three hundred local, State and inter-State organizations of shippers, agriculturists, boards of trade and other commercial bodies.

"The demand from the people for this legislation is imperative. No measure has been before Congress which has met with greater popular support or brought forth stronger or broader appeals for consideration and enactment. It is generally recognized as the best and most important anti-trust law that could be placed upon the statute books, because it strikes at conditions which make the industrial combination or trust possible.

Against Certain Medicinal Articles of Commerce.

It may be recalled by many of you that at the meeting at Niagara Falls last year a statement was made by one of our members, Mr. Harold Sorby, representing the Pasteur Vaccine Company, Ltd., Chicago. The presentation of his address was made at near the close of the fifth session when other important matters were pressing for consideration and a fuller consideration of the matter was deferred until the next day, when the resolution which had been proposed had been referred to the Board of Control for their consideration. I very much regret that some pronounced and emphatic action on this matter could not have been taken at that time, for immediately following the publication of the proceedings in some of the public journals there appeared exhaustive communications of ability and influence from some of our manufacturing membership firms, treating at considerable length on the subject inaugurated at that meeting. Among the contributors was the well-known firm of Parke, Davis & Co., of Detroit, whose financial interests were involved in the extensive manufacture of one of the articles which had been selected by the Government by its unwise and almost malicious competition in manufacture and free distribution of the product throughout the country.

It may be due to you that I should make an apology to the convention for occupying so much time in my report in the consideration of what may seem to you associate matters. On reflection, I think you will not so consider it. The parties prominently named are members of this Association and have been for many years, and it was right and just that they should make an appeal to us through the presentation of facts and figures which will give you some idea of the action which a prominent department of the Government is taking against the vital interests of many of our members and following its repeated assaults with a persistent misrepresentation of facts in the defense of its action. The government of the United States has no priority right of precedent or necessity to enter the field as a manufacturer and distribute its product free to every community, against the competition of large mercantile firms whose business is established by large investments of capital and constant outlay in process of manufacture and taxes to the Government who now seek to destroy its important interest.

The foregoing deals principally with the injustice and injury inflicted upon manufacturing members of this Association. But the subject comes home to the interests and purses of the jobber and retailer as well. The action of Government institutions in presenting vaccines and antitoxines free of charge deprives jobber and retailer of so much business. The private producer reaches the consumer through jobber and retailer. The Government, on the contrary, disregards jobber and retailer, and goes directly to the consumer.

But enough is submitted to show the animus of the department in its controversy with the mercantile interests of the country. I believe when all these facts are submitted to you, it will be the sentiment of this Association, through its convention, that hereafter no appropriation be made by Congress to encourage this illicit piracy upon the business interest of this country, represented in no small degree by the members of this organization. Respectfully submitted.

Mr. Weller, on behalf of the Entertainment Committee, stated that he had no formal report to make. The work of the committee in its results would be found in the programs already published.

On motion the president then appointed the committee on Time and Place of meeting. The members of the

committee appointed in pursuance of the motion are Messrs. C. F. Weller, C. W. Snow, L. D. Hall, F. S. Churchill and C. F. Shoemaker.

The committee on nominations was on motion next appointed by the president. The members so appointed are Messrs. W. A. Hover, C. F. Cutler, C. S. Littell, C. A. Jerman and J. C. Eliel.

W. A. Hover, chairman of the committee on Credits and Collections presented his report, which was as follows:

CREDITS AND COLLECTIONS.

Trade conditions as applying to the wholesale drug business have been exceptionally good throughout the entire country during the year which has elapsed since our last annual meeting. From all sections reports of increased sales with good collections for the first six months of the current year are unanimous. These conditions, in conjunction with the favorable state of the market, will mark the year of 1900 as one of the banner years of the wholesale drug trade.

The present prosperous condition of the wholesale business is but a reflection of better conditions existing among the retailers. The one cannot be prosperous unless the other is enjoying like conditions. That such prosperity is universal and applies to both branches of the trade is further evidenced by the reports of failures for the first six months of the current year. The total number of failures in the drug and paint trade during the first half of the year was 131, as against 149 in 1899, 240 in 1898, 256 in 1897 and 267 in 1896, or less than one-half the number of failures in 1896.

In the amount of liabilities involved by these failures the comparison for the first six months of 1900 is still more favorable. For the first six months of 1896 the amount involved was \$1,795,137. During the same period in 1900 but \$612,953, a little more than one-third.

While not at all inclined to be pessimistic, this steady increase in volume of business, accompanied by minimum loss on account of bad debts, with profits somewhat above the average as a resultant of an advancing market, should furnish food for serious reflection on the part of every credit man. For upwards of five years we have been on the upward curve of the wave of prosperity. The apex must soon be reached, or the experience of the past is without avail.

For the future greater caution should be used in the scanning of credits, and a greater effort should be made to reduce existing past due obligations. In the end the result will be alike favorable to both debtor and creditor.

Uniform Terms and Discounts.

For upwards of a decade this association has declared for uniform terms and discounts. Commencing with the Boston resolution in 1887, successive attempts have been made by the different chairmen of this committee to establish uniform terms of thirty days net, or one per cent. cash ten days. Mr. Faxon's reports of 1887 and 1888, followed by Mr. Eliel's reports of 1889 and Mr. Morrison's reports of 1897 and 1898, are especially noteworthy. But to-day, after an elapse of thirteen years, we are seemingly as far from the goal as when we first started on the agitation of this reform. Conditions are, however, so rapidly resolving themselves as to demand the consummation of the end in view. The wide divergence in the earning capacity of money in different sections of the country undoubtedly has retarded this movement in the past. Recent investigation demonstrates, however, that this obstacle no longer exists, or exists in such a modified degree as to be no longer objectionable.

Reports from ten trade centers, located in all sections of the country, from the New England States to the Pacific Coast, and from the Canadian borders to the Gulf, show a remarkable uniformity in interest charges on real estate and approved commercial loans, the rate on commercial paper running from five to six per cent., and the rate on real estate loans, with two exceptions, running from $3\frac{1}{2}$ to $4\frac{1}{2}$ per cent. on gilt-edge property, and a somewhat higher figure for property not so favorably located. The existing variation is, therefore, only about 1 per cent.

Increased Cost of Doing Business.

The increased cost of doing business by reason of the almost universal abolition of boxing and cartage charges is a factor which should not be lost sight of. The Missouri river jobbers in discussing this question made estimates based on actual figures presented, indicating that the increase by virtue of this charge would average not less than 1 per cent. of gross sales. This 1 per cent. comes out of the net profits and cannot be made up in other directions.

The constant, daily addition to our stocks of new preparations, which in no way increase the volume of our sales, simply replacing other and better known articles, compels the carrying of larger stocks and the investment of greater capital for transacting the same volume of business. Competition is, year by year, becoming keener and keener, resulting in a corresponding shrinkage in gross profits.

On the other hand, the expense of doing business is constantly increasing, it being a well understood fact that the longer we remain in business the greater the expense, etc., in proportion to volume of business done.

These facts demand a reasonable readjustment of our present excessive terms and discounts; 1½ per cent. or 18 per cent. per annum and 2 per cent. or 24 per cent. per annum are figures no longer consistent with present methods and conditions.

The reduction of time from sixty to thirty days will in no wise affect the retailer in good standing, but rather add to his prestige. On the other hand, it will immensely benefit the credit man, who oftentimes is unable to act until after the expiration of the sixty-day limit. Sixty days or 1½ per cent. for cash encourages competition among the retailers by making it easier to establish new stores. Thirty days or 1 per cent. for cash encourages more conservative buying and better business methods and lessens competition. To the wholesaler it means less capital invested, quicker returns, and a cessation of a constant and persistent drain upon his net profits, to say nothing about decreasing the additional credit risk involved.

Proprietary goods representing on an average 54 per cent. of our sales are practically net cash. Such cash discounts as are allowed by the proprietors do not in the majority of cases represent the net profits on their preparations, a considerable proportion of the cash discount being absorbed by the expense of doing business in addition to the entire amount of the regular or rebate discount. Of the 45 per cent. of our sales other than proprietary articles, 76 per cent. is for merchandise for which we pay cash or obtain not to exceed 1 per cent. discount. In view of these facts can we, as business men, justify ourselves in giving without value received our present excessive discount of 1½ and 2 per cent.?

UNIFORM TERMS AND DISCOUNTS.

Supplementing the excellent work done by Mr. Morrison in his reports for the years 1897 and 1898, your committee instituted inquiries on similar lines with results that are most encouraging.

The Sentiment of the Trade as to Discounts.

Of the one hundred and ten answers received to the question, "Are you willing to adopt through your local association, or otherwise, the following terms in the billing of all goods, with the exception of liquors, cigars and sundries, thirty days net, or 1 per cent. cash ten days?" These terms to be made effective January 1, 1901," seventy-four reported in the affirmative, without qualification, twenty-one qualified their answers by stating they would provide their competitors would, fourteen were against the proposition, and one was doubtful.

The canvass made by Mr. Morrison, in 1897, resulted in a vote of seventy-nine in favor of and twenty-seven against. A similar canvass in 1898 indicated a change of sentiment favorable to the adoption of the new terms, ninety-three being for and only fifteen against.

The result for 1900, showing ninety-five for, fourteen against and one doubtful, indicates the general sentiment as about the same as in 1898. An analysis of the 1900 vote is, however, extremely encouraging and indicates the possibility of successful local or sectional action on this question and to such action this report will refer later.

A summary of this canvass by sections shows the situation to be as follows: In Eastern States, including the New England and Middle States, twenty-eight favor uniform terms, two are against and one is doubtful. States west of the Alleghenies, east of the Rocky mountains and north of the Ohio are almost unanimous, the vote standing thirty-seven for and three against. States from the Missouri river west, not including Texas and the Pacific coast States, are solid for the new terms. The Pacific coast States, which in 1897 were solid for sixty days and 2 per cent., are now, with two exceptions, favoring the thirty-day terms.

In the Southern States, as was to be expected, the result is not so favorable, fifteen being for and seven against. Your attention is particularly called to the fact that of the total number of votes against adoption, seven of the fourteen are from Southern States, including Texas.

This leaves for all of the territory west of the Allegheny mountains, through to the Pacific coast and north of the Ohio river including also Kentucky and Tennessee, only five jobbers who express themselves as being against the proposition. Eliminate the two objectors on the Pacific coast and but three remain in all this vast territory. Can we longer hesitate in taking action?

Objections Raised to the 1 per cent Discount.

The objections raised at this time are largely based upon the fact that competitors will not put in practice or adhere to the new terms. One house states that they are unable to collect on sixty days' time and it would be useless to reduce the time to thirty days. The first objection would hold good for any reform of whatsoever nature that this Association could undertake. If the great majority can see their way clear to inaugurate terms which are so manifestly fair and just, and which are demanded by the exigencies of our business, the minority will undoubtedly fall into line as soon as they see that the majority propose to act.

While the second objection is undoubtedly true, it would be equally true if the terms were ninety days or four months and 3 or 4 per cent. for cash. To change the terms from sixty to thirty days does not mean that all bills will be collected at the end of that time any more than they are collected when due on the basis of our present terms. It does mean, however, that a bill sold on thirty days is due in thirty days, and if paid in ten

days is subject to a discount of 1 per cent. The value of such an understanding between seller and buyer is well known and would be appreciated by every credit man and greatly lessen credit risks.

The East, including the New England States, New York and Pennsylvania, are practically solid for the adoption of thirty days' time, there being only two out of thirty-one who express themselves as being opposed to such a change. In fact these terms are the prevailing terms with the greater part of the trade in this section at present.

In the territory between the Allegheny and Rocky mountains and north of the Ohio river, also including Kentucky and Tennessee, the sentiment is almost universal for thirty days, as before stated there being only three objectors, and there should be no difficulty on the part of the O. K. & I., Lake Erie Drug Exchange, Mississippi Valley Drug Exchange and the J. S. C. on the Missouri river in reaching an agreement on this proposition. Indeed, the J. S. C. unanimously declared themselves in favor of the adoption of uniform terms, thirty days or 1 per cent. cash, at a meeting held at St. Joseph, on July 21 last.

The jobbers of the Pacific States who were solid for sixty days and 2 per cent. in 1897 are almost a unit in favor of changing their terms to-day. And from correspondence at hand there is every reason to believe that should a meeting be called at San Francisco for the purpose of discussing this question the result would be unanimous.

By reason of different business methods growing out of requirements wholly divergent from those imposed upon Northern dealers, it seems to be impracticable for wholesalers in the Southern States to universally adopt these terms at the present time, although Maryland and South Carolina are solid for the proposed change, and in certain other sections it would even now seem practicable.

In conclusion, there is every reason for the adoption of uniform terms and discounts, and but very little to discourage a strong united effort on the part of the various local exchanges and their members to adopt a measure from which only mutual benefit to both wholesaler and retailer can result.

Resolution as to Cash Discounts.

The following resolutions are recommended by your committee covering this question:

"RESOLVED, That it is the sense of this Association that the demands of the times require a modification of our present terms of sixty days and 1½ per cent. for cash to thirty days and 1 per cent. for cash, these terms to apply to the sale of all merchandise other than sundries, liquors and cigars, said modified terms to be made effective on and after January 1, 1901. Be it further

"RESOLVED, That the various local exchanges be requested to meet at an early date for the purpose of taking action on the provisions of the above resolution, and for the further purpose if deemed necessary, of calling a general meeting of the members of the various local exchanges interested in a given territory to discuss and take action upon this question."

Credit Insurance.

This subject was so well and exhaustively presented by Mr. Morrison, in his report of 1898, at the St. Louis meeting, that it would be superfluous to devote additional space at this time in entering into a discussion of the relative merits or demerits of such insurance.

With a view, however, of adding to our information on this subject and giving to the members of this Association the benefit of their accumulated experience, the following question was propounded:

"Have you had any experience with credit insurance? If so, is the result satisfactory or unsatisfactory?"

To this question one hundred and fourteen answers were received. Ninety-one report having had no experience; nineteen report having carried such insurance with results unsatisfactory; four report having been covered for various periods of from one to five years without having collected anything on account of excessive losses.

While it is not the purpose of this committee to either defend or criticize credit insurance, these figures speak for themselves. Those interested in the subject should bear in mind, however, that a credit insurance policy differs from all other insurance policies, in that no established form is used. The policy is simply a contract between the insurer and the insured covering excessive losses, and so drawn up as to meet the conditions and requirements of each individual case. It therefore might be possible to obtain a contract so liberal in character as to be of benefit to the insured. Investigators should also bear in mind that the fact of their receiving no benefits from credit insurance during a period of one, two or five years, does not mitigate against this class of insurance. Credit conditions may continue favorable for many years in succession, to finally run up against a disastrous period which would make insurance of this character a valuable asset. Many of us have paid our regular annual premiums on account of fire insurance for twenty years and over, without collecting one "red" cent, but we would not be without it over night.

To receive any benefits from credit insurance due care should be used in the selection of your company, and it should be undertaken in the same spirit that you undertake fire or life insurance, and must be as persistently kept up to secure favorable results.

Credit Clearing House.

Mr. James E. Davis, as chairman of this committee in 1890, contributed a valuable report on this subject, but the members of the association never saw their way clear to act upon the suggestion offered, and thus far nothing has ever been done in the direction of establishing a wholesale drug credit clearing house.

A number of our members are, or have been, connected with the credit clearing house established several years ago for the benefit of all classes of the jobbing trade, and covering districts of which New York, Chicago, Milwaukee and St. Louis are the centers.

With the view of investigating this subject your committee has made inquiries and has received answers from 105 members of our Association. Eighty are not members and know nothing about the workings of this bureau; eleven state that they are members and ten of the eleven report their experience as favorable; the other fails to express an opinion. Fourteen pronounce their experience as unsatisfactory. Where any opinion has been given it is, in effect, that so many members would not furnish the information desired that the reports are incomplete and correspondingly of less value.

Out of 101 answers to the inquiry as to the establishment of a credit bureau for the sole use of wholesale druggists, twenty-eight believe it would be of value and fifty-six do not favor the idea; fourteen were non-committal, three favored local bureaus and the three, in the opinion of this committee, hit the nail on the head.

Credit bureau work can be made valuable if conducted on the right lines and will in time if properly established save to the members of this Association many thousands of dollars annually. The work, however, is of such a character that better results can be secured if the question is handled by local associations and provision made between the associations to exchange reports when desirable.

Your committee would suggest the formation in each local jobbers' association of an auxiliary association consisting of the credit men of the firms interested, who should come together not less than four times a year for the purpose of comparing notes and discussing all questions pertaining to the management of their branch of the business and to confer freely with one another regarding delinquent accounts. The value of such co-operation is not a theory, but has been fully demonstrated by the good work accomplished by local credit men's associations established at our various trade centers.

I know of no better illustration than that offered by the Denver Credit Men's Association. Before the formation of this association there was a marked disposition on the part of credit men connected with competitive lines of business to take every possible advantage of one another to unload their undersirable accounts, and in case of failure to get sole possession of stock of goods involved, which, under our old collection laws, they were enabled to do. To-day, as a result of the credit men's association, all this changed. Credit men in all lines of business are working in harmony and are freely and without reserve giving each other the benefit of their experience with delinquents, and on occasion are acting collectively in dealing with insolvent concerns. Equally good results can be accomplished by similar co-operation on the part of the credit men of this Association, and the ultimate saving of many thousands of dollars per annum to the trade will result.

With the view of establishing a credit association as an auxiliary to local drug exchanges, your committee would recommend the following resolution:

"Resolved, That it is the sense of this association that the trade might be greatly benefited by the establishment of an auxiliary association of credit men in conjunction with each local drug association, club or exchange, and further be it

"Resolved, That we recommend the formation of such adjuncts to each local drug association, club or exchange.

Local Associations Indispensable in Establishing Credit Reforms.

Of one hundred and five answers to the question, "Do you belong to a local organization?" fifty-four replies that they are members and fifty-one that they are not. In analyzing these answers your committee find that the wholesale druggists of the New England States generally belong to local organizations. In New York and Pennsylvania, outside of New York City and Philadelphia, but few wholesalers are members of any local association. In the territory west of the Alleghanies, east of the Rocky Mountains and north of the Ohio River, wholesalers generally are members of one of the several local exchanges, clubs or associations, as they may be called. Southern States, not including Kentucky, are generally without local organizations.

Local associations should bear the same relation to the National Association that individual States do to the National Government. The National Association can suggest many reforms, pass resolution after resolution relating to same, but without the active, everyday interest of local organizations the work is for naught.

The work of the National Association is pre-eminently in the direction of maintaining the rebate plan. The question of uniform terms and discounts, agreement on prices of staple articles not rebated, credit association work, etc., are all subject to local conditions and to local agreements, and which can be inaugurated by local associations only.

It is to be regretted that the showing of members connected with local organizations is not greater, and this

committee would recommend that this association adopt the following resolution:

"Resolved, That it is the sense of this association that all of its members who do not already belong to some local organization composed of wholesale druggists should connect themselves with an association of this character if such exists in their territory, or where such an association does not exist that they will interest themselves in the formation of such an association."

With a chain of local organization throughout the country many of the questions which this association has agitated for a decade past without results would in the hands of local organizations be worked out to a conclusion.

The National Bankruptcy Law.

This Association is on record repeatedly as favoring a National Bankruptcy law. It is apparent, however, from expressions emanating from ninety-three members of the trade that the present law is not the law favored. Of ninety-three answers received, fifteen report their experience favorable. On the contrary, fifty report their experience with the practical operation of the law as being unfavorable; five, while acknowledging some experience, do not express themselves one way or the other; one considers it a necessary evil, and twenty-two fortunate ones have had no experience at all.

There seems to be quite a divergence of opinion on the part of credit men as to the real value of the national bankruptcy law as a fair understanding between debtor and creditor, and criticisms are freely offered. Objectors as a rule complain of the expense attending the settlement of insolvent cases under the provisions of the national law. As a matter of fact, all fees, court costs, etc., as provided for and fixed by law are much less in amount and aggregate far below the average cost of settlement under the old assignment proceedings. As an effect of the law litigation has materially decreased. District courts whose dockets were formerly overburdened now find themselves able to keep their work well in hand. In some sections litigation has fallen off one-third, and a former well-known class of attorneys are finding themselves without occupation. The one feature of the law which has received the most abuse, and which has done more than anything else to bring the law into disrepute, largely resulted through judicial misinterpretation: "The claims of creditors who have received preferences shall not be allowed unless such creditors shall surrender their preferences," has been so interpreted as to compel the surrender of partial payments made within four months of the date of bankruptcy before such creditor can participate in the proceeds of the estate."

A bill amending the act in this particular has been introduced in the United States Senate by Mr. Davis, of Minnesota, and your committee would recommend the endorsement of this bill by our Legislative Committee.

In view of the fact that each one of our forty-nine (49) States and Territories have a separate and distinct code of laws covering the relations between debtor and creditor, the need of some national legislation is apparent to nearly all merchants and credit men, and it would seem wise, notwithstanding that many of our members urge absolute repeal of the law, that inasmuch as this association has always placed itself on record as favoring a national bankruptcy law, that your committee can do no better at this time than to recommend the adoption of the following resolution:

"Resolved, That we favor the principles involved in the National Bankruptcy law. That we urge, through our representatives in Congress, the adoption of such amendments as are necessary and proper to increase the efficiency of the present law, and that we favor the passage of what is known as the 'Ray Bill' with this end in view."

The Ray Bill has already received the support and endorsement of the National Creditmen's Association, who have thoroughly investigated the subject, and our action in this direction is only in line with that taken by said association.

Commercial Training for Graduates of Pharmacy.

The basis of all credit is honesty and integrity. Combine the two with commercial instincts backed by capital and you have the ideal credit risk. The honest man is born, not made. To an extent this is true of the commercial man; the capacity of the latter can, however, be vastly stimulated and improved by training and experience. Our colleges of pharmacy are beginning to realize that by quickening and developing the commercial instincts of their students they are better equipping that student to undertake the duties of his profession when once he embarks into active life than by confining his instruction to technical lines only.

As a result some of our leading colleges of pharmacy have established as a part of their curriculum a course of commercial training having to do with the practical management of a progressive, up-to-date pharmacy, including correct methods of bookkeeping, system in buying and a proper care of stock, importance of meeting obligations promptly, advantages of discounting and a general instruction in such commercial forms as would be of benefit to the graduate in his future career. With a view of indorsing and encouraging this line of instruction where already instituted and stimulating other colleges to adopt like measures, your committee would recommend the following resolutions: "Resolved, That it is the sense of this association that the commercial course of instruction already adopted by the leading colleges and schools of pharmacy is of a character alike progres-

sive and practical, that if persisted in will in time develop a class of graduates which will immediately surround them when once they embark on the independent career; be it further Resolved, That it is a sense of this Association that all the colleges of pharmacy that have not already a course of commercial training should give the question careful consideration, and whenever consistent and practical to make it incumbent on the part of every graduate to properly qualify under the requirements of such a course.

Statistics.

In addressing circular letters to the trade asking for statistics pertaining to the legitimate work of this committee your chairman propounded other inquiries not altogether pertinent to the work in hand, with the hope that the results obtained might be of interest to the members of this Association. These statistics I beg to submit as a part of this report.

Of the 220 members of our active membership list about 154 only are wholesale druggists, the balance consisting of pharmaceutical houses, manufacturing chemists and proprietors. Circular letters were addressed to our wholesale drug membership only, and in addition, to five non-members, or a total of 159. To these letters replies more or less complete were received from 124, and as this number comprises, with few exceptions, all the largest distributors, the figures given are thoroughly representative.

To the question, "What is your percentage of loss of your gross sales by bad debts?" 105 answers were received, the average being five-tenths, or one half of 1 per cent. Maximum loss reported was 2 per cent., and minimum loss one-tenth of 1 per cent.

By sections, the loss attending business in the Eastern States, including the New England States and Middle States, fifty-five one-hundredths of 1 per cent. In the Middle Western or Mississippi Valley States, three hundred and eighty-five one-thousandths of 1 per cent., and Pacific Coast States five hundred and fifty-six one-thousandths of 1 per cent.. The Southern States, as would be expected by reason of their long time, show the maximum loss of seventy-three one-hundredths of 1 per cent.

To the question, "What do you estimate the percentage expense of doing business, including house and traveling expenses and all salaries, but not including interest on investment?" 101 answers were received. In the summary two of these answers were not included on account of one being phenomenally high and the other excessively low. The former was 35 per cent., but evidently included manufacturing and other charges, and the latter was 4 per cent. and referred to the estimated actual cost of maintaining a wholesale department in conjunction with the retail branch of the business.

As a result, therefore, of ninety-nine answers the average is ten and four-tenths per cent. By sections of the territory the following is the result. In the Eastern States, including the New England and Middle States, the percentage cost of doing business is ten and three-tenths per cent. In the Middle Western States north of Mason and Dixon's line, west of the Allegheny Mountains and east of the Rocky Mountains, the percentage expense is ten and seven-tenths per cent. The Southern States, including Texas, report the average as being ten and one-half per cent. The Pacific Coast States report ten and fourteen hundredths per cent. Maximum cost reported is fourteen per cent., nineteen report twelve per cent. and upwards. The minimum is seven per cent. Sixteen report nine per cent. and upwards.

The total of ten and four-tenths per cent. is somewhat under the figures presented by Mr. Carter in his statistics taken in 1893, and made up from answers from forty-five houses only, at which time the expense to sales was eleven per cent. for the year 1892. The latter figures, however, do not include in the cost of doing business interest on investment, neither do they include in many instances the substantial increase which will follow the almost universal abolition of boxing and cartage charges. In some cases, also, houses report that the figures named do not include salaries of managing partners.

Allowing, therefore, one-quarter of one per cent. for the two latter items and one per cent. for interest on investment at the rate of four per cent. per annum, the total expense of transacting business in 1900 will not vary from eleven and one-half to twelve per cent.

To the question, "What per cent. of your gross sales are solicited?" ninety-seven answers were received, two of which were thrown out in the summary on account of their radical variation from the average, one being for eight and the other for ten per cent. only. The result, therefore, is based upon the average of ninety-five answers and shows that fifty-three and sixteen hundredths per cent. of the gross sales of the wholesale drug trade are solicited. Of the ninety-five, fifteen houses report seventy-five per cent. of their sales solicited; thirteen houses report thirty-three and one-third per cent. and under.

The jobbers in the Eastern States, including the New England States and Middle States, report that they are obliged to solicit 53.37 per cent. of their gross sales. The Mississippi Valley States, including territory between the Allegheny and Rocky Mountains, north of the Ohio River, report that they solicit 58 per cent. of their sales. The jobbers on the Pacific Coast report that they solicit 46.83 per cent., and the jobbers in the Southern States, including Texas, report that they rustle for 16.2 per cent. only.

To the question, "About what proportion of your sales

consist of proprietary articles?" eighty-nine answers were received, showing the average sales of proprietary articles to be 54 per cent. The maximum is 75 per cent., which percentage is reported by eight houses; the minimum is 12.5 per cent. Ten houses report 35 per cent. and under.

By sections, the Pacific Coast States lead with sales amounting to 59.6 per cent., against 52.5 per cent. reported by Mississippi Valley States. Sales in Eastern and Southern States running about the same, 55.8 per cent. for the former and 56.5 per cent. for the latter.

Comparative Sales of Pharmaceutical Preparations.

To the question, "Are your proportional sales of pharmaceutical preparations increasing or decreasing? If decreasing, to what do you attribute the falling off?" ninety-eight replies were received, in substance as follows:

Nineteen report their sales of pharmaceuticals to be about stationary; forty-six report their sales increasing; thirty-three report their sales decreasing; all of the thirty-three give as a reason for their sales decreasing, "Sales direct by manufacturers."

One of our members who reports his sales increasing states that such increase is due to the additional lines which his house has been obliged to stock, and it is the opinion of your committee that this is largely the case where an increase in sales is noted.

By territorial sections the following is the summary of answers received:

The Eastern States, including the New England and Middle States, report as follows: Seven, sales the same; eighteen, sales increasing; fourteen, sales decreasing.

The Pacific Coast States: One, sales the same; two, sales increasing; four, sales decreasing.

States west of the Missouri River, not including Pacific Coast States: Two, sales the same; two, sales increasing; one, sales decreasing.

Middle Western, or Mississippi Valley, States: Five, sales the same; eighteen, sales increasing; seven, sales decreasing.

Southern States: Four, sales the same; six, sales increasing; seven, sales decreasing.

The increase in sales in the Mississippi Valley States, including Michigan, Indiana and Ohio, can only be accounted for by the fact that the houses are continually adding to their lines. In Eastern States the difference is not nearly so great, and seemingly due to the fact that there are not so many pharmaceutical houses in the field, nor are Eastern jobbers adding to their lines to the same extent as are jobbers in territory located further West.

Boxing and Cartage.

To the questions: "Are you satisfied with the present system of free boxing and cartage?" and "Are you willing to assist in the restoration of this charge?" to the first 113 answers were received, which may be summarized as follows:

Twenty-four are satisfied with the charge; eighty-six are against it; one reports that he is satisfied with giving free containers, but objects to standing cartage; one reports it a necessary tax, and one reports that he is entirely indifferent.

By sections, the result is as follows: Eastern States are not generally favorable to free boxing and cartage; thirteen report themselves satisfied with the present system, and seventeen are for restoration. In the Mississippi Valley States thirty-two object to free boxing and cartage, and seven are in favor of it. Southern States are almost unanimously against the elimination of the charge, twenty pronouncing against and two for. From the Missouri River west there are but two jobbers who favor free boxing and cartage.

As to the disposition to assist in the restoration of this change, one hundred and ten answers were received; of this number seventy-five will lend their assistance to the restoration of the charge and thirty-five will do nothing.

From the character of the answers received on this subject, it is quite evident that New York, Boston and Chicago hold the key to the situation, and that any movement looking toward the restoration of the boxing and cartage charge must originate in one of these three cities in conjunction with the other two. With New York, Chicago and Boston sold for boxing and cartage, the charge can be restored.

Summary of Results and Statistics as Applied to the Average Wholesale Druggist Doing Business in the United States.

The average wholesale druggist doing business in the United States suffers loss by reason of bad debts of one-half of one per cent.

He operates at an expense of ten and four-fifths per cent., not including interest on investment, etc. Including interest on investment and taking into consideration future additional expense by reason of free boxing and cartage, etc., his cost of doing business will not vary from 11½ to 12 per cent.

Of his gross sales 53.16 per cent. are solicited, and 54 per cent. of same consists of proprietary articles. In the majority of cases his proportional sales of pharmaceutical preparations are at a standstill, or are decreasing, as a result of direct sales by the manufacturer to physicians and retailers.

As a rule he is not satisfied with free boxing and cartage, and will lend his aid looking toward a restoration of this charge.

He does not favor credit insurance, and, generally speaking, is not a member of a credit clearing house, nor does he feel that it would be of any especial advantage to establish a credit clearing house for the sole use of wholesale druggists.

His experience in general has been unfavorable to the national bankruptcy law, and where he expresses any opinion it is generally for repeal.

About one-half of him belongs to a local organization and the other one-half is out in the cold.

In conclusion, as chairman of this committee, I desire to thank the members of this Association for their confidence in so largely responding to questions propounded.

A. W. Cladin, chairman of the committee on deceased members next submitted his report. Following the action on this report, D. R. Noyes called attention to the fact that during the past week a man well known to every member of the Association had passed away. The speaker referred to Samuel B. Schieffelin, of New York. Mr. Schieffelin had lived a long and worthy life, devoted to the interests of the drug business. The deceased had wielded a wide influence in the drug world. He was an honored member of society and the head of a drug house known all over the country. Continuing, Mr. Noyes said, "Mr. Schieffelin died at the ripe age of ninety years, and his funeral occurred on Monday of this week. I am quite sure our memorial committee should add a page, expressing somewhat our appreciation of such a life in connection with our business and ourselves, and although he was not at the time of his death a member of our Association, but had been for years before, that we should honor ourselves as well as honor the memory of one of the most distinguished men engaged in the business, by making suitable mention of his death in connection with the report of this committee." The suggestion of Mr. Noyes was approved and adopted.

The following report of the committee on Paris Green was submitted by its chairman Charles Hubbard.

REPORT OF COMMITTEE ON PARIS GREEN.

Your committee beg leave to report. Being informed early in the season that there would be no united action on the part of the manufacturers, it was deemed best to go to no expense, but leave the matter of selling price by dealers to be regulated, if at all, by local organizations.

From information received, it would seem that trade in the article has been somewhat unsatisfactory, both to manufacturer and dealer, and that not over 60 per cent. of usual quantity has been sold.

Believing it to be to the interest of all parties concerned that Paris Green be sold at a restricted price, if possible, your committee would recommend that the incoming committee keep in close touch with the manufacturers, and if an association is formed, that every endeavor be used to cause such association to place it on rebate plan.

The report was referred to the Board of Control.

J. C. Eliel, chairman of the committee on pharmaceutical preparations, on behalf of the committee said,

PHARMACEUTICAL PREPARATIONS.

"The committee on pharmaceutical preparations held a session yesterday, and a number of members of the Association were particularly interested in the questions brought before your committee. We had a long and serious session with a number of the leading manufacturing pharmacists, and a very pleasant discussion took place in which there was a free interchange of opinions on both sides. Your committee feels while it has nothing to be reported at this time, that some progress has been made. The questions involved are, as you all know, intricate and of such character that they cannot be settled out of hand. Your committee therefore respectfully reports progress, and asks that a similar committee be appointed by the incoming administration with power to treat with these people and, if possible, with power to act, so they can continue the work and report at some future meeting of the Association.

Mr. Eliel's report was received and the suggestion made therein was approved.

The committee on Revision of Pharmaceutical Lists reported through its chairman Charles S. Littell.

REPORT OF COMMITTEE ON REVISION OF PHARMACEUTICAL LISTS.

This committee was appointed to procure uniformity of listing among the more prominent manufacturers of pills, tablets, fluid extracts and similar pharmaceutical preparations, not of price, but of place and title.

This seems at first glance comparatively easy, but on the contrary, it is an intricate problem, requiring patient study, conference and compromise on the part of the various manufacturers.

Each naturally prefers his own classification, and all are anxious to preserve the individuality of their goods.

The policy of at least one large concern is to name their tablets according to the disease or symptoms, claiming that this plan is preferred by their best customers, the physicians.

Changes in nomenclature would make confusion in the stocks carried by dealers, and the medical profession throughout the country.

These are a few of the difficulties to be overcome.

When your committee was announced late in 1899 most of the catalogues of the present year were in press; hence only preparatory steps could be taken at that time.

Nearly all the manufacturers who were approached regarded favorably the suggestion made by the chairman and expressed a willingness to make concessions for the sake of the uniformity desired, but later seemed to consider the difficulties of harmonizing the various interests too great to be accomplished at once, and that the result wished for would come gradually and be eventually attained.

The chairman of your committee believes that this, to a great extent, will prove to be the case, and confidently expects to see the pharmaceutical lists of 1901 much simplified, and his efforts at least partly successful.

As this report is practically "progress" it is recommended that a similar committee be appointed by the incoming president, to finish the work of its predecessors.

This report took the usual course and was referred to the Board of Control.

Mr. Shoemaker, on behalf of Frederick Schneider, chairman of the committee on Fraternal Relations, here read the report of that committee.

REPORT OF THE COMMITTEE ON FRATERNAL RELATIONS.

Your Committee on Fraternal Relations would most respectfully report that the same degree of harmony exists now between this Association and associations of allied interests as in the past. But this friendship seems to partake more of the social than of the business interests.

From the information gathered by your committee, it appears that there is room for much improvement in the harmonious business relations between druggists in this country, and particularly so in the West and middle West. As a result of this unsettled and uncertain state, the business of a large majority of dealers, in the particular sections mentioned, is far from satisfactory. We are of the opinion that this evil is caused solely from the lack of organization and the absence of that unity of interest and purpose that is necessary to bring success to the many. So long as there shall be an indiscriminate scramble for trade with every man attacking his neighbor, and all neighbors attacking each other, having no interest or purpose in common, and having neither the moral or physical support of each other, then just so long shall the results be inharmonious and unsatisfactory and the dividends small.

Less than 50 per cent. of the wholesale druggists are members of this Association, and it is highly necessary that a greater union shall be made under the broad policy of "Justice to all" and "Live and let live" in order to have our business reach that degree of prosperity shown by other trades.

There is no doubt that all should get together with a certain fixed purpose to mutually help and protect with a certainty of ideas and aims, concentrating our force along certain well defined lines in order to reap the profit that is ready to fall in our hands for the asking.

It is a pleasure to state that under the leadership of this organization the improvement is coming, slowly yet surely; and with increased activity on the part of each member to bring all druggists within the pale of this Association's beneficent influence quicker comes the day of our common prosperity.

If every member of this association will so conduct his business as to command the confidence of all who have relations with him, it will increase the respect for the member and for the Association, and all will desire to come in.

Civility and courteous treatment of the representatives of other houses should always be shown, as it is something that costs little and purchases much in lasting appreciation and gratitude.

Your committee asks the members' pardon for preaching, but it would recommend that greater activity be shown to bring all druggists within the bonds of a certain common interest, so that the influence of all may be concentrated along certain fixed lines tending to increase the welfare of the many and not the few.

The chairman of the committee takes this opportunity of thanking each and every member thereof for the prompt assistance and support given.

This report followed the usual course.

Chairman C. F. Weller, of the committee on Time and Place made the announcement that that committee would meet at 9.00 o'clock the following morning in the offices adjoining the convention hall, where members prepared to present invitations for the next annual meeting would be heard and their claims duly considered.

On motion the convention adjourned until Wednesday, September 19, at 10.00 o'clock A. M.

THIRD SESSION.

Wednesday, September 19.

The third session of the National Wholesale Druggists' Association was held on Wednesday morning at 10 o'clock. The meeting was called to order by President Frisbie. The minutes of the previous session were read and approved. The committee on Membership reported the name of the Owen & Moore Drug Company, of Clarksville, Tenn., which was ordered posted for twenty-four hours according to constitutional requirement.

The chair suggested that the Association proceed to the election of new members whose names had been reported by the committee at a previous session. In order to give these gentlemen the privilege of the floor. I. J. Benjamin, chairman of the Membership Committee, said that he had understood those nominated had the privilege of the floor from the time their names were announced, hence, no appropriate action had been taken by the committee. In view of this fact the committee was given further time in which to bring in its completed report.

Under the regular order of business, M. N. Kline, the chairman of the committee on Suits Against Members, read the report of that committee.

SUITS AGAINST MEMBERS.

This report was wholly devoted to relating the proceedings in the various stages of the litigation in the suit of the John D. Park & Sons Company against the N. W. D. A., the next movement of which is to be argued before the first department of the Appellate Division of the Supreme Court of New York in October. Copies of the brief and the opinion of Justice Russell in the case, filed March, 1900, were appended. The committee recommended that these documents should be printed in the annual proceedings. The next move by the plaintiff in the above case for the reversal of Judge Russell's decision is to be argued, as noted above, in October. The expense of this litigation compelled the chairman of the committee to draw against the pledges which had been given by individual members of the Association, because the funds in the treasury had been exhausted. One hundred and sixteen persons had given pledges to defray this expense, and nearly all of them responded to the request of the chairman for additional funds.

Referred to Board of Control.

The report of the

COMMITTEE ON ADULTERATIONS.

John F. Queeny chairman, was next read by J. E. Toms.

The chairman of the committee introduced the report with a plea that all of the members of the committee should lend their assistance and knowledge in the formulation of these reports, and that they should do their share of work and not leave the subject entirely to the chairman. The report gave a long list of various drugs and chemicals which had been found to be adulterated, and recommended that the Association go on record as deprecating the sale of misbranded foods and drugs. The importance of quality in the products sold by a wholesale druggist, on many of which life is often dependent, was emphasized, and the Association was asked to reiterate its endorsement of the Brosius Pure Food and Drug bill. Legislators should be asked to push the bill to early and final passage at the next session of Congress. All the goods sold should be labeled correctly and definitely, and the sale by assay, wherever possible, of chemicals and medicinal products containing alkaloids, resins, oils, oleoresins and essential oils, was advocated.

Referred in usual course to Board of Control.

The report of the Committee on Commercial Travelers, J. B. Purcell, chairman, was called for by the chair. Owing to the absence of Col. Purcell, J. E. Toms read the report.

COMMITTEE ON COMMERCIAL TRAVELERS.

This Committee had little to report. Its members, by correspondence and personal appeal hoped that they had added to the membership of the Association. The object of this committee is for the purpose of suggesting means for the rectification and correction of dissatisfaction among members, reporting where the Association may likely obtain new members, strengthening the waning interest of old members, etc. The committee felt that much good could be accomplished if its work was fully explained and understood by the members.

Referred in due course to Board of Control.

The committee on Passenger Rates and Routes had no report to make.

On motion the convention proceeded to the election of new members. The chairman of the committee on Membership read the names proposed, and on motion the secretary was instructed to cast the unanimous ballot of the convention for the election to membership of those whose names were proposed, which was accordingly done.

Mr. Toms read the report of the committee on Patents, Oils and Glass, Thomas Van Natta, chairman.

This report was referred in usual course to Board of Control.

The report of the Committee on Drug Market was read and referred to the Board of Control.

The Report of the Committee on Trade Marks A. E. Rose, chairman, was read by title and referred to the Board of Control.

COMMITTEE ON TRADE MARKS.

This report was largely a resumé of the past year's trade mark litigation, the decisions in the cases quoted having been furnished to the committee by various proprietors. A majority of the proprietors to whom requests were sent for information had nothing to communicate, which indicated a seemingly satisfactory state of affairs. The committee thought it would be of the greatest value to proprietors to have a hearty co-operation on the part of the selling trade, whereby the moment it is suspected that an imitation is being offered, or anything irregular noted in connection with the goods of any proprietor, that proprietor should be at once made acquainted with all the facts. In commenting on the general situation in connection with this character of litigation, the attorney for the committee states: "The trend of the courts is very distinctly our way, and dishonest practices will be enjoined in most cases; a distinct advance has been made within the last three years."

The report of the committee on Transportation was read by Mr. Toms and referred to the Board of Control.

Frank A. Faxon, chairman of the committee on Proprietary Goods, read the report upon that subject. It was as follows:

REPORT OF COMMITTEE ON PROPRIETARY GOODS.

This organization was formed to promote fraternal and social relations, to guard against feelings of distrust and jealousy, to restrain competition other than by honorable methods, to discountenance all customs not in accord with sound business principles and to establish rules and regulations whereby all grievances and differences might be fairly and equitably adjusted. It has had a career honorable and useful to an eminent degree, and is to-day one of the most influential trade organizations in the country.

The National Wholesale Druggists' Association has given its attention to many important things and has made its work valuable in a wide field, but the Rebate Plan, now, as in the earlier years of the organization, is the paramount issue. Our annual meetings are largely rallies for its support. The members of this Association have been loyal to the plan to an extent that could hardly have been expected. It has had its cloudy and its sunny days, its good and evil times; but it still remains a potent force. In the past it has served well; it must serve well in the future. Sales of proprietary goods are more than half our business. This fact makes the maintenance of the rebate plan an imperative necessity.

Since our meeting at Niagara Falls a year ago, the Proprietary Committee and the Executive Committee of the National Association of Retail Druggists have been working together in developing a plan which it is thought will prove beneficial to the retailer, the jobber and the proprietor. This plan has been called the "New Plan." It is practically the old "Detroit Plan," which was formulated during the brief existence of the "Retail Druggists' Inter-State League." Its features are a list of jobbers to which proprietors will confine their sales at best prices and restrictions to prevent the jobber from supplying rebate goods to the aggressive cutter. It is believed that this plan offers effective means for checking the disastrous cutting evil.

At the Niagara Falls Convention the following resolutions were unanimously passed by the N. W. D. A.:

1. RESOLVED, That as it is as much for the interest of the manufacturer as the jobber that the contract plan should be continued, the active interest of both the manufacturer and the jobber should be secured.
2. RESOLVED, That the strength of the contract system lies in the manufacturers adhering to a recognized list of wholesale distributors, to whom sales at their largest quantity discount should be restricted.
3. RESOLVED, That the chairman of the Proprietary Committee be requested to secure the acquiescence of each proprietor who sells his goods on the contract plan to such a list.
4. RESOLVED, That the chairman of the Proprietary Committee be given control of sufficient funds to investigate all reported violations of rebate terms, with power to take such action as may be proper in the premises.
5. RESOLVED, That the recommendations made in the report that the rebate on leading proprietary articles be withheld for three months be favorably recommended for consideration, provided the other work contemplated by the committee does not result in a more thorough control of rebated articles.

To provide adequate funds for a more progressive policy our Constitution was amended so as to make the annual dues of active members \$50 and of associate members \$20.

The services of F. E. Holliday were engaged, and he became a direct representative of the Proprietary Committee. As he was at the same time chairman of the Executive Committee of the N. A. R. D., the connection had a peculiar value to both organizations.

Immediately following the last annual meetings, the chairman of the Proprietary Committee and chairman of the Executive Committee of the N. A. R. D. undertook to organize the plan already mentioned. The work was extremely slow and there were many vexatious delays. The plan was first presented for acceptance to the five firms of the J. C. Ayer Co., C. I. Hood & Co., Lydia E. Pinkham Medicine Co., F. E. & J. A. Greene and the Wells & Richardson Co., and by them approved.

On March 31 a circular was mailed to all proprietors of medicinal preparations giving a list of those proprietors who had decided to confine their sales at best prices to a uniform list of jobbers and also asking for their support to make the new plan effective.

At the joint meeting of representatives of the three associations, held in Chicago on April 11, no one appeared for the five New England proprietors, the original acceptors of the plan, and in consequence much consultation by wire was necessary. The Conference Committee defined the meaning of the terms "aggressive cutter" and "non-secrets," and wired progress to the five proprietors. A reply was received from them stating that these definitions were satisfactory and they would adhere to the original propositions if all seven conditions were agreed to. To secure successful and early action they insisted that jobbing houses individually agree to this plan, and that orders should be declined from such houses as do not so agree. This, they said, would disclose the friends of the plan at once and put us on the road to immediate success. In the meantime the list of seventeen had grown to sixty-one, and as most of the leading proprietors had accepted the plan, a large percentage of the proprietary goods handled by jobbers was included in the arrangement.

On May 5 the Proprietary Committee issued to wholesale druggists a circular informing them of the action the proprietors had taken and outlining the conditions under which wholesale agents were to be selected. Jobbers were asked to declare their purpose to accept the conditions of the proprietors and to give the new plan their most cordial and earnest support.

Replies came in slowly. The larger houses of the country were generally prompt to accept the conditions of the new plan, but many of the smaller concerns were dilatory, and a few have never yet responded to the several communications sent them by the chairman of this committee. At this writing, however, those who have not sent in their acceptance represent not more than one per cent. of the distributing power of the trade in the United States, and are therefore an insignificant factor in the operation of the new plan.

On June 14, the proprietors who had signified their intention to adopt the plan were informed by the chairman of the committee that the wholesale drug trade of the United States had almost unanimously accepted the terms and conditions of the new plan for the distribution of proprietary goods, and everything was prepared for the proprietors to go ahead and put the plan into effect. Then occurred a long period of "masterly inactivity" on the part of several leading proprietors, and it was not until August 1 that the chairman was ready to announce the inauguration of the new plan, and that most of the proprietors had issued new price lists and term sheets embracing its provisions. The chairman also announced that of the wholesale druggists throughout the country, 88 per cent., numerically speaking, had accepted the terms and conditions of this plan, and the 12 per cent. from whom no replies were received consist of small dealers representing not more than 1 per cent. of the total volume of distribution.

In the list of sixty-four proprietors who have signed the plan may be found the names of Dr. Kilmer Co., Binghamton, N. Y.; Dr. Miles Medical Co., Elkhart, Ind.; Chamberlain Medicine Co., Des Moines, Iowa; M. M. Fenner, M. D., Auburn, N. Y.; Lightning Medicine Co., Muscatine, Iowa; Omega Chemical Co., New York City, neither of whom have heretofore marketed their goods on the rebate plan.

The chairman takes pleasure in mentioning here the name of Hall & Ruckel, who have placed the staple Sazodont in the list of rebate articles, with discounts to jobbers of 10 and 5 per cent., with free delivery.

Since the list of August 1 was published, other proprietors have adopted the new plan, and there will no doubt be frequent additions.

One firm of proprietors was doubtless surprised, disappointed and chagrined at the success attending the committee's efforts in securing the individual acceptance of the jobbers. The Wells & Richardson Company were one of the original five who accepted the plan and pledged their support to it. Yet, since they were advised of its acceptance by the jobbers and requested to issue a new term-sheet in harmony with the plan, they have persistently neglected to answer communications from either the chairman of the Proprietary Committee or the chairman of the Executive Committee of the N. A. R. D. The chairman of the Proprietary Committee addressed them by mail, and finally requested them by wire to extend the courtesy of a reply to his previous communications; but up to this moment no recognition of any kind has been given. Mr. Holliday, for the retailers, had a similar experience.

The number of names at present on the list of recognized jobbers is 398. The number on the old list, which

was arranged by the N. W. D. A. Committee alone, was 387. Thus the adoption of the new plan has caused an increase of only 11 names in the list of wholesale drug distributors.

It is hoped that the tripartite plan may greatly modify, if it does not cure, existing evils. It ought to prove a valuable arrangement. It is certainly an advantage to the proprietor to deal direct only with his wholesale agents, and since the great army of retail distributors demand that he do this, there should exist in his mind no doubt of its policy. With 400 wholesale distributors located throughout the country, he is assuredly guaranteed a full and free circulation of his products. To the proprietor the plan ought to be especially satisfactory.

The jobber, so long as the present plan is operative, is relieved from the competition of buying clubs, which have of late been springing into existence in many of the larger cities, and he has practically assured him the sale of proprietary articles to most of the large buying retailers. The ninety and nine fair price retailers say to the wholesaler, we will pay you full prices for proprietary goods and buy them all of you if you will protect us from the one who is demoralizing trade and undermining our business, and we will take it upon ourselves to designate the one. They thus take the real responsibility of the plan upon themselves. The plan is the retailers' plan. They started it. The jobbers endorsed it, and the proprietors accepted it. The retailers are pledged to its success and only ask our co-operation. This should be all the more readily given, for in helping them we help ourselves. Our retail friends are now, it would seem, in possession of means to greatly modify the ills that afflict them. They have been urged to organize. In their hands is now a weapon to be used in their own defense. May they use it wisely and well.

The proprietors who have adopted the new plan are, to the extent of a large majority, unquestionably in sympathy with it and they will be loyal to it.

Of the 400 jobbing druggists in the United States, less than half are members of this Association, and of those who are members, only about one-fourth attend our annual meetings. Every jobber should keep in touch with the work of this organization. He should be a part of it and do his share of work like a man. He should think it unworthy to reap where others sow. What a power there would be in an association of 300 or more members, all keenly alive to the issues involved and all meeting for mutual consultation and suggestion once every twelve months. Every member of the N. W. D. A. would do well to consider himself a committee of one on membership, and strive to make the list of members what it ought to be. Experience shows that a drug jobber is more effective in the work when in the association than on the outside.

That the plan is a good one for the proprietor there can be no doubt. Leading manufacturers have repeatedly said that it was. It has been to a large extent the life of the proprietary medicine business. Jobbers will never again consent to handle proprietary goods at cost or less than cost, as they did twenty years ago. The destruction of the rebate plan would mean a revolution in the so-called patent medicine business.

We hear of freight allowances, equalizations, etc. This is a pernicious system, and surely not in accord with sound business principles. It is a most disreputable method of evading the letter and spirit of rebate contracts.

The habit of dividing quantities with neighboring jobbers has grown, and is susceptible of endless abuse. We should get the rebate plan to its original status.

Violations do occur, and it has been the untiring effort of this committee to secure proofs of them. It is hoped that those proprietors who, in their contracts, make use of the phrase "should complaints reach us that parties violate these terms, or we have reason to believe that they have done so, we will exercise our right, whenever we are satisfied that these terms have been violated, to decline the orders of parties who have failed to maintain them" will require no stronger proof than indicated in the clause quoted.

There are houses that have failed to recognize that trade has become localized, not because of the rebate plan, but as the inevitable result of growth and enterprise. The tendency is ever in that direction; and whenever a jobber scrambles for trade that is more quickly and cheaply supplied from elsewhere, there the rebate plan is in danger.

If the present tripartite plan does not result in a satisfactory control of rebated articles, the committee would again urge that the rebate on leading proprietary articles be withheld for a period of three months. In the opinion of the chairman, we will in the end come to this; and when we do, the rebate plan will be on a stronger base than it has ever been.

The fears expressed a year ago that the increase in annual dues would greatly reduce our membership, have proven groundless. The Association is at this time nearly as large as it ever was, but the membership roll should be much longer when we meet in the new century.

The last edition of the Rebate List is nearly exhausted, and another issue will soon be necessary. Were it proper and reasonable to furnish copies to members at exact cost, those who contribute nothing to the expense of this organization should be required to pay considerably more.

The services of Mr. Holliday during the year now closing have been wholly satisfactory. He has found much important work to do, and has proven himself to be the right man in the right place. Secretary Toms has had much experience in the work, and this, in con-

nection with superior natural qualifications, makes him a most valuable assistant. The retiring chairman is pleased to express his sense of obligation to them both.

After the reading of the report Mr. Kline moved that the convention go at once into executive session and consider the report. The chair ruled that this could not be done; that the report must be referred to the Board of Control, but suggested that it was within the power of that body to report instant. The chairman of the Board of Control at once adopted the suggestion of the chair and the report was referred back to the convention, which at once went into executive session to consider it.

In executive session the report of the Committee on Proprietary Goods was discussed by Messrs. De Witt, Carter, Jones, Faxon, Schneider, Kline, Holliday, Lange, Ellet, Sharp, and Peter, after which Mr. Kline made the following motion:

Mr. Kline: With the discussion which we have now had I make the following motion: That the report and discussion be referred to the Board of Control for their action and to be reported back to us.

The motion was seconded and unanimously adopted.

Whereupon the convention adjourned until 10 o'clock A. M. Thursday, September 20, 1900.

FOURTH AND LAST SESSION.

Thursday Morning, September 20.

The fourth session of the National Wholesale Druggists' Association convened on Thursday morning, September 20, at 10 o'clock. President Frisbie in the chair. The minutes of the previous session were read and approved. The next business in order was the report of the committee on Time and Place. This committee was not yet ready to report but said that their report would be ready in an hour. The committee on Nominations had prepared its report, but the chairman was engaged in another important matter and the report was deferred until a later hour.

The Auditing Committee reported that they took great pleasure in reporting that they had examined the report of the treasurer, his accounts and vouchers, and found all correct. They recommended the adoption of the report. The recommendations of the committee were accepted and the report adopted.

BOARD OF CONTROL REPORTS.

The chairman of the Board of Control next read the Board's report on the report of the committee on Drug Market, as follows:

This committee, the duties of which are so laborious in their character, has been fortunate in having for its chairman this year Thomas M. Curtiss, who has given us a detailed and accurate picture of the course of the market during the past year. Those who are in the habit of basing their predictions of future prices on the records of past sales, will no doubt find this a valuable addition to their existing literature on the subject.

The report of the Board of Control on the report of the committee on Transportation was as follows:

The report of this committee calls attention in an interesting way to a very serious question now existing in trade circles, namely, the difference between C. L. and L. C. L. rates. We cannot, however, endorse the recommendation of the committee that a permanent committee should be appointed with necessary authority to expend money and to employ the services of a competent secretary.

With the present financial condition of this association, we do not believe that a sufficient sum to conduct such work on a reasonable basis can conveniently be spared, nor do we think it advisable, for other reasons. Nearly every large city has its board of trade or trades league, or both, and it seems to us that whatever efforts the members of this Association wish to make in this direction could be made more effectively through a large number of channels than through a bureau of their own, no matter how competent or efficient the manager might be.

It therefore seems to us that the more important field for the work of this committee consists in continued watchful observance of the problems which develop in connection with transportation and in making recommendations which may be taken up and acted upon by these various commercial bodies throughout the land.

The committee on Membership proposed the names of McBride & Brill Drug Company, Marshalltown, Ia., and

Owen & Moore Drug Company, of Clarksville, Tenn., previously posted for membership. On motion the two firms were unanimously elected to membership.

The Board of Control reported on the report of the committee on Paris Green as follows:

This committee was appointed with the specific object of inducing the manufacturers, if possible, to unite on a combination schedule and a restricted selling price. Experience has taught us that this is the only basis on which a reasonable profit can be secured by wholesalers. Through no fault of theirs, they did not succeed in accomplishing the desired results. Their recommendation, however, is approved, and the following resolution offered:

"Resolved, That the Incoming Committee on Paris Green be instructed to use all possible effort to promote united action among the manufacturers, and, if possible, to induce them to place their sale of the article on a restricted or rebate schedule."

The report of the Board of Control on the report of the committee on Trade Marks was as follows:

The interesting report published by Mr. Rose and his committee deserves re-reading and careful consideration.

It is apparently a thorough history of the events occurring in this line during the past year which are likely to interest the members of our Association. No recommendations are made, and consequently no action on the part of the Association seems to be called for. We especially call attention, however, to the advance which is constantly being made in the decisions of the courts in regard to what is termed unfair competition in trade. The trend of decisions in these matters seems constantly to be more and more toward complete protection of the rights of the proprietor.

The report of the Board of Control on the report of the special committee on Commercial Travelers was as follows:

No doubt it will be remembered that from the beginning this Association had a regular Committee on Commercial Travelers.

The latter is the report which we are now called upon to consider. We are inclined to think that many have not attached sufficient importance to the possibilities of this committee. It has always been largely composed of the very best of the traveling fraternity, who visit the wholesale houses; men of upright personal character, of undoubted ability and of pleasing address.

It may readily be seen that there is a wide field for such men to advance the interests of this association in many directions. To them we extend our thanks for what they have done in the past, and express the hope that they will continue to help us in the future.

All of the foregoing reports of the Board of Control were unanimously accepted.

The report of the committee on Fire Insurance, Daniel Myers chairman, was next heard.

FIRE INSURANCE.

The fire loss in the United States and Canada the first six months of 1900 was \$116,908,000, as against \$77,126,150 in 1899, and \$67,166,850 in 1898, an increase of fire loss over last year for the first six months of almost \$40,000,000, and almost \$50,000,000 more than the first six months of 1898. The causes of this increase are attributed to chiefly gross and criminal carelessness, thoughtlessness, negligence and ignorance. It behooves manufacturers and jobbers to look sharply after the physical fire hazard of their establishments and enforce with military discipline rules and regulations to prevent fires so they may be able to show by their records why they are entitled to reasonable and equitable rates. The wholesale drug house should be swept up daily from cellar to garret and dirt and rubbish removed from the corners. Failure in this one respect very largely increases the hazard and causes fire. The best results in placing insurance seemed to be attained through the medium of experienced underwriters, and wholesale druggists were advised not to turn their insurance over to brokers. Underwriters should employ at their expense a competent sprinkler mechanic to inspect all automatic sprinkler equipments at least once a week. Co-insurance was thought to be a wise measure for the protection of both insurance companies and the insured, but the insured must see to it that he keeps faith and carries 80 per cent. of insurance all the time, so as not to become a co-insurer for more than 20 per cent. The committee this year was composed of twenty-six leading firms in the trade. The report recommended that the incoming committee should, if possible, print in pamphlet form and mail to each member a copy of all of the information obtained from various sources in the trade on the following subjects: (1) Origin of fires in stocks of chemicals and drugs; (2) List of hazardous chemicals, drugs and fluids and how they should be stored and handled; (3) How to best organize a fire brigade within a house; (4) How to equip a drug house so as to promptly extinguish a fire if one occurs.

At this point a brief recess was taken, after which the committee on Nominations reported as follows:

NEW OFFICERS.

For president, W. J. Walker, Albany, N. Y.; for first vice-president, F. S. Churchill, Burlington, Ia.; for second

vice-president, F. M. Robinson, of New York City; for third vice-president, E. B. Smith, of St. Joseph, Mo.; for fourth vice-president, H. W. Williams, of Fort Worth, Texas; for fifth vice-president, H. F. Michaels, of San Francisco; for secretary, A. B. Merriam, of Chicago; for treasurer, S. E. Strong, of Cleveland, O. For members of the Board of Control, J. C. Fox, of Atchison, Kas., chairman; James McCord, of La Crosse, Wis.; Frank Carter, of Boston, Mass.; M. Cary Peter, of Louisville, Ky., and L. D. Hall, of Cleveland.

On motion the report of the committee on Nominations was made a special order for 1.15 P. M.

Montreal Next Year.

Mr. Weller, as chairman of the committee on Time and Place, reported that after careful consideration the committee had decided to present the name of the City of Montreal as the place of the next meeting, the time to be the second Monday in September, 1901. The Association had received a very cordial invitation from the Mayor and many citizens of Montreal.

On motion action on this report was deferred until after action on the report of the committee on Nominations.

The report of Mr. Noyes, of the committee on president's address was received and accepted.

Mr. Faxon, as chairman of the committee on Proprietary Goods made a supplementary report. He had just received a telegram from Wells, Richardson & Co., saying that their president had just returned from Europe and that the firm had decided to sign the proprietary agreement.

The report of the Board of Control on the report of the committee on Suits was received and adopted, and Chairman Kline, of the Suits Against Members Committee, was given a rising vote of thanks by the convention for his excellent work.

On the Fire Insurance report the Board of Control reported thus:

The subject of fire insurance, so far as this Association is concerned, and the name of Mr. Daniel Myers are indissolubly connected. So far as we know, history contains no record of the pyramids having ever been in a blaze, but if they had been, no doubt Mr. Myers would have been "on the ground" inquiring why there was no sprinkler system.

His investigations on the subject of insurance from time to time have been most exhaustive, and we recommend that the incoming committee be requested to comply with the suggestion he makes.

The report was adopted.

Board of Control on Proprietary Committee.

The Board of Control, as a summary to its report on the report of the committee on Proprietary Goods:

1. Resolved, That we reaffirm the action of the Association a year ago, as expressed in the following resolutions:

"Resolved, That it is as much for the interest of the manufacturer as the jobber that the contract plan should be continued, the active interest of both the manufacturer and the jobber should be secured.

"Resolved, That the strength of the contract system lies in the manufacturers adhering to a recognized list of wholesale distributors, to whom sales at their largest quantity discount should be restricted.

"Resolved, That the chairman of the Proprietary Committee be requested to secure the acquiescence of each proprietor who sells his goods on the contract plan, to such a list.

"Resolved, That the chairman of the Proprietary Committee be given control of sufficient funds to investigate all reported violations of rebate terms, with power to take such action as may be proper in the premises.

"Resolved, That the recommendation made in the report that the rebate on leading proprietary articles be withheld for three months be favorably recommended for consideration, provided the other work contemplated by the committee does not result in a more thorough control of rebated articles."

2. Resolved, That the thanks of this Association are extended to those proprietors who made the tripartite plan possible by their ready acceptance of the conditions of the same.

3. Resolved, That those proprietors who have as yet neglected to accept the new plan be respectfully urged to do so at an early date.

4. Resolved, That it is the urgent recommendation of this Association that every wholesale druggist in the country, in or out of this organization, co-operate in every reasonable manner with the retail trade in its efforts to secure protection by the operation of the tripartite plan.

5. Resolved, That the incoming Proprietary Committee is hereby instructed to issue a revised edition of the rebate list at the earliest practicable time.

The report was accepted and the resolutions proposed were adopted.

The Board of Control made suitable recommendations in its report on the report of the committee on Deceased Members and the convention received and adopted the suggestions so made.

The report of the Board of Control on the report of the committee on Fraternal Relations was duly received and accepted.

The president next called upon Mr. Noyes for a report upon the pictures. Mr. Noyes had been jokingly instructed to act as a committee of one to select a number of the handsomest members for a group picture. He aptly replied with a remark which he attributed to Washington, "Whenever you are absolutely not to blame, be brief," and sat down amid laughter and applause.

The Board of Control's report on the report of the committee on Paints, Oils and Glass was received and accepted.

The Board's report on the report of the committee on Adulterations, was as follows:

The report of this committee bears evidence of most painstaking effort, and in this respect is to be commended. Your Board of Control, however, is not prepared to accept as correct the existence of such widespread adulteration as this report would indicate. We believe that the quality of the goods sold in our line is gradually but steadily improving, and we likewise believe the gradual improvement in the pharmaceutical education of retail druggists is steadily working in the same direction. This Association is on record as favoring the Brosius Bill, which has been before Congress for the last two or three years. This bill has been largely amended and improved through the agency of our members and resolutions for the continuance of the support of the bill have already been offered in connection with the report of the committee on Legislation.

In the meantime we especially desire to call attention to the necessity and desirability of having Pure Food Laws in all the States. If a dealer complains of adulterations on the part of his competitor a National law will not prevent it if the competitor does the adulteration himself. A state law would prevent it. Every merchant, therefore, who feels deeply on this subject should make an earnest effort to have a Pure Food Law passed by his own particular state, and we recommend that this action be taken by all our members.

Some discussion was indulged in on this report, participated in by M. N. Kline, C. F. Weller and others. The upshot of it was that it was resolved that the Association deprecates the sale of adulterated goods and will do all in its power to prevent the practice or find a remedy for it. The several recommendations which were made in the closing portion of the report of the Committee on adulterations were taken up separately and each in turn after considerable discussion was approved and adopted and then all were adopted as a whole.

The Board of Control reported as follows on the report of the committee on Credits and Collections:

The Board of Control recommended that the Association go on record as requiring a modification of the present terms of sixty days and 1½ per cent. for cash to thirty days and 1 per cent. for cash, these terms to apply to the sale of all merchandise other than sundries, liquors and cigars, and to be made effective on and after January 1, 1901. It also recommended that the various local exchanges meet at an early day for the purpose of taking action on the resolution. It was thought the trade might be greatly benefited by the establishment of an auxiliary of credit men in connection with each local drug exchange, and members of the association were recommended to become members both of the National Credit Men's Association and of these local credit men's associations. Commercial Courses of instruction in colleges of pharmacy were recommended, with the suggestion that wherever consistent and practicable the colleges should make it incumbent on the part of every graduate to properly qualify under the requirement of such a course. The principles involved in the National Bankruptcy law were favored, with the recommendation that members urge through their representatives in Congress the adoption of such amendments as are necessary and proper to increase the efficiency of the present law. The committee, with this end in view, were in favor of what is known as the "Ray bill."

This report provoked considerable discussion, especially that part relating to bankruptcy laws. The report was adopted.

Mr. Faxon presented a resolution to the effect that

SOME PORTRAITS FROM THE BANQUET PROGRAM.

(American Lithograph Co.)

It is the sense of the Association that the incoming committee on Membership should invite only those to become members who are wholesalers in fact as well as in name. After a lengthy discussion participated in by Messrs. Faxon, Noyes, Carter, Hover and others, some of whom insisted that the Association should define a wholesaler, the original resolution as stated was adopted. The committee on Membership will use its best judgment as to who is and who is not a wholesaler.

The secretary was by resolution instructed to at once print a correct copy of the constitution and by-laws of the Association.

The secretary announced that hereafter the secretary's office of the N. W. D. A. will be in Chicago, to which place he has moved.

A resolution to the effect that the Association enforces the efforts of those who are trying to raise the standard of pharmacy in the United States hospital and marine service, and that the Association would lend its aid to such efforts, was referred to the Committee on Legislation for action, with the recommendation that the course outlined in the resolution be adopted by the committee and such support given as might be possible.

Mr. Faxon now rose and after a brief speech nominated C. F. Shoemaker, of Philadelphia, as chairman of the incoming Proprietary Committee of the N. W. D. A.

On motion the secretary was instructed to cast the unanimous ballot of the convention for Mr. Shoemaker, which was accordingly done.

Mr. Kline moved that a rising vote of thanks be given Mr. Faxon for his splendid work as chairman of the committee on Proprietary Goods. The motion was carried without dissent. Mr. Faxon, though deeply moved

by this mark of consideration on the part of his friends and associates, responded in a graceful speech.

Mr. Noyes now moved that the secretary be instructed to cast the unanimous ballot of the Association for those gentlemen whose names had been proposed by the Nominating Committee for the officers of the Association for the ensuing year. The motion was carried.

The recommendation of the Committee on Time and Place was adopted, and the convention unanimously selected Montreal as the next meeting place.

Mr. Kline moved that the officers be installed in the Auditorium parlors this evening at 7 o'clock. Carried.

On motion the convention adjourned.

The amusement features of the week will be described in the next issue of the Era.

THE PROPRIETARY ASSOCIATION OF AMERICA.

FIRST SESSION.

The first session was called to order at 11 a. m., Wednesday, September 19. President V. Mott Pierce occupied the chair. After a brief announcement by the president that inasmuch as this is the semi-annual meeting, no regular reports from committees would be called for, but that the Association would be pleased to hear from visiting members of the retail and other associations who might be present. The secretary moved that the calling of the roll be dispensed with. The motion was carried. Dr. R. V. Pierce moved that the reading of the call for the meeting be dispensed with. Secretary Leeming called attention to that portion of the call which stated that Article IV. of the by-laws would come up for amendment at this session. On motion of Mr. Harding, Article IV., which reads, "When any member shall

have failed to pay his dues to the Association by May 1 of any year, the treasurer shall notify the secretary of the fact, etc.," was changed to read "April 1" instead of "May 1."

President Pierce next called upon Mr. Anderson, President of the N. A. R. D., who responded briefly. Mr. Anderson said that there was one principal point on which he wished to talk to the Proprietary Association. That matter was substitution. The members of the National Retail Druggists' Association recognized the injustice done to proprietors by the practice of substitution. Proprietors have worked hard and spent much time and money in perfecting their preparations and placing them upon the market. They can in all justice object to a practice which takes away from them any share of the business which they have so laboriously built up. In many cases to be sure, retailers had felt that they were driven to some such course in self-defence, but the plans of the three associations have been so far carried into effect that this excuse seems no longer tenable. The N. A. R. D. is on record as opposing and condemning the practice of substitution. The members of that association do not practice it, but if the proprietors will but look about them they will find that it is the department store, and the aggressive cutter almost without exception who substitute.

He hoped that the Proprietary Association would at this meeting see fit to reaffirm their agreement with the retailers in order that the plans and hopes of both organizations might come to fruition and the work of organization be pushed still more vigorously.

Ex-President Simon N. Jones, of the N. A. R. D.,

next responded to a call from the chair. Mr. Jones said that the N. A. R. D. wished to be fair to everyone, to the proprietor, the jobber, and to itself and its members. Its design was to hew to the line of its agreements and its duty. That it had adhered to the promises made one year ago in Cincinnati all would doubtless agree. The N. A. R. D. asks of the Proprietary Association the renewal of that agreement. Feeling that it has been kept in letter and in spirit during the past year, he believed that it would be renewed and that the best interest of the trade will be conserved thereby. The N. A. R. D. had a request to make of the Proprietors. The practice by cutters and others of advertising proprietary goods at retail at less prices than the druggist can buy them at wholesale is detrimental to the whole trade. He asked that some appropriate action be taken to stop the practice and referred to certain resolutions passed by the N. A. R. D. at Detroit, and called attention to similar resolutions which it was proposed to bring before this meeting.

In replying to the remarks of Mr. Jones, Mr. DeWitt, of Chicago, welcomed the delegates of all associations to this city. He complimented the N. A. R. D. upon its cordial treatment of delegates from other associations at the Detroit meeting, and said that such meetings as that just finished in Detroit bring all branches of the trade into a closer union. In regard to the resolution referred to by Mr. Jones he would say that he came to his office rather late that morning and that there were one or two minor changes to be made in the resolution and that it was still in the hands of his stenographer. He would present it, however, at the next session.

Mr. Sharp rose to correct an impression that members of other associations may have entertained, that this was an informal meeting of the Proprietary Association. On the contrary, it is perfectly regular, and any action taken at this meeting is just as binding as if it were taken at any other.

The retailers here withdrew to attend the session of the N. W. D. A., and listen to the report of the chairman of the Committee on Proprietary Goods, Mr. Faxon.

Henry Miles, vice-president of the Proprietary Articles Trade Association, of Canada, was here introduced, and spoke briefly upon the subject of legislation in Canada. Mr. Miles said that his association wants the assistance of the American brethren in this matter. Some of the members of the Proprietary Association of America are already members of the Canadian body, but more of them should be. The two organizations should be in a position to work together when a common interest dictated such a course.

The speaker referred to certain legislation recently passed in Ontario, regarding companies doing business in that province under outside charters to comply with the forms of the new act. He declared that this might be of interest to some members and offered to give any information which might be requested at any time. In response to a question, Mr. Miles stated that it is free to anyone to sell goods in Ontario through agents or otherwise. The law covers those who become residents, open an office or have a manufactory within the Province.

A formal invitation was extended to Mr. Behrens, of Texas, to speak at the next session of the Association.

On motion, the meeting was adjourned to meet again on Thursday, September 20, at 10.30 a. m.

SECOND SESSION.

The second session of the Proprietary Association was called to order on Thursday morning, September 20, at 10.30

o'clock, President Pierce in the chair. As there was no regular order of business, the chair at once called upon Mr. Behrens, of the Behrens Drug Company, of Galveston, Texas, to take the floor. Mr. Behrens said that his purpose in addressing the meeting was to call attention to the losses sustained by the druggists of Galveston in the recent disaster which had overtaken the city, and to ask that the Association take some action looking toward the assistance of those so sorely stricken. The houses of his company in Waco and Galveston had been damaged to a considerable extent. Some goods had been spoiled by water and others had been swept away and completely destroyed. It was difficult to get into Galveston now to learn the exact extent of the damage. Twenty-one of his employees had lost their lives, and by this calamity his force had been so much reduced that it was difficult to make an inventory at once. The speaker requested that some action be taken by the Association looking toward the assistance of the druggists of Galveston, saying that many of them were worse off than he.

Dr. Pierce replied, expressing the sympathy of the Association. He doubted, however, the power of the Association to recommend to individual members what they should do in the matter, suggesting that individual action should be taken. Mr. Hance suggested that a circular be prepared at once and sent to all members of the Association embodying the remarks of Mr. Behrens, and suggesting that relief measures be at once taken. Mr. DeWitt said that while the measures proposed by Mr. Behrens were unusual, so, also was the nature and

MORE OF THE ARTIST'S CONCEPTIONS; NAME THEM.

(American Lithograph Co.)

extent of the calamity whose consequences it was sought to relieve. He therefore moved that the Association recommend to its individual members that they accord the Behrens Drug Company the most liberal treatment, both in the way of restoring damaged goods and by such further action as they may deem advisable under the circumstances.

H. L. Kramer seconded the motion. He said that speaking for his firm, he would, if Mr. Behrens would make out a list of the goods of his firm which had been lost, he (the speaker) would see that they were replaced without cost to the Behrens Drug Company. Dr. Pierce said that he was heartily in accord with the spirit of the resolution. Its advisability was the only point on which he had any doubt. He would suggest, however, that it include all of the druggists of Galveston. Mr. DeWitt and Mr. Sharp spoke in favor of the recommendation of Dr. Pierce, and Mr. Hance formulated the idea into an amendment, which was accepted. The motion was further amended by the recommendation that it be printed and mailed at once to all members and that the sympathy of the Association be expressed to the druggists of Galveston.

The resolution as amended was unanimously adopted. Mr. Behrens, on behalf of himself and all of the druggists of Galveston tendered sincere thanks to the Association.

Mr. DeWitt then offered the following resolution and moved its adoption:

Whereas, Since the agreement of the three associations for the regulation of price cutting on proprietary medicines in St. Louis in 1898, proprietary interests have received many evidences of the good will of the retail drug trade; and,

Whereas, The National Association of Retail Druggists in session at Detroit, September 14, 1900, adopted a resolution:

"That manufacturers of medicinal preparations should request the public press to refuse to publish advertisements of such preparations offered by others than the maker at prices below those fixed by the maker. That such cuts of prices are never advertised, except in the case of articles made widely familiar to the public by extensive and costly advertising on the part of the manufacturer, on which preparations the price fixed by the manufacturer has come, in public estimation, to be recognized as a standard. That we believe the public press which receives the money of the manufacturer is mutually interested to protect the integrity of the preparations of such manufacturer against the assaults through its columns of avaricious tradesmen who seek to reap a benefit for which they return nothing, and which action on the part of such tradesmen injures the reputation and diminishes the sale of such preparation, and tends to destroy the legitimate proprietary and drug business.

The Proprietary Association of America wishes to express its cordial appreciation of this action, as being further proof of a spirit on the part of the retail drug trade to protect the interests of proprietors, therefore the co-operation of the press is earnestly desired by this association to co-operate with them in discouraging the demoralization of proprietary and drug interests of the United States as above stated. Be it

Resolved, That this Association heartily approves the suggestion embodied in the resolution of the N. A. R. D. and strongly commends it to the favorable consideration and action of our members as a policy calculated to diminish the practice of price cutting on proprietary medicines, and protect the reputation and sales of such products.

Resolved, That the Proprietary Association of America congratulates its members and the drug trade at large upon the action of so many members of the Association in selecting a uniform list of wholesale distributors of their goods to which list they are now confining their jobbing sales at best prices; and it renews the assurance of its earnest desire to promote by every equitable means the just commercial rights of the retail druggist.

The foregoing resolution was unanimously adopted, and the convention then adjourned sine die.

CORN PACKING.—Corn undergoes seven processes in packing, viz.: (1) husking, (2) cutting from the cob, (3) shelling, (4) mixing (sometimes omitted), (5) cooking at 185 degrees to exhaust cans and filling into cans, (6) capping, (7) processing in steam retorts from fifty-five to sixty-five minutes at 212 to 245 degrees Fahrenheit. As a rule, the corn is not vented after being sealed. When the water bath was used, it was commonly done. In former years it required from four to five and one-half hours in a hot water bath to process corn. It is conceded that corn as packed to-day is incomparably better than that produced twenty years ago, or back to the days of the open water bath. Nearly all the work is now done by machines. The Maine corn packing industry is sixty years old.—(Am. Grocer).

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Violet Sachet Powder.—(A.M.) (1) Orris, ground 16 ounces; oil of bergamot, 10 drops; oil of bitter almonds, 7 drops; oil of rose, 2½ fl. drams; tincture of musk, 80 minims. Mix the whole thoroughly. (2) Orris root, powdered, 2 pounds; benzoin, powdered, 4 drams; cassia extract, 1 ounce; otto of rose, 10 minims; essential oil of almonds, 10 minims. (3) Ionone, 2 drams; jasmine extract, 3 drams; orris, powdered, 4 ounces; rice flour, 12 ounces. Mix and tint with violet aniline. (4) Powdered orris root, 3 pounds; essence of musk, 1 ounce; oil of bergamot, ½ dram; essential oil of almonds, 20 minims; otto of rose, 20 minims. Some additional formulas are given in the Era Formulary.

Nail Cosmetic.—(G. H. S.) We cannot give the formula for the proprietary article. Most nail polishes, however, contain oxide of tin, and may be either paste or powder. Here are two formulas: (1) Oxide of tin, 2 pounds; carmine, 3 drams; oil bergamot, 75 grains; oil lavender, 75 grains. (2) Putty powder, 4 ounces; liquid cochineal, 1 dram; glycerin lotion, enough to make a soft paste.

Nail Varnish.—Dissolve 1 dram of paraffine mixed with enough chloroform to make 2 ounces and perfume with oil of rose or some other suitable odor.

Finger Nail Dressing.—Sulphuric acid, 5 drops; tincture of myrrh, 1 dram; water to make 4 ounces. For tinting finger tips, alcoholic solution of alkanet or eosin may be used.

Almond Meal.—(G. H. S.) Here are several formulas: (1) 16 parts of sweet almond are dried, powdered and mixed with 8 parts of orris root, 16 parts of rice starch, 2 parts of soap, and 2 parts of borax, all in fine powder. The mixture is perfumed with oil of bitter almond and passed through a coarse sieve. (2) 50 parts dried sodium carbonate, 100 parts powdered borax, 250 parts powdered orris root, and 2,000 parts best wheat or rice flour are mixed and thoroughly rubbed up with 120 parts expressed oil of almond. To this 100 parts alcohol and sufficient oil of bitter almonds are added and the whole put through a moderately coarse hair sieve. (3) Oatmeal, 4 pounds; wheatmeal, 1 pound; almond oil, 3 ounces. Mix and add powdered borax, 3 ounces, powdered orris, 3 ounces, oil of lemon, 3 drams; oil of verberna, 20 minims; oil of bitter almonds, 25 minims. Mix. (4) The following has been suggested as an almond meal "substitute." Mix 60 parts of expressed oil of almond with 120 parts of dried sodium carbonate and gradually incorporate the mixture with 2,000 parts of wheat flour. Perfume with benzaldehyde, oils of sandalwood and ylang-ylang.

Polishing Aluminum Scale Pans.—(G. & Co.) If your scale pans have been badly corroded with corrosive sublimate it is quite likely that no application will restore them to their original brightness. Silver plating has been suggested for this purpose, but you must be the judges whether this shall be done. It might also be well to first try cleaning the scale pans with the following application which is equally well adapted for cleaning any instruments or apparatus of a similar character: Equal parts of oleic acid, water of ammonia, and absolute alcohol are mixed, and filtered after settling. The articles to be cleaned are rubbed with the mixture by means of a cloth and polished with a little powdered tripoli. Another polish successfully used to brighten aluminum ware consists of stearic acid, 1 part; fuller's

earth, 1 part; rotten stone, 6 parts. The fuller's earth and rotten stone must be in very fine powder and thoroughly mixed with the stearic acid. Scales and balances require very careful handling and nothing likely to prove injurious should ever be allowed to come in contact with them. Active chemicals such as corrosive sublimate, iodine, etc., and deliquescent salts should never be weighed on the metal pans, but always on glass or in tared vessels. The same rule of action should be observed in weighing potent and poisonous drugs.

Meaning of "Carat."—(J. J. M.) "Carat" is the name of an imaginary weight or unit by which diamonds or precious stones are rated; and also a term used for expressing the fineness or purity of gold. The alloy is supposed to be divided into 24 parts called carats, and its fineness is reckoned according to the number of these which are pure gold. Thus gold 18 carats fine is $\frac{18}{24}$ or $\frac{3}{4}$ pure gold. United States gold coin is 21.6 carat or $\frac{900}{400}$ fine. As a unit of weight for precious stones the carat contains about 3.2 grains varying somewhat according to different authorities. The international carat is 3.168 grains or 205 milligrams. The "Jeweler's" or nitric acid test for gold and silver consists in applying a few drops of a mixture of two ounces of nitric acid, C. P. and 2 drops of hydrochloric acid, C. P. This solution it is said will not act upon 18 carat gold, but will show a brown stain upon 14-carat gold. The gold should be brightened with a file, and the test should be made at both center and cap. For silver use nitric acid. If it boils a greenish color and a gray stain is left after removing the acid, the metal is silver, but if the surface is bright on removing the acid it is not silver. If the acid has no effect on the metal except to leave a gray mark it is silver. If the acid bubbles a grayish color it is lead. The ordinary analytical tests and assay methods of estimating gold and silver may be found in almost any good work on general chemistry.

Enameling Wood.—(E. W. H.) Wood painted and varnished is called enameled. The method usually followed by painters is about as follows: First coat—which may be a filler, is applied, carefully wiped off and allowed to dry. The surface is then rubbed with fine sand paper and given a coat of white lead with a little ivory black in it, just enough to produce a lead color. This is allowed to dry thoroughly when it is again rubbed down with sand paper or pumice stone and water. When dry, the ground color is applied generally quite full and almost flowing. This application when thoroughly dry is rubbed with finest sand paper, pumice stone and water, after which the glaze is applied. The glaze is the finishing color coat mixed with varnish. Sometimes this coat is again gone over with varnish. Of course, where a white is desired, no ivory black is employed. For the "glaze" tints you name use ultramarine (blue), chrome green (green), madder lake (pink), etc. No exact proportions can be given; the operator must practice on a small portion of his material until he gets the desired effect. Another authority furnishes another general method as follows: (1) Apply a thin coat of white lead; (2) putty and allow to dry; (3) rub down; (4) coat of lead as before and allow to dry; (5) rub; (6) coat of white lead and any mineral color approaching the color required. Set until "tacky" or nearly dry; (7) scrape off with steel scraper and allow to dry; rub down; (8) rub down; (9) apply the color proper and varnish or glaze; (10) dry; (11) rub off with surled hair and apply one to three coats of finishing varnish.

Emulsifying Creosote.—(G. A. S.) Almond oil soap, resin soap, tincture of quillaja, casein saccharate and various other substances have been recommended for "saponifying" or emulsifying creosote. The method of using tincture quillaja is practically identical with that used in making "liquor carbonis detergens," a formula for which was given in this journal February 1 of the present year, page 122. Resin soap, which is said to be an excellent emulsifying agent for substances like creosote, is prepared by boiling 30 drams of yellow resin and 5 drams of caustic soda in 20 ounces of distilled water for two hours, occasionally replacing the water lost by evaporation. The mixture is allowed to cool, when a

yellow pasty mass separates, which is drained, squeezed as free as possible from liquid, dried over a water bath until brittle, and reduced to powder. The powder is soluble in water. A formula recommended is creosote, 2 drams; resin soap, 10 grains; water enough to make 3 ounces. Dissolve the soap in the water and shake the solution with the creosote. Still another formula is that recommended by Schazki in which saponin is used. He directs creosote, 1.25 grams; oil of sweet almond, 10 grams; saponin, 0.06 gram; water, 100 grams. In these proportions the saponin is said to be absolutely harmless. M. Leger prepares an emulsion by adding 10 grams each of casein saccharate and water to a mixture consisting of 10 grams each of creosote and alcohol. When, after several seconds' agitation, the emulsion is complete, sufficient water is added to make one liter. This preparation remains unchanged for a long time.

Sizing or Stiffening for Felt Hats.—(J. S. F.) For slight stiffenings aqueous solutions of gelatine, iceland moss, lichen gum, tragacanth, cherry gum, etc., are employed. In applying these stiffenings to the felt care is necessary to have it perfectly dry, otherwise the absorption will be irregular. Skill in judging and apportioning the proper amount of impregnating material is also a prime factor in obtaining success. The suitability of one or other of the materials named depends largely on the condition of the felt; thus close felt gives best results with soft stiffening like cherry gum or tragacanth, the more brittle kinds imparting a harsh feel and grayish appearance. Weak brims can be advantageously treated by a double dressing of weak gelatine solution (about $\frac{1}{2}$ per cent.), narrow brims requiring less than broader ones. A higher degree of stiffness may be obtained by using so-called patent stiffening prepared by dissolving, for example, (Jour. Soc. Chem. Ind.) 1 part of borax and 1 of soda in 70 parts of boiling water, and adding thereto 3 parts of ordinary rosin and $2\frac{1}{4}$ of gum elemi. When these have been dissolved by boiling and stirring, $\frac{1}{4}$ part of turpentine oil or linseed oil, and 20 of good orange shellac, are stirred in and boiled until the ingredients are thoroughly incorporated together. This preparation is applied uniformly over the surface of the hat body by brushing, after which the hat is steamed, dried, steeped for an hour in a bath of weak hydrochloric acid—the temperature being raised from 104° to 140° F. and finally brushed in cold water, rinsed, drained, and dried. In the case of colors unaffected by weak acids, sulphuric acid is used, hydrochloric acid being advisable for very delicate colors, and pyroligneous acid for all others.

For very stiff hats, shellac dissolved in spirits is employed, cold-prepared solutions being used for stiffening the brim, on account of their greater penetrating power, whilst the crown is stiffened with hot-made solutions.

Elastic crown-stiffening for light-colored hats: orange shellac, 15 kilos.; white lac, 7 kilos.; elemi, 3 kilos.; spirit, 50 litres.

Hard-stiffening for light hats: Orange shellac, 14½ kilos.; white lac, 6½ kilos.; elemi, 1½ kilos.; rosin, 1½ kilos.; spirit, 50 litres.

Brim-stiffening for very light hats: Bleached shellac, 20 kilos.; rosin, 1½ kilos.; gallipot, 1½ kilos.; elemi, 1½ kilos.; spirit, 50 litres.

Wash for cleaning the hats after stiffening: Soft, boiling water, 50 litres; borax, 1½ kilos.; soda, 1½ kilos. Used boiling hot.

PURE TUNGSTEN.—According to M. Marcel Delapine, in "Comptes Rendus" of the Paris Academie des Sciences, the reduction of tungstic anhydride by means of zinc allows of the easy preparation of pure tungsten at temperatures below that at which zinc distills. In physical properties, the metal thus prepared possesses the density and heat of combustion of crystalline or ordinary tungsten. It can also, by compression or trituration, be made to assume the brilliance of metals. In fact, it can be positively asserted that this substance acts as an identical element, though prepared in a state of fine division due to the slight fusibility of tungsten.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

China.

General James H. Wilson, commanding a detachment of the American forces in China, took Pei Ta Chu last week.
Mr. Rockhill our special commissioner, has reached Peking.
The Shanghai correspondent of the London Daily News cites the opinion of a high foreign official that the Emperor and Empress Dowager will, under the pressure exerted by the Viceroy, surrender Prince Tuan and the anti-foreign leaders to the Powers.
It is expected that Count von Waldersee, commander-in-chief of the allied forces, will reach Peking this week.
The allied forces last week captured the Pietang and Lu Tai forts after a hard fight in which there were great losses among the international troops.
Active military operations are about to be resumed with a view of insuring coal and food supplies, opening the northern passes and restoring trade.
By order of Postmaster-General Charles Emory Smith a United States post office has been opened at Tien-Tsin to facilitate the handling of mail matter for the troops in China.
The sale of loot belonging to the Americans in China has begun. General Chaffee first proposed to burn it, but finally decided that it would be better to feed the hungry Chinese.
According to the London Daily Mail's St. Petersburg correspondent, Russia will claim an indemnity of £100,000,000.

The Philippines.

A Manila despatch says that in an engagement between 1,000 Filipinos and detachments of the Thirtieth and Thirty-seventh United States Infantry Regiments last week the Americans lost twelve killed, twenty wounded and five missing.
The Philippine Commission, in a preliminary report from Manila, made public last week, say that most of the natives are in favor of American rule and that the insurgents are only keeping up the fight in the hope that a Democratic victory in November will give them their independence.
Lieutenant Hobson, in a report made last week, says that the ships of Montojo's fleet were sunk by the Spaniards themselves and not by Dewey's guns. This is taken by some as a reflection on the American Admiral, but it is pretty generally believed that the Spaniards would not have sunk their ships if Dewey had not been in the vicinity.

South Africa.

Lord Roberts reports the capture of thirty-eight cars of flour, a car of coffee and nineteen damaged locomotives by General Pole-Carew at Watervalonden in the Transvaal.
The Government of the Netherlands has notified Great Britain that compensation will be demanded for the expulsion from the Transvaal of employees of the Netherlands Railroad.
The British Government has already received offers for underground mining rights in the Transvaal, which will go a long way toward meeting the cost of the war.
Lord Roberts reports the scattering and dispersion of the remnants of the Boer army in the Eastern Transvaal, many hundreds taking refuge in Portuguese territory.
The Dutch cruiser Gelderland has been ordered to proceed from Port Natal to Delagoa Bay for the purpose of conveying President Kruger to Holland.

Other Foreign News.

The Kreuz Zeitung prints a letter from the Transvaal warning Germans against emigrating thither.
The Kurutu and Tabuai Islands have been formally annexed to France by the Governor of Tahiti at the request of the natives.
An extraordinary heavy rainfall in India is causing fear of loss of life; half the city of Calcutta is submerged. The plague is still causing deaths in Glasgow and new cases are discovered daily.

DOMESTIC.

The Anthracite Miners' Strike.

Three regiments of infantry, a battery and a troop of cavalry have been ordered out to assist in maintaining order in the Schuylkill region.

Several persons have been killed and injured in small riots in the disturbed district and serious trouble is feared.

The strike has demoralized the like coal-carrying trade and has brought the season to a premature close. The price of hard coal has advanced in some places two dollars a ton.

The number of striking miners is increasing daily, and it is believed that practically all of the 112,000 workers in the anthracite region will be out this week. In the number of workmen involved it is the largest labor war America has seen.

Galveston.

Martial law at Galveston ended last Friday. The temporary bridge over Galveston Bay was opened to traffic.

Governor Sayers estimates the loss of life along the Texas coast at 12,000, and the property loss at \$20,000,000. A bill has been introduced in the Mexican Congress providing for an appropriation of \$30,000 for the Galveston sufferers.

Subscriptions in New York City for the relief of the Galveston sufferers amount to more than a quarter of a million dollars, and subscription lists in other cities are growing rapidly. The total amount, however, does not amount to more than half as much as was subscribed for the Johnstown sufferers, and every dollar subscribed will be needed as many widows and orphans are left without relatives or property.

Politics.

Some amusement was caused last week by Senator Hanna's declaration, in a stump speech, that there are no trusts in the country. Mr. Bryan remarked in a speech a day or two afterwards that it was idle to expect any anti-trust legislation from a party whose leader denies that there are any trusts.

In his letter accepting the Democratic nomination for the Presidency, which was published last week, Mr. Bryan renews his allegiance to free silver in unequivocal terms. The Republican leaders say that this spoils any chances Mr. Bryan may have had in New York, Maryland, West Virginia, or the other Eastern States.

Governor Roosevelt has been making a stumping tour of the Rocky Mountain States and has aroused great enthusiasm. The silver sentiment is strong in that section and the Governor said very little about the gold standard, devoting most of his attention to expansion.

President McKinley will not go on the stump this campaign.

Other Domestic News.

Four negroes were lynched Thursday night of last week at Pontchatoula, Louisiana, where they were taken from jail. The town has recently been infested with negro burglars and the four victims were under arrest, charged with robbery.

Ex-Governor Roger Wolcott, of Massachusetts, has declined the appointment to the post of Ambassador to Italy.

The railroads between New York and Buffalo have formed a freight "pool" to keep up the price of grain freight between those cities and have agreed upon an amicable division of the traffic. It is said that the agreement is framed in such a way as to dodge the Interstate Commerce Law, which is intended to prevent such "pools" between competing roads.

General John A. McClelland, who commanded the right wing of Grant's army at Fort Donelson, died last week at Springfield, Ill., aged eighty-eight years.

The trustees of the Christian Endeavor Society have voted to accept the invitation of Cincinnati to hold the twentieth International Convention in that city in 1901.

A Minneapolis despatch says that capitalists of that city, New York and Berlin have formed a company "to control sea food." It will be known as the National Sea Food Company and will, it is said, include all the largest packing concerns of the country.

The First National Bank of Winnemucca, Nevada, was robbed of about \$13,000 last week by three outlaws who overawed the bank officials and escaped.

General Randall reports to the War Department from Fort St. Michael, Alaska, that "general health conditions at Nome much improved since last report; order prevails; situation among natives slightly better."

The Argentine Republic has appropriated \$30,000 for a building at the Buffalo Exposition.

An automobile, in a race at the Gutterburg track last week, made a mile in 1.27 1/2.

Duroy Wines.

The genuine old Duroy Port Wine is never sold to jobbers, but can only be purchased from the Duroy & Haines Co., Sandusky, O., the manufacturers. Therefore, all wholesale dealers offering this wine for sale are misleading the trade. A sample of Duroy wine will be sent to any retail druggist who will write to the manufacturers for it.

THE DRUG NEWS.

New York and Vicinity.

MANHATTAN ASSOCIATION WILL WORK FOR THE N. A. R. D. PLAN.

The keynote in a campaign against the "cut-rate" drug store was sounded at a meeting of the Manhattan Pharmaceutical Association, Monday evening, September 17, when the members unanimously decided to try the plan of the N. A. R. D., re-affirmed at the convention in Detroit, during the week beginning September 10. The action taken was the appointment of a committee of five by first vice-president Pringle, who presided over the meeting, to confer with similar committees, with sister organizations in Greater New York and Jersey City, with reference to establishing a basis from which to work out the N. A. R. D. plan. This important step was precipitated by the excellent reports presented to the meeting by Delegates Felix Hirseman and William Muir, both of whom urged the advisability of action. Mr. Hirseman spoke first as he was the delegate from the Manhattan Association. In part he said: "If the plans adopted at the convention are carried through they will cause an evolution in the drug business the ultimate result of which I cannot conceive." Mr. Hirseman then gave a brief history of the National Association; continuing he said: "I thought I should be one of the passive members of the convention, but after the first day when I heard the addresses and saw the numerous attendance and the men from New York complimented, Muir on the nominating committee and Anderson named for President, and myself chairman of the committee on resolutions, I could not remain still. Mr. Muir and I both went to the convention doubting, but when we became familiar with the whole plan we secured a better insight in the purpose of the organization. When we heard the resolutions passed on the trade marks law, reports on the removal of the stamp tax, the observation given of Schedule B, the military bill to raise the rank of hospital stewards and many other things we thought we owed a debt to the N. A. R. D. Now the plan which was the same as last year and which is re-affirmed this year is this. If we can get the consent of 75 per cent. of the druggists of this Greater New York section to enter an agreement to stop cutting, the other 25 per cent. are considered hostile. We then notify the N. A. R. D. and the jobbers take the matter up by refusing to sell to this 25 per cent. It is not necessary that the scale of prices should be the same all over the country, we can have different prices for different communities and if this Association will do its share we can have the plan working. The 25 per cent. who don't come in can do so at any time, however. It would pay to put an organizer in the field to do the work. There was also a resolution passed to the effect that the manufacturers refrain from advertising patents in the newspapers which carry "ads." of cut-rates on the same patents. Mr. Kramer, of Casearet Company, said that he already had such a clause inserted in his contracts." Mr. Hirseman then advised immediate action. He was followed by William Muir, who spoke along the same lines, but referred to incidents at the convention that Mr. Hirseman had neglected to take up. His report was an excellent one. Mr. Hirseman again took the floor saying he wanted to have a word about "buying clubs." "Julius Hammer, of the Retail Druggists' Association of this city, offered a resolution that buying clubs be considered as jobbers under the tripartite agreement, but the convention was not in favor of such an arrangement. Mr. Hammer spoke finely, however." On motion of Mr. Schweinfurth a vote of thanks was tendered for the excellent reports. And on motion of the same member the committee of five was named by Chairman Pringle as follows: George F. Schweinfurth, chairman, Felix Hirseman, A. P. Kerley, S. P. Haddad and Charles White. The meeting com-

menced at nine o'clock. Secretary Swann read the minutes of the previous gathering and they were approved. Treasurer Hitchcock was absent. Fifteen names were elected to membership and five applications received. Secretary Swann said that since May first 100 new members had been received. A letter was read from Mr. Faber referring to the recent increase in the matter of fire insurance and suggesting that a Drug Fire Insurance Company be organized. It was referred to the committee on grievances. It was also suggested that the same committee revive the telephone question.

MORE ABOUT GALVESTON FLOOD.

J. E. Hertz, a partner of J. J. Schott, in the drug business in Galveston, has received a letter from Edward Barr, one of Schott's employees, under date of September 11. The letter designates Mr. Hertz and his wife who were in Canada when the flood occurred as "Lucky People." It states that Schott's store was about entirely ruined, the back being stove in by a falling part of the Opera house and the front suffering serious damage from a part of the City Hall falling on it. During the storm Mr. Schott and about sixteen of his friends were quartered in the building and were all saved though badly frightened. When the storm broke Mr. Schott thought best to go to his home and in company with his negro porter he set out, but the water carried them off their feet before they had proceeded far and they were only saved by clinging to a piece of floating wreckage which fortunately drifted near a friend's house where Mr. Schott remained until the following day. The negro insisted upon going back to the store and his dead body was found next morning with the skull crushed in. The letter tells of the horrible details of disposing of the dead, relating how bodies were piled up in the street and sulphuric acid thrown on them to consume them. The large storehouse of the Behrens Drug Company, of Waco, was washed away entailing a loss of from \$40,000 to \$50,000. Two feet of mud covered the floor of Schott's store, and a handsome show case containing about \$1,200 worth of cologne, was completely destroyed. Orders were received in the drug market here for carbolic acid, copperas and chloride of lime, but it was impossible to obtain a supply of either carbolic acid or copperas.

BROOKLYN ALUMNI'S OUTING.

In keeping with the extensive preparation made weeks ago, the outing and field day of the Alumni Association of the Brooklyn College of Pharmacy was held at Woodlawn Park, Twenty-second avenue and Sixty-fifth street, Brooklyn, Thursday, September 13. The afternoon was occupied in an intensely exciting ball game between the Alumni team and a collection of doctors from the Long Island College Hospital. These two sets of players have met twice before, and each side has secured victory from the other, consequently this last contest was to be a telling one, but unfortunately when the game was at its highest pitch, seven innings having been played, the score stood 6 to 6, darkness drew the curtain. The doctors were playing the first half of the seventh inning and had finished with the score well in their favor, when the umpire called time, declaring the game a draw. Players and guests to the number of about 200 then adjourned to the pavilion where dinner was served, and a merry time was had until eight o'clock, when the dancing began that continued throughout the evening. During the entire day and up to nine o'clock prize bowling was had, some thirteen prizes being offered, and these were secured through earnest solicitation of William Bussenschutt and F. F. Tutthill. The prizes, which included cigars, perfumery, brushes, etc., were generously donated by various individ-

uals connected with the manufacturing and jobbing trades. The prize winners were: Gentlemen—Geo. Mulvaney, H. Middleton, E. Hlave, L. Troster, J. Schmidt, F. P. Tutbill; Ladies—Mrs. Smith, Miss Meyer, Miss Behrends, Mrs. A. Schletter, Mrs. S. Wood, Mrs. Van Cigred.

DRUG TRADE CLUB NOTES.

—The members are greatly pleased over the selection of W. J. Walker, of Walker & Gibson, of Albany, as president of the N. W. D. A. Another pleasing choice was that of F. W. Robinson, as second vice-president. One of the largest parties to leave this city in some time attended the Chicago meeting, and Chairman Thomas P. Cook is to be commended on the excellent arrangement and perfect execution of his plans for the trip.

—A notice was posted on the bulletin board last week requesting contributions of old clothing, men's, women's and children's shoes, hats and everything of like nature, for the sufferers of the Galveston horror, the same to be sent to Brent Good, at No. 57 Murray street, where they would be packed and shipped to the Relief Committee. The responses were generous.

—The following nominations for the Board of Governors have been made by the nominating committee: For the vacancy in the term ending in 1902, W. S. Ginnell; for the term ending 1903, Alexander Robb, Harry Hall, W. H. Childs, W. D. Allison and J. D. Dorsey. The selection will take place October 4.

—Notices were sent out last week by the membership committee, announcing that the membership limit of 300 had been reached but is advising members that all in excess of the limit would be placed on the waiting list. It is expected the limit will be reached before the end of this month.

—Charles H. Taft recently returned from Tien-Tsin, China and C. W. Goff, of Easton, Pa., were at the rooms last week.

—S. C. Bass, of Booneville, New York, was entertained by J. B. Booth, at the rooms Thursday, September 20.

Such a Wardrobe.

D. A. Greaven, day manager for Perry in the Pulitzer Building, returned last week from a vacation of several weeks at Niagara Falls and other places, to find that during his absence enterprising thieves had entered his apartments in West 114th street and taken the major part of the family's wardrobe. A quantity of Mrs. Greaven's wearing apparel was missing, as was also that of the boy's, but Mr. Greaven had the chief sorrow, his loss being no less than eleven suits of clothes. While this did not entirely embarrass him, as he has some half dozen other suits on hand, it sent him scurrying to the tailors and the police station. He left orders for several new suits for himself at the former place and a number of new suits for the thieves at the latter place. The police say they have the garments of the robbers ready to try on whenever they return Mr. Greaven's, but that time seems so vaguely hence as to spoil a year's calculations.

NOTES.

—A meeting of the New York Pharmaceutical Clerks' Association was called for Wednesday afternoon, September 19, at the New York College of Pharmacy, but as a quorum did not present itself, the meeting was not held. In justice to the few members present may it be said they have never permitted interest in the organization to flag, but a dullness has crept into the minds of the majority of the other members that cannot seem to be effaced. "It seems a pity," said one of those who came the other day, "that we cannot support a clerks' association in a city like New York. For some reason or other the fellows will not hold together, and there are many important matters for us to interest ourselves in." The matter of disbanding the organization was hinted.

—During last week the city was ablaze with posters announcing that "old maids need not despair," and so forth. The announcement emanated from a town museum, where L. Samor, a chemist from Chicago was on exhibition as a prospective husband for the holder of a

ticket in a lottery conducted by the managers of the place. Each lady (?) or sett at the performance during the week was given a ticket, and the holder of the number drawn would receive Samor for a husband. Samor was described as good looking and intelligent.

—Charles Hollister, head soda water clerk in Perry's pharmacy, was killed by being struck by a train at Rutherford, N. J., early Monday morning, September 17. Hollister left this city for Rutherford Saturday night, September 15, with several friends. It is supposed he ran after the train for New York, and missing his footing, fell under the wheels. He was 20 years old, and boarded at No. 129 West Thirty-fourth street.

—Thomas Voegeli, of the Voegeli Brothers Drug Company, one of the largest and best known pharmacies in Minneapolis, Minn., was in the city last week. Mr. Voegeli had just returned from the N. A. R. D. Convention at Detroit, and his views concerning the meeting were as interesting as they were instructive.

—The Brooklyn College of Pharmacy began its regular sessions on Monday last as was announced in the Era of last week. It was also stated at that time that 70 students had enrolled; since then, however, the number has been swelled and it is now stated that nearly 100 students are to receive instruction.

—An important meeting of the Drug, Paint, Oil and Chemical McKinley and Roosevelt and Sound Money Campaign Club is being held in the headquarters in the Seabury building to-day. It is proposed to secure rooms somewhere in the drug district where noon day meetings may be held.

—The Kola Cola Company has recently been chartered under the laws of the State to engage in the manufacture of disinfectants. Its office is located in Buffalo, N. Y., and the capital stock is \$5,000. The incorporators of the company are: J. D. Browning, A. E. Mathews and A. N. Miller.

—H. C. Fick, traveling representative for Lehn & Fink in three Western States, with headquarters at Chicago, returned last week from a pleasant vacation of several months in Europe. Mr. Fick visited all the principal points of interest, including the Paris Exposition.

—J. Maxwell Pringle, one of the prominent members of the Retail Druggists' Bowling Club, and generally well known in the trade, has refitted his store at 977 Eighth avenue, and added interior decorations that give it a decidedly handsome appearance.

—The firm of Lehn & Fink lost \$1,500 worth of drugs in a storehouse at No. 80 Pearl street recently from water that wet them. The water was used in drowning out a fire in a coffee warehouse next to the drug firm's storehouse.

—E. W. Hayen, of E. W. Hayen & Co., one of the leading retail drug houses in Chihuahua, Mexico, visited the trade last week, it being his initial trip. Mr. Hayen's firm intends to embark in the wholesale business soon.

—Reports from Norway contain the information that the catch of Norwegian cod is the lowest this year of any in the last century, and as a consequence Norwegian cod liver oil has been advanced.

—Fire did \$300 damage in the offices of the Yates Drug & Chemical Company at No. 32 Liberty street, Saturday, September 15. The blaze was caused by the explosion of a gas stove.

—L. H. Goodwin, of Hartford, Conn., visited the city during the last week. Mr. Goodwin is well and favorably known to the trade here, and is one of the foremost druggists of Hartford.

—For the week ending September 15, drugs, paints, etc., were imported at New York to the amount of \$791,978. The largest article brought was licorice, of which there was \$116,628 worth.

—Charles A. Stecher, formerly with George E. Hoether, at 169th street and Third avenue, has recently purchased the store of George Pecht at 1722 Bathgate avenue.

—N. A. Lefras, of the William S. Merrell Chemical Company, returned last week from a trip of several months in northern New York and Canada.

—Druggist A. Weiss, Ninth street and Second avenue, is receiving the congratulations of his friends over the advent of a baby girl in his family recently.

—In consequence of the fall movement in cotton in the

last fortnight, an advance has been made on all medicinal cottons of 5 cents a pound.

—Lindsay Bunting, of Bunting & Son, druggists at Bristol, Tenn., was in the city last week. Mr. Bunting visits New York once a year.

—The Paint, Oil and Varnish Club held an entertaining business meeting and dinner at the Drug Club, Thursday evening, September 20.

—The firm of Goetzschoff & Bakst, East Broadway, are beautifying the interior of the store by the addition of a mosaic floor.

—D. Davidson has recently sold his pharmacy at No. 1135 Second avenue to B. Hayunga.

—A. M. Gould has sold his store in Woodbridge, N. J., to E. L. Reglath.

—Dr. Giovanni Lo Pinto has opened a store at 205 Grand street.

IN AND ABOUT BOSTON.

PECULIAR PREDICAMENT OF DRUGGISTS.

Boston, September 22.—Interesting cases in the court at Gloucester are those of two Rockport druggists, J. Sidney Pool and Miss Nellie G. Bass, one of the very few women pharmacists in this State. The charge brought against them was liquor selling. The conditions were out of the ordinary run and the court room was crowded when the cases were heard. It appears that at the last town meeting a police officer stated that those who sold liquor were protected by the officials, but that, if he were given the authority, he would raid the druggists. The town then voted to give him the power to do so. Soon afterward he secured a large quantity of liquor at the drug store of J. Sidney Pool and a small lot at the pharmacy of Miss Nellie G. Bass, in Pigeon Cove. Both defendants first pleaded guilty, but withdrew this and entered a plea of *nolo contendere*. They were each fined \$50, from which they appealed and were each held in \$200 for their appearance in the Superior Court. Col. William A. Pew, counsel for the defendants, maintained that they had been selling with practically the co-operation of the selectmen for years, because the law obliged the selectmen to grant a license for the sale of liquor, which, however, they declined to issue, while giving the druggists tacit consent to sell, even if not a legal right to do so. He said his clients were willing to do anything to escape the stigma of being convicted for selling liquor. They would pay all the costs and would give an affidavit that they would go out of the liquor business.

NOTES.

—Arthur C. Burwell, proprietor of the Adams House pharmacy, this city, was before United States Commissioner Fiske, this week, charged with sending through the mails a defamatory postal card to Dr. S. A. Oppe, of Hyde Park. He pleaded "not guilty" and the case was then continued until a later date, the defendant being allowed to go on his own recognizance, upon furnishing bonds to the amount of \$500. Mr. Burwell says that Dr. Oppe formerly was in his employ as a clerk, and that since he severed his connection with the drug store he has made an effort to have the Board of Registration in Pharmacy revoke the license of the defendant. Learning of this, Mr. Burwell wrote to the doctor accusing him of "Using his back store for a rum shop," by which he meant that, while he was in his employ, Dr. Oppe sold liquor in the rear room of the Adams House pharmacy. Mr. Burwell further said that, when he learned of the sale of liquor in his store, he discharged Dr. Oppe.

—Walter Messinger, a Boston druggist, is a voluntary petitioner in bankruptcy with liabilities amounting to \$10,019 and assets of \$2,251. The secured claims are \$2,732 and the unsecured \$3,248, and there also is an unpaid tax bill from the city of Boston of \$20. A mortgage on the stock in his store at 2385 Washington street is held by Nathaniel F. Goldsmith to the amount of \$2,500. Other similar mortgages are for \$142 and \$100. The balance of the indebtedness is made up of small sums here and there, representing many creditors, almost none of these amounts exceeding \$100 individually. Then there is an indebtedness to Marcia C. Messinger for \$770 on account of a note. The stock in the store is valued approxi-

mately at \$500 and the store and fixtures at \$1,500, both subject to mortgages. About \$250 in cash is due Mr. Messinger from various sources. Mr. Messinger makes his home in the Dorchester district of this city.

—At a meeting of the Executive Council, this week, Governor Crane appointed George M. Hoyt, of East Weymouth, as a member of the Massachusetts Board of Registration in Pharmacy, to succeed John Larrabee, of Melrose, the chairman of the board, who, under the law of 1890, which says that no member of the board may serve for more than five consecutive years, must retire.

—The Dr. Greene Nervura Company has just become incorporated under the laws of Massachusetts, with W. E. L. Dillaway as president and V. K. Pettingill as treasurer. The capital stock is placed at \$200,000. Mr. Dillaway is a lawyer and Mr. Pettingill is head of the advertising agency bearing his name.

—The drug store on Warren street, Roxbury, conducted for a number of years by Charles E. Savelle, and later by the Warren Drug Company, was purchased September 8 by Arthur L. Given, a clerk formerly with F. A. Hubbard, of Newton.

—W. M. Higham has just bought the drug store of Elihu Bunker, at New Bedford. Mr. Higham has worked in this store for twenty-two consecutive years, being there even before Mr. Higham bought it twenty years ago.

—The City Fathers of Malden have just established a new branch station of the Public Library of that place at the drug store of H. A. and F. L. Miner, Summer and Maple streets, in the West End section of the city.

—The building which has been occupied as a drug store for years by Walter Messinger, Dudley and Washington streets, Roxbury, is to be torn down. Mr. Messinger has not yet been able to secure another store.

—The entire contents of the late Dr. I. Campbell's drug store at 239 Broadway, South Boston, are to be sold at auction. Dr. Campbell, at the time of his death about a year ago, was the oldest druggist in Boston.

—The week's exports from the Port of Boston include drugs and chemicals, \$6,615; hops, \$1,29; India rubber manufacturers, \$10,396; tobacco, \$2,374; spirits, \$2,165.

—Thomas A. White, of Roxbury, acting naval apothecary for the last three years, has been ordered to the United States battleship Massachusetts.

—An enterprising South Boston druggist has the following sign on the inside of his screen door "Have you forgotten anything?"

—Edward G. Bossom, head clerk for Hunt & Co., is taking a two weeks vacation at Onset Bay.

Cendrillon Toilet Soap.

The perfumer Maubert, of Paris, is about to introduce a new soap in this market, to which has been given the name of Cendrillon, on account of the very unique parallel that seems to exist between the story of Cinderella and her transformation into the beautiful princess, and the unique, even coarse wrapper of the soap, which being removed, exposes to view a handsome package with the most exquisite perfume. The Maubert people will do a large amount of advertising in magazines, and will push the soap hard to the consumer. They wish to have the goods sold through the drug trade, and have adopted some unique methods to interest druggists in it. The American agents, Messrs. Thomas F. Condon & Co., 15-17 Jay street, New York, have been advised that Messrs. Maubert are preparing a beautiful embellished booklet, "The Story of Cinderella Applied." The booklet will be a work of art and will describe the soap which it is intended to exploit. These booklets will be distributed to the druggist with his name and address on the cover in gilt, and the purpose of the advertisement in this issue is not only to let the trade know that Cendrillon soap is good, but to secure the names of druggists who want their names on these books. A quantity for free distribution, with your imprint on as above, may be had for the asking, if you will write to the American agents.

PHILADELPHIA.

Enforcing the Pharmacy Law.

Philadelphia, September, 22.—The complaints received from Philadelphia of late because of violations of the State Pharmacy Law have been so many and so general, that the State Board has determined to make as thorough an investigation as possible of the manner of doing business in the city's retail drug stores. For this purpose, agents of the Board are now making visits in all sections of the city, and already a number of violations of the law have been reported. Most of these are trivial in character and have arisen more from ignorance of the law than from intent to violate it, but, lest some of the "Era's" readers are unconsciously putting themselves in the position of law-breakers, a summary of the Board's instructions to its agents is given:

"Inform druggists that they must keep a record in a book of all sales of poisons that are fatal to human life in quantities of five grains or less; this book must be kept for at least two years after the last sale is recorded.

"Every package of poison sold must have the name and address of the seller and the word 'poison' either plainly written or printed affixed to it. This applies to all substances that are fatal to human life in quantities of sixty grains or less."

"The board does not insist that every registered pharmacist must have a qualified assistant, but the drug store must not be left in charge of an unregistered person."

"The board insists that where the owner of a store is not himself registered, such store must be constantly conducted by a registered pharmacist. This does not mean that the store may be in the constant charge of a qualified assistant and under the nominal charge of a registered pharmacist who would call at the store once or twice a day.

"Registered pharmacists having branch stores must place a registered pharmacist in charge of each branch.

"All drugs must comply with the tests of the last edition of the U. S. P. This also applies to wholesalers.

"All certificates, together with renewal receipts, must be displayed in a conspicuous place in every drug store. Failure to comply with this latter regulation will render the offender liable to a fine of ten dollars for each offense."

P. A. R. D. Meeting.

Philadelphia, September 22.—A special meeting of the officers, ward chairmen and members actively engaged in the canvass for the "Price-schedule" of the Philadelphia Association of Retail Druggists was held at the College of Pharmacy on Thursday, September 20th, at 2.30 P. M. At this meeting the delegates just returned from the National Convention reported informally to the Association on the work done at Detroit. A letter from Shoemaker & Busch was read, in which this firm took the same position as certain others in regard to the supplying of "department stores" with supplies, positively declaring that they would refuse all such orders as prejudicial to the retail trade.

J. C. Perry, chairman of the delegation to the N. A. R. D. convention, then made an informal report, in which he spoke very enthusiastically of the earnestness and attention to business displayed by the delegates to the convention, making the assertion that the N. A. R. D. was now in a position to carry out any policy that might be determined on as best for the retail druggist, and that the former fear of failure from lukewarmness and treachery in the ranks had vanished, like a mist, before the intense earnestness of the men composing the N. A. R. D., the retail druggists of the United States!

In answer to the query as to the method of locating and denominating "aggressive cutters," Mr. Perry stated that it would not be necessary to raise prices to locate cutters; all the evidence needed could be had from their manner of advertising and doing business, and that when the local price-schedule was put into effect, the local association would attend to the cutters here and notify the local jobbers, the National Association to take care of outsiders.

Messrs. Rumsey, Stiles and Cliffe then followed with short addresses expressing their appreciation of the work done by the N. A. R. D. and their surprise at the earnestness and enthusiasm of the delegates, unanimously agreeing in declaring that only failure on the part of the retailers to back up the N. A. R. D. plans could bring disappointment.

Reports were then heard from all the wards of the city, as to general conditions in each and also as to what, if any, aggressive cutters were located in each ward, and the sentiment of these gentlemen on the question of price schedule. About twenty-five "cutters" were reported, but of this number, perhaps only four or five could be called "aggressive," the others were only cutting to meet competition in their neighborhoods. The Executive Committee then called for volunteers to visit these "cutters" to endeavor to bring them in line with the other druggists of their localities; a number offered their services, and an arrangement was made by which every suspected "cutter" in the city will be visited and the facts of the present situation laid before them, in the endeavor to gain their co-operation on the price-schedule. No attempt at coercion was to be used by any visitor it being assumed that if a retailer deliberately refused to join the movement for uniform prices, he knew what he was doing and had counted the cost of defying the N. A. R. D. His attitude would then be a question for the National Executive Committee to act on, in pursuance of the spirit of the "plan" which meant "No supplies from jobbers!"

Mr. Eppstein, chairman of the committee appointed to wait on Lit Brothers then reported, informally, that they had seen Messrs. Lit and that the firm had decided to abandon their proposed drug department rather than antagonize the druggists of the city, and that they also reached this decision from motives of a policy that looked to the best interests of the greatest number. This announcement was received with much applause, as indicating a most unexpected generous and fair minded spirit on the part of Messrs. Lit Brothers. The announcement was made that Lit Brothers had a certain amount of stock on hand which would be a dead loss to them now that they had given up their proposed drug store; a suggestion was made that the members of the Association purchase this stock in shares as a proper recognition of Lit Brothers' courtesy to the P. A. R. D., and was very favorably received, the Executive Committee to take suitable action in the matter.

Will Not Open Drug Department.

Philadelphia, September 22.—It will be very welcome news to the retail druggists of Philadelphia to learn that Messrs. Lit Brothers have abandoned the idea of a "drug store" in connection with their other departments. Much alarm had been felt when the announcement was made, for fear that the usual "bargain prices" would be applied to drugs and medicines, to the great demoralization of trade, to say nothing of the danger to be feared of a general lowering of standards. The committee from the P. A. R. D. was received very cordially by Messrs. Lit, and, after the committee had presented their side of the question, the firm asked for time to consider this argument; soon after, the committee received word of Messrs. Lit's decision to abandon their proposed innovation.

This action on the part of one of the largest firms in Philadelphia deserves more than a passing word of notice. With the enormous capital back of them and with the prestige of being Philadelphia's greatest "bargain store," Lit Brothers could have made a certain success of their drug store in spite of its handicaps. The firm has risen to its present greatness from a small dry goods store, showing the business capabilities of its members, and has made a success of every department it has handled, so it is no more than just to believe that they would have done likewise with their drug store in course of time. But, rather than antagonize the druggists of the city when they found how deep the feeling was, rather than take any risks of causing a demoralizing price war, the firm listened to argument, and when it was shown to them that the handling of medicines and drugs was a profession properly confined to those making it their life work, not a matter of parter and sale, they at once decided the question on its broad application to public welfare. Too much credit cannot be given to a firm whose dealings are based on such a fairminded policy, and Lit Brothers have earned the respect and esteem of every druggist in the city by this action.

NOTES.

—The severe storm of last Saturday night did considerable damage uptown in the neighborhood of the old Conshohocken sewer, which again burst its bounds and flooded the adjoining streets. Quite a number of drug stores are in this locality, and all of them suffered more or less damage from flooded cellars. Downtown, the heaviest loser was E. H. Fienhold, of 13th and Morris streets, his cellar being flooded and much damage to goods stored there resulting. Mr. Fienhold says that for at least half an hour the water was four feet deep in the street in front of his store, and the way it came into his cellar made him think of Niagara Falls.

—The P. A. R. D. delegates to the meeting of the National Association of Retail Druggists at Detroit, returned in detachments during the past week, full of enthusiasm for the work of the N. A. R. D. and loud in their praises of the hospitality of Detroit. The P. A. R. D. was honored by the selection of J. C. Perry as a member of the National Executive Committee, an honor doubly deserved, for the Philadelphia Association is numerically and actively the largest in the country, and Mr. Perry is one of the most active and energetic of its members.

—Last Sunday, 30 advertisements for situations were noted in one of the leading dailies, to 56 ads. of "Help Wanted." A note of the coming college year is found in the number of applications for situations from country towns, with the stipulation for "college privileges." Several stores are offered for sale, but no one advertised for one. One of the oldest up-town drug stores is now for sale, the owner being about to retire.

—A dentist was recently enlisted in the navy as "Hospital Steward," at \$60 per month, for service at Guam. This step was taken at the instance of the Surgeon General because of the number of complaints from that far-off colony among the garrison there of decayed teeth. There seems to be something about the climate that is very detrimental to teeth, rapid decay being usual among new-comers, and, as the new Hospital Steward is to be the only dentist in that part of the world, he ought to make a good thing "on the side."

—The Philadelphia College of Pharmacy will open its session on October 1 with the greatest number of matriculates ever recorded. W. Nelson Stem, actuary, stated that he had been overwhelmed with applications for entry, and that as far as he could judge, the standard of education among the young men applying was an improvement on the average. Chas. LaWall has been appointed Assistant Instructor in Theoretical Pharmacy; E. T. Cook assistant instructor in Practical Pharmacy; W. S. Weakley is to assist Prof. Kraemer in "Materia Medica and Botany."

—Dr. H. L. Baer, whose marriage to Miss Mabel McKinley, niece of President McKinley, caused a stir in social circles up-state, is a graduate of the P. C. P. of '96, and of Jefferson '00. Like so many of P. C. P.'s graduates, Dr. Baer has turned his mind to the sister profession, medicine, and has quite a fine practice in his native town.

—The firm of Mellor & Rittenhouse have decided to establish a plant in Camden, N. J., and extensive contracts for wharfage, buildings and other essentials of a complete factory for the handling of their specialty, have been given out.

—R. C. Cadmus, of Twenty-first street and Mount Vernon, has moved to Twentieth and Spring Garden streets, the site formerly occupied by A. J. Seeler, who has given up the drug business to follow the profession of dentistry.

—The drug store of D. N. Hill, Spring Lake, N. J., was completely destroyed during the disastrous fire of last Sunday, both stock and building being a total loss.

No Cutting on these Goods.

In view of the recent action of the N. A. R. D. in Detroit, the advertisement of the Holtin Chemical Co., on another page is of considerable interest. They rightly believe that the interest of the retail druggist is their interest, and that he is justly entitled to a fair profit on all he sells. They state that it will be their honest endeavor to see that he secures at least a fair profit on all of their preparations.

CINCINNATI.

Six Pharmacists in One Family.

Cincinnati, Sept. 22.—The many friends of Otto Heineman, the veteran druggist at Laurel and Linn streets, will be pleased to hear that he has partly recovered from his recent illness and will again assume charge of his business. He was confined for some time owing to an abscess on the apex of the right lung, and owing to his age, his condition was considered very serious. Mr. Heineman is one of the pioneer druggists of Cincinnati, having conducted the drug store at Laurel and Linn streets since 1854. Mr. Heineman can appropriately claim the title of "Father of Druggists and Physicians," as all his sons are identified with the profession. Arthur is in the drug business in New York City. Edwin is doing business at Liberty and Elm streets, this city, and besides being a Ph. G., is also an M. D.; Alfred is practicing medicine at Jones Station, Ohio, and is also a Ph. G.; Emil is in the store at Laurel and Linn streets, practicing pharmacy with his father, and Oscar is a practicing dentist, although his knowledge of chemistry and pharmacy entitle him to the distinction of a Ph. G. It is doubtful if any other family in the United States can show so many members who are interested in the profession of pharmacy.

Arrested for Violation of State Law.

Cincinnati, Sept. 22.—Julius Greyer, representing the Ohio State Board of Pharmacy, has commenced a crusade against persons selling poisons in violation of the law. The law provides that only pharmacists, or assistant pharmacists, shall sell poisonous articles. Mr. Greyer swore out warrants against Miss Dryck, employed by J. M. Rose in Court street, for selling "phosphorus paste," a poisonous compound, without having the necessary certificate. Mr. Richards pleaded guilty to the charge, and was fined the minimum costs, amounting to \$20. It is said that several other dealers are spotted and more arrests will follow. This action of Mr. Greyer is commended by all the local druggists, and they believe if he will give his attention to the proprietors of retail paint stores and groceries he will find any number of violators who sell Paris green in "any quantity" to "any person" "without registering sales," as druggists are compelled by law to do.

NOTES.

—Miss Ellen M. Galvin has brought suit against Druggist B. H. Overbeck for \$10,000. Miss Galvin is a professional nurse, and while in the employ of Dr. M. J. Ambrose she ate some oatmeal containing poison which made her seriously ill. This is an echo of the celebrated case of poisoning whereby Faltha Gilliam attempted to murder the entire Ambrose and Winold families some months ago. Miss Galvin was in attendance on the family in her professional capacity when the crime was committed, and very nearly became a victim. She claims that Druggist Overbeck, through his clerk, sold arsenic to the would-be murderess, and did not take proper precautions while selling the poison. Mr. Overbeck has his poison record to show that when the poison was sold all the provisions of the State law were conformed with.

—Milton Ullman, the druggist on Woodburn avenue, Walnut Hills, has just returned from the country, where he went to recuperate. Milton went fishing up the Miami River a few weeks ago, and besides catching a string of fish contracted a swelling of his lower limbs which turned to a black and blue color. He says the next time he goes fishing he will stand on the bank of the stream and not stand waist deep in the water.

—President Linneman, of the Druggists' Bowling Club, announces that the last summer outing of the season will be Friday, October 3. The annual election of officers for the ensuing year will be held on the same day and at the same place. The Bowling Club will finish the year with cash in the treasury and from the outlook the next year will prove even more prosperous than the last.

—Fred Weissman, of Weissman Brothers, Molitor and Vine streets, will leave next Saturday for Heidelberg.

Germany. Mr. Weissman will enter the Heidelberg University and take a complete course in chemistry. He expects to remain abroad about two years, when he will return to Cincinnati.

—Arthur F. Moore, Jr., is opening a new drug store at Bellevue, Ky. He was with Daw's Pharmacy for some years.

CHICAGO.

Chicago, September 22.

—The pure food law, as applied to sellers, has been decided this week in one of the lower courts to be applicable as to penalties only where the seller had a guilty knowledge of the impurity of the goods sold.

—J. C. Antram, brother of H. A. Antram, of this city, has been laid up for three months with an injured back. Mr. Antram was formerly with Lazell, Dalley & Co., of New York.

—M. E. Gladstaine, formerly in the drug business in Chicago, died in Brooklyn of consumption a few weeks ago. Mr. Gladstaine sold out his business here last spring.

—Henry J. Burgman, a Chicago druggist, has given a bill of sale of his store to Harry C. Burgman. The consideration is \$1,500.

—B. M. Butler & Co., manufacturers of drug mills in Chicago, have made an assignment. Their liabilities are \$25,000.

—The Consumers Ice Cream Company was placed in the hands of a receiver a few days ago.

—E. O. Carlson, Fifty-first and State streets, has taken advantage of the bankruptcy law.

A Watch Free.

The G. Holzhauer Estate, Newport, Ky., in their advertisement on another page, offer an Ingersoll dollar watch free with every three dozen order of Holzhauer's Chemical Corn Solution, the watch and all being sent for \$2.00. The Corn Solution is guaranteed, and they will pay druggists 10 cents for every bottle sold that does not cure. They have sold 157,000 bottles in eight months. Here is an offer worth accepting. The advertiser is perfectly responsible, well known in that part of the country, and his preparation has a very heavy sale wherever it has been introduced.

The plan adopted by John Lucas & Co., Philadelphia, to help dealers sell their paints makes an investment in their goods almost a sure thing. Their Paint Specialties include Prepared Paints in all tints and in packages of all sizes, Varnish Stains, Enamels, etc., etc., for household decoration. Just the thing for the druggist who wants a good side line. Lucas "Helps" sell the goods for you, and the profit on them (no cut prices), puts money in your pocket. Samples of advertising matter and full particulars of their plan will be submitted on application.

Rigney & Co., 348 Park avenue, Brooklyn, opened the Cough Drop campaign this season with a half page advertisement in the Era, exploiting their Rocko Cough Drop and Rocko Horehound Drop. The Cough Drops are made from pure rock candy, and are absolutely pure. The Horehound Drops contain nothing but pure rock candy and extract of horehound. Each drop of their manufacture has stamped on it a facsimile of a perfect rock candy crystal and their initials. The goods retail at five cents, are attractively put up, and ought to be on sale by every leading druggist.

We introduce in our advertising pages this issue an old friend in the shape of Young & Smylle's Licorice. Their advertisement contains the old familiar cut, which will be recognized by everybody in the drug trade. They make a pretty strong statement in their advertisement when they claim that the most delicious and best selling licorice preparations are made by them, yet this is a statement to which a large number of the better class of drug buyers will give their hearty assent. Young & Smylle's licorice is for sale by every wholesale druggist in the United States. They make Stick Licorice, Acme Licorice Pellets, Licorice Lozenges, Manhattan Wafers and other special grades.

STATE OF TRADE.

Steadily Increasing Business.

New York, Sept. 25.—Although there was very little change in the general condition of affairs throughout the various departments, the movement into consuming channels has continued to show steadily increasing proportions and business in the aggregate was of satisfactory volume. Transactions, however, were mainly of a jobbing character and the limited number of developments during the week were of no special importance; consequently there is little in the way of new features requiring more than ordinary mention. The quinine situation has not changed materially, but the firmer feeling among outside holders has been accentuated by the announcement that the quantity of bark to be offered at the Amsterdam sale on Thursday next will be comparatively small. It is expected that efforts on the part of quinine manufacturers to secure additional supplies of raw material will result in more or less spirited bidding at the bark sale and consequent higher prices which will be followed by an advance in quotations for quinine. Leading American makers have refused to enter further contracts and will sell only in a limited way for prompt delivery, so that the bulk of new business is finding its way to foreign manufacturers who are yet willing to supply legitimate requirements of consumption.

Opium has shown no improvement and a continued easy feeling has prevailed under the influences noted last week. Former jobbing quotations are still current, but in several instances sales of case lots were reported at a further slight concession in price. Morphine has continued in active demand for consumption and notwithstanding the apparent weakness in opium it was intimated that manufacturers are strongly contemplating an advance in values. Cocaine continues very strong and some of the leading manufacturers decline to enter additional contracts. Raw material is very scarce and extremely low prices are asked for the limited quantity available. Hydrochinon has been reduced by manufacturers abroad owing to more or less keen competition and a corresponding decline has occurred in local quotations. Chrysophanic acid is firmer and manufacturers have announced an advance of 5c. per pound.

In the department of essential oils sassafras has continued to show a hardening tendency and a higher range of prices is quoted for both natural and synthetic. The former is in reduced supply and the spot stock is concentrated in few hands. Natural wintergreen is scarce and firmer owing to a poor outlook for new crop, distillers reporting that on account of lack of water in producing districts the yield this year will probably be very small. Wormseed is easier under pressure to sell and the near approach of new crop. It is claimed that vermifuge manufacturers did not purchase their usual quota during the past season and in consequence there is a surplus.

Among the roots, senega and serpentaria are in demand and steady, but golden seal has developed weakness under competition and more liberal offers from primary markets. Manna continues firm and dealers are still looking for extreme prices. Short buchu leaves are held at slightly higher figures. Condurango bark is scarce both here and abroad and quotations show an advance. Menthol is decidedly firmer with the market reflecting the recent improvement in conditions abroad.

Little Change in Boston.

Boston, Sept. 22.—There appears to be little, if any, change in the trade conditions this week over those prevailing last week, and nearly all druggists are doing at least a fair business and many are finding trade especially good. While a strong undertone prevails in the chemical and drug market, there is no great volume of trade passing. Prices for the most part hold well, or at least show no shrinkage. Not enough business has gone on to give any marked impetus to the trading, consequently there has been little change in values. Much the same may be said regarding dye stuffs and tanning goods, which show only a fair amount of trading. The market outlook for hops indicates higher prices in the near future. The call for alcohols and cologne spirits keeps rather steady. Waxes are fleeter.

A Steady Wholesale Condition.

Philadelphia, Sept. 22.—A steady wholesale condition of affairs still continues to enliven the wholesale houses. Sales are reported as brisk and collections above the average. Several of the larger firms have taken on large additions to their working forces to meet the increasing business of the fall season. There is a large demand for vaccine, caused by the opening of the schools and the compulsory vaccination law, and druggists are reaping a good profit from the sale of vaccine to the doctors.

Among the retailers, a feeling of satisfaction seems to be general, few complaints are heard and these only from the chronic knockers. There is a general attitude of expectancy on account of the prospect of a near introduction of the proposed "price schedule" for proprietary articles, and already there are many who have made slight additions to the selling prices of patent medi-

cines in anticipation of the general advance. From all standpoints the prospect of a profitable and large business for the fall and winter is better than for many years, for the retailers have gotten together as never before and scarcely any of the old bitter feeling among neighbors appears to remain. A general movement has been made in several wards to advance the price of a few staple drugs which is meeting with success, uniform prices now prevailing for such articles as citrate of magnesia, seidlitz powders, etc.

The "coal question" still continues to agitate the minds of the druggists as well as other citizens, and quite a rush has been made to secure a winter's supply before higher prices prevail. Unfortunately, the heaviest burden will be felt by the smaller stores, those least able to bear it, and many a druggist is now doing sums to figure out how much he will have to advance prescriptions.

Orders Numerous but Small.

Baltimore, Sept. 24.—The past week proved to be in the main satisfactory for jobbing druggists and manufacturers of pharmaceuticals. Orders, though small, were numerous and the employees of the different establishments were kept decidedly busy. Both the local and out-of-town trade continued active, and the solicitors for orders found their efforts well rewarded. The information received at Washington that the orris root crop abroad had been cornered attracted some attention, but otherwise the market remained practically featureless. Retailers are moderately busy, while the movement of heavy chemicals is about of average volume.

Nicely Busy.

Detroit, Sept. 23.—"Nicely busy" is the report from the wholesalers for the week. "Getting caught up with what I did not attend to when the N. A. R. D. was here," said the retailers, when asked the same question. The remarkably cold spell which set in on Monday—the aftermath of the West Indian storm—cut off the soda water trade as with a knife and many of the fountains around town are getting into their winter blankets.

Chicago Trade Fair.

Chicago, Sept. 22.—Business in this city has been fairly good this week. Fall orders are beginning to come in as a result of cooler weather and increased effort on the part of manufacturers' salesmen. The mail order business is good, however. Jobbers have had a fairly busy week and dealers in sundries report the beginning of a good trade, especially in holiday lines.

Politics will have little influence and every one looks for an excellent fall business.

All Right in the Northwest.

St. Paul and Minneapolis, Minn., Sept. 21.—The weather in these cities has been raw and disagreeable the past week, a condition usually conducive to trade dullness, but, strangely enough, this has not been the result. Almost all the retailers report that they have done very well indeed. The general trade with some of them has fallen off a little, but this has been fully offset by increased work in the prescription line. There is a marked improvement in the status of collections in the case of some retailers, though most of them still say this branch of business is not all it should be. The jobbers report a satisfactory number of sales. Orders are coming in with considerable freedom from all parts of the Northwest with the possible exception of North Dakota, where the wheat crop failure has worked some evil. The lack in this section is, however, counterbalanced by the liberal number of orders from other parts of the country tributary to the Twin Cities. The quotations on all strictly Western products remain unchanged.

Whiskies, Wines and Liquors.

The attention of retail druggists is especially called to the circular which the Turner-Looker Co., Cincinnati, are sending out to all druggists in the United States, with the exception of two or three of the larger cities. The Turner-Looker Co. is one of the leading jobbers in whiskies, wines, liquors, etc., in the West. They ship directly to responsible dealers, or ship with draft attached, and make prices accordingly. They solicit correspondence with every druggist who is interested in fine goods at right prices.

Brazilian Balm.

Brazilian Balm is a new specific for Asthma, Hay Fever and Catarrh being exploited by B. F. Jackson & Co., Indianapolis, Ind. It is put up in three sizes, the prices of which have been reduced to \$2.00, \$4.00 and \$8.00 respectively. They also manufacture Toxicola Tablets at \$4.00 a dozen. All jobbers have these preparations, and liberal advertising matter is furnished on application.

MARKET REPORT.

NEW YORK MARKET.

New York, Sept. 25.—There has been a continued gradual and steady increase in the general movement into the various channels of consumption and prevailing conditions appear to be satisfactory to jobbers, but there is little to note in the way of important price changes or new features of special interest.

OPIUM.—Consumers' requirements have continued limited to small parcels and the market has remained quiet with jobbers quoting the old range of \$3.45@3.55 for 9 per cent, and \$3.55@3.65 for 11 per cent, according to quantity, the outside figures for single pounds.

POWDERED OPIUM.—The market remains tame and featureless with the volume of business of meagre proportions, but quotations are unchanged at \$4.50@4.65 for 13 per cent, and \$5.10@5.25 for 16 per cent, as to quantity.

MORPHINE.—There is no abatement of the active demand previously noted and jobbing quotations continue steady on the basis of \$2.40@2.60 for eighths, according to brand and quantity.

QUININE.—Market conditions are practically as noted for some time past. There is a continued fair demand from the consuming trade and values have a steady support owing to the strong position of raw material and the fact that leading American manufacturers refuse to enter additional contracts. Jobbers are inclined to offer sparingly and are not anxious sellers at quotations on the basis of 44@45c, in ounces, according to brand.

HYDROCHINON.—Manufacturers' prices are lower owing to competition in foreign markets and jobbing quotations show a corresponding decline. The revised figures are \$1.90 in bulk, \$2 in 1-lb. cartons, \$2.05 in halves, \$2.10 in quarters, 18c. in ounces and 20c. in ounce vials, all inclusive.

CHRYSOPHANIC ACID.—The market is firmer with manufacturers' prices higher and jobbers have advanced their quotations to 30@35c. per ounce.

CONDURANGO BARK.—Owing to scarcity and higher markets abroad a firmer feeling has developed and spot quotations for small parcels show an advance to 55@65c. for whole and 65@75c. for powdered.

MANNA.—Values continue to harden under the influences noted last week and jobbing quotations have been further advanced to 68@73c. for small flake and 45@50c. for sorts. Large flake is nominal at \$1.25@1.35.

BUCHU LEAVES.—Short are held with a fair degree of firmness and with the available supply light, quotations for jobbing parcels have been marked up to 35@40c. for whole, 38@43c. for ground and 40@45c. for powdered.

OIL SASSAFRAS.—The market shows increased firmness under reduced stocks and jobbers have advanced quotations to 55@60c. Synthetic is higher in sympathy and the revised prices are 47@55c.

OIL WINTERGREEN.—Distillers are firmer in their views owing to a poor outlook for new crop and jobbing quotations have been advanced to \$1.55@2.10.

OIL WORMSEED.—Supplies are abundant and with the new crop about due an easier feeling is manifested on the part of holders and jobbing quotations have declined to \$1.75@2.

GOLDEN SEAL ROOT.—Competition among dealers and freer offerings from producing markets have had a weakening influence, but for jobbing quantities quotations are unchanged at 70@80c. for whole, 75@85c. for ground and 80@90c. for powdered.

MENTHOL.—Conditions abroad are influencing a firmer feeling among local holders and jobbers have advanced quotations to \$3.35@3.55 per lb. and 26@29c. per oz.

McKesson & Robbins have secured the wholesale Eastern agency for Camelline Liquid and Powder. These toilet preparations were well known in the trade several years ago, particularly the powder, which was then known as Wakelee's Camelline. They already have an established trade, and McKesson & Robbins ought to have little difficulty in introducing them again. These preparations have taken front rank in the estimation of ladies wherever introduced, as efficient and refreshing beautifiers and toilet requisites. The manufacturer claims they have been endorsed by members of the medical profession as absolutely harmless, and calls attention in his advertisement in this issue to the fact that they afford an excellent product. For a short time only 1-6 dozen free will be given with each dozen of first purchase.

THE ERA COURSE IN PHARMACY.

The lectures will hereafter be issued in monthly instalments, and the entire work of the Course can be completed within twelve months.

NEW CLASSES FORMED EACH MONTH.

The first instalment of lectures will be issued in October, and the remainder at intervals of thirty days thereafter.

Recitations and examinations are conducted by correspondence directly with each regularly matriculated student.

Especially valuable as a preparation for examination by a board of pharmacy, to those who cannot attend a college of pharmacy, and to all desiring to review their former study of the subjects embraced in the curriculum.

TOTAL EXPENSES FOR FULL COURSE, \$10.00.
For fuller particulars see announcement facing third cover.

Write for new descriptive Prospectus, now ready.
Address, THE PHARMACEUTICAL ERA.

NOTICE TO STUDENTS OF THE ERA COURSE.

Since the publication of our last announcement, the following Seniors have completed their recitation and examinations, and are entitled to diplomas:

Charles B. Lamson.
Arthur J. Stauff.
Lew Knapp Van Allen.
Sister M. Mechtildis.

The following Juniors have completed the work of the first year, and are entitled to advancement:

Herman Pederson, Jr.
J. T. Loyd.
Arthur Walters.

SUNDAY SALES AND LOCAL ORDINANCES.

A correspondent residing in Pennsylvania writes: "I would like to have your opinion on the legality of a borough ordinance recently passed by our borough 'dads' prohibiting the sale of soda water, cigars, candies, etc., and the performance of any unnecessary work on Sunday. One other druggist here and I violated this ordinance one Sunday, were prosecuted and paid a fine of four dollars and costs. It has now been four weeks since this happened and the authorities have made no effort to stop the unnecessary work which is done. We have since then closed our places on Sunday. Do you think that if we were to again sell soda water on Sunday we could be made to pay another fine?"

Yes, you can be punished if you are convicted of violating a borough ordinance like this one, which seems to be perfectly legal and within the scope of the law-making power of the common council or board of borough aldermen. Ordinances of this character are held to be authorized under those acts of the Legislature which grant power to the common council of cities and boroughs in Pennsylvania and other States to adopt ordinances and make regulations for the safety and good government of the community and the general welfare of the inhabitants. These ordinances may be said to be derived from the police power of the municipality exerted to prevent crime or other evils, etc., and to provide benefits to the community. It is mainly under such regulations that saloons are required to be closed on Sunday, and that boards of health derive much of their authority. So much for this aspect of the subject. That the authorities have made no effort to stop "unnecessary work" is not so very strange. What constitutes "unnecessary work" on Sunday is something of a question to determine, for it presents many difficulties. A charge of violating an ordinance by selling soda water or cigars is specific and the fact of such sale would only have to be established.

But why sell soda water, cigars or do a general

drug business on Sunday, anyway? Why toil like a "galley slave" three hundred and sixty-five days every year? Of course the very nature of the drug business demands that the druggist or his clerk be on hand to supply drugs and medicines for the sick, but aside from these duties we believe it is against public policy and individual advancement for either of them to work all of the time. Custom has set aside Sunday as a day of rest, and without introducing any argument savoring of religious doctrine, evidence can be presented to show that an unbroken series of labor and toil soon causes the mental powers to languish and the bodily strength to become fagged out. The druggist should, like a sensible individual, give himself a show. "All work and no play makes Jack a dull boy."

CREDITS AND COLLECTIONS.

One of the most thoughtful and thorough documents ever presented to the consideration of the drug trade was the report of the Committee on Credits and Collections, read at the recent annual meeting of the N. W. D. A. This report was published in full in this journal last week, but it is not out of place to here repeat, as follows, the summary of results and statistics as applied to the average wholesale druggist doing business in the United States.

The average wholesale druggist doing business in the United States suffers loss by reason of bad debts of one-half of one per cent.

He operates at an expense of ten and four-fifths per cent., not including interest on investment, etc. Including interest on investment and taking into consideration future additional expense by reason of free boxing and cartage, etc., his cost of doing business will not vary from 11½ to 12 per cent.

Of his gross sales 53.16 per cent. are solicited, and 54 per cent. of same consists of proprietary articles. In the majority of cases his proportional sales of pharmaceutical preparations are at a standstill, or are decreasing as a result of direct sales by the manufacturer to physicians and retailers.

As a rule he is not satisfied with free boxing and cartage, and will lend his aid looking toward a restoration of this change.

He does not favor credit insurance, and, generally speaking, is not a member of a credit clearing house, nor does he feel that it would be of any special advantage to establish a credit clearing house for the sole use of wholesale druggists.

His experience in general has been unfavorable to the national bankruptcy law, and where he expresses any opinion it is generally for repeal.

About one-half of him belongs to a local organization and the other one-half is out in the cold.

The report was listened to with the closest attention and met the approbation of every member present as a most comprehensive and valuable document. It received the consideration of the Board of Control in a formal report, as follows:

The Board of Control recommended that the Association go on record as requiring a modification of the present term of sixty days and 1½ per cent. for cash to thirty days and 1 per cent. for cash, these terms to apply to the sale of all merchandise other than sundries, liquors and cigars, and to be made effective on and after January 1, 1901. It also recommended that the various local exchanges meet at an early day for the purpose of taking action on the resolution. It was thought the trade might be greatly benefited by the establishment of an auxiliary of credit men in connection with each local drug exchange, and members of the association were recommended to become members both of the National Credit Men's Association and of these local credit men's associations. Commercial Courses of instruction in colleges of pharmacy were recommended, with the suggestion that wherever consistent and practicable the colleges should make it incumbent on the part of every graduate to properly qualify under the requirement of such a course. The principles involved in the National Bankruptcy law were favored, with the recommendation that

members urge through their representatives in Congress the adoption of such amendments as are necessary and proper to increase the efficiency of the present law. The committee, with this end in view, were in favor of what is known as the "Ray bill."

DRUG ADULTERATION.

The report of the Committee on Adulteration, of the N. W. D. A., presented at the annual meeting in Chicago a couple of weeks ago was a most interesting and a particularly important document. It set forth very plainly that there is too much apathy and indifference in the wholesale drug trade relative to the quality of goods handled, and severely reprimanded numerous cases of misbranding or carelessly labeling articles. The following paragraphs from the report are quoted as indicative of the general nature of the document:

"It is not surprising to find the medical profession showing a strong preference for the products of pharmaceutical houses, instead of sending the prescription to the retail druggist to be compounded, as formerly. The physician is being educated to the fact that the pharmaceutical and specialty manufacturers are the most careful buyers of crude materials, and he can, therefore, place reliance on their products. This feeling is growing stronger day by day. Why? A representative of a drug milling establishment was questioned recently by the chairman as to whether quality or price was the main consideration in buying, with the majority of jobbers he visited. His reply was emphatic: 'Price—the question of quality was seldom referred to.' That state of affairs should not be. Quality should always be the first desideratum in the buying of the goods we handle. Patent medicine men and pharmaceutical manufacturers cannot afford to be more particular in this respect than the wholesale druggist."

"Beeswax which contains 50 to 60 per cent. Ceresine is sent out labeled or marked, 'Beeswax,' and so invoiced, without other designation."

"Why should we continue to send out under the label of Powdered Black Antimony—even if labeled commercial—an article which does not contain a grain of Antimony, but which, instead, is Lehigh Soft Coal—pure and simple—pulverized. Sometimes we find it of a grayish color denoting an addition of Slate, Talc, or something else—not Antimony."

The Red Aniline supplied generally to jobbing druggists is granulated Sugar colored with Red Aniline. Some times Salt is used instead of Sugar.

A Vanillin recently examined was found to be adulterated with Acetanilid to the extent of 50 per cent."

Much of the report was devoted to the sophistication of essential oils, showing how widespread was the practice, and how difficult it is to obtain a pure oil of almost any variety, even when the purchaser is willing to pay the price.

The report strongly recommended the passage of some sort of pure food and drug laws, and goes on to say:

"It is the hope of this committee that the dealers who are insensible to the quality of drugs they handle are in the minority, yet it is for these that we should have a Pure Drug law, for what their conscience will not tell them is proper, just and humane, such a law would teach and reach. There are two classes—one, the dealer who is indifferent to quality and does not want to know true conditions; the other, who knowingly and wilfully sells adulterated and inferior goods for pecuniary benefit. But, are they not both equally guilty?"

"At the last meeting a resolution was passed favoring the passage of the Brosius Pure Food and Drug bill. Have we shown by our actions that we meant what we said? When the bill is passed, and it is, in fact, a law, the duties and reports of the Committee on Adulterations will, without a doubt, be very much curtailed."

The committee concluded its report by the following recommendations:

1. That we deprecate the sale of misbranded foods and drugs.
2. That we constantly keep before us the importance of quality in the products we sell, on many of which life is often dependent.
3. That we reiterate our endorsement of the Brosius Pure Food and Drug bill.
4. That individually, and as an association, we use our utmost endeavors to influence our Legislators to push the bill to early and final passage at the next session of Congress.
5. That we label correctly and definitely all the goods we sell.

Pharmaceutical Celebrities.

THOMAS V. WOOTEN.

Thomas V. Wooten, secretary of the National Association of Retail Druggists, is a self-made man. While the results have been quite conspicuously successful, Mr. Wooten displays none of that weakness common to many self-made men, that of being over-much in love with his maker. Born in the land of colonels, fine horses and fair women, he assumes no military title, professes no interest

6. That we carefully consider the advisability of advocating the sale of assay—chemical or otherwise—of the drugs and medicinal products which contain alkaloids, resins, oils, oleoresins and essential oils.

There was considerable discussion in open meeting over this report, which was finally referred, according to the rule of the association, to the Board of Control. This board later reported as follows:

The report of this committee bears evidence of most painstaking effort, and in this respect is to be commended. Your Board of Control, however, is not prepared to accept as correct the existence of such widespread adulteration as this report would indicate. We believe that the quality of the goods sold in our line is gradually but steadily improving, and we likewise believe the gradual improvement in the pharmaceutical education of retail druggists is steadily working in the same direction. This Association is on record as favoring the Brosius bill, which has been before Congress for the last two or three years. This bill has been largely amended and improved through the agency of our members and resolutions for the continuance of the support of the bill have already been offered in connection with the report of the Committee on Legislation.

In the meantime we especially desire to call attention

in the Derby and has remained all his life a consistent bachelor. The reason for the last condition is probably similar to that to which our own Mr. Dooley ascribes his own condition of celibacy: "Tis not for lack of opportunities I'm here alone, I tell ye that, me bucko, for the time was when th' sound iv me feet'd bring more heads to th' windies iv Ar-r-hey r-road thin'd bob up to see ye'er fun'ral go by. An' that's manny a wan. To tell ye th' truth, Hinnessy, th' raisin I niver got married was I never could pick a choice."

Mr. Wooten was born in Simpson county, Ky., thirty-nine years ago. His childhood and youth were spent in Franklin, where he attended the common school. Owing to the death of his father, he was compelled to leave school at the age of twelve years and help in the support of the family. Three years later he attended the same school for a five months' term. This was the sum total of his preparatory education.

A year later he made the acquaintance of Squibbs' mixture and other things pertaining to pharmacy in his brother's drug store, in Smith's Grove, Ky. Here he rose successfully from drug store boy to clerk, Assistant Postmaster, prescription clerk and the owner of the store.

Coming to Chicago in 1888, he entered the Illinois College of Pharmacy, graduating with honors one year later. After a year of clerical work in the windy city, he purchased the drug store at the northwest corner of West Madison street and Oakley avenue, which he has since owned and successfully conducted.

Mr. Wooten has never been faint-hearted nor a pessimist. He believes in men—judiciously, and believes in their power to help themselves if only they go about it in the right way. He can recognize a good thing afar off in the intellectual haze in which many men obscure themselves, and can seize upon an apt idea and make it work while another man is dreaming.

Mr. Wooten is a consistent believer in fair play. He once said, "I believe in treating my enemies as though I expected them some day to be my friends," which is a good rule for everyone to follow. He has been a pretty regular holder of office for several years among druggists' organizations. The offices have pursued him and dragged him out of his business, when his own interest pointed toward his store. His reward he has shared in common with his brother druggists who have reaped the fruits of his public spirit. From diffidence he has come to be a speaker of much force. The gift of gab he was not born with. Experience has taught him what to say and reading taught him how to say it, while observation has conferred the most valuable gift of all—a knowledge of just what not to say.

Mr. Wooten was prominent in the Interstate Druggists' League, helped to organize the United States Pharmaceutical Company and has been president of the Chicago Retail Druggists' Association since 1893. In 1898 he was a prime mover in the organization of the N. A. R. D., and has been secretary of that organization since its inception.

to the necessity and desirability of having Pure Food Laws in all the States. If a dealer complains of adulterations on the part of his competitor a national law will not prevent it if the competitor does the adulteration himself. A State law would prevent it. Every merchant, therefore, who feels deeply on this subject should make an earnest effort to have a Pure Food Law passed by his own particular State, and we recommend that this action be taken by all our members.

There are many things in this report of the Committee on Adulterations which every member of the drug trade, wholesale and retail, should take closely to heart, if actuated by motives of real honesty and desire to improve the quality of medicinal articles. Unquestionably there is much adulteration of drugs; equally true that while some of it may be due to carelessness or ignorance, or both, yet a very considerable portion is directly attributable to dishonesty and fraudulent operations. If a national pure drug law will correct the evil to any extent whatever, by all means let us work for such legislation.

REVISED AUGUST 31st, 1900.

WHOLESALE DRUG DISTRIBUTERS.

"WR" AFTER THE NAME INDICATES THEY SELL BOTH AT WHOLESALE AND RETAIL. "3" AFTER THE NAME INDICATES RETAILER WITH LIMITED OUILET AT WHOLESALE.

THE RISE AND FALL OF EPSOM WELLS.*

By D'ARCY POWERS.

Mr. George Clinch contributes some interesting notes on Epsom Wells and Epsom Downs to the Home Counties Magazine for April, 1900. He says that the mineral springs at Epsom are situated near the highest point of Epsom Common, at a distance of about a mile west of the town. Their waters are charged with sulphate of magnesia derived from the bed of London clay of which Epsom Common is composed. Local tradition asserts that the Epsom Wells were found accidentally in 1618 by Henry Wicker who, during a dry summer accidentally came across a small hole filled with water. This he enlarged so as to form a pond, but it then appeared that in consequence of the bitterness of the water the cattle would not drink of it and thus its mineral character was detected. The fame of the waters soon grew and so many strangers visited Epsom that in 1621 the owner of the spring enclosed it with a wall and built a kind of shed for the conveniences of the sick persons who were taking the waters. By the year 1640 the reputation of the Epsom Wells had extended to foreign countries and as a consequence persons of distinction from France, Germany and other parts of Europe visited this little Surrey village. After the Restoration Epsom became more famous than ever and a regular service of coaches was established to convey visitors daily to and from London. Pepys visited it in July, 1663, and gives as usual a lively picture of his experience. He found the town so full that he could get no lodging and had to sleep at Ashted "at a lodging in a little hole we could not stand upright in." He went to the Wells the following day—Sunday, July 26—"where great store of citizens, which was the greatest part of the company, though there were some others of better quality. I met many that I knew, and we drank each of us two pots (of the water) and so walked away, it being very pleasant to see how everybody turned up his tail, here one and there another in a bush, and the women in their quarters alike." On the following day he rode through Epsom "the whole town over seeing the various companies that were walking there; which was very pleasant to see how they are there without knowing almost what to do, but only in the morning to drink the waters. But Lord! to see how many I met there of citizens that I could not have thought to have seen

there, or that they had ever had it in their heads or purses to go down thither."

By the year 1690 the proprietor of Epsom Wells found it necessary to extend the accommodation for his visitors. He built a ball room seventy feet in length, as well as other necessary apartments, and a long walk leading from the London road through Epsom was laid out and planted with elm trees. The amusements provided for the patients and visitors comprised public breakfasts, dancing, and music every morning; horse racing on the downs daily at noon (where now is held the Derby); cudgel playing, wrestling and foot racing in the afternoon; and assemblies and card parties in the evening.

During the reign of Queen Anne, Prince George of Denmark was an occasional visitor at Epsom, and John Toland, who wrote about this time, states that he had counted as many as sixty coaches in the ring on Sunday evenings; he also mentions that one of the elegant amusements of the place, popular among the visitors, was that of trying to catch a pig by the tail.

Among the various characters attracted to Epsom Wells was Sarah Mapp, a celebrated bone setter, of whom Percivall Pott says: "We all remember that even the absurdity and impracticability of her own promises were by no means equal to the expectations and credulity of those who ran after her; that is, of all ranks and degrees of people, from the lowest laborer or mechanic up to those of the most exalted rank and station; several of whom not only did not hesitate to believe implicitly the most extravagant assertions of an ignorant, illiberal, drunken female savage; but even solicited her company, and, at least, seemed to enjoy her conversation. Hogarth introduced her into his picture of "The Undertaker's Arms: or, Consultation of Physicians."

The first indication of the declining popularity of Epsom Wells is found in the year 1706, when an apothecary named Levinstone, who was living at Epsom, started the New Wells whose waters, he said, were of equal mineral value to that of the old springs. This was soon found to be false, and when the trick was discovered, both the old wells and the new were brought into disrepute. Before the year 1720 the fashion of visiting Epsom for the sake of its mineral springs was rapidly on the decline. During the excitement caused by the South Sea Scheme the Wells recovered some of their popularity, but the revival was only transitory. By the beginning of the present century the buildings in connection with the Wells were pulled down and the ground was purchased or leased by a Mr. Hitchener, who built a small house close by for his residence. The memory of the Wells has disappeared forever, though Epsom salts will always remain as a valuable remedy in the pharmacopœia under the name magnesium sulphate.

*From Janus 5, p. 239. (Pharm. Rev.)

ANILINE DYES SOLUBLE IN FATS.

By Dr. MARKFELDT.

Since the very commencement of the aniline dye trade this comparatively new industry has steadily continued to increase from year to year, not merely on account of the indefinite variety of colors, often surpassing those afforded by nature, which it furnishes, but especially because of the strength of the dye stuffs and the facility with which they are used. In all branches of the coloring business it is necessary to produce articles which please the customer's eye, and the achievement of this object depends in a very large number of cases upon a proper choice of the dyes or pigments to be used in their manufacture. In the course of time people have been accustomed to demand a supply of natural products with a special color, different from that which properly belongs to them, without troubling their heads about the fact that they must, therefore, be artificially dyed.

Of late a large number of artificial dyes have become used on a very large scale in all those trades which deal with oils and fats, either in the way of extracting them from their natural sources and putting them upon the market, or in the direction of elaborating them into various commercial articles. For example, substances have sometimes to be added to destroy the fluorescence of certain oils. For this purpose nitronaphthalene, a body obtained by acting upon naphthalene with nitric acid, was at one time the only substance used. Of late, however, it has been completely replaced by a dye, fluorine, which has shown itself far more suitable for the purpose, especially for machine oils. Such an extremely small quantity of the dye as 1 to 2 pounds per 20,000 pounds of oil is ample to produce the desired effect.

We propose to discuss in this article the artificial dyes which are used for dyeing fats, oils, stearine, oleine (oleic acid), palmitine, ozokerite, ceresine, wax, tallow, paraffin, etc., and those put upon the market under the name of fat-Soudan ceresine, turpentine oil and resinates colors. They must be placed in the following three classes:

1. The basic dyes.
2. Certain azo dyes made from phenols.
3. The so-called resinate dyes.

Class I.—Most of these as they are put upon the markets are hydrochlorates from which the colored bases can be precipitated by caustic alkalis. The bases are then filtered off, thoroughly washed, filter-pressed and dried at low temperatures (about 50° C.). The commonest bases in general use are auramine, chrysoidine, safranin, fast blue, victoria blue, induline, methyl violet B and G B, malachite green, brilliant green, bismarck brown, and nigrosine. All kinds of shades can be got by suitable mixtures made from among these. The bases are either sold as such in powder or in highly concentrated solution, or made up into small dice-shaped pieces by fusion with the proper quantity of stearine. They are also sold dissolved in oleine. They are much used, especially in the dyed manufacture of stearine candles. Candles are dyed either in the mass before moulding or in dipped candles the last dip is made into dyed grease. Moulded undyed candles also are given a dip into dyed grease. The latter method is chiefly used for wax and ceresine, the former for stearine, except for the larger kinds of stearine candles, particularly the so-called "boudoir candles." A good effect is produced with these candles, as the dyed mass accumulates most in the grooves, which then appear darker than the rest.

Mineral colors have the effect that they make the candles burn badly. Some of them, such as those containing arsenic or mercury, must not be used, as they cause the candle to give off poisonous fumes while burning. The color bases named above have the special advantage for candle dyeing that they enter into chemical combinations with the stearic acid present. This explains the great solubility of these dyes in the fat.

These dyes are used with stearine by melting the latter and adding the coloring matter to it at 60° to 65° C., from 2 to 10 pounds to every 20,000 pounds of stearine. Great care must be taken not to overheat the mass or the dye may decompose. Blues generally change to a brick red, but recover their color on cooling. Some colors which are

very fast on textile fabrics soon bleach when dissolved in stearine, sometimes completely in a few hours. This is particularly annoying when it happens to only one of the dyes in a mixture. Thus, for example, yellow is generally added to brilliant green to give it a warm tint, but the green soon fades and only an ugly greenish yellow is left. Care must be taken, therefore, in using mixtures to make them solely from dyes of equal permanency under the circumstances. In the above case a mixture of fast blue and auramine gives far better results. Black soluble in oil is used in specially large quantities. It is procurable in two shades, blue black and deep black.

The latter is prepared by mixing nigrosine with chrysoidine, a basic azo dye, and is sold either in powder as deep black F, extra concentrated, or mixed with stearine as black F in pieces, or dissolved in oleine as liquid black F.

In the production of black candles, which are sometimes used in funeral processions, paraffin dyed black with anacardium was used till within the last few years.

The paraffin was heated nearly to boiling and some of the shells were then soaked in it. The paraffin then dissolves a resin out of the shells and acquires a dark brown color, which becomes a dead black on cooling. Nowdays deep black F supplies us with a far more convenient method of making black candles, which can be ornamented with silver as drawing-room candles. Deep black F extra concentrated is also used for dyeing mineral oils, vaseline, etc., after it has been dissolved in oleine. In this form it is extensively used in the manufacture of wagon grease.

The only other use of this class of dyes in powder is in dyeing oils and fats of an acid nature, such as oleine and stearine. If they are to be used for dyeing neutral fats, wax or paraffin, they must first be dissolved in oleine or stearine.

Class II. This is the most valuable of the three classes as it can be used for all fats and oils indiscriminately. They dissolve easily in stearine, oleine, palmitine, ozokerite, wax, tallow, paraffin, fats and oils, and also in alcohol. Hence they are extensively used in all trades making use of any of the above substances. They are all made by diazotizing bases and then combining them with phenols in alkaline solution. The principal phenols employed for the purpose are phenol itself and betanaphthol. In a few cases alphanaphthol and resorcin are made use of. Large quantities of these azo dyes are exported to China, in which country they are much used for dyeing wax tapers. As in textile dyeing, the azo dye principally in demand is red, and the Chinese import particularly ceresine red, alias alpha red or red B extra concentrated, which is prepared from amidoazotoluol and beta-naphthol. Amidoazobenzole gives with beta-naphthol a dye of a somewhat yellow shade.

The raw materials of these oil reds, amidoazobenzole and amidoazotoluol, are themselves soluble in fats, but being of a basic character, belong, like bismarck brown and chrysoidine, to Class I. They are sold under the name of butter yellow, and, as the name implies, are used for dyeing butter. They are prepared somewhat differently from the other azo dyes. Besides the dyes above mentioned and combinations of aniline with phenol, with alpha and with beta-naphthol, of ortho-toluidine with alpha and with beta-naphthol, of alpha-naphthylamine with the naphthols, of aniline and of pyranitriline with resorcin, and of safranin, a diazotizable basic dye, with beta-naphthol, are also used. Finally the diamines (benzidine, toluidine and dianisidine) are used in combination with the phenols. The production of these compounds is a fairly simple matter and the necessary apparatus is not expensive. On a large scale mechanical stirrers have to be used. To insure good solubility the dyes must always be carefully dried and very finely powdered.

Class III. The resinate dyes belong to the great class of color lakes and are prepared by dyeing solutions of resin soaps with basic aniline dyes and then precipitating the lake with a metallic salt. The resin soap solution is made by boiling the purest colophony obtainable with a solution of caustic soda and carbonate of soda for about an hour, with an arrangement for condensing the steam and returning the water to the boiler, or, if the process is carried out in an open pan, adding water from time to

time to keep the original volume of liquid unchanged. The pan should be much larger than is required to hold the materials, as they froth a great deal at the beginning of the process. The solution of soap is finally diluted to 50 B with cold water and dyed with a filtered solution of basic aniline dye, such as fuchsine, methyl violet, brilliant green, safranine, chrysoidine, etc. The weight of dye used should be from 5 to 15 per cent. of that of the rosin saponified. If the temperature is too low when the dye is added or the soap solution is too concentrated, the color bases separate out as abietates, which must be prevented. The dyed soap solution is then precipitated with a dilute aqueous solution of a metallic salt. A slight excess of the latter should be added, as it facilitates the subsequent filtration and washing. The washed precipitate must be very carefully dried, as it is easily charred and spoiled by high temperatures.

The resinate colors got in this way are insoluble in water, more or less soluble in alcohol, and very soluble in benzole, ether, chloroform, oil of turpentine, wax, stearic acid, drying linseed oil, etc. They are very suitable for making varnishes for improving polished metallic surfaces, as well as wood, paper, leather, glass, etc.

In many cases, as for painting wood, for example, the metallic resinates which possess a color of their own, such as those of iron, chromium, copper, manganese, etc., are to be preferred, in combination with bismarck brown or other dyes, both from considerations of economy and from regard for fastness to light. By suitably mixing resinate colors dark browns and blacks can be got which can be used for printing or lithographic inks. Dilute solutions of the resinate colors in benzole can be used for dyeing textile fabrics light shades in a single bath and the method is used very largely for silk, satin and artificial flowers, and gives very fast results. The resinate colors are also suitable for dyeing and printing india rubber, celluloid, linoleum and American cloth, as well as for dyeing white lead, zinc sulphide, heavy spar, chalk and other inorganic whites. In paste form they are excellent for making colored pencils and mixed with tragacanth, dextrine, starch or albumen, they answer well in carpet printing. They can also be used for making brown asphalt varnishes black. Very little of them suffices, and the drying of the varnish is only very little hindered.

Dissolving the Oil Dyes.—This is done by stirring the dye into the fused fat. It is best to dissolve the dye in a little of the fat separately and then to add the strongly dyed fat to the main mass. As above remarked, care must be taken to keep the temperature as low as possible. In dyeing soaps, the dye should first be dissolved in a little oil and the same for dyeing leather. Very little dye is needed, as above shown.

To test the dyeing power of these dyes, it is best to proceed as with ordinary dyes, viz., to dye a pattern in the production of which a known proportion of dye has been used. The results obtained are not so sharp as with ordinary textile dyes, but they are sufficiently so, and the trial should never be omitted. Fuse in a porcelain dish 20 grammes of stearine and add to it a weighed quantity (0.01 to 0.02) of the dye to be tested. When it is fully dissolved pour the stearine into cold water so as to keep the cooled mass together and not so as to let it spread over the surface of the water. This is best done by pouring out sharp from a height of an inch or so above the water. In this way patterns can be prepared which can readily be used for determining how much dye has to be used for producing any particular tint in a given mass of fat. Other methods can be adopted, but this is the one which has hitherto given the best results in practice.—Oils, Colors and Drysalteries. From the *Farben Zeitung*. (Sci. Am. Sup.)

Boquet Essence.

Orris root 300 parts
Alcohol, S. p. c. 1000 parts

Macerate for three days, filter, then add:

Oil of rose 1.5 parts
Oil of orange flowers 2 parts
Tincture of musk 10 parts
Essence of jasmine 75 parts
Distilled water, enough to make 1000 parts

THE WIDE OCCURRENCE OF INDICATORS IN NATURE.*

By G. S. FRAPS.

In the course of some work on a black cow-pea bean, the writer's attention was attracted by the change from black to red, which took place when it came in contact with an acid. Later, in speaking to Mr. G. H. Whiting, a student, about this, he mentioned that the juice of the blackberry had the properties of an indicator. These observations led to the work about to be described. Since completing it, the writer has been informed that a lady placed some violets in ammonia water to preserve them, and to her astonishment they became green.

The results of this work show that indicators are of very common occurrence in nature. Some seventy-four kinds of colored flowers, both wild and cultivated, the leaves of five varieties of coleus, the cow-pea bean, the blackberry, mulberry, smilaxberry, strawberry, and the red beet were extracted with water or dilute alcohol, and the extract tested for indicators. In only three cases did the extract not become one color when acid and another color when alkaline. As a rule, the coloring-matter was fairly sensitive as an indicator, being changed by from less than 1 to 2 drops of tenth-normal ammonia. Some of the changes were very sharp, and many of the colors were very beautiful. In some cases the color passed through several stages in going from acid to alkaline, or the reverse.

The materials examined could be grouped in four classes:

Class I.—Extract not affected by acid or alkali.

Class II.—Extract colorless when acid, yellow when alkaline.

The flowers in this class were yellow, and the yellow-coloring matter was hardly affected by the extracting agent.

Class III.—Extract red (or a shade of red) when acid, yellow when alkaline.

Class IV.—Extract red when acid, green when alkaline.

Classes III. and IV. are not sharply separated, sometimes the color produced by the alkali being such that it was hard to decide whether it was yellow-green or green-yellow. Ammonia was the alkali used; often a green solution with ammonia would have been yellow with caustic soda. Most of the coloring-matters in these two classes were very sensitive. In many cases the flowers were bleached when boiled with water, and the extract nearly colorless, or quite so, but it would become colored when made acid or alkaline.

Class V.—Miscellaneous. This includes all that do not fall in the other four classes. It must be observed that in no case do the colors occur in the reverse order from those in the other classes—that is, never colorless when alkaline and yellow acid, or red when alkaline and green or yellow acid.

The colors of the coleus especially, depend on the degree of acidity of the leaf as well as on the kinds and distribution of the colors. With coleus colors there is a regular change in color from acid to alkaline, or the reverse, passing through several stages. It is easy to see that a slight change in the acidity of the sap of the leaf will affect the color and give rise to some of the manifold variations that are observed in the coleus. The same may be said of some flowers.

Methods of Examination.

Two methods were adopted for testing the color. In the one, small portions of the material were placed into two test-tubes with alcohol, a few drops of fifth-normal hydrochloric acid added to one, of tenth-normal caustic soda to the other, and the changes noted. It usually requires some time for the effect to be visible. In the second method the material was boiled in a large test-tube with about 20 cc. of water, to which a little alcohol was often added, cooled, the extract poured off, and titrated with fifth-normal acid and tenth-normal ammonia. The two methods usually gave the same results, though they were sometimes different, as was to be expected, as in the one case all of the color, soluble

*Am. Chem. Journ.

and insoluble, was subjected to the action of caustic soda; in the other case only the soluble part was treated with ammonia. Method two allowed some conclusion as to the sensitiveness of the color to be made.

Class I.—Color unaffected by acid or alkali. This includes the orange flowers of *Stylocanthus biflora*, the yellow ones of *Chrysogonum Virginianum*, and the leaves of a smooth, red variety of *coleus*. Three materials not containing indicators were found out of 81 examined.

Class II.—The flowers in this class give a colorless extract which becomes yellow when made alkaline.

The color is moderately sensitive. All of the flowers but one—the white petals of the wild daisy—are yellow or orange. Yellow is a color which cannot be extracted by boiling water. In some cases it goes into solution with the tenth-normal caustic soda.

This class comprises 10; stamens of begonia and *Solanum Carolinense*; petals of canna, *Oenothera sinuata*, *Hypoxis erecta*, butter-cups, alamauder, wild daisy, a yellow wild flower, and leaves of the yellow coleus.

Class III.—In this class the materials give an extract which are red or a shade of red when acid, yellow or a shade of yellow when alkaline. All the colors are fairly sensitive, being changed by at least two drops of tenth-normal ammonia. Twenty-one of the 81 materials examined fall into this group, 11 being originally red or pink flowers, 4 orange or yellow, 5 purple or violet, 1 green (coleus leaf). The red and pink flowers were: the pink rose (faint pink, rose, and wild rose), pink larkspur, crimson clover, phlox (faint pink, light claret, rose, scarlet, magenta), begonia (2 varieties), double nicander, a variety of *Euphorbia*, *Spensoia goligefolia rosa*, *Clerodendrum*, and *Silene Virginica*. With the exception of *Clerodendrum*, which gave a well-colored, orange-pink solution, all of the flowers above named were bleached when boiled with water, giving a colorless or faintly colored solution, which, however, became colored on the addition of acid or ammonia. Verbena flowers gave extracts, yellow with caustic soda, but green with ammonia, and the extract from sweet peas green when first made alkaline, became yellow on standing. These two are included in Class IV.

The purple or violet flowers were: the vetch, Mexican sage, heliotrope, *Clematis ochroleuca*, and *Solanum Carolinense*. They were bleached by the boiling. The orange or yellow flowers were orange nasturtium and canna, *Asclepias tuberosa*, yellow Alamauder *vercofolia*. The yellow color of the flower was unaffected, but a colorless or faintly colored extract was formed which became colored on addition of acid or ammonia. A red-orange extract was obtained from the green part of the leaf of a red and green coleus, which was red with acid and brown yellow with ammonia.

Class IV.—This includes those coloring-matters which are a shade of red when acid, a shade of green when alkaline. The greens are at times of a beautiful emerald color, sometimes of a yellowish tinge. Most of the colors are very sensitive to the reagents, being affected by less than 1 drop of tenth-normal ammonia.

Thirty of the materials examined fall into this class, 15 being originally a shade of red, 9 violet or purple, 3 blue, 1 lilac, 1 black (bean), 1 yellow. The flowers a shade of red were: red clover, scarlet sage, Canterbury bell, red zinnia, rose geranium, crimson honeysuckle, California poppy, verbenas (faint pink and rose), sweet peas (faint pink, rose, maroon, magenta, lavender), gladiolus (rose), red cyclamen, varieties of *Bumaldae*, hibiscus, *Tephrosia* (devil's shoestring), and leaves from four varieties of coleus. With the exception of hibiscus, scarlet sage, and coleus, the extracts from these were colorless or nearly so.

The purple or violet flowers were phlox, petunia, coriopsis, verbena, sweet peas, "Jimson weed," maypop or passion flower, *Specularia perfoliata* and *Ruellia ciliosa*.

The lilac flower was *Salvia urtica*, the blue ones were *Ageratum*, *Ruellia vulgaris*, and blue larkspur, the yellow one was nasturtium, and the black material, a cow-pea bean.

The colors from some of these flowers passed through several stages on the way from acidity to alkalinity. The most noteworthy are:

Specularia perfoliata: Magenta, blue, green.

Ruellia cillata: Rose, lilac, green.

Salvia urtica: Claret, peacock blue, green.

"Jimson weed": Magenta, purple, green.

Maypop: Magenta, blue, green-blue, olive green.

Blue larkspur: Magenta, purple, blue, peacock blue, green.

Purple Petunia: Magenta, purple, blue, green.

California poppy: Magenta, purple, violet, peacock-blue, green.

Red coleus: Red, claret, violet, green.

Red and yellow coleus: Red, brown-red, orange-red, yellow-green, olive-green.

Light-red, dark red and green coleus: Cherry, violet, brown, green-brown, dirty green.

Red and deep red coleus: Magenta, purple, blue, green.

Most of the colors above given were very bright and beautiful, and, as a rule, fairly sensitive.

The coloring matters of the following flowers in this group are especially sensitive: "Jimson weed," Maypop, *Salvia urtica*, black cow-pea (bean), *Ruellia cillata*.

Class V.—This group includes substances giving colors with acid and alkali that do not come into the classes already described.

The colors are those produced by ammonia. The color, when acid, is given first, then the stages it passes through to alkaline:

Bougainvillea spectabilis (mauve): Purple, colorless.

Gloxinia hybrida (pink): Pink, purple, brownish red.

Gloxinia hybrida (purple): Magenta, purple, olive-green.

Dendrobium nobilia (purple): Pink, purple, blue, green.

Amaryllis (red): Cherry, maroon.

Salvia (red): Orange, dark red.

Cynthia (yellow): Yellow, terra-cotta.

Geranium (scarlet): Scarlet, violet.

Galardium (red): Scarlet, corn, yellow-brown.

Snapdragon (red): Red, red-brown.

Canna (red): Red, orange-brown.

Fruit—

Smilaxberries (red): Pink, violet.

Beets (red): Magenta, purple.

Strawberries: Straw, purple.

Blackberries: Rose, colorless.

Mulberries: Cherry, violet.

Brown cow-pea bean: Colorless, brown.

COLORS FIREWORKS—Blue Flame.—(1) Ore pigment, 2 parts; charcoal, 3 parts; potassium chlorate, 5 parts; sulphur, 13 parts; potassium nitrate, 77 parts. (2) Sulphur, 15 parts; potassium sulphate, 15 parts; ammonio-cupric sulphate, 15 parts; potassium nitrate, 27 parts; potassium chlorate, 28 parts.

White Flame.—(1) Potassium nitrate, 30 parts; sulphur, 10 parts; antimony sulphide (black), 5 parts; flour, 3 parts; powdered camphor, 2 parts. (2) Charcoal, 1 part; sulphur, 11 parts; potassium sulphide, 38 parts. (3) Stearine, 1 part; barium carbonate, 1 part; milk sugar, 4 parts; potassium nitrate, 4 parts; potassium chlorate, 12 parts. As a general rule, a corresponding quantity of shellac may be taken instead of the sulphur for inside fireworks.

Smokeless Vari-colored Fire.—First take (this is essential) barytes or strontium, bring to a glowing heat in a suitable dish, remove from the fire, and now add the shellac. The latter (unpowdered) will melt at once, and can then be intimately mixed with the barytes or strontium by means of a spatula. After cooling, pulverize. One may also add about 2½ per cent. of powdered magnesium to increase the effect. Take, for instance, 4 parts of barytes or strontium and 1 part of shellac.

Green.—Melt shellac, 5 parts; barium nitrate, 1 to 1.2 parts; pound after cooling and add 2 to 5 per cent. of barium chlorate. The latter enhances the coloring.

Red.—Shellac, 5 parts; strontium nitrate, 1 to 1.2 parts. Preparation as above. In damp weather add 1 to 4 per cent. of potassium chlorate to the red flame; the latter causes a little more smoke. The flames give little smoke, and can be burned in the room. The smoke is not molesting. They burn well and very light. The composition should be shaped into a longish hill.—Nuestre Erfindungen und Erfahrungen; (Sci. Am. Sup.).

"Percy can look through my eyes and see my very soul."
 "Oh, that's unimportant; but can he look through the rouge and see the freckles?"

PRODUCTION OF IPECACUANHA.

One of the most widely used of all vegetable drugs is the powerful emetic ipecacuanha, which is obtained from a Brazilian shrub. The French Conseiller de Commerce, at Cuyada, in the State of Matto Grosso, Brazil, gives in a recent report an interesting account of this plant, which has in that State and the neighboring districts its only habitat. The drug is obtained from plants which attain a height of from 12 to 16 inches. The leaves are oval, dark green, and sharply ribbed, and the white flowers give place to an ovoid fruit containing black seeds. Besides the Ipecacuanha Cephaelis, or the "white ipecacuanha," as it is generally known, there are several other varieties which are somewhat different, but all are used for the same purpose, and are distinguished as brown, black and striated ipecacuanha. The drug is obtained from the root of the plant, where it occurs, in quantities about the size of a quill, between the layers. The taste is acrid and bitter, and the odor is nauseating. That found next to the bark is most active in its effects, having in the highest degree the emetic property, due to the active principle known as "emetine." The State of Matto Grosso, which, as before observed, is the habitat of the plant, is one of the richest in Brazil, among its many natural products being gold and diamonds, rubber, sarsaparilla, jalap, jaborandi, copaiba, various gums and drugs of several kinds. Ipecacuanha is found in the north and northwest of the San Luiz-de-Caceres, formerly in the Villa Maria region, and its habitat covers an immense area comprised between a network of rivers in Brazil, Bolivia and Paraguay. The dense foliage of the forest of this region provides the dank and humid conditions which favor the growth of the shrub. The Brazilian product is known as the Rio Ipecacuanha, and the product secured from similar shrubs in other countries passes under the name of the port from which it is shipped. Attempts have been made to transplant the shrub and to cultivate it in British colonies in various parts of the world, but without success, and Brazil continues to be the only source of supply for the best grade. The process of gathering the plant is perfectly simple, and during the rainy season, while the ground is soft, is very easy. A stick is inserted under the root and while this is raised with one hand the entire plant is pulled out with the other. As little care is given to the protection of enough plants to secure a future supply, the output is growing smaller, and the price consequently higher each year. The scarcity of workmen is a great difficulty. In the dry season the roots cannot be gathered, and it is at this season when any one adapted to the work is engaged in gathering rubber. During the rainy season, from October to April, when the plants may be easily drawn from the ground, women are usually employed for the work.—(Sci. Am. Sup.).

SELECTED FORMULAS.

From Hager's "Handbuch der Pharmaceutischen Praxis." (Revised Edition, 1899.)

Violet Extract.

I.

Oil of orris.....	5	drops
Dilute alcohol.....	250	grams

II.

Ionone solution (Schimmel's).....	4	drops
Orange extract.....	10	grams
Triple extract jasmine.....	10	grams
Alcohol, 95 per cent.....	80	grams

III.

Orris root.....	200	grams
Alcohol, 80 per cent.....	850	grams

Mix, macerate for three days, filter, then add:

Oil of orris.....	0.5	grams
Oil of bergamot.....	2.5	grams
Oil of rose geranium.....	2.5	grams
Oil of bitter almond.....	5	drops
Tincture of musk.....	2.5	grams
Tincture of vanilla.....	5.0	grams
Essence of jasmine.....	250.0	grams
Alcohol, enough to make.....	1000.0	grams

Acid Dentrifice Powder.

Cream of tartar,	
Sugar of milk, of each.....	200.0 grams
Carmin.....	0.4 grams
Oil of peppermint.....	1.0 gram

Kamala Tablets.

Kamala.....	25.0	grams
Sugar, powdered.....	30.0	grams
Acacia, powdered.....		
Chocolate, of each.....	10.0	grams
Distilled water (q. s., or).....	1.5	grams

Make into a mass and divide into 100 lozenges.

Wine of Creosote.

Creosote.....	10	parts
Tincture of gentian.....	25	parts
Alcohol, 90 per cent.....	250	parts
Sherry wine, q. s. to make.....	1000	parts

Compound Syrup of Walnut.

Extract walnut leaves.....	20	parts
Extract cinchona.....	10	parts
Alcohol.....	20	parts
Sherry wine.....	30	parts
Potassium iodide.....	5	parts
Oil-sugar (anise).....	15	parts
Syrup.....	900	parts

Sweet Tincture (Goldtropfen).

Solution potassium acetate.....	30	grams
Spirit of acetic ether.....	20	grams
Spirit of chloric ether.....	60	grams
Tincture of caramel.....	25	grams
Syrup.....	75	grams
Alcohol, 95 per cent.....	400	grams

Cosmetic Water.

Solution potassium carbonate.....	
Tincture of benzoin, of each.....	15 grams
Spirit of camphor.....	3 grams
Cologne.....	820 grams
Distilled water.....	150 grams

Mix and filter. Add one teaspoonful to wash water.

Violet Pomade.

Lard.....	950	grams
White wax.....	50	grams
Jasmine pomade.....	30	grams
Cumarin.....	0.03	grams
Hellotropin.....	0.05	grams
Oil of rose.....	5	drops
Oil of orris.....	2	drops
Oil of bergamot.....	2	drops

Violet Powder.

Orris root.....	600	grams
Wheat starch.....	300	grams
Zinc oxide.....	100	grams
Spirit of jasmine.....	15	grams
Oil of bergamot.....	10	drops
Oil of lemon.....	10	drops
Oil of rose.....	10	drops
Oil of orange flowers.....	10	drops

Syrup of Iodine.

Iodine.....	1	gram
Potassium iodide.....	1	gram
Glycerin.....	5-10	grams
Citric acid.....	15	grams
Syrup.....	1000	grams

Artificial Strawberry Essence.

Amyl acetate.....	25.0	grams
Acetic ether.....	2.5	grams
Dilute alcohol.....	225.0	grams
Tincture of orris.....	150.0	grams

EXAMINATION OF ANTIPYRINE FOR ANTIFEBRIN, PHENACETIN AND EXALGIN.—By boiling with concentrated phosphoric acid (sp. gr. 1.7), the anilides, antifebrin and phenacetin are "saponified." In presence of these compounds, acetic acid is first developed, and very small quantities can be recognized by the odor. Antipyrine colors the phosphoric acid mixture golden yellow, gradually changing to brownish yellow. Antifebrin colors it faintly yellow, on further boiling, brown. By phenacetine the solution is first colored rose, then brownish red, changing through reddish violet, and bluish green, to a dirty green. The appearance of the violet color is specially characteristic of phenacetine.

Antifebrin and phenacetine are distinguished by their behavior on saponification with caustic potash, the operation being carried out in a test tube with a few grams of substance and 2 to 4 c.c. of concentrated aqueous solution of potash. The test tube is closed by a rubber stopper and connected by a piece of glass tubing bent in the form of a hook, with a second test tube containing 1-3 c. c. of clear solution of chloride of lime. In presence of antifebrin the first drops of distillate give the well known violet coloration caused by aniline. In the absence of antifebrin and presence of phenacetine, the first drops give no coloration, but later a brick-red turbidity due to phenetidine is produced. Finally, an amorphous red substance separates out on the surface of the liquid, which, after some time, is clear yellow. If the receiving test tube is changed, the two reactions, the violet coloration, and the separation of phenetidine may be successively observed. On boiling a mixture of phenacetine and antipyrine with potash, the distillate does not give with the chloride of lime solution, the red coloration characteristic of phenacetine, but the solution becomes yellowish green, and then yellowish gray; with antipyrine alone, the chloride of lime solution remains colorless.

Exalgin, on boiling with phosphoric acid, readily gives off acetic acid; the phosphoric acid mixture becomes colored an intense golden yellow. On boiling with potash, the methylaniline separated, distills over in oily drops, which collect on the surface of the chloride of lime solution, being colored first green, then grayish green, and finally a dirty green. The author, in opposition to Fischer's statement (*Die neuen Arzneimittel*, 4 Aufl. 120), found that exalgin is readily saponified by alkali.

Quinine on boiling with potash, gives no volatile products which alter the chloride of lime solution. Boiled with phosphoric acid, the mixture becomes first yellow with intense "yellow-bluish green" fluorescence, and then becomes rapidly dirty brown and opaque. The presence of anilides in quinine may be detected by the method described above.

Traces of p-amidophenol in phenacetine, antifebrin, etc., may be recognized by the solution in cold phosphoric acid turning intensely violet, while the latter substances dissolve to a colorless solution in the cold.—(*Jour. Soc. Chem. Ind.*).

EFFECT OF SACCHARIN ON DIGESTION.—Nencki, of St. Petersburg, and Berlioz, of Grenoble, have found that the presence of saccharin had no retarding effect on the digestion of albumin in flasks by extracts of pepsin and pancreatic ferment. They conclude from these results that saccharin is not injurious to health in the proportion used to produce sweetness, and its use should not be restricted by law. Windisch (*Jour. Soc. Chem. Ind.*) ridicules the assumption that conditions in a laboratory flask with enzyme solutions of given concentration can be compared with those prevalent within the organism. The secretion of these enzymes is a result of nerve activity which may be influenced by saccharin, and nothing is known of their concentration in the body. Arguing on the above lines it might plausibly be concluded that, because the action of enzymes is not restricted by chloroform, which is generally added in experiments of this class, chloroform is not injurious to health, whereas one of its effects is a great derangement of the digestive functions. Moreover, the experiments cited above really showed a very considerable diminution of digested albumin in presence of saccharin when the strength of the pepsin solution used was "too weak." This was remedied by increasing the strength of the pepsin solution, but Windisch enquires, How is such increase to be effected in the human body?

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Antipyrin and Syrup of Wild Cherry.—(O. F. N.) The incompatibility of antipyrin with syrup of wild cherry is due to the tannin in the latter. Upon standing a day or so a mixture of this character deposits a brown precipitate, the syrup of wild cherry becoming very light or amber colored.

Removing Hydrastis Stains.—(B. R.) Hydrastis stains may be removed from linen or white cotton fabrics by bleaching with Labarraque's solution or Javelle water, then washing out with warm soap suds or ammonia water. The treatment necessary to remove these stains from colored fabrics can only be determined by careful experiment.

Base for a Family Salve.—(C. T. K.) wants a base for a family salve. He has tried petrolatum, but it becomes too soft in warm weather. He has also tried it mixed with paraffin but does not like it on account of the granular formation.

An ointment base of almost any desired consistence may be obtained by using a petrolatum of a high melting point, such as is described in the dispensaries under "hard petrolatum." Ordinary petrolatum may also be hardened by incorporating with it a suitable amount of yellow wax. The simple cerate of the Pharmacopœia is a most desirable base for a family or household ointment.

Dose of Santonin and Calomel.—(W. H. R.) asks what is the proper dose for children of a tablet composed of $\frac{1}{2}$ grain santonin and $\frac{1}{2}$ grain calomel.

As usually prescribed one or two tablets, according to age, are directed to be taken every two hours until cathartic action is produced. However, the administration of santonin to children should be carefully watched. Some authorities are of the opinion that it should be prescribed in doses not larger at first than 1 grain for adults and $\frac{1}{4}$ grain for children, and ought to be taken at night, both because its action upon the parasites is less interfered with by food at that time, and because the yellow vision which it may occasion will not then be a source of so much annoyance. Many cases have been reported in which decidedly poisonous effects have arisen from the administration of comparatively small doses of santonin and you will do well to read up the subject in one of the dispensaries.

Balsam of Copaliba and Tincture of Iron.—(J. B.) asks criticism upon the following:

Balsam of copaliba,
Spirit of nitrous ether,
Compound spirit of lavender,
Tincture of ferric chloride, of each... 1 ounce.

As the prescription stands a satisfactory mixture cannot be made. Balsam of copaliba does not form a miscible liquid with the other ingredients. Spirit of nitrous ether is decomposed when mixed with the acid tincture of ferric chloride. It is possible to make a presentable "shake mixture" by the addition of considerable mucilage of acacia and syrup, first taking care to dilute the several constituents separately with the syrup before adding them to the mucilage. In this way the syrup acts as a "protective" agent and prevents the formation of a jelly-like mass. Of course the addition of the mucilage and syrup increases the quantity of the mixture and no such modification of the formula should be attempted without consulting the prescriber.

Ka-No-Ma.—(L. W.) received the following prescription: B

S. E. Ka-no-ma.....	1½ gr.
" " Muirpuama	1¼ gr.
" " Hangnon	¾ gr.
" " Aurum et Sodii.....	¼ gr.

Dose, 1 to 2 after each meal.

J. A. P., M. D.

He says he translated the names of the last three ingredients as solid extracts of muirpuama and hoangnan and chloride of gold and sodium, but was unable to determine the identity of the first substance. He did not compound the prescription, but told the customer the writer thereof was a "fake" and lacked the sense to "belt a buzzard."

This prescription has all of the indications of a fake and the style in which it is written proclaims it to be the work of some "quack" physician. We do not know what is meant by "Ka-no-ma" nor can we find anyone in the trade who is able to identify it.

Chlorinated Lime and Calcium Chloride.—(J. B.)

The Pharmacopœia defines "chlorinated lime" as a "compound resulting from the action of chlorine upon calcium hydrate, and containing not less than 35 per cent. of available chlorine" and further that "this preparation is often improperly called 'chloride of lime.'" The latter term was probably given to it long before the chemical nature of the manufacturing process was understood. The true calcium chloride is the salt $\text{CaCl}_2 \cdot 2\text{H}_2\text{O}$, formed by neutralizing hydrochloric acid with calcium carbonate. In practice, however, calcium chloride is obtained, in a crude state, as a by product in different chemical operations. The Pharmacopœia recognizes only the anhydrous salt which is prepared by fusion. This compound is employed in pharmacy chiefly as a desiccating agent, while the crystallized salt is used as a reagent in analytical chemistry. See U. S. P. calcium chloride test solution (No. 23.)

Carbonated Ginger Ale.—(L.) Various formulas have been published in this journal. Consult the indexes. Here are some others: (1) Tincture of ginger, U. S. P., 7 fl. ounces; tincture of capsicum, 3 fl. ounces; oil of lemon, fresh, 1 fl. dram; solution of citric acid, 4 fl. ounces; sugar, 10 pounds; water enough to make 10 gallons. Mix in the usual manner and charge with carbonic acid gas not to exceed 150 pounds pressure. (2) Cinnamon, 1 ounce; cloves, 3 drams; cardamom seed, ½ ounce; capsicum, 1 dram; soluble extract of ginger, 2 pints. Macerate four days and filter. Color with caramel. Add 1½ ounces of this essence to 1½ gallons of syrup and enough water to make 10 gallons, then charge with carbonic acid gas, as above. Or the following extemporaneous method may be employed: (3) Into a suitable bottle, having the capacity of about 12 ounces, put
Syrup of ginger..... 1 fl. ounce.
Syrup of lemon..... 2 fl. drams.
Carbonated water, sufficient to fill the bottle.

Close the latter instantly, and secure the cork with twine or wire.

Patent Leather Enamel.—(H. T. S.) The Era Formula gives the following: Four ounces of shellac, ½ ounce of camphor, and 1 ounce of resin are dissolved in 1 pint of methylated spirit and shaken at intervals for 48 hours. The mixture is then colored according to the kind of leather with which it is to be used. Other resins, solvents and proportions may be adopted.

(2) Asphaltum, 150 parts; boiled linseed oil, 3 parts; turpentine, 33 parts; benzine, 20 parts. Melt the asphaltum in the oil and add thinners.

(3) Old faded and cracked carriage tops may be restored by first washing with warm water and afterwards thoroughly drying, then with a sponge give one or two coats of the following carriage top dressing:

Nutgalls	4 ounces.
Logwood	1 ounce.
Copperas	1 ounce.
Clean iron filings.....	1 ounce.
Sumach berries	1 ounce.

Put all but the iron filings and copperas in 1 quart of the best white wine vinegar and heat nearly to the boiling point, then add the copperas and iron filings. Let them stand for 24 hours and strain off the liquid; apply with a sponge. When dry, apply one coat of lampblack,

using oil or varnish enough to give a gloss. "Moss" off when dry and give a coat of drop black mixed a little quicker than the first coat. Follow with another coat having a little coach japan in it.

Potassium Acetate and Solution of Iron and Ammonium Acetate.—(Subscriber.) Submits the following:

Potassium acetate.....	2 ounces.
Solution of iron and ammonium acetate	8 ounces.

He says the prescription was formerly compounded in Philadelphia, a clear solution being always obtained. He put up the mixture but was unable to get a like result. What is the difficulty?

Potassium acetate in the above proportions should dissolve in solution of iron and ammonium acetate without precipitation and we know of no reason why a clear mixture should not be obtained, providing the substances prescribed answered the official requirements. Of course, if the potassium acetate should be alkaline and the solution of iron and ammonium acetate neutral in reaction, a precipitate of iron would occur, but under ordinary circumstances such a condition is hardly probable. We think if you will make up a new lot of the solution, keeping it slightly acid in reaction, that you will have no difficulty in obtaining a clear mixture.

Liquid Depilatory.—(Clayton.) We know of no satisfactory formula for a depilatory in liquid form containing one of the sulphides. All of the depilatories depending for their action upon the presence of a sulphide and a caustic alkali are applied as a paste freshly prepared. A typical formula is the following from Martindale: Barium sulphide (in fine powder), 1 to 3 parts; powdered starch, 3 parts. Mix. Make into a paste with water at the time of using, spread over the part required, and remove at the end of five or ten minutes. In a similar manner Queirel has found calcium sulphide extremely useful in removing hair, especially from the field of surgical operations. The calcium sulphide is applied in a thin layer like a paste and rinsed off with tepid water in five minutes, rubbing lightly with a cloth. The hairs wash off with it, leaving the surface smooth, without irritation or inconvenience of any kind, except the rather unpleasant odor of the sulphide, which can be disguised if wished. The hair soon starts to grow again, however. The following, from the Pharm. Post, is a formula for a

Liquid Depilatory.

Tincture iodine	6 parts.
Oil turpentine	6 parts.
Castor oil	8 parts.
Alcohol	48 parts.
Collodion	100 parts.

To be used once or twice daily for 3 or 4 days. The film formed is then pulled off rapidly, so as to take the hair with it.

Corrosive Sublimate, Iodine and Potassium Iodide.—(I. H.) asks if the following prescription should be dispensed:

Corrosive sublimate	2 grains.
Iodine, pure	4 grains.
Potassium iodide	4 drams.
Syrup sarsaparilla, enough to make...	4 ounces.

M. One teaspoonful every four hours.

This prescription is one of a type frequently dispensed. The reaction here is that between potassium iodide and mercuric chloride, mercuric iodide being first formed. This precipitate has the property of dissolving in excess of potassium iodide, or excess of mercuric chloride, forming double compounds. These "doubles iodides" are of somewhat variable composition, but if the potassium iodide has been used in excess, as in this case, the double compound is approximately represented by the formula: $(\text{KI})_2\text{HgI}_2$. The iodine here prescribed is soluble in the solution of potassium iodide. Though the above salts are chemically incompatible, the prescriber doubtless intended the reaction to take place. To compound the prescription triturate the potassium iodide in the syrup until dissolved. Then dissolve the iodine in a little alcohol and add to the syrup, lastly adding the corrosive sublimate previously dissolved in a little water. A precipitation will occur upon allowing the mixture to stand for a time, hence the bottle containing it should be sent out bearing a "shake" label. The prescription is intended for an alterative.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

China.

There are grave fears that Germany, by making demands that China will not grant, is trying to bring on a war that will result in the dismemberment of the Chinese Empire, and the annexation of several provinces to Germany.

Germany's present demand is that China shall surrender to the Allied Powers for punishment all such persons as the Powers believe to be guilty of instigating the Boxer outbreak. As this would probably include the Dowager Empress, Prince Tuan, Prince Ching and most of the royal court, it is not believed that China would grant the request.

The United States and England have declined to act with Germany in the proposed demand, but it is reported that Russia, France and Japan would be glad to join Germany in provoking war and partitioning China.

Russia has issued a proclamation annexing the greater part of Manchuria to her empire and announcing that it is intended as a punishment for the Chinese raids into Russian territory along the Amur River.

Russian troops, so the correspondents in China report, hold all the strongholds from Taku to Peking, and Russia will never leave unless forced to do so by the other Powers.

Our government has ordered General Chaffee to send most of our troops to Manila, retaining only 2,000 in China to act as a strong legation guard. Our authorities fear that if we have a large force in China the United States might be drawn into undesirable diplomatic entanglements.

That the officers and men in the German army are firm in the belief that war is imminent between Germany and China is reflected in the unusual number of applications which have been made to a life insurance company in New York for policies on their lives. Hundreds of applications have been received through a Berlin agency.

It is reported that Russia has offered to advance money to China to repay the British loan.

The Austrian Admiralty has received a despatch from Taku giving the strength of the forces landed there by the Allied Powers as follows: Austrian, 494; German, 8,178; British, 8,353; American, 5,608; French, 6,575; Italian, 2,511; Russian, 20,934; Japanese, 15,570; total, 68,253.

The Russians in China are inaugurating a Red Cross hospital under the patronage of the Czarina. The institution will be open to soldiers of all nationalities.

South Africa.

Great Britain has warned the Government of Holland that if Kruger be allowed to carry bullion or State archives on a Dutch warship it will be regarded by England as a breach of neutrality.

The Boers attacked Paget's force at Pienaar's River last week, but were repulsed after a three hours' fight; Hellbron, Reltz and Lindley have been reoccupied.

The Philippines.

General MacArthur cables from Manila that on September 11 Captain Shields, with fifty-one men of Company F, Twenty-ninth Volunteer Infantry, left Santa Cruz for Torrijos. Nothing has been heard from them since, and it is supposed that the entire party, including Capt. Shields, has been captured, with many killed and wounded.

A Manila despatch says that Senor Aroley, the chief justice; Senor Leon Pepperman, the recorder; Mr. Schurman, Judge Taft and Mr. Higgins have been appointed Commissioners of the Philippine Civil Service.

Other Foreign News.

The Japanese Cabinet has resigned and Marquis Ito will probably succeed to the Premiership.

Charles T. Yerkes, formerly owner of the Chicago Street Railroad, has secured a valuable charter in London and will build an underground rapid transit road there, colon advised, by way of Kingston, Jamaica, say that there has been a renewal of hostilities between the insurgents and Government troops near Panama.

The Fiji Islands are taking steps to federate with New Zealand.

The storm which wrecked Galveston reached Iceland last week, causing the death of several persons, driving

ships ashore and doing great damage to property. The floods in India are abating.

DOMESTIC.

The Great Coal Strike.

The coal operators, it is said, are willing to grant the striking miners an advance of ten per cent. in wages. Many believe that the miners will accept the concession and return to work.

The virtual surrender of the coal operators is said to be due to the efforts of Senator Hanna, who feared that riots might break out in the coal regions, that troops would be sent to put them down, as was done in the Chicago railroad strike, that this would send the labor vote to Bryan, and that McKinley would be defeated as Cleveland was after the use of troops in Chicago. The announcement of the concession by the coal operators, at any rate, immediately followed a visit by Mr. Hanna to the coal and railroad magnates in New York.

The coal strike has brought to light the important fact that 72 per cent. of the hard coal fields in Pennsylvania are owned by nine railroad companies, which act in concert to keep the freight rates on hard coal up to an exorbitant figure. This allows them to squeeze the small independent operators to the wall on the one hand by the exorbitant freight charges, and to charge unreasonable prices to the consumer on the other hand, alleging as an excuse that freight rates compel them to put up the prices. As the combination own the railroads, the high rates are simply paid into their own pockets. It is said that out of \$5 paid for a ton of hard coal, \$3 is paid for hauling it to market.

The coal operators were strongly influenced in their decision to grant the miners' demands by the fact that soft coal is capturing part of the hard coal market during the strike, and the operators fear that if the strike should be prolonged they would be unable to win their old markets back again.

Politics.

A crowd of roughs attempted to mob Governor Roosevelt after his speech at Victor, Colorado, last week, but a circle of his friends protected him from serious injury. The affair has created a considerable stir, and the Democratic leaders promptly disavowed the act and condemned the perpetrators as enemies of the party.

Mr. Bryan, upon hearing of the attack upon Governor Roosevelt in Colorado requested his friends in Lincoln, Nebraska, to remove his pictures from the store windows when the Governor visited Lincoln, as a mark of courtesy.

Mr. Bryan started last week on a stumping tour that will last until Saturday before election day.

The Prohibitionist candidates are touring the Middle West on a special train.

Harmony on the Republican State ticket in Delaware was assured last week when the Union Republican State Committee accepted the compromise ticket selected by the Republican (anti-Addicks) State Committee two weeks ago. The Union Republicans have accepted Dr. Ball as the compromise candidate for Congress.

After conferring with the Republican campaign managers in Chicago, Gen. Russell A. Alger announced that it had been decided that he should devote all his time to campaigning in Michigan for McKinley and Roosevelt.

Senator Hanna enlivened the political campaign in New York last week by several stump speeches, frequently interrupted by remarks from Democratic listeners.

Adlai E. Stevenson has written a letter accepting the place on the Populist National ticket vacated by Mr. Towne.

Other Domestic News.

Memphis is now the third city in the South, and celebrated the event last Thursday night with a street demonstration. Its population of 102,320 is only exceeded by New Orleans and Louisville.

Santiago has passed through the summer without a single case of yellow fever for the first time in the memory of the oldest inhabitant.

The annual report on public works in Cuba plans for new roads in the island at a cost of \$13,000,000. This is more than the total cost of all the roads now existing in the island.

It is said that the railroads entering Galveston have reached an agreement by means of which a corporation has been formed for the construction of an elaborate steel bridge from the main land to the island to be used jointly by the various lines.

The report of Commissioner of Immigration Fritchie, of New York, shows that the arrivals of foreigners the last fiscal year were 400,842. The immigration from Southern Europe shows an increase, while from the northern countries it is decreasing. The greater the illiteracy the smaller the amount of money brought. Our best immigrants come from Northern Europe. Those from Southern Europe are usually very undesirable.

The Rapid Transit Commissioners in New York have decided to extend the new rapid transit tunnel under the East River to Brooklyn. It will probably not be completed before 1905.

A despatch from Fort Worth, Texas, says that the losses caused by the storms and floods in various sections of the State since the Galveston disaster are estimated at \$1,000,000. The rivers are still rising.

A notable dramatic performance is being arranged in

London for the benefit of the Galveston sufferers. General John M. Palmer, who headed the Gold Democratic ticket four years ago, died last week. With the death of General Palmer, Mr. Sewall and Mr. Hobart, each of the three leading tickets of 1896 has lost one of its members.

Senor Rafael Cruz Perez, of the Cuban Supreme Court, has been appointed Chief Justice of that tribunal in succession to Senor Antonio Gonzales de Mendoza.

THE DRUG NEWS.

NATIONAL WHOLESALE DRUGGISTS' ASSOCIATION.

COMMITTEE ON PROPRIETARY GOODS.

Kansas City, Mo., Sept. 26, 1900.

To the Trade:

Following an established custom, I send herewith copy of the resolutions adopted at the Chicago meeting of the N. W. D. A. last week in connection with the Proprietary Committee's report.

The office of chairman of the Proprietary Committee, which it was my pleasure to occupy for a period of three years, has by me been relinquished, and Mr. C. F. Shoemaker, of Shoemaker & Busch, Philadelphia, was at the recent meeting chosen as my successor, receiving the unanimous vote of the convention. Mr. Shoemaker is admirably equipped in every way for the duties of the position, and will only require the cordial support that has been accorded me to make his administration successful and satisfactory.

The work of the committee will, by October 1, be transferred to Philadelphia, and all correspondence in connection therewith should be addressed to Mr. Shoemaker at 602 Arch street.

Mr. J. E. Toms, who has served the committee as its secretary for more than four years, will also remove to Philadelphia, thus giving to the new chairman the benefit of his experience, and his knowledge of the status of the work and all correspondence in connection therewith up to the time of Mr. Shoemaker's election.

The services of Mr. F. E. Holliday have been reengaged, and he will continue in his special field of work as during the past year. His address from this time on will be the same as Mr. Shoemaker's.

In retiring from the chairmanship, I wish to express my deep appreciation of the courtesies extended me by jobbers, proprietors and retailers—all with whom my official duties have brought me in contact. These have been my compensation and they are sufficient.

Very truly yours,

FRANK A. FAXON.

Resolutions adopted by the N. W. D. A. in connection with the report of the Committee on Proprietary Goods:

1. Resolved, That we reaffirm the action of the Association a year ago as expressed in the following resolutions:

"Resolved, That as it is as much for the interest of the manufacturer as the jobber that the contract plan should be continued, the active interest of both the manufacturer and the jobber should be secured.

"Resolved, That the strength of the contract system lies in the manufacturers adhering to a recognized list of wholesale distributors, to whom sales at their largest quantity discount should be restricted.

"Resolved, That the chairman of the Proprietary Committee be requested to secure the acquiescence of each proprietor who sells his goods on the contract plan, to such a list.

Resolved, That the chairman of the Proprietary Committee be given control of sufficient funds to investigate all reported violations of rebate terms, with power to take such action as may be proper in the premises.

"Resolved, That the recommendation made in the report that the rebate on leading proprietary articles be withheld for three months be favorably recommended for consideration, provided the other work contemplated by the committee does not result in a more thorough control of rebated articles."

2. Resolved, That the thanks of this Association be extended to those proprietors who made the tripartite

plan possible by their ready acceptance of the conditions of the same.

3. That those proprietors who have as yet neglected to accept the new plan be respectfully urged to do so at an early date.

4. Resolved, That it is the urgent recommendation of this Association that every wholesale druggist in the country, in or out of this organization, co-operate in every reasonable manner with the retail trade in its efforts to secure protection by the operation of the tripartite plan.

5. Resolved, That the incoming Proprietary Committee is hereby instructed to issue a revised edition of the Rebate List at the earliest practicable time.

A FINE (?) DISPLAY OF ENGLISH.

Santiago, Chili, is to have a Latin-American Medical Congress during the coming December, and by way of conveying to the American medical profession some idea of the high regard entertained by the South Americans toward them, the Chilians have arranged an International Exposition of Hygiene, Pharmacy and Dentistry. So far everything is perfection, but when the Chilians issued the program of their part in the show it was truly the best example of "English as she is spoke" seen in many a day. Here is a sample: "Under the protection of the Chilian Government and by occasion of the Latin Medical Congress, which is going to be congregated in Santiago in Chili on the 25th December, 1900, it will also be opened as an exposition of hygiene, pharmacy and dentistics, with the following programm."

"Rage. Serie of the marrows of the antiragical vaccine by the metod of Pasteur. Model of a kennel to keep the dogs that don't carry a muzzle." "Rage" is undoubtedly meant for rabies, but the Chilians mistook it as a synonym for madness. About the worst jumble of English appears in the "advertisement to the exponents." It is as follows: "It is beg to observe specially that part of the ordinance relative to the datum in which the term for the admission solicitudes expires, and that one relative to the installations in the place which will be oportunely designed. It is beg to the persons who take interest to concur to this concourse to present their solicitudes as soon as possible in order to reserve them the space that their installations need."

FIFTY DRUGGISTS WITNESSES.

Trial of Howells, Accused of Forging Peruna Trade Mark.

Wilkesbarre, Pa., Sept. 27.—A case involving more than fifty druggists in all parts of the country was on trial before Judge Halsey to-day. M. H. Howells is charged with forging trade marks and labels and using bottles similar to those of the Peruna Manufacturing Co., of Columbus, O., and placing a compound prepared by himself upon the markets as Peruna. Similar suits have been commenced by manufacturers of other patent medicines.

It is charged that Howells readily sold his preparation to druggists in all parts of the country, because his prices were 25 per cent. less than the trade prices.

He was arrested here several months ago and has been in jail ever since. A partner named Quackenboss, arrested at the same time, is in the Scranton jail.

About fifty druggists were present as witnesses. They were from this city, Scranton, Forty Fort, Allentown, Reading, Lebanon, Harrisburg, Milton, Williamsport, York, Lancaster, Norristown, Baltimore, Binghamton, Pittsburg, Philadelphia, Harrisburg, Columbus, O.; Cleveland, Boston and Lynn, Mass. The trial will take several days.

THE ENTERTAINMENT FEATURES OF THE CHICAGO CONVENTIONS.

On Monday evening, September 17, an informal reception was given in the parlors of the Auditorium. A miscellaneous program was highly enjoyed. The Lotus Quartette discoursed a number of sweet songs, and Mrs. Isabel Garghill Beecher, a most accomplished reader, read selections from the writings of Thomas Nelson Page and other authors in delightful fashion, much to the enjoyment of her audience. Mrs. Beecher was given several encores.

Miss Grace Florence Schneider, of Troy, N. Y., proved a most pleasing singer. Her voice is full, sweet and strong, and both her voice and her winning personality so captivated those who heard her that she was encored repeatedly.

During the intervals between the numbers a very good string band spun a fine thread of music through the conversation that flooded the room. About 200 persons were present.

The automobile ride tendered to the ladies on Tuesday morning was lots of fun, they all said. The autos—or some of them—gave out in the neighborhood of 51st street and the occupants were compelled to ride back to the hotel on a street car. This accident added very much to the gaiety of the occasion, but the reputation of the automobile as a reliable means of locomotion suffered a severe blow.

In the evening a reception was tendered to President Frisbie, of the N. W. D. A. and Dr. V. Mott Pierce, of the Proprietary Association, in the Auditorium parlors. About 250 persons were present and the affair was most enjoyable. The ladies of the reception committee were Mesdames G. H. Ball, Marble, Remick, Kathrens, Matthews, Kenfield and Searle. To them is due much of the success which this and other exclusively social functions achieved.

On Wednesday afternoon the members and their ladies, on the invitation of the Armour Packing Company, boarded a special train to the stock yards and were shown through the immense plant of that establishment. All the various processes in vogue from the killing of the animals to the final curing and preparation of the meat for market were shown and explained. The occasion was both interesting and instructive, and was one calculated to remove any prejudice which one might entertain as to the cleanliness with which the work is performed. Everything seems to be as neat as it could possibly be in such an establishment.

In the evening an opera party enjoyed the performance in the Studebaker Theatre. The opera "A Trip to Africa," was given by the Castle Square Company.

The entertainment features for Thursday evening consisted in a banquet at the Auditorium, given by the members of the two associations, and a musicale in the hotel parlors, tendered to the ladies. Both were successful in an eminent degree. The toasts and speakers at the banquet were as follows:

"The Mirth Cure," Rev. Frank Crane.

"The National Wholesale Druggists' Association," W. J. Walker.

"The Proprietary Association of America," Dr. V. Mott Pierce.

"The Flag," Edward C. Frisbie.

"Let Us Take Our Medicine," Col. Clark E. Carr.

"The Pharmaceutical Press," Joseph Helfman.

"The Ladies," M. Carey Peter.

Thomas P. Cook presided as toastmaster.

After the edibles and drinkables had been consumed and the ladies from their musicale and refreshments below had ascended to the banquet hall, the toastmaster in a witty speech introduced the Rev. Dr. Frank Crane. Dr. Crane was in his best form and convulsed his hearers with the wit and quaint humor of his remarks.

Mr. Walker, in response to the toast, "The National Wholesale Druggists' Association," expressed his appreciation of the honor conferred upon him and in fitting terms outlined the history and designs of the Association.

Dr. V. Mott Pierce, responding to the toast, "The Proprietary Association," made a witty speech congratulating those present upon their choice of a meeting place. In humorous vein he outlined the difference between

these festal occasions and those of pure business when members met to transact affairs concerning laws and cents. He closed with a glowing tribute to united action and to expansion commercial and territorial.

Mr. Frisbie's speech on "The Flag" was an elegant tribute to the starry emblem we all love, and was received with enthusiasm.

A telegram from Senator Thurston announced that owing to the arrival of an infant daughter he would be unable to be present. This announcement evoked cheers for the infant daughter and a telegram of congratulation was sent to Senator and Mrs. Thurston. Col. Clark E. Carr then responded wittily and eloquently to the Senator's toast.

"The Pharmacal Press" was given a very fine and scholarly tribute by Joseph Helfman, one of the most brilliant of the exponents of trade journalism. M. Carey Peter, of Louisville, brought down the house in his toast to the ladies. His speech was witty, gallant and to the point, and if Mr. Peter's reputation as an orator was not before assured it is now in the minds of all who heard his neat and eloquent tribute to the gentle sex.

After speeches from several other gentlemen the banqueters adjourned.

The lake trip on Friday morning was taken as per program. The steamer Manitou was full of life and bustle as she moved from the dock. Dinner was given the members and ladies at the Plankinton House in Milwaukee by the druggists and newspapers of that city, and a drive was taken, a visit to Pabst Brewery and other points of interest. The party returned on the boat that night, arriving in Chicago Saturday morning.

ENTERTAINMENTS OF N. A. R. D. WEEK.

As a convention city, Detroit possesses many attractions. The beautiful river flowing by her gates, her parks and the warm welcome extended by her citizens all tend to make the visitor long remember his stay. The hospitality extended to delegates attending the second annual meeting of the National Association of Retail Druggists, held in that City September 12 to 14, was most generous and heartily appreciated by every one. The entertainment programme included a smoker and vaudeville entertainment at the Fenowcraft Club, Wednesday evening, at the close of the first day's session. On Thursday the ladies were taken out for a carriage drive around the city and to Belle Isle Park. On the return a stop was made at the laboratories of Frederick Stearns & Co., where they were received by the members of the firm and the heads of the departments and shown some of the most interesting features of the plant, as recorded in this journal September 20, 1900, page 321. In the evening the ladies attended a theatre party.

On the same afternoon the gentlemen of the association were taken in charge by the representatives of Parke, Davis & Co., the remainder of the day being devoted to a visit of inspection through the laboratories and a trip on the river as the guests of that house. At 1.30 p. m. a start was made from the Russell House, the headquarters of the association, for Parke, Davis & Co.'s, the trip being made up the river on the commodious steamer Pleasure. At the laboratories the guests were warmly received by the general manager, William M. Warren; the secretary, H. A. Wetzel, and John C. Spratt, of the general business department. The visitors were then taken in charge by a large committee of department chiefs and conducted through the pharmaceutical and biological laboratories, the various manufacturing operations conducted on a mammoth scale were fully displayed, and every opportunity was given to the visitors to inspect the intricate details of laboratory work and equipment.

The department which aroused the greatest interest was that where the biological laboratories and stables are housed. Here horses for the production of antitoxin are cared for, and the various steps taken for the manufacture of curative serums. The magnitude of this department may be indicated by a statement of the facilities needed in the operation of this branch of Parke, Davis & Co.'s enormous business. Over 5,000 animals are always kept on hand, a veritable menagerie, in-

cluding guinea pigs and frogs, rabbits, white mice, pigeons, dogs and roosters, besides a large number of heifers used in the production of vaccine virus. It is understood, of course, that many of these animals are employed in testing the physiological effect of drugs, a department of investigation in which the experts of Parke, Davis & Co. have done some particularly valuable work.

Following the long tramp through the laboratories, the visitors were accorded an exhibition by Parke, Davis & Co.'s fire department, the sixty members thereof doing their work with the precision of veterans, all

parts of the various buildings being covered with five large streams of water in less time than one needs to write about it.

On returning to the steamer, a sail was taken up the river past Belle Isle Park, situated on a beautiful island in the center of the river, and across Lake St. Clair. A luncheon was served during the return trip, the boat reaching the city about 10.30 p. m., when the crowd dispersed, every individual feeling that he had enjoyed a most pleasant outing, and voting that he had never had a better time or received more lavish entertainment.

New York and Vicinity.

THE REGISTRY OF CARBOLIC ACID SALE AGAIN IN COURT—PENAL CODE SUSTAINED.

The interesting complex question arising from the conflict of the pharmacy law, the charter of Greater New York, with the Penal Code in relation to the registering of poisons and poisonous substances, came up for settlement in Part I. of the Court of Special Sessions, Thursday, September 20 and, as has been the case heretofore, was decided according to the provisions of the Penal Code which requires that all poisons and poisonous substances shall be registered. The case was put down on the calendar as the People against Harry Goldfarb. Goldfarb is a clerk for Alexander Goldman, druggist, corner Monroe and Market streets. Recently a man came in Mr. Goldman's store and asked for carbolic acid for cleaning purposes and was given crude carbolic acid. He had been sent by his employer, who came to the drug store with the carbolic acid and demanded why the man had not been given oxalic acid. It was explained that oxalic acid had not been called for and the man left vowing vengeance. Later Goldfarb was arrested. He was defended by Robert Mazet, who took the stand that crude carbolic acid, in a 5 per cent. solution the amount given, was not a poisonous substance, also that the pharmacy law, the charter of Greater New York and the new pharmacy law to go in effect January 1, 1901, did not require that carbolic acid be registered. He also claimed that the first two laws were made subsequent to the Penal Code and set aside its provisions. Judges Jacobs, Holbrook and McKeon handed down the opinion that the laws mentioned were applicable in the State only while the Penal Code applied to the United States. They held that all previous decisions had been adverse to the defendants in such cases and they adjudged Goldfarb guilty, but suspended sentence. Mr. Mazet made an able defence of the case. No appeal was taken.

NOTES OF THE DRUG TRADE CLUB.

—A meeting of the club was held yesterday, when a number of members were elected. While it is not possible to state here whether the club has reached its limit of 100, it is safe to assert that it has, as only a few applications were needed at the time of this writing. Hereafter members elected will be placed on the waiting list.

—A number of members of the trade in the West who were in attendance at the convention of the N. W. D. A. in Chicago came on to this city. Those who visited the club included Daniel P. Dougherty, of the Moffit-West Drug Co., St. Louis, and W. A. Hover, of W. A. Hover & Co., Denver, Col.

—Other guests during the week have been Ernst Griebel, Mexico; A. Lennen and J. C. Kaine, of Montreal, Canada.

—P. A. Ramsey, of Port of Spain, Trinidad, registered last week.

BE CAREFUL OF THESE BLANKS.

Dr. J. A. Kerrigan, of No. 455 West 155th street, warns druggists against filling any prescription for morphine or cocaine bearing his name. Dr. Kerrigan says not to give it on his blanks, even when calling for it for his own use and signed by his name. He states he will not prescribe any, and will secure all he needs from his own druggists.

An Excellent Display of Senna.

The firm of A. U. Andrus & Co., dealers in crude drugs at 7 Gold street, have recently imported one of the finest selections of Alexandria senna to be obtained, and have it on exhibition at their warerooms. The collection is the more interesting in that it was procured for the New York Botanical Museum in Bronx Park. The display shows the various stages of growth and preparation of the drug from its native heath to the market. It consists of the dried plant, some in flower, others with matured seed pods, the various grades of leaf shown in the market, whole, broken, siftings and dust, the stems divested of the leaves, roots and even the rejections, showing the various parts of the plant and the commercial products and waste. The firm of Andrus & Company took especial pains to secure the goods, and a large number of the trade have visited the house to view the exhibit.

Woman Nurse and Apothecary Files Claim Against State.

Miss Agnes P. Mahoney, of this city, has filed a claim against the State of New York for \$59 salary. Miss Mahoney enlisted in the State service of the United States Army on Sept. 9, 1898, after leaving a position as apothecary of the Manhattan State Hospital. She is the first woman employee in the State service to take such a step. Her claim is made through the State Court of Claims as due under Chapter 654 of the laws of 1899, which authorize payment during absence in the United States service.

Pugilist in Drug Store.

The drug store of Andrew Hegeman, in Bay Seventeenth street, Bensonhurst, was put in a turmoil one night last week by the one-time champion pugilist, "Jack" McAuliffe. The slugger had been telephoning at another drug store to a woman, and because the wires became crossed he started for Dr. Hegeman's store, where the central office is located. The clerk there, Percy Durham, endeavored to pacify the enraged thug and received a thumping for his pains. Then Mr. Hegeman and his clerk, George Schofield, interfered and they received similar treatment. There were no policemen on hand, but it is safe to say had there been McAuliffe would not have been arrested.

An Old Drug Store Sold.

The well known old drug store lately owned by Charles H. Coe, deceased, at Mann and Minerva streets, Derby, Conn., was recently sold by the administrators to George H. Harding who had been employed in the store since January, 1876. The business is the oldest in the city, having been established in 1845 by G. P. and J. B. Tomlinson, who were succeeded by W. C. Bristol and David Betts, and these in turn by Dr. Ambrose Beardsley, who was bought out by G. H. Colies. Colies was succeeded by George H. Peck, who afterward took George C. Stillson for a partner, but later bought him out. Mr. Coe soon after secured the store.

Boys Stole Soda Water Tank.

For some time complaints of thefts of soda water tanks have been coming in to the police of Williamsburg from John Matthews, soda manufacturer of this city, of thefts of soda water containers, and finally a policeman was detailed on the case. He found three boys in an open lot one evening recently seated round a bonfire, by the light of which they were trying to demolish a soda water tank. The officer nabbed them, and Magistrate Worth held them to investigate their characters, which are said to be bad. The youths admitted the theft, and augmented the confession with several others. They said they sold the metal in the tanks.

Drug Trade Campaign Club.

Noonday meetings will shortly be commenced by the McKinley and Roosevelt and Sound Money Drug, Paint, Oil and Chemical Trades Campaign Club, in the quarters rented at 53 John street, corner Dutch street. Prominent speakers will be present each day.

NOTES.

—The trustees of the Brooklyn College of Pharmacy have arranged to give the students of the college the opportunity of learning something about the business requirements necessary to become a successful pharmacist, and to this end have engaged W. L. Perkins, of the law firm of Perkins & Butler, New York, to deliver a course of lectures on practical business methods. The talks will be given twice each month and will cover such branches of education as are required by the proprietor of every well-kept drug store. The course this year is not obligatory, but is tried as an experiment. All students of the college may attend.

—J. Gaylord Bragdon, of the firm of Bragdon & Co., manufacturing, wholesale and retail druggists of Middletown, Del., was in the city on a brief visit last week. Mr. Bragdon is father of a new idea in soda fountains, of which he speaks with much pride, and he points to the fountain he built in his own store as being without equal in the United States. The fountain is made of plaster of paris and papier mache and it makes a handsome appearance. Mr. Bragdon declares he has had no difficulty in keeping it looking neat and clean and he further states that its power to attract trade is well worth the time and labor spent in its building.

—Among the druggists visitors in this city last week were: Ralph Corbin, Ellenville, N. Y.; C. H. Krauter, Youngstown, O.; C. E. Jones, New Haven, Conn.; B. P. Merry, Archbold, O.; A. Felton Woods, of A. F. Woods' Sons, New Haven, Conn.; G. H. Harding, Derby, Conn.; Wm. Borden, Columbia, N. Y.; Harry Vaughan, Kansas City; Geo. Ross, of Ross Bros., Providence, R. I.; K. I. Hart, Boston; L. E. Davis, Centralia, Pa.; R. M. Hartwell, Louisville; G. Loveland, of G. Loveland & Co., Burlington, Vt.; C. K. Brown, Deposit, N. Y., and G. Katz and A. Rosenfeld, of New Orleans, La.

—The Board of Pharmacy met Monday, September 17, in the Brooklyn College of Pharmacy and examined 76 candidates. The following 24 of the number were successful: Louis V. Campbell, Michael Di Santi, Emiddie Fera Ishi, Jacob Goldblatt, James A. Hunter, John Keelgar, Henry V. Lentz, Saveris Maschia, Louis May, Harry Nevelson, William Roschen, Fraggi Rosenthal, Herman Shekتمان, Jacob Siegmund, Donald B. Sterritt, Gustave Strasslimmer, Charles A. Wittmack, Henry Perkin, Charles Gaer, John Kelley, William Marshall, Samuel Ritter, Morris Spiegelman, Max Wolfram.

—At a meeting of the New York section of the All-State Board of Pharmacy held recently lots were drawn in accordance with the provision of the law creating the board to determine the terms of office of the several members. The following was the result: One year, Sidney Faber; two years, C. O. Bigelow; three years, William Muir; four years, Albert H. Brundage; five years, George C. Dickman. The term of one member of the board thus expires each year and the succeeding member is elected for five years thereafter.

—G. Harold Kent, president of the firm of G. B. Kent & Sons, London, is in this city for a few days. The firm of G. B. Kent & Sons is the largest manufacturer of toilet brushes in the world. Its agents in the United States are McKesson & Robbins, and Mr. Kent is the guest of

John McKesson, of that firm, during his stay here. The firm has recently added another large factory to its already extensive works, and this is under the personal supervision of Mr. Kent. Mr. Kent will return on the Oceanic October 10.

—M. J. Gillisple, manager of the Columbia Drug Co., at Savannah, Ga., was in the city last week. The Columbia Drug Co. is one of the largest houses in the South, and Mr. Gillisple states he is crowded just now to take care of the business the company is doing. He said that in the recent cotton flurries the grower was the person who benefited. He also said that the banks of the South were able this year to advance money to the cotton growers, the first time such a proceeding has been possible since the Civil War.

—The regular monthly meeting of the New York Section of the American Chemical Society will be held in the assembly room of the Chemists' Club at 105 West 53th street, on Friday evening, October 5, 1900, and will be called to order at 8.15 o'clock. The following will be the programme of the evening: (1) C. Glaser, "Dr. Meyer's Tangent System of Sulfuric Acid Manufacture." (2) Wm. H. Bassett, "Note on the Determination of Zinc in the Franklin, New Jersey, Ores by the Ferrocyanide Method."

—Theodore W. Roberts has sold his drug store at Poughkeepsie, known as "The Central Drug Store," to A. Edward Platt, formerly of Orange, N. J. Winthrop E. Simpson, graduate of the New York College of Pharmacy, with whom Mr. Roberts engaged in business in 1885, will be associated with Mr. Platt, and George E. Terwilliger, who has been head clerk in the store for the last six years, will also be retained by the new owner.

—The Smith, Kline & French Co., of Philadelphia, have sent neat notices to the trade in this city requesting that Saturday orders be sent in early. This is done to aid the firm in closing its doors at one o'clock Saturday during the entire year, following the custom of the summer months. It is hinted that a similar movement is to be started here.

—The Munyon Homeopathic Home Remedy Company have moved their general offices from Philadelphia to New York. They will occupy the entire ground floor and basement of the St. James building at Twenty-sixth street and Broadway, for which they will pay \$20,000 a year, according to information furnished by their advertising manager.

—R. E. Meyers, druggist at No. 1114 Amsterdam avenue, has recently returned from an enjoyable vacation of three weeks at Port Jervis, New York. Mr. Meyers was accompanied by his wife and two daughters and they whiled away the time hunting and fishing. It was the first "day off" Mr. Meyers had taken in sixteen months.

—The Pinotis Chemical Company has recently been incorporated under the laws of this State, and will deal in chemicals. The company starts with \$10,000, and the incorporators are Bernard Mizel and E. L. Brownell, of this city and P. J. Walsh, of Guttenberg, N. J. The offices of the concern will be located in this city.

—The Rutherford Pharmacy, at Rutherford, N. J., in which the late Donald L. Cameron held a partnership under the firm name of Cameron & McGee, has returned to the old name of Fred. W. McGee & Company, which it bore before Mr. Cameron became connected with it.

—A. P. Kerley, for many years a member of the firm of A. P. Kerley & Company, at 2035 Broadway, has disposed of his interest in the store to the executors of the estate of his former partner, A. B. Havens, deceased. Mr. Kerley's interest was sold to Mrs. A. B. Havens.

—A meeting of the New York Section of the Society of Chemical Industry, was held at the Drug Trade Club, Thursday, September 27, when matters of interest were discussed. In absence of the chairman, Clifford H. Richardson, Vice-Chairman Dr. Coblenz presided.

—The weekly importations of drugs, chemicals, etc., to this port for the seven days ending Sept. 21, amounted to \$874,980. Brimstone headed the list with an importation of \$96,125. There was carbolic acid to the value of \$2,196 and \$36,136 worth of quinine.

—Nelson S. Kirk has issued the first number of "Kirk's Bulletin" from his drug store, 450 Third avenue. It is a four-page paper and besides containing many nicely worded "advs." for the drug store, gives a number of good stories. It is to appear monthly.

—The Acme Medicine Company, of Buffalo, has incorporated to manufacture and sell chemicals and medicines. The capital stock is given at \$6,000, and the following are the directors: Henry L. Gillette, Davolson D. Clark and Blinn Yates.

—In a few days the firm of Antoine Chiris will change its headquarters from 224-226 Pearl street to 18-20 Platt street, where two buildings have recently been newly fitted up. The change is made by reason of increasing business.

—Prof. George A. Ferguson, of the New York College of Pharmacy is enjoying a vacation at Monroe, Orange County, and Harry B. Ferguson, instructor in materia medica has been visiting his former home in Little Falls, N. Y.

—T. J. Galligan, one of the clerks in Hudnut's Pharmacy on Broadway, near Fulton street, was called to Troy last week by the death of his father. The funeral was held Tuesday, September 25.

—W. J. N. Gervais has recently joined the traveling staff of Lehn & Fink. He was formerly with the Oak Drug Co., in Binghamton, and will travel in the same territory for his new employers.

—W. S. Torrance, of Derby, Conn., has made an assignment in favor of the Home Trust Co., and his store will be sold during the week. The liabilities were \$1,500 and the assets about \$2,500.

—E. W. Ault has recently purchased the store of William Welsenger, at Sixty-fifth street and Second avenue. The store has been refitted and renovated and is handsomely appointed.

—Russel H. Marsh, formerly assistant in the chemical laboratory at the New York College of Pharmacy, was married to Miss Gerken, on Wednesday evening, September 26.

—The first game of the season of the Retail Druggists' Bowling Association was played at Brinkama's alleys at Fifty-seventh street and Sixth avenue last Monday evening.

—The first meeting of the Board of Trustees of the New York College of Pharmacy was held Tuesday evening, October 2, when routine business was transacted.

—Carl Schnackenberg has recently improved the appearance of his store at Eighty-first street and Amsterdam avenue, by the addition of a metal ceiling.

—S. Harkavy, druggist at Broome and Suffolk streets, and one of the popular members of the Retail Druggists' Association, is to be married during the month.

—John Albert, Jr., of 25 First avenue, is confined to his house by typhoid fever. He has gone through the serious stage of his illness and is rapidly recovering.

—P. A. Anderson, of the firm of A. U. Andrews & Co., of 7 Gold street, has returned from a pleasant vacation of two weeks in the Adirondacks.

—Mr. Boyer, formerly with Trunk Bros., druggists, Denver, Col., is in the city for the purpose of pursuing a course in voice culture.

—C. W. Branch, one of the foremost druggists at Inagua, Bahama Islands, was in town last week, it being his first visit to this country.

—David Davidson, formerly at 1135 Second avenue, will open a new store at Seventy-second street and Second avenue about October 15.

—The first meeting of the German Apothecaries' Society following the summer vacation will be held at 192 Third avenue this evening.

—Dr. George W. Thompson, of the Mutual Drug Company, 422 Third avenue, has returned from a three months' sojourn in Europe.

—William Hauenstein has had a new metal ceiling placed in his store at Seventy-eighth street and Amsterdam avenue.

—The third edition of Sadtler and Coblentz's Chemistry revised and rewritten will make its appearance about October 15.

—Bruce C. Hallowell, one of Lehn & Fink's salesmen in Washington and West Virginia, recently spent a few days here.

—James Duggan, of Norwich, Sonn., has sold his store to John Dunn, who was formerly with H. J. Saner, at Norwich.

—A Bermuda druggist, F. W. Grantham, at Hamilton, was among those who visited the trade in this city last week.

—D. Boyer has resigned his position with H. K. Eaton, at Ninety-fourth street and Columbus avenue.

—The Apothecaries Bicycle Club held its weekly run to Morristown, N. J., on Thursday, September 27.

—A. M. Gould, druggist, formerly of Woodbridge, N. J., has purchased a store in Arlington, N. J.

—P. C. Magnus, of the firm of Magnus & Lauer, 92 Pearl street, is in the West on business.

—A. T. Mitchell has secured a position with H. A. Cassebeer, at 257 Columbus avenue.

—James F. Pickett is doing detail work in this city for William R. Warner & Co.

—F. S. Schlauch has accepted a clerkship with F. Haas, at 439 Fifth avenue.

—M. Mayer has recently sold his store at 41 Avenue C to I. Mitchell.

IN AND ABOUT BOSTON.

DEATH OF ALDERMAN FREDERICK W. DAY, A POPULAR DRUGGIST.

Boston, Sept. 29.—Not in a long time has a death in Boston so deeply impressed the entire community as has that of this week of Alderman Frederick W. Day, a popular druggist in the East Boston district. He was ill but a short time previous to his death, which resulted from typhoid fever. Not long before he died, Mr. Day rallied a bit, giving great encouragement to his family and physicians, but their hope was short-lived.

Alderman Day was associated with his father in the drug business at 235 Meridian street, under the firm name of Frederick B. Day & Son. He was born in the East Boston district in 1864, and was graduated from the grammar school in 1879. Later, in 1881, he was graduated from the East Boston High School, and then attended the Massachusetts College of Pharmacy, after graduating from which he entered the wholesale drug commission business, which he left to become associated with his father in the retail business, first as a clerk and later as a partner. In his own ward he was looked upon as really too conscientious to be a politician, and elsewhere he was by every one highly respected and personally liked. Mr. Day, besides being a member of the Board of Aldermen, has been an overseer of the poor and was a Free Mason of high standing. He also was moderator of the East Boston Unitarian Society. As an Alderman he has been a valuable member of many important city committees. Mr. Day left a wife and three children, the youngest of which is only three months old.

Recognition of his death was taken by both branches of the city government, the Common Council and Board of Aldermen both holding special sessions, in which his sterling worth and integrity were shown to have been marked among men of to-day. There has been widespread sorrow and sympathy for his family. For his funeral, a private service of prayer was held at his home, after which a public service followed at the home of his father. Mayor Hart and nearly all the members of this and last year's Board of Aldermen were present, as were delegations from the Masons and the Odd Fellows and other organizations to which he had belonged. The burial was in Woodlawn Cemetery. During the hours of the services the City Hall was closed to the public and the flag on the building floated at half staff as a mark of respect to the dead druggist.

American Soda Fountains Meeting With Increased Favor in Europe.

Boston, Sept. 29.—That the drinking of soda water is on the increase in Europe is learned from the statements of the American Soda Fountain Company, of this city, which reports having sold more of its fountains in England, Scotland, Ireland and in Paris this summer

than ever before in any one summer. For years, American tourists have searched Europe oftener than not in vain, for the familiar fountain, which could be found only here and there, and then only poorly equipped. "Chemists," as druggists and pharmacists in Europe always are called, have not included them as a part of the fittings of their stores, whereas here in America, as is well known, it is rare to find a pharmacy wherein a soda fountain is not a conspicuous feature and profitable adjunct to the business. In Boston, for instance, only three or four pharmacies can be recalled which lack a fountain, among these places being the Theo. Metcalf Company, Tremont street; Henry Canning, Green street, and Kelley & Durkee, Boylston street.

The American Soda Fountain Company attributes its success in the matter of foreign sales to the fact that they have a most capable man in charge of this work—a man with a peculiarly Yankee energy and tact in inducing the British, particularly, to overcome their inertia and natural indifference to modern American inventions. It is a curious fact, however, that all the foreign sales, satisfactory though they have been, do not equal in amount the number of fountains sold in Massachusetts in places east of Worcester. This has been proved beyond question the greatest district in the world for soda fountains, and moreover, here are to be found the costliest ones ever built.

A fine large fountain recently has been erected in the comparatively new South Terminal Station, this city, which is a notable example of the extent to which art and practicability can be combined in a soda fountain. It occupies a pagoda built especially to house it, in the "midway" of this great station, where approximately 100,000 persons pass in and out daily. They nearly all are obliged to pass this pagoda, too, in reaching trains or the street. Already the new fountain has proved its need to the thirsty, large numbers of whom surround the place during the busy part of the day.

NOTES.

—The storage warehouse of E. and F. King & Co., wholesale druggists and chemists, situated on Atlantic avenue, this city, had a narrow escape from serious damage by fire a few days ago. The fire broke out in an adjoining building to their own and, had it not been for a thick party wall, the blaze would have found its way to the King storehouse. As it was, the stock stored there suffered only a slight damage from smoke and water. The contents of the building were well insured.

—In the Superior Court at Salem, Edward E. White has pleaded guilty to the charge of forgery. He forged a check for \$18, signed by D. B. Purbeck, and cashed by H. K. Mansfield, a prominent Salem druggist. The young man has made restitution to Mr. Mansfield, and his case was placed on file, as it appears that he has a good record, other than this. The City Marshal of Salem went surety for the young man.

—By invitation of A. E. Blight, a druggist in the Forest Hills District, a company of pharmaceutical students gathered at his residence at No. 50 Wenham street, one evening this week, and listened to a well written paper by the host on "Pharmacy of the Seventeenth Century." At the close, a reception followed, giving opportunity to form pleasant acquaintances.

—In the court at Lynn, Roscoe S. Walton pleaded guilty of sustaining a liquor nuisance. The district attorney said that the case was one of a drug store bar-room. By a reversal of fortunes, the defendant has become a waiter in a restaurant. By recommendation of the Marshal, he was fined \$50.

—John Cowen, of J. J. Desmond's drug store at Lawrence, where he is head clerk, has returned from a fortnight's vacation. Mr. Desmond has been confined to his home by illness, and is unable to attend to his duties at the Broadway Pharmacy.

—A narrow escape from death was that recently of Edward Warren, who was injured by the explosion of a soda water tank at Bell's drug store in Holyoke. Mr. Warren, who is now comfortably recovering from the accident, was fortunate that it proved no more serious than it did.

—An early morning fire one day this week was in the wooden building at Nos. 179-181 Washington street, Dorchester district, owned by J. N. Engel and occupied in part by J. S. Gleason, a druggist. The total loss was \$1,000.

—J. Casey & Co., druggists at Newburyport, have opened their new and attractive store in that city. The interior finish is in good taste, and the store is a marked addition to the business interests of Newburyport.

—This week's exports from the port of Boston include, among other things: Drugs and chemicals, \$15,044; India rubber manufactures, \$12,384; hops, \$245; tobacco, \$103; wax, \$250; spirits, \$20,044.

—Charles E. Scheffler, the Lawrence druggist, whose store is on Essex street, has returned from a two weeks' vacation passed at Hampton Beach, N. H.

—Edward Watts, proprietor of two drug stores in Fall River, who has been visiting friends in Lawrence, has returned home.

—Harry Barker, a clerk at Emerson's drug store in Haverhill, has been enjoying a vacation with his friends in New Hampshire.

—George Hayes, chief clerk at Greer's Pharmacy in Lawrence, has been enjoying his annual vacation of two weeks.

—William E. McCann, clerk at Maynard's drug store in Worcester, will take a position at Greene's pharmacy.

—Arthur Brown, leading clerk at Sheehan's drug store in Lawrence, has been visiting friends in Haverhill.

—E. M. Smith, a Waltham druggist, has changed from his former quarters into the new Lawrence Block.

—Walter Kneeland is about to open a drug store in Doonan's Block, at Edgeworth, a part of Malden.

OTHER NEW ENGLAND NOTES.

—The case in court at Burlington, Vt., against Ira Kingman was decided by a jury for the defendant. This case was based on the disclosure of a man who was fined a while ago for being drunk. He said that he bought a half a pint of alcohol in the drug store of Joseph Cote, at the corner of Winooski avenue and North street. He identified Kingman, who had sold him, but Kingman denied ever having sold anything to the accused and witnesses who were in the store at the time specified by the alleged buyer, said that he was not in the store at all. The jury brought a verdict of innocence.

—Brook pearl fishing is a craze which has broken out in Maine where from a Lisbon brook a pearl was taken and given to D. Fessenden, of Lisbon Falls, a well known druggist. The pearl was of a beautiful pale pink, valued at \$50, and Mr. Fessenden had it mounted and wears it as a scarf pin. In the brooks of Norway and vicinity three varieties of pearl-bearing clams have been identified, with pearls that are pink, some with purple shades, the black and smoky pearls and the pearls with bronze shades.

—Frank S. Waldron, a popular druggist of Norway, Me., has been visiting his old home in Auburn. During the Spanish-American war in Cuba, Mr. Waldron was hospital steward in the First Maine Heavy Artillery.

—Charles H. Moor, of C. H. Moor & Co., druggists at Rockland, Me., has just met with the loss of his father, who died suddenly from the effects of a stroke of apoplexy.

—George Spillane and Irving W. Jones, clerks at Currier & Blanchard's drug store at Nashua, N. H., have returned to their duties after enjoying a vacation.

—Edwin Hatch, who formerly was a clerk at McLaughlin's drug store in Manchester, N. H., intends to enter the Massachusetts College of Pharmacy at Boston.

—Herbert Woodman, clerk at Lothrop & Pinkham's drug store at Dover, N. H., has returned from his annual two weeks' vacation.

—Charles Goodale, chemist at Cannon & Upham's pharmacy at Waterbury, Conn., has been on a vacation trip to Boston and Portland.

—A new drug store at Waterville, Me., is that of John B. Friel, in the Thayer Block, Main street.

—The M. J. Halloran drug store at New Britain, Conn., is to be reopened by James Halloran.

PHILADELPHIA.

TO ENFORCE THE N. A. R. D. PLAN.

Philadelphia, September 29.—In spite of the full accounts published of the recent meeting of the three associated branches of the drug trade, there seems to be a slight confusion in the minds of many druggists of this city in regard to the methods necessary to be taken to put the tripartite "plan" into effect, the manner of dominating 'aggressive cutters,' the time when this is to be done and also the question and time of the adoption of a "price schedule." The questions of uniform prices and the adoption of the N. A. R. D. plan have been pretty well brought to the attention of every retail druggist here, so that now there is a general feeling of expectancy and a desire to know just "how things are," and one particular phase of the subject, the "aggressive cutter" is most prominently in the minds of the retailer. In view of this general interest felt in these topics, an interview was had with a gentleman on whom most of the details of this work has devolved, one who speaks from a thorough understanding of all points of the question. His remarks were about as follows:

"The question of the practicability of the adoption of a uniform price schedule for patent medicines in Philadelphia may be considered as settled. Over 90 per cent. of the retail druggists here have been visited and their positions on the matter ascertained; the remaining 10 per cent. is composed of stores run by foreigners, stores not handling patents, etc., and need not be taken into serious consideration. Of this 90 per cent., the bona-fide retail druggists of Philadelphia, nearly 80 per cent. have given their signatures to an agreement for uniform prices; 15 per cent. have given their qualified assent, i. e.: they will agree to maintain the schedule if it should prove to be a practical working agreement and if it is agreed on by the majority of the trade. In this number are some who are now willing to adhere to the schedule when convinced of its adoption by the majority. The 5 per cent. are mostly 'aggressive cutters;' of these, practically all have been interviewed, and in only three cases was there a positive refusal to abide by the schedule. But even these parties have admitted that they will come into line when they see a practical working agreement and feel the weight of its influence by finding themselves in a losing fight, and the others are not in a position to defy the great majority of the trade. We may thus safely say that the adoption of a uniform schedule of prices for patent medicines for this city is not a mere dream; it has been proven to be the wish of practically all the retail druggists and its enforcement is shown to be the earnest desire of a big majority, being now only a question of time and details!"

"In answer to your question 'How will we locate the cutters?' I can assure you that this will be a simple matter. The N. A. R. D. convention at Detroit made this question entirely dependent on the local trade, and gave them a method whereby they can decide it. If a 2-3 majority of the retail druggists of a locality unite in naming a certain man as a 'cutter,' that settles it, the burden of disproof is on him then. We do not have to prove a man to be a 'cutter,' nor do we have to raise prices to draw him out, his own methods of doing business and his own advertisements do that; he must prove himself not to be a cutter or else discontinue his offensive tactics. How? Well, every man is entitled to a chance to set himself right. The cutter is visited by an authorized person and asked, pointblank, whether he will or will not adhere to a uniform price schedule for patents when such a schedule is adopted by a majority of the druggists of his locality. If necessary, the situation is explained to him fully; he is not required to sign any agreement, nor to raise prices nor do we ask where or how he gets his goods, that being a question for the jobbers and proprietors to settle, only this, will he give his word to sell patents strictly at the prices of the schedule when such is adopted. If he says that he will, even with the qualification that he must see such a schedule in working effect, well and good; if he refuses, why, he then places himself by his own word in the position of opposing his fellow druggists, as, in short, an 'aggressive cutter.' See!"

"What will be our action then? That is just what the N. A. R. D. plan has outlined for us to accomplish. You know the working theory of the 'plan' whereby the 'cutter' is to be refused supplies by the jobbers, etc.; that is our weapon of defense. All jobbers will refuse supplies to our cutters, and then they will have their own troubles in trying to get goods; after a few months of scouring heaven and earth for goods they might get right at home by 'being good,' it is very likely that most will see the error of their ways and come into the fold. How can a 'cutter' set himself right and get his supplies again if he finds himself playing a losing game? Easily enough, all he has to do is to say that he will agree to the uniform price schedule and stick to it and 'be good,' and all restrictions will be removed. To whom will he say this? There will be those authorized to receive such declarations, they need not be secret or written on parchment! One point I want you to make plain, we do not care what a man HAS BEEN, it is what he is GOING TO BE that concerns us; no matter if he has been a 'cutter,' if he agrees to the schedule and maintains its prices he will be treated exactly as if he had been 'good' all his life!"

"When will this question go into effect? Ah, now you are asking me too hard—a question, there are too many interests and details involved to give an off-hand answer. I don't believe that one druggist in ten in this city realizes what a vast amount of work has been done on this question nor what a vast amount of good we have accomplished; the task has been simply enormous on account of the widespread territory and number of stores in the city of Philadelphia; and but for the volunteer help of a few we might still be only talking about it yet. You can say this, though, that those in charge of the matter are working day and night on it, and that its submission to the retail trade is only a question of a short time. Say this, too, that we who are in this movement will not have to wait for the final adoption of the schedule to locate our 'cutters' and cut off their supplies. This we can do at any time now, in the manner I have just outlined, and we will be prepared for such action very soon, evidence is now being supplied us direct by the 'cutters' themselves. Just as soon as a price schedule is worked out that will be for the interests of all, it will be submitted to the druggists for their approval and corrections, if any; then, when definitely decided on, a date will be set for it to go into effect. And I have not the least particle of doubt but that our labors will be crowned with success; the retail druggists of this city are splendidly organized, fully alive to the importance of securing better prices and fully determined to take such action as will insure this betterment of present conditions, and, furthermore, they are determined to brook no opposition from those who seek to further their own interests at the cost of their fellows. There may be a few backsliders at first and we may, of course, have a few hitches on the start, but this movement has behind it the united power of the druggists of this city backed by the full power of the N. A. R. D.; and we cannot fail. We are not worrying about how we are going to meet this or that condition, the time will come when the condition comes. The only people that are worrying are the 'cutters' who do not know how they are going to come out of the deal; and they will do a lot more worrying later on!"

PHILADELPHIA COLLEGE OF PHARMACY NOTES.

With the approaching opening of the college year all is bustle and activity in the big building. Workmen are rushing the new laboratories to completion, lecture rooms are being cleaned, big boxes of chemicals, apparatus and supplies come in by wagon loads, specimens, charts and books are brought out and put into readiness, indeed, a visitor is made to feel as if great things are to be anticipated! Down in the Actuary's office, a steady stream of matriculates, juniors and seniors is pouring in and taxing to the utmost the capacity of the Actuary and his assistants to enroll them and issue cards for lectures, laboratory courses, etc. The number of matriculants and the new courses for this year will make it one of big red letters in the annals of the college, a feat not so easy to do after all.

A number of examinations for admission to special

courses, for advanced standing and for last year's "conditions" are now going on, and most of the faculty are at their desks, ready for business. A little incident showing the estimation in which the college course in bacteriology is held seems worthy of note; from far-off Cuba came a letter to the Faculty asking if lessons in bacteriology could be conducted by correspondence, as the writer was very anxious to avail himself of the superior facilities of the P. C. P. This course, under the direction of Prof. Kraemer, will be still further improved and advanced this year, and offers an unexcelled course to the pharmacist desiring to fit himself for such work.

The quarterly meeting of the members of the P. C. P. was held at the college last Monday, the 24th, over thirty-five members being present. A spirited election to fill three vacancies in the trusteeship of the college resulted in the re-election of Messrs. Kline and Krewson and the election of Mr. Rittenhouse (of Mellor & Rittenhouse). The usual routine business was taken up and settled, a number of topics of importance being discussed. George Beringer, chairman of the committee on by-laws, submitted the new "Code of Ethics" to be subscribed to by members of the college. This, following the usual procedure, was laid on the table for discussion at the next meeting. This new code will settle one or two vexed questions of ethics in pharmacy that have for a long time been the subject of earnest discussion; a full copy of this "Code" will soon be given to the public, that is, after having been voted on at the January meeting. Era readers, of course, will have it too, as a guide through the devious ways of professional etiquette and ethics.

NOTES.

—A free scholarship in the Philadelphia College of Pharmacy has just been established through the endowment by the Keasbey & Mattison Company, of Ambler, Pa., whereby meritorious students may after successfully passing a competitive examination, and producing satisfactory evidence of ability before the committee of the college, become entitled to free tickets for all the lectures. The scholarship thus established embraces all the branches taught in the college, and has been created through the desire of Mr. Henry G. Keasbey and Dr. Richard V. Mattison, both of whom are graduates of the Philadelphia College of Pharmacy, to lend a helping hand to some of the hard working young men who have chosen the practice of pharmacy as their life work. All persons desiring to avail themselves of the privileges of the scholarship should address the Dean of the Faculty, Prof. Joseph P. Remington, No. 145 North Tenth street, Philadelphia.

—Not one of the least of the signs of a better condition of the finances of the retail druggist of Philadelphia is the very general overhauling and remodeling of drug stores that is being done all over the city. And in every instance the fixtures put in have been of the newest, finest and most substantial kind, with the general effect of vastly improving the appearance of dozens of stores in every section. It would be safe to say that few large cities have so many really handsome drug stores as Philadelphia, the tendency here being to the solid and substantial in effect instead of the "gingerbread" work seen in so many other localities.

—Among the number of young men from up-State who are just now securing positions in the city so that they can attend the P. C. P. were noted C. M. Riff, of Chambersburg, who is now with Milliken, Twenty-third and Spruce, and Charles Koontz, of Harrisburg, who is with J. C. Perry, of Forty-first and Lancaster avenue. Mr. Riff is taking his second year in pharmacy at the Medical Chi., Mr. Koontz enters the Philadelphia College of Pharmacy for his first year. Quite a number of other young men are noted around, but they seem too modest to send their names to the Era's correspondent.

—Addison LaDow, he of many drug store fame, declares that his Oak Lane store is not only the handsomest in that section, but also is the handsomest in the city. Mr. LaDow is very near right, too, for although it may not be as large nor so full of china and bric-a-brac as some of more imposing appearance, his store out there is certainly about as elegant and complete in its appearance as one could find far or near. Not only this,

every facility for dispensing and prescription work has been supplied, with an eye to utility as well as beauty.

—For the first time in its history, the "Women Medical College" will have a woman occupying the chair of "Demonstrator of Pharmacy." Miss Mac Harders having been elected to fill the vacancy caused by the resignation of a "mere man!" Miss Harders is unique in perhaps being the first woman to occupy such a position in any medical or pharmaceutical institution in this country.

—A curious sight was noted in the display window of a down-town "cut rate" drug store the other day, an assortment of pills of all kinds and makes labeled with bargain prices. It looked as if these were some old stock that the enterprising druggist was trying to work off after the fashion of the department stores. Wonder how the public took it, and if they took the pills, too.

—Although proposing to go out of business as such, the firm of Bullock & Crenshaw is still very much in business. A visit to their store the other day found them with a rush of orders for chemicals and apparatus for colleges and schools from all over the country. The firm has now confined itself entirely to this business, having given up handling drugs and medicines.

—Harry Cox, the oldest druggist in Haddington, is remodeling his store with the intention of making it the finest in that little burg. Mr. Cox has a host of friends who hope that in this remodeling old Father Time may take a hand and make the veteran as young in body as he is in heart and mind.

—Charles Gill, of Twenty-ninth and Diamond streets, has bought the property in which his store is located and proposes to make extensive alterations and enlargements, remodel all the fixtures and put in an entirely new and complete stock in the near future.

—Theo. Campbell, of Overbrook, president of the Alumni Association of the Philadelphia College of Pharmacy, paid a flying visit to Baltimore recently on business connected with the Alumni and also found time to attend to a few private affairs of his own.

—Boericke & Runyon have opened a "Homeopathic Pharmacy" on Thirteenth street, just above Market, which is a model of its kind, and presents a very neat and attractive appearance to the passer-by.

—S. C. Meredith has opened a new store at 2116 Diamond street, full of fresh stock and fitted up with an extremely neat scheme of fixtures.

—W. H. Hickson is opening a new store at Fernwood, one of the prettiest suburbs of the city.

DETROIT.

SALESMAN MISSING.

Detroit, September 29.—The whereabouts is desired of Wm. F. A. Neynaber, commercial traveler, age 45, in appearance 35; height, 5 feet 7 inches; weight, 145-150 pounds; brown hair, blond mustache, blue eyes, left handed at times. Has since 1892 represented to the drug trade and physicians Messrs. F. Stearns & Co., Detroit, Mich., Luyties Homeopathic Pharmacal Co., St. Louis, Mo., Billings, Clapp & Co., Boston, Mass., Clinton Pharmacal Co., Brooklyn, N. Y. Last heard from at Toledo, O., August 11, reported suffering from an injury to the head occurring July 5th; operation contemplated. Information as to his whereabouts, occupation or condition is desired by his destitute family and invalid wife, at 347 Trumbull avenue, Detroit, or address A. E. Gerow, 118 Michigan avenue, Detroit, Mich.

Druggists Awakening.

Detroit, September 29.—As one result of the recent N. A. R. D. meeting in this city, the Executive Committee of the local association held a session during the week, which it is hoped will result in bringing about important changes. A very thorough canvass of the situation will be made, and every effort made to better conditions. The word "sell" is to be cut out of the language. A lengthy schedule of prices will be made, to be agreed upon, if possible, by the cutters and department stores. At present the last December schedule is lived up to, but the new schedule will embrace many more preparations. The association is determined upon success.

NOTES.

—Frank Lesinsky and wife, druggists at \$99 Dubols street, Detroit, were arrested Friday, September 28, charged with violating the State pharmacy laws. A year ago Lesinsky was arrested on a similar charge and paid a fine of \$25. The present complaint charges Mrs. Lesinsky with selling an ounce of carbolic acid, "not being then and there a registered pharmacist, an assistant pharmacist, nor being in the presence of a registered pharmacist." Another charge is made against Lesinsky himself by a Mrs. Vertiel, wife of a neighboring druggist, who says that he sold her an ounce of arsenic, "not being a pharmacist." At the time of his arrest Lesinsky said that when Mrs. Vertiel called for the drug he knew who she was and knew that she was in the drug business; that he supposed there had been a call for arsenic in the Vertiel store, and being out of it had merely come to him to be helped out; that he had had his regular pharmacist put up the package, but that he himself had handed it to the woman. The hearing was set for Saturday, the 29th.

—The baseball season closed last Saturday for the Michigan Drug Co. team. It has been a successful season, and the boys have played good ball, winning 14 out of the 17 games played. They have been up against the best local talent outside of the American League team, and have won laurels from all. They have beaten the Polish Seminary boys, the Walkerville team (three games), the Michigan Malleable Iron Works team (three games), the Ideal Manufacturing Co.'s team, the Buhl Malleable Iron Works team, the D. A. C. Regular, the D. A. C. Reserves, and the Michigan Alkali Works team (two games). They have lost games to the Byram & Co.'s team, the D. A. C. Reserves, and the Michigan Alkali Co. team. They have made money enough to buy their own uniforms and pay all their expenses and now have enough left to give themselves and their most faithful "rooters" a grand banquet. It will take place at the Griswold House about the middle of October.

—John M. Sutton, city department Michigan Drug Co., gave a lecture on "Bees" before the Detroit Club and its guests on Friday evening, September 28. A large crowd was in attendance. Mr. Sutton had with him one of his glass hives, through the sides of which the audience could see some of the marvellous operations carried on by the bees. He also had a box in which were some bees. These he let out one by one and forced them to sting him in order to show the interested spectators just how the stinger works and how it may be removed. Mr. Sutton is almost immune to the sting.

—The Pharmacy department of the Detroit College of Medicine opened on Wednesday, the 26th, with a good attendance—in numbers about the same as last year. One lady is in the class. The buildings have been entirely refitted, and extensive additions made to the chemical laboratories. Beginning this term, the work will be done between the hours of one and six, and eight and ten, P. M. All laboratory work will be done in the day time, and the evenings devoted entirely to lecture work. A successful year is anticipated.

—The Michigan Drug Co. baseball team played the Michigan Alkali Company's team on Saturday, September 22, and were defeated by a score of 10 to 1. Bennett Park, the home grounds for the Detroit team of the American League, was hired for the occasion, and an admission fee of 15 cents charged to defray expenses. A large number of "rooters" for each team turned out and kept things lively all around. After the game the druggists entertained their opponents at a dinner.

—F. J. Henning, druggist on Third avenue, Detroit, celebrated his birthday, September 28, by doing a very handsome thing for the boys of the city department of the Michigan Drug Co. It consisted of a big theatre party at the Detroit opera house, followed by a delightful evening at Mr. Henning's home where an elaborate lunch was spread. The party broke up about two o'clock Saturday morning.

—Walter R. Mac Adam, in the city department at Farrand, Williams and Clark's, is laid up and hip disease is feared. Mr. Mac Adam over-exerted himself while on his vacation, then took a heavy cold, which settled in his hip. He is very popular with the drug trade of De-

troit, and is considered one of the best bowlers of the city. Great sympathy is expressed for him.

—Harry T. Carver, of Farrand, Williams and Clark, accompanied by his son Harry, Jr., is spending two weeks at Jamaica, a town in the Vermont hills, with Mr. Carver's parents. The old people, after twenty-five years in the West, have lately gone back to their native state to spend their declining days.

—Dr. J. E. Clark, dean of the College of Pharmacy, Detroit, returned from a European trip last Sunday. He made a personal investigation of the bubonic plague in Glasgow, and brought back a lot of interesting information about the plague.

—W. S. Springer has bought the drug stock and fixtures of Earl F. Townsend, corner Granby and Medbury avenues, Detroit. Mr. Townsend has gone to California for his health.

—Mr. Green, of Kalamazoo, will in the near future, come to Detroit to become manager of the drug department of C. A. Shafer's department store.

—Norman McBean, of Detroit, formerly with A. S. Parker of the same, has taken a position with W. C. Vivian, of Carsonville, Mich.

—E. F. Ballard, for sometime with Parke, Davis & Co., has taken a position in the Katus retail drug store, Champlain street, Detroit.

—Drug clerk McKay, formerly with the Brown Cut-rate store, Detroit, has accepted a position with J. P. Scott, Delray.

—Claude Bronner, of Detroit, has given up traveling and taken a position with the Central Drug Store.

CHICAGO.

LEAGUE OF AMERICAN DRUGGISTS IN TROUBLE.

Chicago, Sept. 29.—The League of American Druggists bids fair soon to be a closed incident, if indeed, its demise has not already occurred. Its only visible exponent, Richard Respers, is beset by creditors and by other troubles as well. The office of the "League," at No. 57 Franklin street, is in the heart of the wholesale drug district. The scheme which Mr. Respers outlined to your correspondent was comprehensive and audacious, even, one might say, iridescent, in its brilliancy. It embraced in its contemplated results nothing less than the elimination of the wholesale druggist as a factor in the trade; the retailer, in consideration of a trifling sum per month, was to receive his goods at manufacturers' prices by ordering them through the "League," and the manufacturers on their part would pay rent for the use of drug store windows in which to display their goods. The "League" was to hire competent advertisers and window dressers to make the rounds among the stores of its members, these people to be paid by the sums advanced by the manufacturers for advertising. The window displays, demonstrators and advertising devices were to be passed on from store to store in rotation each week. The system comprehended the distribution of hand bills and circulars, the renting of bill board space and many other things.

Mr. Respers came here from Philadelphia, and nevermore will that town be deemed slow if all its young men are like Richard. The "pent up Utica" of his ambition found scope in the broad and breezy West, and just as he was prepared to woo coy Fortune and make her his own, the clammy hand of debt stopped the whole proceeding. Yesterday he telephoned to all the druggists who had gone into the scheme that the sums they had contributed would be returned to them to-day or Monday. The furniture he bought—on credit—is piled up awaiting the coming of the furniture company, the employees are waiting for their pay, and Mr. Respers is out hustling for cash. The "six Chicago banks" which were backing the "League" seem to have vanished into thin air, or have withdrawn themselves into the distance. The cry is for cash, and cash alone will rescue the "League" from the mire in which it is floundering.

The difficulty seems to have been that Mr. Respers had more ardent faith than he had cash, and the child

of his intellect, though beautiful, lacked substantiality. His intentions were better than his powers of fulfilling them; in short, his powers of mastication were not equal to the piece he had selected.

The Milwaukee Trip.

Chicago, Sept. 29.—Those who went on the Milwaukee trip of the N. W. D. A. assert that the time so spent was the pleasantest part of the whole convention. The enterprise of the Milwaukee Journal was especially remarked and commended. The Journal put twenty-five carrier pigeons on the boat when it started from Chicago, and the doings of the members on the boat were chronicled from time to time and sent by carrier pigeon to the Journal office in Milwaukee, so that upon the arrival of the boat at that place every guest was furnished with a special, giving a detailed report of the proceedings from the time the boat left Chicago until it came within sight of Milwaukee. The Milwaukee druggists had hired 100 carriages, and the guests were taken over the city, visiting all the principal points of interest. A stop was made at Pabst's Brewery for refreshments, which the Pabst Brewing Company furnished in its usual hospitable fashion.

The Milwaukee druggists gave their guests a banquet in the evening at the Plankinton House. Mr. Kathrens was toastmaster, and fulfilled his duties to the satisfaction of every one. The speeches and toasts were informal. Gen. Doe greeted the guests on behalf of the Mayor and citizens of Milwaukee, and Frank A. Faxon responded. The witty speech of Gov. Peck was responded to in an equally happy vein by J. C. Eliel. The return trip on the boat by night was not the least enjoyable feature of the entertainment, and every one felt that the greetings and hospitality of the Milwaukeeans had been most heartily warm and courteous. Members of the N. W. D. A. and those who accompanied them will always remember Milwaukee with feelings of gratitude and pleasure.

NOTES.

—An involuntary petition in bankruptcy was filed last week against the W. H. Daniels Company, wholesale stationers, by the Hopper-Morgan Company, of New York and two Chicago creditors. A receiver was appointed in the person of Henry W. Leman, of the Chicago Title & Trust Company. It was alleged in the pleadings and affidavit filed that the bankrupt firm had preferred several of its creditors, that the president had fled the State and district, that the manager was ill and unable to attend the store and that only one clerk was in charge. The W. H. Daniels Company were jobbers in stationery, and did quite a business at one time with druggists who handle that class of goods as a side line.

—The new building which Lord, Owen & Co. are putting up on Randolph street, between Franklin and Market streets, is nearing completion. The framework is up five stories, and a part of the walls nearly done. Their new home will be in every way worthy of the firm's reputation for enterprise and success.

—Albert E. Ebert expects to leave some time next week for the East to attend a committee meeting connected with the revision of the United States Pharmacopæia.

—C. A. Davidson, of the well known sundries house of James A. Davidson, accompanied by his family, is spending a week or two in La Fayette, Ind.

—The Golden Eagle Pharmacy at North avenue and North Clark street, has been sold, and the stock will be removed to Nebraska.

Money Saved on Purchases of Oiled Silk and Muslin.

Druggists can save from 20 to 30 per cent. on all purchases of oiled silks and muslins by addressing Walter Arncliffe, Newark, N. J., who will furnish samples to any dealer who is interested enough to write for them. He employs no traveling salesmen, and is, therefore, able to guarantee the above saving. His goods are well known, and are guaranteed to be all right.

THE NORTHWEST.

ONE OF THE STRANGE QUIRKS OF THE DRUG TRADE IN SOUTH DAKOTA.

St. Paul, Minn., September 28.—A case just disposed of at Brookings, S. D., is a reminder of the period when South Dakota was a prohibition State. During prohibition times liquor could be procured for medicinal purposes at the drug store upon the applicant signing a statement to the effect that the liquor was necessary as a medicine. It was something remarkable how cases of "stomach trouble" and other ailments suddenly increased, and the wonder was that the number of such cases did not materially decrease in view of the regularity with which those afflicted took medicine in the form of the beverage which intoxicates.

A Brookings druggist was arrested a few days ago on the charge of having sold liquor without a license. At the preliminary examination a total of twenty-seven witnesses were examined, nearly all of whom admitted that they had purchased liquor from the accused, but that it was exclusively for medicinal purposes. As no evidence was offered that the druggist had sold liquor as a beverage, the case was dismissed. Those not inclined to look upon the case seriously had lots of fun at the expense of the witnesses regarding the unhealthy condition of the town, in the face of the low death rate, and suggested the need of a public hospital.

While, generally speaking, the South Dakota liquor license law is one of the best in the United States, the case at Brookings reveals one of weak features. In most of the cities and towns of the State the maximum license of \$1,600 per year is imposed for the privilege of selling liquor at retail. Druggists are not required to pay a license at all, and as they are permitted to sell liquor for medicinal purposes—as was the case when prohibition was in effect in South Dakota—it is perhaps natural that some of them enter actively into competition with the saloon men who pay high license fees, and injure in no small degree the business of the saloonmen.

Druggists generally do not thus violate the spirit of the State license law, but among them, as among other classes of business men, are a certain percentage of men who are not as scrupulous as they might be when it comes to increasing their profits. The saloonmen are thus brought into competition with men who, because they are not required to pay licenses, place the proprietors of the saloons at a serious disadvantage. When a druggist is arrested for selling a suspiciously large quantity of liquor it is an easy matter for him to clear himself, as in the case of the Brookings druggist, as men who prefer to procure their liquor at drug stores, because they consider it more genteel than mixing with the "common herd" at the saloons, will readily protect the druggist who sells them liquor by appearing on the witness stand if necessary and testifying that the liquor was procured exclusively for medicinal purposes.

The practice has caused so much feeling on the part of the licensed saloonmen that it is probable they will appeal to the next legislature to amend the law in such a way as to impose licenses equal to their own upon druggists for the privilege of selling liquor at retail, or otherwise so remedy the matter as to place them on an equal footing with the druggists.

Wisconsin Drug Clerk Sues a Prominent Lady for Breach of Promise.

St. Paul, Minn., Sept. 21.—It is not often that the lady in the case is defendant in a suit for breach of promise, and still more seldom does it happen that a druggist is the plaintiff. Therefore a contemplated action at law over in the neighboring Badger State presents unusual features. The prospective plaintiff is Henry Erickson, a drug clerk at Race Lake, Wis. He has given notice that he is on the point of suing Mrs. Semilla Allen, wife of Land Commissioner Allen, of the Chicago, St. Paul and Minneapolis Railroad Co., for alleged breach of promise. He will at the same time bring action against Mr. Allen, whom he charges with having alienated the affections of his sweetheart. Until a few weeks ago Mrs. Allen was Miss Semilla Anderson, telephone girl in the

Cumberland exchange. Mr. Erickson and Miss Anderson carried on a courtship and in due time became engaged. Then the young man removed from Cumberland to Rice Lake to take a more lucrative position. During his absence his fiancée met Mr. Allen and later came to St. Paul, where they were married. Mr. Allen is well provided with this world's goods. He is forty years of age, while his bride is but nineteen.

NOTES.

—Successions: Matt Hummell, Dysart, Ia., by Kaiser & Lumsden; Pfanden & Hackroot, Ackley, Ia., by Charles F. Pfander; J. G. Beste, Bloomfield, Neb., by the Down Pharmacy; Backus & Keating, Wakefield, Neb., by J. M. Keating; R. E. W. Somers, Milwaukee, Wis., by Edward Kettler, Jr.; Parden & Follansbee, New Richmond, Wis., by J. H. Parden; Hoyt & Longnecker, Indianola, Neb., by Dr. Hoyt; E. C. Enderly, Bridger, Mont., by the Bridger Drug Co.; Fred E. Palmer, Sparta, Wis., by John Palmer; N. L. Erickson & Co., Milford, Ia., by J. O. Stephenson & Co.; John M. Burnett, Mitchellville, Ia., by James H. Hume; C. E. Frost, Rhodes, Ia., by J. H. Perry & Co.; G. W. Hewitt & Co., Helix, Ore., by N. J. Cockerline; Emerson & Lieberg, Jonesville, Wis., by E. S. Lieberg; John H. Allen, Oak, Neb., by I. N. Allen; Phelps & Tyler, Kanawha, Ia., by O. W. Phelps; E. E. Gallogly & Co., Butte, Mont., by Christie & Leys; L. F. Summers, Millin, Iowa, by Summers & Frantz; Knudson Bros., Montour, Ia., by Thompson & Knudson; L. G. Palever & Co., Vermillion, S. D., by H. E. Vaughn; Whittemore, Iowa Drug Co., by Reimers Bros. & Co.; Stout Bros, Sound Bend, Wash., by Chester Egbert.

—Walter Nelson, one of St. Paul's progressive druggists has been nominated by the Republicans for another term in the lower house of the Legislature. Mr. Nelson is qualified to form a whole trust by himself, as he owns and operates no less than four drug stores in this city.

—A. J. Wampler, one of the oldest druggists of St. Paul and former proprietor of stores at two of the leading corners, but who has been out of business several years, is now with W. W. Noble. "Merely brushing up in the drug business," says Mr. Wampler.

—Chrys Hohjorn, a young drug clerk employed in Proctor & Fish's store, at Valley City, N. D., and who lately came from Minnewaukan, same State, committed suicide Wednesday night by taking morphine. The cause was not transpired.

—J. N. Palmquist has returned from a prolonged trip to Europe, during which he visited his old home Norway and Germany, France, etc., etc. He is glad to return to the Northwest and the drug business.

—C. R. C. Johnson has returned home to Morris and J. M. Arbes, who has been in charge there during his absence, has gone to work for R. L. Morland, Worthington.

—W. C. Haney, who is now in the drug business at Marshall, was up here visiting old friends this week, accompanied by Dr. Bacon, of the same place.

—D. R. Noyes, of Noyes Bros. & Cutler, St. Paul, has returned from Saratoga, where he took a prominent part in the revision of the Presbyterian creed.

—John Dannewick, who is in charge of the drug business in Warren Potter's store at Aitkin, has been on a hunting trip, but has returned home.

—J. K. Carlson, well known in the Twin Cities and now running the Princeton Drug Co.'s store, was in the city on business one day this week.

—Sam. Ellingsen, a former St. Paul pharmacist, but lately of Grand Forks, N. D., was around the city visiting old friends this week.

—C. A. Countryman was in the city on business this week, from Belview. Likewise Dr. D'Arms, of Zieffor.

—W. H. Green has gone to Ashland, Wis. to work in Weed's store while Mr. Weed takes a vacation.

—W. R. Smith, who has been taking a long vacation this summer has returned to his store at Benson.

—F. S. Peahody is preparing to start at Big Stone City, S. D., and F. H. Hildreth, at Bay City, Wis.

—W. T. Gilmore has left Duluth, preferring the Twin Cities as a place of residence and business.

—F. A. Priest who recently came here from Kansas City, is working in Rollin's drug store.

—Henry Bernhardt, of Henry Bernhardt & Co., Des Moines, Ia., has given a bill of sale.

—Mr. Heimark has withdrawn from the Battle Lake, Minn., firm of Kjørang & Heimark.

—F. J. Schulte has sold his store at Ronneby, Minn., and is now with A. J. Guersey, St. Paul.

—J. W. Bowden has returned from Tracy, where he has been running Hunter's drug store.

—George Freishemer, Missoula, Mont., has discontinued his branch at Grangeville, Idaho.

—O. J. Olson, of Evansville, was visiting here this week, but has now returned home.

—E. H. Brown was down this week from West Superior, visiting his relatives.

—F. E. Baxter, Petersburg, Neb., and T. A. Sloan, Salt Lake City, Utah, have sold.

—Atwood's Pharmacy, Staples, Minn., has offered to compromise with creditors.

—New: Van Brunt & Co., Angus, Neb.; M. N. Hinsdale, Rock Springs, Wyo.

—A. S. Crew, Salem, Ia., has sold a part interest to William R. Crew.

—The Hardy & Dill Drug Co. has incorporated at Everett, Wash.

—Malstrom Bros., Tacoma, Wash., have received a bill of sale.

—N. W. Barrett, Brown's Valley, Minn., was burned out this week.

—Aug. Enhelcke, Carthage, S. D., has been adjudged bankrupt.

—George R. Sager, of Roswell, S. D., has removed to Coleman.

—W. W. Salisbury was visiting the city this week on business.

—Thos. Biscoe is going to work in Frost's drug store, this city.

—H. W. Stringfellow is to incorporate at Havre, Mont.

—The Swanville Pharmacy, Swanville, Minn., has sold.

—Wilcox & Sherrerd, Wood River, Neb., have dissolved.

—Conrad Bartels, Omaha, Neb., has given a bill of sale.

—F. N. Eaton, Des Moines, Ia., has given a bill of sale.

—C. F. Little has started at Salt Lake City, Utah.

—J. L. Fitzgerald is about to leave Morton, Minn.

—D. B. Billington is now working at Cass Lake.

—Ed. Brassington is working in Ulen, Minn.

Every Drug Clerk Should Have One.

Every drug clerk should have one of the J. Arthur Co.'s Tie Pins. They are made in oxidized and bright.

silver, with ruby or emerald eyes, and are sold at 26 cents each; or they may be obtained at \$1.35 each in solid gold, Roman or bright finish. They are sent, post-paid, on receipt of price, by the J. Arthur Co., 18-20 Colonial Arcade, Cleveland, O.

A Pleasant and Efficacious Mouth-Wash

Thycaol is a "mouth-wash antiseptic," possessing an acceptable flavor and pleasant odor and it has been used and prescribed by dentists, physicians and trained nurses generally. It has also been highly recommended by prominent dentists in articles which have appeared in dental and medical journals. The manufacturers, The Elwin Laboratory, Poughkeepsie, N. Y., invite druggists to write to them for descriptive literature, etc., of this meritorious article.

A Complete and Economical System of Filtration.

The Multiple Perfection Filter advertised by Rheinstrom Bros., Cincinnati, Ohio, is said to be the simplest, most complete and economical system in use for the filtration of extracts, wines, waters, syrups, in fact, almost any liquid. It takes but a few minutes to repack them, and their action is rapid and perfect. A catalogue describing the filter in detail will be sent to any manufacturer interested.

ST. LOUIS.

THE MISSOURI PHARMACY LAW.

St. Louis, Sept. 29.—The Missouri Board of Pharmacy is now registering physicians as druggists on their medical diplomas. It will be remembered that according to the pharmacy law which was in effect up to four years ago, physicians could register on diplomas the same as graduates in pharmacy. Then after many attempts the law was amended so that—as the druggists supposed—every one was obliged to pass the same examination in order to register. Since that time the Board of Pharmacy has been continually annoyed and threatened by physicians who claimed that according to the opinion of good legal talent they could still register on their diplomas; that there was a defect in the amended law. The Board of Pharmacy finally applied to the Attorney-General for a decision and he gave as his opinion that inasmuch as there was no repealing clause in the amendment to strike out the first part of the old original law—which provided for registration on pharmacy and medical diplomas—the Board must still recognize said diplomas. When this decision was given the Committee on Legislation of the Missouri Pharmaceutical Association employed a competent lawyer to carefully look over the law and give his opinion, and that has just been given and it corresponds with the Attorney-General's opinion, so the druggists are wondering what to do next. "There was much money, time and energy spent in getting the law amended, so naturally the prime movers in the good cause are discouraged. It is the opinion of some of the better class of local pharmacists—by better class we mean those who take the most interest and do the most work for the betterment of the profession—that it would be a good idea to get the entire law repealed at the coming session of the Legislature, which will convene this winter. They claim that the majority of the druggists of the State take little or no interest and give no help in securing better pharmacy laws, and that if Missouri had no pharmacy law at all for a short time it would wake them up and cause them to fall in line, and with the co-operation of all the druggists in the State a good, substantial and desirable pharmacy law could easily be secured. Just at present it is hard to tell what will be done, but it is safe to say that some radical action will be taken within the next few weeks.

The Alumni Silver Jubilee.

St. Louis, Sept. 29.—The silver anniversary of the Alumni Association of the St. Louis College of Pharmacy was held Friday night, September 21, at Leiderkranz Hall. The function was a success in every way, was largely attended, and was in full harmony with the reputation for dignity and high standing which the organization has always maintained. About one hundred were in attendance. The menu was a most excellent one and was thoroughly appreciated by the guests.

Charles A. Lips, the chairman of the committee in charge of arrangements, presided as toastmaster. His graceful manner and his clear and dramatic reading of the quotations appropriate to the formal toasts gave evidence of his former stage experience. His witty and impromptu introductions clinched his fame as an after dinner speaker of the first order.

The first speaker was R. S. Vitt, president of the Alumni Association. He called attention to the fact that the man who received the first alumni medal and the one to secure the last medal were both present. He referred to the president and made a jovial, but tactful comment on the administration of each.

The toast, "The Class of 1900," was responded to by C. W. Cramer, in a most interesting manner.

Henry T. Rohlfing, the veteran president of the C. of P., did full justice to his subject, "The St. Louis College of Pharmacy." He devoted himself mainly to the present, paid his respects to the faculty, and expressed the hope that he would meet all those in attendance

at the golden anniversary of the alumni a quarter of a century hence.

One of the most interesting addresses of the evening was that made by W. C. Bolm and entitled "Our Alma Mater and We, Her Children." It was in effect a categorical review of the history of the college and of the Alumni Association. His reference to the fact that the Alumni Association was organized with but twenty members and now has an enrollment of 538, was most enthusiastically received. He also spoke of the suggestion made by several members that the present time be utilized for establishing a permanent memorial of the Alumni in the shape of an annual prize or something of that nature. He favored the idea, but had no special recommendation and expressed the hope that the officers of the organization would take the matter up.

The next toast, "The Wholesalers," was responded to by C. F. G. Meyer, in his usual happy and instructive vein.

The last formal toast, "The Faculty of the College Past and Present," was responded to by Prof. O. A. Wall. He did not respond to the instantaneous cry for funny stories, but instead related some intensely interesting reminiscences of the members of the faculty both living and dead, including many names high in pharmacy's roll of fame.

After the formal toasts a number of those present were called upon by the president and responded in an interesting manner. They were Prof. Francis Hemm, who by request read the first Alumni essay read by him at the first meeting of the Alumni and entitled "Conium Maculatum," Prof. J. M. Good, Mr. Eilbrucht, of Waterloo, Ill.; Charles Gietner, Dr. O. E. Smith, Dr. H. M. Whelpley and E. P. Van Harlingen.

Several of the speakers referred to Charles Gietner as the father of the association. He could not deny the soft impeachment, but said that Prof. J. M. Good, Adolph Pfeiffer and Henry Lindemann were also among the organizers.

The menu cards were exceedingly handsome, the covers being embellished with the insignia of the association in silver and blue on a mottled ground. Blank pages were left for the autographs of those present and were freely circulated for that purpose during the evening.

In the course of his remarks Prof. Good observed that this was also his silver anniversary as a professor in the college. Prof. Wall has passed his and the next to celebrate will be Prof. Francis Hemm.

The holding of the event in the Liederkrantz Hall had a special significance, as up to the '80s the annual graduation exercises and ball were held at that place.

NOTES.

—A local bottling association is sending circulars to certain druggists advising them that they are subject to prosecution under the State laws for using bottles formerly containing the product of members of the association for other purposes.

—The local wholesale druggists are all ready for the coming week, when many of their outside customers come to the city to participate in the festivities and the wholesalers have an opportunity to show the kind of good fellows they are.

—Theo. F. Fienup, proprietor of the drug store at Broadway and Marion street, and Miss Clara L. Niemeyer, of East St. Louis, will be married on October 16.

—J. E. Hibby, druggist at Vandeventer and Washington avenue, and one of the well known and most respected pharmacists of the city has failed.

—Geo. F. Bader, E. L. Pierce and F. L. Whelpley, local drug clerks, have entered the medical department of the Washington University.

—Otto Ude, the veteran pharmacist at Twentieth and Salisbury streets, will celebrate his eighty-second birthday on November 18.

—C. C. May, of Thirty-third and Locust streets, has just returned from Europe where he has been spending the summer.

—The St. Louis College of Pharmacy will open on Tuesday, October 2. Prospects are good for a large attendance.

—Sol Boehm has returned from a month's vacation spent in the north.

BALTIMORE.

A Drug Clerk's Mistake Caused Death.

Baltimore, Sept. 29.—Because a clerk put too much atropia into a prescription and by his mistake caused the death of a girl, Druggist Albert N. Conner, of Fourth and N streets, Washington, D. C., was yesterday fined \$100 and costs, the highest punishment that could be imposed under the pharmacy law of the District, which provides that all clerks shall be competent and duly registered. This requirement Mr. Conner had ignored, his two clerks, Isadore Cohen and Frank Tuck, having failed to obtain licenses. The victim of the error was Miss Eva Melling, who died last Sunday. An investigation established the fact that an excessive proportion of atropia had been put into the medicine prescribed for her and the druggist's arrest followed, a coroner's jury having found a verdict against him. Mr. Conner was at first accused of manslaughter and required to give \$5,000 bail for his appearance in court.

Dr. D. W. Prentiss, the attending physician in the case, testified that the prescription called for about 1-128th of a grain of atropia. After having taken one dose of the medicine Miss Melling showed symptoms of poisoning and died in a few hours. Isadore Cohen, one of the unlicensed clerks, stated that he was learning the drug business under the direction of Mr. Conner. He (Cohen) was neither registered, nor had he matriculated at any college of pharmacy. Mr. Conner was absent from the city at the time the prescription was presented. It was written in the French metric system, which neither Cohen nor Tuck know anything about. Their ignorance was responsible for a miscalculation, when they undertook to reduce the quantities to apothecaries' weight. Tuck testified that he is employed at the Government printing office, is studying pharmacy at the National College of Pharmacy and works for Mr. Conner during his off hours, receiving therefor \$4 a month. Mr. Conner stated that he usually employed a registered pharmacist during his absence from the store and had not come so on this particular occasion only because the man who usually served him was busy elsewhere. His instructions to the clerks were that they must not compound prescriptions or sell poisons.

The testimony offered in the Police Court was similar, and at the conclusion of the case Judge Kimball imposed the highest penalty under the drug law.

Clerks and Employers.

Baltimore, Sept. 29.—Many druggists of this city are in search of competent clerks and many clerks, apparently competent, are looking for situations, but somehow the two parties seem unable to come together. This state of affairs is inexplicable to persons who know nothing about the situation. Those, however, who are familiar with the true inwardness of affairs exhibit no astonishment. As a matter of fact, owners of drug stores cannot get clerks because the salaries which they offer hold out no inducement to aspiring young men. A case in point is the experience of a clerk who had been in actual charge of a pharmacy for some time past, to the entire satisfaction of the owner, at \$15 per week. Not long ago the store passed into other hands and the new proprietor requested the clerk to stay. But when the financial arrangements came to be considered it transpired that the purchaser was willing to pay only \$7 per week. The reduction was accepted provisionally. In other words, the clerk promised to stay until he could get another place with a better salary attached. Seven dollars will be considered by every impartial judge a rather small reward for work which entails long hours and demands special knowledge that can be gained only at an expenditure of time and money. Nor is the instance cited exceptional. Many other drug clerks are no better compensated. It is this condition to which must be attributed the multiplication of drug stores in Baltimore and elsewhere. The energetic young pharmacist, whose ambition is not limited to a \$7 clerkship, seeing poor prospects ahead as an employee, resolves to become a proprietor as speedily as possible. He embarks in business on his own account at the earliest opportunity and sharpens competition, already very keen, either by cut-

ting prices or dividing the trade of a neighborhood. Some persons succeed where others fail, but the conditions which virtually stimulate the opening of new stores make it still worse for the clerk of the future. At the same time the remedy for this condition is not easy to discover.

—Among the out-of-town druggists in Baltimore last week were E. H. Reinhart, Jr., of Shepardsdown, W. Va.; Mr. Reinhart, of Reinhart & Ringgold, Cumberland, Md.; C. H. Elliott, of Washington; Mr. Hood, of Cheney, Hood & Co., Augusta, Ga.; R. H. Campbell, of Lonaconing, Md.; George Washington Hurd, of Williamsport, Md.; J. Walter Hodges, of Washington, and Joseph B. Boyle, of Westminster.

Red Fire Torches for the Campaign.

Fireworks are responsible for a good deal of the glory of a Presidential campaign, and there is reason why the druggist should put in a stock of "The Pittsburg Red Fire Torches." They are manufactured by the Iron City Chemical Company, No. 64 Eighth street, Pittsburg, Pa., who claim for them great brilliancy and splendor of color, and guarantee them to contain no adulteration. Their advertisement on another page quotes prices. Red Fire Torches may be obtained from Pittsburg jobbers.

Thomas' English Prepared Chalk.

Years of experience in the manufacture of chalk has enabled the Thomas Manufacturing Company, Baltimore, to prepare a product which they claim to be the finest and handsomest produced anywhere. They point with pride to the fact that 90 per cent. of the prepared chalk sold in this country is Thomas', and that this result has been accomplished solely by the merit of the goods, as they have done but little advertising. Thomas' chalk may be had in white or pink cones, but it is only sold to the trade in 8-pound, locked-corner wooden boxes, on each of which is the "Three Cone" trade mark shown in their advertisement in this issue.

Goods Properly Displayed Easily Sold.

We want to call particular attention to the John Phillips' Cigar Case, illustrated on another page. Cigars displayed in this case are already half sold. A dealer cannot sell good cigars unless they are properly displayed, but he can sell them in a case such as they offer. The case not only shows them off to the best advantage, but it keeps them in prime condition. There is plenty of room not only to display them on the top shelf, but to store surplus stock below. These cases were introduced several years ago under the trade mark name of "Silent Salesman," by John Phillips & Co., Detroit, Mich. They make other show cases, and are headquarters for drug fixtures and fountain tops.

MDCCCCI Calendars.

The useful feature of Calendars, combined with their ornamental beauty has been so impressed upon people generally that they cannot do without them. In fact, there is no advertising matter so much in demand or kept so long in the house as calendars. If a retailer can obtain a supply with his name attached free, it is certainly for his interest to do so. C. I. Hood & Co. make their annual offer of calendars in our advertising columns and the conditions are such that nearly every dealer can accept the offer through his jobber for one of the quantities named. The sale of Hood's Sarsaparilla is so large that most dealers will find it necessary to order during the time covered by the offer, which is nearly three months. We are informed that certain conditions are required, otherwise C. I. Hood & Co. could not fill their orders for calendars.

Their proposition seems fair and worthy of acceptance by all retailers. If you cannot accept the offer because of stock on hand, we suggest that you write C. I. Hood & Co., believing you will find them reasonable and ready to help you in any way possible.

Business Record.

السلامة في العمل

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,
New York.

ALABAMA.—Alexander City.—Rainey & Watkins, succeeded by J. R. Watkins.

ARKANSAS.—Coal Hill.—E. C. Hunt, removed to Hartman.

Heber.—T. A. Bevins succeeded by Bevins & Crosby.

CALIFORNIA.—Los Angeles.—L. P. Collette, 621 Downey avenue, sold to E. C. Cook.

COLORADO.—Denver.—E. Brunert, Seventeenth and Larimer streets, deceased.

CONNECTICUT.—Wallingford.—Pickett Bros. sold to R. C. Smith & Co.

Waterbury.—B. E. Riley & Co., 831 West Main street, sold to J. H. Walcott.

FLORIDA.—Jacksonville.—W. E. Spruill & Co., Laura and West Duval, succeeded by W. E. Spruill.

GEORGIA.—Columbus.—Turner Bros., 1002 Broad, succeeded by J. C. Turner.

Fitzgerald.—Long & White succeeded by W. F. Long.

ILLINOIS.—Chicago.—E. A. Schmidt, 3022 Archer avenue, deceased.—T. V. Wooten Co., 943 West Madison, sold to Milton C. Smucker.

Nashville.—F. H. Franzlau sold to W. E. Krumsick.

IOWA.—Dysart.—M. Hummed sold to Kaiser & Lumsden.

Moravia.—Buck & Simmons sold to I. W. Halden.

KANSAS.—Oskaloosa.—W. P. Duckhorn sold to John Williamson.

KENTUCKY.—Henshaw.—G. T. Berry, sold to Hunt & King.

MASSACHUSETTS.—Holliston.—A. E. Kimball sold to Clarence E. Ware.

New Bedford.—E. Bunker, 403 Purchase, sold to W. M. Higham.

MICHIGAN.—Lakeview.—C. E. White sold to J. W. Kirtland.

MISSOURI.—Springfield.—Oscar Rose, southwest corner Public Square, sold to Gentry & Toomba.

Sturgeon.—Robinson & Summers succeeded by R. L. Robinson.

NEW YORK.—New Hyde Park, Nassau County.—A. G. Rave, M. D., should be added to D. D. List.

Spring Valley.—C. H. Smith sold to Albert L. Embray.

NEBRASKA.—Gordon.—W. E. Mitchell sold to R. E. Dowd.

Wood River.—Wilcox & Sherrard succeeded by D. E. Wilcox.

OHIO.—Zanesville.—George Kemp, 304 Putnam, assigned.

PENNSYLVANIA.—Bradford.—E. E. Clark sold to A. Hennage.

TEXAS.—Merit.—Swift & Kelley succeeded by Adair & Kelley.

Weatherford.—Weatherford Drug Co. sold to Chandler, Campbell & Ivy.

The Ideal Atomizer.

The Ideal Atomizer, manufactured by the Ideal Rubber Co., 28 Rodney street, Brooklyn, N. Y., is made in all styles for throat, toilet, nasal, medicinal, and for vaseline and oils. It has an unbreakable tube, and a continuous spray is guaranteed. The manufacturers claim that no atomizer in the market will compare with it nor give the satisfaction that the "Ideal" will give. They manufacture a full line of druggists' sundries, and will be pleased to furnish catalogue and make special quotations to any druggist who is interested.

Gordon's Glycerine the Standard.

Gordon's Chemically Pure Glycerin is the oldest brand on the market. It has been the standard for nearly fifty years. It is known to be pure, never fails to respond satisfactorily to the most exacting tests, and as it is just as cheap and as easily obtained from jobbers as any other brand, there is no good reason why every druggist should not use and dispense it. It is necessary to specify "Gordon's" on your order to jobbers, because every jobber has it.

STATE OF TRADE.

Dealers Satisfied With Prevailing Conditions.

New York, Oct. 2.—Developments of more than ordinary consequence have been somewhat limited during the period under review, but the volume of general business has continued to show a gradual but steady increase and dealers as a rule express satisfaction with prevailing conditions. Quinine has been the leading article in point of interest, and the attitude of leading manufacturers at home and abroad has been watched rather keenly. At the Amsterdam bark sale on Thursday values advanced about 5 per cent, and it was generally expected that manufacturers would immediately mark up their quotations, but only one domestic brand was advanced on Friday, and that one only 1 cent per ounce. This has given rise to the belief that there is another factor—active competition between American and foreign makers—which largely governs the market for the time being; hence the difficulty of anticipating the course of prices. It is admitted on all sides that prevailing values of raw material warrant a higher market for the manufactured product, and outside holders are indifferent sellers, feeling confident that conditions will improve in the near future.

Opium has continued easy with the consuming demand slow and unimportant and quotations for round lots have declined about 2½c. per pound. The inside figure for powdered shows a similar decline, and the outside price has been reduced fully 10c. per pound. Morphine has continued to move actively on orders from the consuming trade and values remain unchanged. There is no abatement of strength in the cocaine situation and the position of raw material would seem to justify further improvement. Cables from the west coast of South America report that supplies of leaves from interior producing districts are coming in very slowly, and that extreme prices are demanded. Spot quotations have in consequence moved up rather sharply, and indications favor still higher figures. There has been a decided improvement in the position of naphthalene balls owing to stronger markets abroad. Domestic manufacturers and leading importers of foreign have withdrawn all quotations and for the small stock in the hands of dealers a material advance is quoted.

Manna continues to harden in price and extreme figures are anticipated in view of the unfavorable outlook for new crop. Cables reporting an exceedingly small yield on account of heavy rains in producing sections have been confirmed, and the small stock in primary markets is offered very cautiously at prices showing a considerable advance over former quotations.

German ergot is firmer to the extent that wholesale prices have been advanced 2c. per pound. The improvement is due to reports from abroad that the Hamburg market had been cleared and that no more could be obtained there until the next crop, which will not be available for several months. Canada balsam fir is in reduced supply and firmer with values showing an advance of 2c. per pound. Senega root has advanced sharply under the influence of light stocks both here and at interior points, and an active inquiry from consumers and exporters. It is claimed that shippers in producing markets have been unable to secure sufficient stock to fill their orders and have been endeavoring to buy in this market in order to cover their contracts. Short buchu leaves show a substantial gain in values, owing to a corresponding improvement in European markets. Among the essential oils, lemon and lemongrass are firmer, and cubeb a shade easier, but none of the changes is of more than ordinary consequence. Grain alcohol has been advanced 2c. per gallon by leading distributors, and the market is firm in sympathy with the strong position of corn. Yellow prussiate of potash is lower, owing to an unsettled condition of affairs resulting from competition between domestic and foreign manufacturers.

No Change in Boston.

Boston, Sept. 29.—No remarkable changes have taken place in the trade situation. Nowhere does one hear any complaint from druggists of poor trade or unsatisfactory conditions, and general content appears to be their good fortune. There is nothing in sight to indicate any unfavorable change in the immediate future.

There has been a fairly good jobbing demand for some drugs, that for quinine being perhaps most noticeable. It is held rather firmly and higher prices are talked about. Vanilla beans are steady. Essential oils show no special life. Prices for the general list of chemicals show little fluctuation. Nitrate of soda is probably the leader in point of interest and there are indications of stronger prices. Alcohols are showing an upward tendency, so some dealers believe, while in other quarters it is thought that they are full high enough. There is no great activity in them. Waxes are not particularly active just now. The English crop of hops this season was so unsatisfactory, possibly half of what it was expected to be, that prices here are thought to be slated for a rise. Not much is doing at this time in dyestuffs and tanning materials.

Dull in Philadelphia.

Philadelphia, Sept. 29.—Business has been quite dull and dragging during the past week, showing a decided falling off from that of the earlier part of the month. Several of the large jobbing houses report orders as coming rather slow and being small in amount, and no movement of interest in the local market seems to have transpired. The effect of the fall elections is already being felt in the general feeling of unrest and uncertainty, although, of course, the retail stores only feel this remotely, but the two years of good business has placed most firms in a far better position to stand a dull month than was the case four years ago. Prescription business is now very dull, scarcely half the amount being done as in the past two weeks, and most of it is of the ordinary kind, it being too late for "summer complaints" and too early for "coughs and colds." A forerunner of the times to come is seen in the refurbishing up in many stores of signs for cod liver oil, cough medicine and such other winter necessities. It is the same with soda, "betwixt and between" times are always bad for trade.

The coal strike has not affected the large manufacturers as yet to any great extent; most of them have contracts for supplies well ahead, and as there seems a prospect of settlement we shall probably not have to resort to soft coal and have higher prices for manufactured articles. Most retailers are holding back to await developments, the continued mild weather not calling for heating of stores.

A Good Month Expected.

Detroit, Sept. 29.—September has not proved a very good month, on the whole, for Detroit druggists. Instead of two weeks—the usual allowance—there have been but two or three really hot days. A few people have had "colds," but there has been no epidemic. But now that people are back from the resorts better trade is looked for, and the ever hopeful druggists anticipate that October will be a busy month.

Slower Trade in Chicago.

Chicago, Sept. 29.—Business has been for some reason only fair this week. None of the jobbers seemed inclined to ascribe any particular reason for this, except that it is simply a natural lull which sometimes happens at any season. One jobber said that he had observed an increase in the city business recently and ascribed this state of affairs to better local conditions among the druggists. In point of country trade, however, the orders had not been so satisfactory as usual.

The manufacturers are not complaining. They have a good volume of business, which seems to be growing as the season advances. The general opinion seems to be that the Presidential campaign is having very little effect on business.

Cheering Prospects in the Northwest.

St. Paul and Minneapolis, Minn., Sept. 28.—One of the heads of the largest drug jobbing house in these cities made a statement to the Era man to-day that covers the situation tersely and in manner most gratifying, not only to the house in question, but to the whole trade, of which the statement is representative. "Our business," said the gentleman, "shows an increase of \$140,000 for the year thus far up to the 1st of this month over the parallel period of 1899. This is quite cheering, even though the increase is less than that of the first eight months of 1899, over those of 1898, which was \$240,000. Collections are much better than expectation had led us to hope for." He added that senega root—and the greater part of the country's supply comes from Minnesota—is considerably higher, as the article is not coming to market in its usual volume. Flax seed, both whole and ground, is half a cent a pound lower. The retail trade is flourishing, according to the assurances of a majority of dealers questioned. There has been an appreciable increase in the prescription branch, owing to colds, etc., resulting from changeable weather, which for several weeks has been mostly wet and chilly.

A Profitable Side Line.

Invalid Chairs made by the W. D. Allison Co., Indianapolis, Ind., are light, strong and durable. They are made in many styles, with rubber tires and ball bearings. They also make physicians' and dentists' chairs, tables and cabinets. While druggists do not usually carry such goods in stock, they frequently have orders from physicians for them, and such druggists should have Allison's Catalogue B, which will be sent for the asking.

MARKET REPORT.**NEW YORK MARKET.**

New York, Oct. 2.—Business in a jobbing way has continued to show gradually increasing volume, and with a liberal majority of price changes in favor of holders, prevailing conditions are satisfactory to dealers.

OPIUM.—The demand is light and wholly for small lots, with the market barely steady in tone, but quotations remain unchanged at \$3.45@3.55 for 9 per cent. and \$3.55@3.65 for 11 per cent., according to size of order, the outside figures for single pounds.

POWDERED OPIUM.—Small parcels are moving moderately on orders from consumers, and jobbing prices are maintained at the old range of \$4.50@4.65 for 13 per cent. and \$5.10@5.25 for 16 per cent., as to quantity.

MORPHINE.—The market continues moderately active under a steady demand from the consuming trade, and quotations are well sustained on the basis of \$2.40@2.60 for eighths, according to brand and quantity.

QUININE.—There is a fair inquiry for consumption, and the market is firmer to the extent that manufacturers of the P. & W. brand have advanced their quotations 1c. per ounce. Other makers have not yet followed, but an opinion prevails that values generally will be higher in the near future, as the statistical position of the raw material is sufficiently strong to justify a much higher range of prices. Meanwhile jobbers continue to offer sparingly at quotations on the basis of 44@45c. in ounces, according to brand.

NAPHTHALINE BALLS.—Owing to scarcity and the refusal of manufacturers to quote for forward delivery, jobbers have marked up quotations to 3½@3¼c. by the barrel and 5@7c. for less.

MANNA.—Values continue to harden under the influences noted in previous reports, and jobbing prices have been advanced to \$1.40@1.60 for large flake, 65@75c. for small flake and 45@55c. for sorts.

BALSAM FIR.—Canada is firmer on account of reduced supplies, and quotations for bulk have been advanced to \$2.95@3.20, as to quantity. Pound bottles are unchanged but firm at 50@55c. inclusive.

COCA LEAVES.—All varieties are higher in sympathy with primary markets, and the revised jobbing figures are 40@45c. for Truxillo and 50@55c. for Huanuco; ground 5c. and powdered 10c. higher.

SENEGA ROOT.—An increased demand and steadily diminishing stocks have caused the market to harden, and jobbers have advanced quotations to 55@65c. for whole and 60@70c. for powdered.

ALCOHOL.—Distillers have again advanced their prices, and jobbers are now quoting \$2.49@2.50 by the barrel and \$2.60@2.70 for less. Odorless, \$2.51@2.52 by the barrel and \$2.65@2.75 for less.

BUCHU LEAVES.—Foreign markets for short are stronger, and jobbing prices show an advance to 37@42c. for whole and 42@47c. for powdered.

ESSENTIAL OILS.—The changes during the week comprise an advance in lemon to \$1.45@1.70, and in lemon-grass to \$1.45@1.70. Cubeb quotations have undergone revision, and the new figures are \$1.25@1.40.

RUSSIAN ISINGLASS.—Prime grades are very scarce, and jobbers have advanced their prices to \$4.50@5. The market is bare of No. 2.

SEEDS.—The changes during the past week consist of an advance in German rape to 3¼@4c. by the bag and 6@8c. for less; an advance in Russian hemp to 3¼@3½c. by the bag and 4½@6c. for less; and a decline in canary to 3¼@3½c. for Sicily and 2½@3c. for Smyrna by the bag and 4@6c. for small quantities.

BALSAM TOLU.—A slightly easier feeling has developed, and jobbers have reduced quotations to 31@33c. for 10-lb. tins and 34@35c. for smaller packages.

COPEKAS.—Stocks have been very much reduced by the recent demand from Galveston, and the market is firmer to the extent that jobbers have advanced their quotations to 1¼@1½c. in barrels and 2¼@2½c. for less.

CAMPHOR MONOBROMATE.—Values are firmer in view of the stronger position of camphor, and jobbing quotations show an advance to \$1.25@1.50 per pound and 12@15c. per ounce.

GALLIC ACID.—Higher crude material and a consequent advance in manufacturers' prices have caused jobbers to mark quotations up to 85c@81.

HOWARD MULLIKIN, a native of Trappe, Talbot County, Md., who had been in the drug business at M'ford, Del., for a number of years, died there September 16. He was 57 years of age and unmarried. The remains were taken to Trappe for burial. The deceased was highly educated and gave much time to historical and genealogical research, acquiring a reputation as a scholar which extended far beyond the confines of his native State.

THE ERA COURSE IN PHARMACY.

The lectures will hereafter be issued in monthly instalments, and the entire work of the Course can be completed within twelve months.

NEW CLASSES FORMED EACH MONTH.

The first instalment of lectures will be issued in October, and the remainder at intervals of thirty days thereafter.

Recitations and examinations are conducted by correspondence directly with each regularly matriculated student.

Especially valuable as a preparation for examination by a board of pharmacy, to those who cannot attend a college of pharmacy, and to all desiring to review their former study of the subjects embraced in the curriculum.

TOTAL EXPENSES FOR FULL COURSE, \$10.00.
For fuller particulars see announcement facing third cover.

Write for new descriptive Prospectus, now ready.
Address, THE PHARMACEUTICAL ERA.

NOTICE TO STUDENTS OF THE ERA COURSE.

Since the publication of our last announcement, the following Seniors have completed their recitations and examinations, and are entitled to diplomas:

Charles B. Lamson.
Arthur J. Stauff.
Lew Knapp Van Allen.
Sister M. Mechtildis.
John Beard Griffin.
Frederick H. Ehrhardt.

The following Juniors have completed the work of the first year, and are entitled to advancement:

Herman Pederson, Jr.
J. T. Loyd.
Arthur Walters.
P. W. McFadden.
John H. Pearson.
W. B. Palamountain.

REPEAL THE STAMP TAX.

If influence can accomplish anything, the drug trade ought to feel quite sure of the repeal of the iniquitous stamp tax on medicines at the coming session of Congress. Those powerful bodies, the National Association of Retail Druggists, the National Wholesale Druggists' Association and the Proprietary Association of America, have each decided to formulate plans to bring all the influence of these several bodies to bear upon the law-makers at Washington, to the end that the drug trade may be relieved of this great and unjust burden. These bodies are working both separately and in unison, and many other organizations in the drug trade, such for instance as the Drug Trade Section of the Board of Trade and Transportation of New York, many State pharmaceutical associations and local bodies of all degrees of importance and strength are combined in this one great effort. This paper, believing that it can assist very materially to secure the desired end, offers its pages for the promulgation of information, for the publication of arguments and protests, and has farther undertaken the preparation of a monster petition from the trade to the members of Congress. Details of this scheme will be set forth in subsequent issues of this paper.

It is not necessary here to recount the grounds for objection against a continuation of this stamp tax. Every member of the drug trade has felt its operation to a greater or less degree. We wish to request, however, that this paper be favored with communications on the subject suitable for publication, setting forth the case just as strongly as possible by argument and reason. In a multitude of counselors

there is wisdom. We confidently believe that when the sentiment of the drug trade is placed before our law-makers in the proper shape, they can take no action other than to order an immediate repeal of that section of the War Revenue act which bears so harshly and unjustly upon the drug trade. The stamp tax has operated in a direction exactly opposite to that apparently intended by its framers. It has fallen heavily upon the very class of articles which should not be taxed (those constituting the bulk of the medicinal articles in the drug store), and has exempted the other class of patented and protected articles which, if there is any justice in the tax at all, are the most proper and most able to stand the tax.

Now is the time, and now is the chance for the drug trade to voice its protests in no uncertain sound, and this little notice is but a preparatory announcement of the campaign which the Era, as one drug paper, intends to inaugurate in its desire to serve to the best of its ability its clientele.

THE OPPORTUNITIES FOR EDUCATION.

The season for the opening of schools and colleges brings home with emphasis the great opportunities presented to the student of to-day. It was far different not so very many years ago. There may have been some opportunities for a chosen few, but there were comparatively none for the many. Times have changed and the educational idea and its consequent concomitants have been felt in our national life, our sports and pastimes, our literature and thought. As a consequence of this idea the environment of the individual is no longer restricted, he has become more observant, and with his experiences have come broader views of life. He has expanded and educational institutions are among his most positive and permanent achievements. The effect of this expansion, this development, has extended into all of the avenues of activity and in none has its influence been for greater good than in the domain of pharmacy. The necessity for better education is realized now as never before, and yet when we look around us we feel that there are so many who have not caught the spirit of enthusiasm and are not in step with the procession. It is these fellows who become the discontents of the calling and who do more than all others to keep pharmacy and themselves in the background.

Young men! The educational institutions of this great country of ours, the press, the thinkers, appeal to you to live up to your opportunities. If you cannot go to college study at home. Get an education somehow, the best is none too good. Practice economies if necessary and make a beginning. Successful business men are united in the belief that the future of pharmacy must be worked out from within and the equipment and training for this work must be of the highest

standard of excellence. The young man if he is wise will profit by reading the signs of the times and act accordingly.

MATRICULATE NOW.

Part I, thirty-two pages, of the lectures of the 'Era Course in Pharmacy, was mailed to a large class of students yesterday, October 10. This part covers that portion of the work coming under the subject of general chemistry, in which the laws and principles of the science are so treated and illustrated that the students cannot help but find the lectures most helpful. There is included a scheme or plan for the separation and identification of bases and acids and a description of the principal reactions and tests useful in analysis. Chemistry is the fundamental science upon which a knowledge of pharmacy is erected, and the student is urged to study the subject earnestly and faithfully. Next month will follow Part II., containing that part of the course under the theory and practice of pharmacy. Students who are desirous of taking up the work with the October class are urged to get in their applications for matriculation before October 30, as all students who enroll during this month will receive the lectures sent out as Part I. If the matriculation be delayed, they will have to wait until the following or some subsequent month. No examination is required to enter the classes, and all students will find the lectures on the various subjects systematically arranged with particular reference to their needs. Matriculate now!

OPTIMISTIC VIEWS.

A prominent wholesale druggist calls attention to several reasons why he thinks the fall business will be especially good, in spite of the fact that this is Presidential year. "There may be some conservatism by the country druggists in placing orders, but this would appear to me to be rather a healthy, encouraging sign than otherwise. One encouraging thing is the almost total absence of any great amount of political excitement calculated to disturb the natural course of business. Another favorable indication comes from outside the confines of the drug business, but is none the less pertinent for that reason. Several of my friends happen to be connected with the St. Louis houses of the large harvester and thresher companies, and this is the time of year when they are working on settlements for machines sold the past season. Without exception they tell me that their path is strewn with roses as compared with usual conditions in making settlements. Collections are far easier than they have been for years and they are receiving a greater proportion of cash than they have known for a long time. This certainly indicates that farmers in the territory tributary to St. Louis are in a prosperous condition, and this will of course have its effect on all lines, the great drug trade included."

Pharmaceutical Celebrities.

HENRY MILTON WHELPLEY.

H. M. Whelpley, of St. Louis, is widely and favorably known as a pharmaceutical and medical worker. His journalistic training began a score of years ago and has marked him as a practical, conscientious, interesting and instructive writer. He is often complimented upon his original and popular plan of reviewing the transactions of conventions. He is editor and manager of the Meyer Brothers Druggist, on the editorial staff of the Medical Fortnightly and a frequent contributor to other publications, including scientific periodicals and the daily press, and is also the author of two books which have passed through several editions.

As a teacher, Professor Whelpley has exercised a natural talent. His aptness of illustration, earnestness of purpose and general interest in each student win for him the love and admiration of even the laziest and most passive student. A now prominent physician who graduated under him said recently: "Dr. Whelpley knows how to make every student study and enjoy it." It was a St. Louis drug clerk who unintentionally gave the doctor a compliment when he said, "I am a failure in the drug business and Whelpley is to blame for it. He made me study and pass my examinations. If it had not been for him I would have flunked at college and gone in some other business better suited to my disposition." The doctor is a member of the faculty of the St. Louis College of Pharmacy and of the Medical Department of the Washington University. He often has private students in microscopy and each winter delivers popular lectures on scientific subjects or travels.

The exacting duties of secretary-work come natural to him. He held the office in literary societies during school and college days and has served in this capacity in the Apothecaries Society, Alumni Association, Microscopical Society, State Association, Section of the American Medical Association, Missouri Medical College and

numerous other organizations. At the Richmond meeting he was elected local secretary of the American Pharmaceutical Association for the St. Louis meeting next September. He shrugs his shoulders when asked about the task thus placed before him, but can be depended upon to acquit himself in a manner becoming such predecessors as Whitney, Hynson and other workers.

The Whelpley residence is a place which students, pharmacists, physicians and naturalists are fond of visiting. A large and well selected library, the most complete collection of microscopical mounts and apparatus in the West, instructive natural history specimens and an air of hospitality render this home of special interest.

Whelpley has been the subject of much speculation. He pursues science like a German, is as obliging as a Frenchman, has the Irish love of wit and looks like a Scotchman. It seems that the Whelpley name is traceable to the Royal Guelf family of England and the historic German Guelfs of the eleventh century. When pressed on this point, the doctor admits his attenuated consanguineous relation to her Majesty, Queen Victoria. But he dislikes discussing the subject and says that people who are ever talking of their ancestors are likely to belong to a family which is like a hill of potatoes—the better part underground.

Every man has a weakness, but few are as strong in that weakness as H. M. Whelpley, when on fishing bent. We have it on the best authority that once he wets his fish line there is no stopping him until darkness drives him home. In fact he would miss many a meal if his good wife did not usually accompany him and place in his hand a tempting lunch at meal time. He does not always catch fish, but hope springs eternal in the human breast, and he expects to get next time those missed the last trip.

Whelpley never wears jewelry of any kind except at conventions, when, with an idea of advancing the interests of the association, he has the official A. Ph. A. badge and several annual badges in evidence. He designed the A. Ph. A. badge and, with Geo. W. Voss, of Cleveland, and H. M. Whitney, of Boston, wears the one with the greatest number of bars.

MANUFACTURE OF ALBUMIN IN CHINA.—The first albumin manufactory in the Far East was established in Hainan (Jour. Soc. Chem. Ind.); this factory used about 1,000,000 eggs daily, but was burned down by the natives. Later, a German firm, Stubbe & Wintgen, started a manufactory at Wuhu, where ducks' eggs were very plentiful and cheap, then costing only about 2.00 taels (at 3s., say 7s. 10d.) per 1,000. Other factories have been since established, and there are now (July 5, 1900) six in China, five being in German hands and one in French, but the industry is no longer so remunerative and thriving as at first, and the price of eggs is now about 5.30 taels (say 15s. 11d.) per 1,000. A thousand eggs yields from 13 to 15 lbs. of albumin, which is sold at about 3s. per lb. The albumin is used principally in photography, the yolks of the eggs being employed in the tanning industry.

THE LI CHEE OR LAI CHI NUTS. which are so frequently used as tokens of good will by the Chinese laundryman or peddler about the time of their New Year, are grown upon a tree known as the Nephelium Litchi. The edible portion of the li chee nut is really the fleshy aril which immediately surrounds the smooth brown seed and is in turn surrounded by the thin warty shell of the fruit itself. The nuts may be obtained in the dry form and also preserved with sugar in cans. In the sample analyzed the aril formed 46 per cent. of the weight of the dry seed, but these figures can scarcely be considered typical, as the fruits were kept for some months before being used. As might be expected from their sweet taste, sugar, especially reducing sugar, is their most important constituent. Other nutritive substances are present in small quantities. The tree has been a favorite subject for greenhouse treatment in temperate climates for many years, and is also reported to tolerate the climatic conditions found in Southern California in a satisfactory manner.

(Special Correspondence).

THE PARIS EXPOSITION.

✻ ✻ THE FRENCH EXHIBITS.

PART II.—MISCELLANEOUS.

(Continued from page 256, Sept. 13.)

LEAVING the Chemical Industries Group and passing northward along the first floor galleries, one reaches the French

Educational and Scientific exhibits. Here are many most interesting details—views, reports, statistics, specimens—of the French Universities, and their work, which are well worthy of examination. The Paris School of Pharmacy and

Faculty of Sciences are illustrated by photographs, etc., and there are several cases of specimens shown by the professors which we should describe more fully had we not seen something similar in the modern portion of the "Retrospective Chemical Exhibit," already noticed. Close by are

The Surgical Instruments

neatly shown, as will be seen by our engraving; and the Anatomical Models. The French are past masters in this art, and this is all very curious and exceedingly instructive to any one who cares for physiology.

We now leave the main buildings, and passing under the Eiffel Tower, reach the riverside building, where the

French Hygiene Section

is situated. On the first floor there is a roomy saloon where all the leading French mineral waters are shown. The only portion of the ground floor exhibit which need be described is

The Salon Pasteur

where the bust of "the Master" (as he is termed by his disciples) stands in the centre, with a figure of Fame offering him a crown. Around, in an octagonal glazed

Around the sides of the room is the work of his disciples, Behring and Roux's diphtheria serum, Calmette's work on serpent venom, yeast, etc., etc. By the way, Dr. Calmette gave a descriptive lecture in this hall last July, when Madame Pasteur and her children were present. This handsome exhibit was paid for by the exhibitors in the French Hygiene Section, and cost about \$12,000. Various exhibits illustrating Pasteur Institutes in other lands are grouped around.

A neighboring riverside building is devoted to Forestry, Hunting, Fishing and Wild Crops. Hardly a place, one would think at first, to interest the non-sporting druggist. But it must not be forgotten that many of our

Drugs and Materia Medica

are still found in a wild state, and even the cultivated species are classed under the same heading in this case. This drug exhibit is fairly large and well shown; we merely notice a few leading features. H. Salle & Co. show opium from various countries, and in all states from the poppy seeds to the aqueous extract and finished products. In another case they have a good quinine exhibit, where the Eucador bark is shown in the original cowhide bales. A similar object lesson is offered by the "Society for the Treatment of Quinine," who show the model of a bark-drying hut (1-20 real size) and knives and tools used for cutting and preparing the raw material. Next to these objects are the finished products, sulphate, bi-sulphate, hydrochlorate, etc., etc. The "Central Pharmacy" of Paris shows quinine (Javan, South American, etc.), but has also a capital show of general drugs, from belladonna to Iceland moss and castoreum. M. Bocquillon (whose name will be familiar as treasurer of the Pelletier-Caventou statue subscription), shows a collection of materia medica found in the French colonies, also a herbarium, mounted microscope slides, and other details.

The General Association of

French Herbalists

have a very nicely arranged show of the medicinal indigenous plants in which they deal. The popular household remedies form a long array of glass jars, flanked by herbariums; below are bunches of the dried herbs. Here are balm, horage, couchgrass, chamomile, centeury, fumitory, lavender, lime and walnut leaves, mallow root, poppies, water lily root, peppermint, horehound, violets, and a score of other simples still so largely used in France. Here are the "pale roses," with the syrup of which (and one or two other simples) Guy Patin, sworn enemy of apothecaries, declared he could cure all the ills the flesh is heir to. Few of us who have lived a few years in France have escaped being dosed (without the doctor's orders as a rule) with some of the good old fashioned "tisanes," or teas made from one or more of the plants above named. It may or may not have done us good, but did us so little harm! and pleased the worthy and aged persons who love to act as amateur doctors. There are several private exhibits in this herbal line; some are very well arranged; we may just quote a case of saffron shown by a Pithiviers grower. There is

FRENCH SURGICAL INSTRUMENTS.

case, is the historical museum of his life work. Here is the original MS. of his thesis at the Faculty of Sciences (certified by the chemist, J. B. Dumas and dated July, 1847), and his various scientific apparatus illustrating the discovery of the anthrax microbe, the treatment of hydrophobia, etc., etc.

FORESTRY, HUNTING AND FISHING PAVILION.

a model of the growing flowers with the note: "It takes about 100,000 flowers to prepare a kilo of saffron." Next we have the portion of the flower which produces the saffron, followed by the powder, and finally the put-up article as offered. A radiograph of pure and adulterated saffron is also shown.

There is the curious pungent smell about this section which reminds one of the old fashioned drug stores of one's boyhood, and makes one quite sorry to leave the quiet gallery for the mere crowded downstairs portion of the building. We pass on our way (in the Fur section) a curious musk and civet exhibit (of which we shall speak in connection with French perfumery) and an important

Sponge Show

arranged by M. Weill, of Paris, who has branches in Cuba, Tunis, etc. He has made quite a large and interesting group; here is a model of how sponges are packed at Sfax (Tunis); there a figure of the strangely-clad Cuban sponge fisher; in the centre a collection of curious sponges, etc.; there are also photographs and specimens illustrative of the fishery. We note that 340 tons of sponges were imported into France last year (1899); a large quantity come from Cuba, Florida, and the Bahamas, and the remainder principally from the Mediter-

ENGLISH GROCERY SECTION.

anean. There are one or two smaller sponge exhibits hard by. In the ground floor Fishery Section there are more curious old relics of the Newfoundland cod fishery, including an ancient press used for extracting the oil. Close by is the exhibit of the French

Mycological Society

of which Prof. Bourquelet (who drew up the 1900 report on the International Pharmacopœia) is an active member. The study of fungi, and more particularly the means of distinguishing between the poisonous and non-poisonous kinds, is one of these matters where the educated and intelligent country pharmacist may sometimes render service to his rural neighbors. Are you an amateur of truffles? Here, besides specimens and documents, is the "Trufficulteurs Almanac" for 1900, published at Périgueux (the capital of Périgord) of course.

Before leaving the Champs de Mars we may just pass hastily through the

French Alimentary Section

attached to the Agricultural Group. Nearly one-half of the space, both downstairs and upstairs, is occupied by the Beverage Exhibits, wines, beer, cider and liquors of endless kinds. Many of these are of a nature to interest such American druggists as carry this line, but to a French pharmacist the only important feature is the

Medicated Wines

which are well put forward, several being lodged in tasty little kiosques, with a bar to facilitate the practical testing ("dégustation," as our French friends term it) of the various products. We give a sketch of the St. Raphael Quinquina stand. Close by this will be found some curious old engravings of Alchemy and Distillery in days gone by; and further on in the same gallery some seedsmen show medicinal plants, and there is an olive oil exhibit. Before leaving this building we may just notice two stands outside the French exhibit, as we may not be able to allude to them elsewhere. Besides several popular beef juices,

The English Grocery Section

contains the "Mellin's Food" exhibit, which will interest pharmacists. The baby among the bulrushes cannot fail to attract the maternal eye to the article offered. Another stand where the same laudable sentiment is worked upon is found in the

Swiss Alimentary Group

where Nestle's baby in a high chair, as will be seen by our illustration, gives a finishing touch to a nice exhibit, and may offer a suggestion for a window show to pharmacists. We may add the whole of the Swiss foodstuffs group is lodged in uniform stands of the model shown.

The French Perfumery Section is too important to be treated in the brief space which remains at our disposal, nor do we propose to describe in detail

Various Articles and Apparatus

very interesting to pharmacists, to be found in the sections devoted to glassware, india rubber goods, brushes, scientific instruments, machinery and apparatus, photography, etc., etc. By the time the visitor has seen half what is described above he will be heartily glad to take one of the handy "Fauteuils Roullants" (bath chairs)—for the still more popular "Trottoir Reulant" (movable platform) which runs round the Exhibition, but does not cross the river—and be wheeled to the

French Colonial Section

in the Trocadero, where picturesque little pavilions, containing the products of France's new and old colonies, dot the garden. In nearly every one of these something

UNITED STATES TOBACCO EXHIBIT.

might be learned of the olive oil industry of Algeria and Tunis, of the caoutchouc gathering in West Africa, of

NESTLÉ'S STAND. SWISS ALIMENTARY GROUP.

vanilla and spice growing in the old colonies of Martinique, Réunion, Mayotte and Gaudeloupe, etc., etc. In one of the wings of the main building of the Trocadero is a collection of French

Pharmaceuticals, Etc., for Export.

It is said that some pharmacists preferred to exhibit here, as they had more chance to obtain space, and were not tied down to uniform cases as in the Chemical Group. But we fancy they will regret their decision, for this is a somewhat out of the way part of the Exposition. We noticed milk sterilizers and vermin killers, cattle powders, corn cures, refrigerators, food for diabetics, disinfecting powders and other necessities and comforts of savage and tropical life (most of the French colonies are in the warmer regions). The pharmacists who put up proprietary medicines are well to the fore, it was curious to find, in this very modern department, for the

French Colonies practically date from 1871; the exhibit of the "Golden Pestle," an ancient drug store which claims to have been founded in 1483.

Fedit's compressed medicaments and pharmacies or medicine chests for explorers may be noted, a box 12 inches by 10 by 8, priced at \$30, is advertised to contain 4,300 doses of medicaments, and an outfit for surgical instruments.

—The California Board of Pharmacy as now constituted consists of Wm. M. Searby, president, San Francisco; S. L. Waller, San Francisco; C. A. Seifert, Oakland; S. Oberdeener, Santa Clara; E. A. Baer, Bakersfield; H. M. Sale, Los Angeles, and A. G. Orena, Los Angeles. S. L. Waller, formerly secretary, has resigned that office (but not as member of the Board), which is now filled by John Calvert, 400 Sutter street, San Francisco, who is not a member of the Board.

PHARMACY AT THE PARIS EXPOSITION.

In general it is to be said of the system of arrangement of exhibits at the Paris Exposition that while measurably destroying the bulk of national display it has grouped together the various national exhibits for any given subject. The installation of exhibits has become a science more or less exact. In this science two objects are sought to be conserved, the integrity of national exhibits, which is a matter in all cases of national pride; and the grouping together of all the exhibits on a given subject with a strong secondary consideration of their place of origin. As a matter of mathematics the perfect scheme of an installation which shall give equal weight to each factor is that of a series of concentric circles, or possibly a spiral, intersected by radial aisles from the common centre. On the scheme of concentric circles each such circle is given up to the whole exhibit of a single nationality, the wedge-shaped spaces between main radial aisles being devoted to a special class of exhibits. The advantages of this arrangement are that such visitors as wish to examine the whole exhibit of the country in which they are interested may do so by going around the circle, while on the other hand the visitors who wish to compare national exhibits of any given specialty may do so by confining their attention to the particular wedge. The Commission-General of the Paris Exposition hesitated a long time before relinquishing this scientific method of installation. The only reason why they gave it up was the consideration of the enormous territory which would be covered in so large an exposition as that in Paris this year. To secure the necessary space it would be necessary to go so far into the country as to cause great inconvenience and almost entirely rob the Exposition of all right to use the name of Paris.

In the failure of this scheme of installation it was decided to give up the idea of conserving the idea of national exhibits and to group as conveniently as possible the display of individual topics. This decision has undoubtedly injured the ensemble of the fair, but it has concentrated the interest of all special students.

Passing from the question of exhibits I wish to say that for the first time in the history of the world's great expositions pharmacy has taken a high place. Hitherto it has been displayed as a mere incident to general chemical industry. This year at Paris it has had not only a special section and both artistic and commodious housing, but also still further recognition in the first International Congress of Pharmaceutical Industry and Commerce. The sessions were held at the Palace of the Congress of Social Economy on the Place de l'Alma on September 3 and 4. In the organization of the Congress it was stated that pharmaceutical specialties have become a most important article of commerce between the different nations of the world. They are products essentially valuable to public health, and their use from the international point of view is one of the most fruitful applications of the principle of the unification of medical dosages. In effect they allow consumers of every nationality to use the same medication, no matter in what country it may be found, and likewise make it possible for physicians to dispense to their patients from any pharmacy in the world a drug whose doses shall be unchangeable. Nine resolutions were acted upon by the Congress, and from their particular importance it is worth presenting them as concisely as possible.

First resolution. That in every country the restrictions of law upon the importation and sale of pharmaceutical specialties should have no other object than to assure public health the guarantees to which it is entitled; and that so far as concerns the restrictions of law the common law should be applied to these products, and this applies to special duties and revenue stamps on the means employed for their publicity.

Second resolution. Wherever pharmaceutical specialties are not admitted free it is desirable to secure a unification of the forms required for the import and sale of foreign articles, and these forms should everywhere consist of a declaration of the active principles of each preparation.

Third resolution. In every commercial contract it should be stipulated that medicines sold under the name and label of the manufacturer shall be imported at the charge of the manufacturer in complying with the legal formalities of the country to which imported.

Fourth resolution. It is desirable that in countries having ad valorem customs duties the tariff should not exceed 10 per cent. of the mean value of the products, calculated on their customary wholesale price; and that in countries having specific duties computed by weight these imports should be adjusted to all goods, light or heavy, in such wise that they shall never exceed 10 per cent. of the customary wholesale price.

Fifth resolution. Trade marks should be protected independently of the products to which they apply, so that a trade mark should be protected everywhere, even in countries where the medicine itself is prohibited.

Sixth resolution. The name of maker or inventor should be inscribed in a register or other record of medicine, and should constitute a property to be protected everywhere, except in cases where the maker has voluntarily relinquished it for the good of the public.

Seventh resolution. The employment of customary and general designations, such as the scientific name of a medicine or the form in which it is put up, as for example the words capsule, elixir, globule, granule, ovule, pillule, powder, salt, syrup, solution, suppository, wine, etc., being absolutely necessary for a distinct denomination of pharmaceutical specialties, it is desirable that trade marks bearing one of these designations followed by the name of manufacturer or inventor should be accepted by the authorities of every country, it being understood that the person registering the trade mark shall not acquire any property right in the common designation.

Eighth resolution. Fanciful designations of medicines should be protected in every country to the same extent as fanciful designations of other industrial products.

Ninth resolution. It is desirable that every country should adopt uniform regulations in regard to the patentability of industrial products including medicines.

The importance to the pharmaceutical trade of the full discussion of these topics cannot be overestimated. The results of the discussions of these several resolutions do not amount to more than the expression of general desires, for the delegates to the Congress were not empowered to commit the governments of their respective countries to the acceptance of the conclusions reached by the Congress on these points, most of which will be seen to appertain to treasury departments, patent offices, copyright bureaus and other executive branches of government. That they have been discussed at all is a long step in advance, even if the results are not immediate.

B. T. WHITMORE, M. D., LL.D.

AS OTHERS SEE US.

The following appears as an editorial in a recent issue of Tobacco:

WELCOME EFFORT AT REFORMATION.

The National Association of Retail Druggists will meet in annual convention at Detroit, Mich., September 12, 13 and 14, when the question of price cutting, which has been the scourge of the trade for some years past, is expected to reach a settlement. The druggists have had a good, long, steady pull at their own medicine bottle, and Tobacco is more than glad to find them so heartily sick of the dosing.

There has been no more flagrant, wanton and persistent cutting of retail cigar prices in this generation than that perpetrated by retail druggists, and they are entitled to but scant sympathy from the straight cigar trade in the steady frying in their own juice, which they have been subjected to these many years gone by. Long before department stores entered the arena the druggists were viciously plying their knives on the legitimate cigar dealer; indeed, they merely suggested to the department store man how easily he could turn and rend them. The druggists' motto seemed to be an effort to atone for their own steep charges on prescriptions, etc., by abolishing the legitimate profits of their neighbors.

There have been some honorable exceptions among druggists in the matter of price cutting on cigars; men who have handled this branch of their business to make a legitimate profit of it, but they are so conspicuously few that they only serve to emphasize the business immorality of their cutting brethren. Tobacco does not object to druggists, or anybody else, retailing cigars merely because it is a department or side line with them. Our objection is to their demoralizing a legitimate business by making it a side line at prices that knock legitimate profits galley west for everybody. Whatever objection may be urged against the handling of cigars by the saloon trade, "Boniface" only rarely can be saddled with the sin of cutting. As a matter of fact, his offense has been entirely in an opposite direction—in getting a price for his cigars usually far beyond their true value.

Genuine reform from great sins is sometimes achieved after great tribulation, and, of this, the druggists have sipped from an overflowing cup. Let us hope that it has worked in them the production of fruit meet for repentance and the warrant of hope for better things from them in the future.

INDICATORS FOR ALKALOIDAL ESTIMATIONS.

C. Kippenberger (Pharm. Ztg., Merck's Report) has carried out a series of careful experiments with a view to determining the best indicators for use in titrating the various alkaloids. From the results obtained it would appear that uniformity and accuracy of results are possible only when the alkaloidal salt in aqueous solution is dissociated as little as possible, in which respect the sulphates may be regarded as the most satisfactory, or, when the molecule of indicator (acid) alkaloid (base) compound is but very little prone to dissociate, which may be when the alkaloid possesses a strongly basic character, and the indicator is a weak, or at most medium strong acid, or, when the alkaloid is only a medium strong base, and approximates the acid indicator in affinity. In general the indicator must not have a greater affinity for the alkaloidal bases than the acids used for titration. The author has compiled his results in the form of a table. The best indicator to use in each case is indicated by italics; those not quite so well adapted, but yet giving fairly good results, are shown in parentheses:

Aconitine: *Azolitmin*, cochineal, hematoxylin, iodeosine.
 Atropine: *Azolitmin*, cochineal, hematoxylin, iodeosine, *lacmoid*, (methyl orange)¹, *uranine*.
 Brucine: *Azolitmin*, *cochineal*, hematoxylin, iodeosine, (lacmoid), (uranine).
 Caffeine:
 Cocaine: *Cochineal*, hematoxylin, *lacmoid*, *uranine*.
 Codeine: (*Azolitmine*), *cochineal*, hematoxylin, *iodosine*, *lacmoid*, *uranine*.
 Conine: (Alkanin), (*azolitmin*)², *cochineal*, congo red, (hematoxylin)³, *iodosine*, *lacmoid*, (methyl orange), *uranine*.
 Emetine: (*Azolitmin*)², *cochineal*, (hematoxylin)¹, *iodosine*, (lacmoid)², *uranine*¹.
 Morphine: *Cochineal*, (iodeosine), *lacmoid*.
 Narceine:
 Narcotine: *Lacmoid*, (methyl orange).
 Nicotine: *Cochineal*, (iodeosine)¹, *lacmoid*, (uranine)¹.
 Papaverine: *Lacmoid*.
 Pelletierine: *Azolitmin*², *cochineal*, (lacmoid)², (iodeosine), *uranine*.
 Quinine: *Azolitmin*, *hematoxylin*,² *lacmoid*, *uranine*.
 Sparteine: Alkanin, *azolitmin*, *hematoxylin*, phenolphthaleine, (uranine).
 Strychnine: *Azolitmin*, *cochineal*, hematoxylin, (lacmoid), iodeosine, (uranine).
 Thebaine: *Cochineal*, (hematoxylin), *iodosine*, *lacmoid*¹, *uranine*.
 Veratrine: *Cochineal*, hematoxylin, iodeosine, *lacmoid*.

¹The change of color is rather indefinite.

²The indicator yields intermediate colors.

³The change of color is very sharp and is easily observed, but does not remain constant.

⁴Lacmoid yields with quinine in aqueous solution a flocculent precipitate; on adding some ether and then titrated (as with iodeosine), or rather decomposition of the precipitate occurs, and the figures obtained by titrating are serviceable.

FIRE INSURANCE IN THE DRUG BUSINESS.*

By DANIEL MYERS.

The fire loss in the United States and Canada the first six months of 1900 was \$116,908,000, as against \$77,126,150 in 1899 and \$67,166,850 in 1898, an increase of fire loss over last year for the first six months of almost forty million dollars and almost fifty million dollars more than the first six months of 1898.

These figures are no more colossal than astounding. Naturally the query arises, to what cause can this phenomenal increase be attributed? Primarily to numerous little things, but chiefly gross and criminal carelessness, thoughtlessness, negligence and ignorance are to blame for the millions of dollars' worth of property that is annually consumed by fire.

The phenomenal prosperity of this country the past three years has called for the utmost limit of the output of corporations and firms. This condition has largely increased the fire hazard. Overworked managers and employees have had no time to look after physical hazard—the one hundred little things that are the primary causes of fires. Ignorant employees are permitted to handle dangerous fluids in a reckless manner and electrical wires located where the insulation is chafed off by friction pass unnoticed. Too much prosperity seems to be a greater element of calamity to fire insurance companies than an era of business depression.

You can't make something from nothing. The law of equivalents is inexorable, consequently insurance rates will be advanced until the equivalent is restored and the scales are balanced. Now it behooves us more than ever to look sharply after the physical fire hazard of our establishments and enforce with military discipline rules and regulations to prevent fires, so that by our record we may be able to show why we are entitled to reasonable and equitable rates. A wholesale drug house should be swept up daily from cellar to garret, every nook and corner behind radiators and in the closets, and dirt and rubbish removed from the premises. Failing in this one item very largely increases the physical hazard and causes fires. The loss is paid to the insured, but the tax to indemnify insurance companies is laid on all of us. Recently a large wholesale drug house was notified to clean up the establishment or surrender its insurance policies. If a druggist is too greedy or penurious to clean up he should pay double rates for insurance.

The insurance representative in this case deserves a gold medal from the trade as a rare exception of his class; he is an inspector who inspects. Inspectors should always be welcomed and shown through the establishment by some one in authority, just criticism should be thankfully received and all good suggestions faithfully carried out.

The vast army of insurance solicitors are mere barnacles on the trade who render no equivalent to any one, but merely take toll as the policy passes through. Fire insurance seems to be the asylum for the unfortunates in all callings.

Broken down ministers and school teachers, impecunious business men and politicians. This condition is most unbusinesslike, and will never be changed until insurance companies cease paying such outrageous commissions to their agents and make the limit \$15. Then, in such an event, all insurance should be placed direct with the authorized representative in his office, and wholly ignore the army of supernumeraries who now solicit insurance.

Don't scatter your policies in small doses. Better select one or two, possibly three or four, if the business is large, able, experienced underwriters. The larger the business the more motive an underwriter will have to look after your interests and frequently inspect your plant. The underwriter who fails to inspect your establishment frequently should be ignored when policies are renewed at the end of the year.

Don't turn your insurance over to brokers. Stand close to one or more able underwriters; then if you should

have a fire loss he or they will stand close to you. That's human nature.

Don't rely wholly upon automatic sprinklers for protection. The system is not perfect, the sprinklers do not always ring the alarm. In two instances this year where the fire loss was trifling the loss by water was \$100,000 in each case.

The alarm signal failed to work, but the sprinklers sprinkled all night as the stars twinkled all night.

Local underwriters should employ at their expense a competent sprinkler mechanic to inspect all automatic sprinkler equipments at least once a week.

"Co-insurance" was not made entirely clear in the report of last year; we, therefore, submit the following example:

Mr. Blank, at time of taking insurance, has stock to the value of \$100,000. He agrees to carry insurance to the amount of 80 per cent. of value, and has a 30 per cent co-insurance clause attached to his policies. During the course of the year his stock has increased \$50,000 and a fire occurs; he has forgotten to increase his insurance, and still has only \$80,000 insurance with value of \$150,000, while the 30 per cent. co-insurance clause requires \$120,000 insurance, that sum being 80 per cent. of \$150,000. The clause reads as follows:

PERCENTAGE CO-INSURANCE CLAUSE.

If at the time of fire the whole amount of insurance on the property covered by this policy shall be less than 80 per cent. of the actual cash value thereof, this company shall in case of loss or damage be liable for only such portion of such loss or damage as the amount insured by this policy shall bear to the said 80 per cent. of the actual cash value of such property.

Result—He receives such portion of his insurance as the amount insured, viz., \$80,000 bears to 80 per cent. of value, viz., \$120,000 or 80-120ths of his insurance—2-3 of \$80,000.

Co-insurance without doubt is a wise measure for the protection of both insurance companies and the insured. But the insured must see to it that he keeps faith and carries 80 per cent. of insurance all the time so as not to become a co-insurer for more than 20 per cent. Fires caused by spontaneous combustion in clothing stores don't occur where co-insurance is in force. That's no joke.

Electricity.—The largely increased use of electric lights and electric power has been the cause of many fires. The great danger is at night, when wholesale houses are closed, but when the electric power is at its highest pressure. One of my associates on this committee informs me that the electric power in his store is cut off every night at close of business. This idea is certainly invaluable to all of us, and the wise ones will return and have this new idea applied at once. Perhaps the earliest record of fire protection is found in the Bible. Shadrach, Meshach and Abednego, three Israelites, were put in a fiery furnace and came out all right. Pat, with his proverbial wit, when this incident was related to him, promptly replied: "And did yez ever hear of an Israelite that didn't come out of a fire all right?"

Your committee this year was composed of twenty-six leading firms in the trade. An urgent appeal by letter was sent to each firm asking for an expression on the following queries:

How to prevent fires.

How to reduce physical fire hazard.

Original useful ideas to prevent fires.

Causes and origin of fires with'n your knowledge.

The responses were gratifying and contain much useful information and valuable ideas.

One of the oldest and largest contributed a four-page letter, giving in detail their system for prevention of fire. This firm has never had a loss by fire. Evidently they believe in prevention as better than cure.

Another member writes: "Never had a fire, therefore, have not given the subject any attention. We doubtless would if we had experienced a fire." This firm will lock the stable after the horse is stolen.

To include all these letters would make this report too long. Besides, we all know that wholesale druggists are overworked and give too much attention to getting

*Portion of the report read at the 1900 meeting of the National Wholesale Druggists' Association.

trade away from competitors. When they attend this annual meeting they are here for a vacation, for rest and for a social good time. They do not half absorb the good things that are served up by the few workers, except when the sound of revelry is heard in the banquet hall.

Now, in order that every member may have the fullest benefit of past reports, we recommend that the incoming committee pursue the matter further and as early as possible print in pamphlet form and mail to every member a copy, turning all the light possible on the following subjects:

1. Origin of fires in stocks of chemicals and drugs.
2. List of hazardous chemicals, drugs and fluids, and how they should be stored and handled.
3. How best to organize a fire brigade within the house.
4. How to equip a drug house so as to promptly extinguish a fire if one occurs.

"A little fire is quickly trodden out,
Which being suffered, rivers cannot quench."

EXAMINATION QUESTIONS.

BOARD OF PHARMACY OF THE CITY OF NEW YORK.

MATERIA MEDICA.

- 1.—Name four official Mineral Astringents each having a different base.
- 2.—Name three official drugs that belong to the Natural Order Umbelliferae.
- 3.—Give the common name of Erythroxylon; b What part of the plant is used? c Name the alkaloid and dose.
- 4.—Give the botanical name of May Apple; b Name the official preparations.
- 5.—From what is Lanoline obtained; b To what does Cherry Laurel Water owe its activity?
- 6.—What are Oleates? Name the official Oleates.
- 7.—Is Oleum Copalibae a fixed or a volatile oil?
- 8.—Give the composition in parts of the following: a Dover's Powder; b Tully's Powder; c Compound Jalap Powder.
- 9.—Give the botanical name and habitat with official title of each of the following: a Bittersweet; b Colocynthis; c Yellow Jasmine; d Elder.
- 10.—Name the source from which the following are obtained: a Phosphorus; b Eserline; c Iodoform; d Veratrine.
- 11.—Give the official title of: a Turpeth Mineral, and b Kermes Mineral.
- 12.—Name three official drugs that are gum resins.
- 13.—Mention four official vegetable astringents; b Also four official vegetable acids.
- 14.—From what is Creosotum U. S. P. derived? b What is the source from which Phenlic Acid is obtained?
- 15.—Give the common names of the following:
Lappa, Cypridium,
Sambucus, Caulophyllum,
Matricaria, Euonymus.

CHEMISTRY.

- 1.—Define the following terms:
a. Matter. c. Metalloid.
b. Homologous. d. Molecule.
- 2.—How many grains of Iodine can theoretically be obtained from 532 grains of Potassium Iodide?
- 3.—State how Calcium Carbonate can be converted into Calcium Hydrate.
- 4.—Give the chemical title of each of the following:
a. $\text{Na}_2\text{S}_2\text{O}_3$ c. FeBr_2
b. BiCl_3 d. Na_2HPO_4
- 5.—Write the chemical formula for each of the following:
a. Manganic Chloride c. Mercurous Nitrate.
b. Hydrogen Sulphate d. Potassium Dioxide
6. What compound is formed when nascent hydrogen is brought into contact with a salt of arsenic?
7. How would you accomplish the separation of silver from mercury (ous) both being contained in the same solution?
- 8.—Name two official organic acids giving the chief source from which each is derived.
- 9.—What is the chemical name of Salol? State how it is obtained.
- 10.—Show by equation how Hydrocyanic Acid can be prepared from Silver Cyanide.
- 11.—What is the chemical composition of Kermes Mineral?
- 12.—What is reduction? Name an official acid which is obtained by the process of reduction.
- 13.—Nitrogen: a Name its principal source; b Give its physical properties.
- 14.—Name and write the graphic formula of each of the first three members of the marsh gas series.

15.—Complete the following equations.

TOXICOLOGY AND POSOLOGY.

1. Name two emetics and state emetic dose of each. Name two antacids useful in a ill poisoning.
- 2.—Mention some proprietary or other arsenical preparation from which poisoning may occur and give emergency treatment.
- 3.—Mention three stimulants suitable for most poisoning cases requiring stimulation.
- 4.—What is the poisonous ingredients of common matches, and what emergency treatment should be employed for poisoning by them?
- 5.—Name a gas or vapor likely to produce poisoning and give emergency treatment.
- 6.—What treatment should be given for poisoning by Camphor? When and why may the administration of Alcohol as a stimulant in such poisoning be considered objectionable?
- 7.—Give a characteristic chemical test for Strychnine.
- 8.—Poisoning by what drug would be indicated by the following symptoms: Stupor, slow and stertorous breathing, contracted pupils not reacting with light, weak pulse, cold or perspiring surface and livid countenance? What emergency treatment should be given?
- 9.—What precautions should be observed in selling poisons?
- 10.—Of what class of medicines is it unsafe to give children large doses? What is the duty of the pharmacist if a large dose is prescribed?
- 11.—What is the dose of Mercurous Chloride, Mercuric Chloride, Chloral, Ammonium Carbonate, Lead Acetate?
- 12.—What is the dose of Acetanilid, Antimonial Powder, Lithium Bromide, Naphthalin, Potassium Iodide?
- 13.—What is the dose of Alcoholic Extract of Belladonna Leaves, Extract of Digitalis, Extract of Nux Vomica, Salicylic Acid, Zinc Valerianate?
- 14.—What is the dose of Croton Oil, Paraldehyde, Spirit of Chloroform, Tincture of Ipecac and Opium, Tincture of Nux Vomica?
- 15.—What is the dose of Tincture of Colchicum Seed, Fluid Extract of Veratrum Viride, Fowler's Solution, Magendie's Solution, Vinegar of Squill?

PHARMACY.

- 1.—What weight expressed in grammes is contained in one cubic centimeter of distilled water at 4° C?
- 2.—Name a good excipient for massing each of the following: (a) Creosote; (b) Aloes; (c) Phosphorus; (d) Potassium Permanganate.
- 3.—How many cubic centimeters are contained in five fluid ounces of water?
- 4.—How do mixtures differ from liquors? Name two of each, giving their official title.
- 5.—What is a glycerite? Name the official ones.
- 6.—How many cubic centimeters of Fowler's solution can be manufactured from 2.5 grammes of arsenous acid?
- 7.—Name the official infusion which is directed to be made by the cold process. State why such directions are necessary.
- 8.—Give a general formula for the preparation of fluid extracts. State what relation the strength of the finished product has to the drug from which it is prepared.
- 9.—State in what manner fixed oils may be obtained from plant parts. Name three official fixed oils.
- 10.—What quantity of extract of nux vomica assaying 12 per cent. of total alkaloids must be employed in making 500 cubic centimeters of official tincture of nux vomica?
- 11.—Define the term "crystallization." What conditions are necessary for the formation of large crystals?
- 12.—Name three official ointments in which benzoated lard is employed as a base.
- 13.—Acidum Lacticum: Give its source, official strength and state how an admixture of glycerin may be detected.
- 14.—The solubility of boric acid in water at 59° F. is 1 part in 25.6 parts. How much of it would be required to saturate one pint of distilled water at the temperature given?
- 15.—State why precipitated calcium phosphate is employed in the manufacture of many of the official medicated waters. What chief advantage does it possess over magnesium carbonate, which is sometimes employed for a similar purpose?

"Olfaction is the most primitive of all the senses. That part of the brain associated with olfaction, namely, the hippocampal convolution, is phylogenetically the first part of the central mass of nervous matter to be differentiated for the reception of a special set of sensations."

The above is quoted from an article in the "Doctor's Magazine." We are very glad to get this information.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

White Enamel Patat.—(E. W. H.) "Enamel white" for inside work is made by simply adding to each pound of white lead or zinc white, ground in oil, a trace of Berlin blue. The paint is then thinned with boiled oil and turpentine, sometimes a light damar varnish being also added. Some experimenting is necessary on your part to secure the right proportions.

Cleaning Silver and Plated Brass, Copper, etc. (E. W. H.) We are not familiar with the "celebrated electro plating" for cleaning silver and plated brass, copper, German silver, etc. It may or may not be a solution of nitrate of mercury, a "wonderful silvering oil," sometimes sold by traveling fakirs. If you want a good silver polish see reply to another correspondent in this department.

Tarnished Silver.—(H. P. S.) A "dipping" solution sometimes employed consists of sodium hyposulphite, 4 ounces; dissolved in water, 12 ounces. Filter. After using this liquid the silverware is rubbed dry and polished with one of the polishing powders adapted to silver. A common formula and as satisfactory as any is: Prepared chalk or whiting, 2 ounces; ammonia water, 2 fluid ounces; water, enough to make, 8 fluid ounces.

Silver which has become much tarnished may also be restored by immersion in a warm solution of 1 part of potassium cyanide to 8 parts of water. Washing well with water and drying will produce a somewhat dead-white appearance, which may be quickly changed to a brilliant luster by polishing with a soft leather and rouge.

A Clear Mixture.—(Subscriber) submits the following prescription:

Tincture of aconite.....	10 minims
Tincture of bryonia.....	
Tincture of ipecac, of each.....	30 minims
Tincture of lobelia.....	1 dram
Simple syrup	4 ounces

He says he filled it a short time ago, obtaining a transparent light brown syrup. The mixture was sent out, but shortly after it was returned with the statement that it had been previously dispensed as a milky mixture. Our correspondent wishes to know where the turbidity comes in.

This preparation does not produce a turbid or milky mixture, each of the ingredients mixing clear with the syrup.

Theatrical Face Paints.—(R. R.) See this journal, May 10, 1900, page 502. For coloring the cheeks and lips try the following: (1) Erythrosin, $\frac{1}{2}$ ounce; glycerin, $\frac{1}{2}$ ounces; spirit of rose, $1\frac{1}{2}$ pints; rose water, $3\frac{1}{2}$ pints. Dissolve the erythrosin in the water, add the glycerin and perfume and filter. (2) Rouge de Theatre.—Powdered talc, 5 ounces; precipitated chalk, 1 ounce; carmine, 1 scruple; water of ammonia, 1 fluid ounce. Mix the powdered talc and chalk; digest the carmine in the ammonia until dissolved; mix the solution with a portion of the powders and this with the remainder and dry by exposure to the air. **Burnt Cork for Minstrels.**—Melt 6 parts cacao butter, add 1 part best lampblack, intimately mix while cooling and when nearly cold add oil of neroli to perfume. **Nigger Black.**—Beat finest lampblack into a stiff paste with glycerin and apply with a sponge. This mixture is far superior to the old-fashioned burnt cork and beer, as it is more easily applied to and removed from the face. Eyebrow pencils may be made by using anyone of the general formulas for stick pomades.

Use of Registered Bottles.—(J. H.) You can obtain a copy of the law which makes it a misdemeanor "to fill with any beverage, medicine, medicinal preparation or compound any bottle or siphon having produced thereon the registered mark of any person, without the written consent of or purchase from the owner of said mark," from the Secretary of State at Albany, and in whose office there is on file a list of manufacturers' marks and descriptions of bottles so registered. There is really no practical method of determining whether a given bottle is registered unless you have the complete description as filed for registration and even then it is difficult. The law does not make it obligatory upon the registrant to have the word "registered" blown in the bottle; it only requires that he shall notify the public through the press that he has secured registration of a bottle of a certain description. The only safe method for the druggist to follow is to use no old bottles. They may be found to belong to some other fellow and besides, there is danger in them any way.

Arsenic, Quinine Sulphate and Tincture of Iron.—(S. S. W.) submits the following prescription:

Arsenous acid	$\frac{1}{2}$ grain
Quinine sulphate	$\frac{1}{2}$ dram
Tincture of ferric chloride.....	2 drams
Distilled water, enough to make....	2 ounces

The arsenous acid was dissolved in the water and the quinine sulphate in the tincture of iron. On mixing these a very muddy solution was produced. On adding a few drops of hydrochloric acid the solution became clear, but a small quantity (about $\frac{1}{2}$ grain) of a white powder was precipitated. Is this arsenic, and why, since hydrochloric acid is one of its solvents?

The "muddy solution" first noticed is due to the insolubility of the quinine in the mixture after the addition of the water. Upon addition of a few drops of hydrochloric acid the quinine is redissolved and the solution becomes clear. We do not exactly understand why there should remain a small undissolved portion unless it be that the solution did not contain enough free acid, as arsenous acid and quinine are both soluble in acid solution. We suggest the following manipulation: Dissolve the arsenous acid in $\frac{1}{2}$ fluid ounce of water in a test tube with the addition of three or four minims of hydrochloric acid, only slightly warming to avoid volatilization of the chloride of arsenic. In a mortar dissolve the quinine sulphate in the tincture of iron, add the remainder of the water and enough hydrochloric acid to clear up the solution. Then add the solution of arsenic.

Filtering Tincture of Kino.—(F. A. S.) wants to know how to filter tincture of kino through paper as directed by the Pharmacopœia. He says he has tried a wetted filter but his experience has been that it would require at least six months or a year to filter 1,000 Cc. of the tincture.

We are aware that tincture of kino is liable to gelatinize, but it is hardly possible that such a condition should arise in the short time necessary to make the preparation. But few complaints of this character have been recorded against the official process, though Quackenbush (A. Ph. A. Proceedings, 1889, 411) states that filtration is accomplished in a much shorter time if the maceration be prolonged five days. The formula of the British Pharmacopœia is almost identical with that of the U. S. P., the method of procedure being only a little different, in that the kino is directed to be rubbed with the glycerin and water to a smooth paste when it is transferred to a closed vessel, ten fluid ounces of alcohol added, the mixture being then set aside for 12 hours and frequently agitated. It is then filtered through a plug of cotton, the remainder of the alcohol being added through the filter. We suggest you try filtering through cotton.

There are various kinds of kino and some of them have been reported to produce tinctures which gelatinize more easily than others. Martindale states that the gelatinizing quality is especially observable in the kino obtained from Bombay. It might be profitable to examine the kino you have been using.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

China.

The outlook for agreement among the Powers for peace in China seems brighter than it did last week. The German Emperor has receded from his threatening attitude, and now announces that he is willing that the Chinese government shall banish the court officials guilty of instigating the Boxer outrages, instead of compelling China to surrender them to the allies for punishment.

The Chinese government announces in an official proclamation that Prince Tuan and the other officials who encouraged the Boxer uprising have been degraded in rank and will be punished.

The Powers have instructed their Ministers in China to report whether punishment is inflicted on the ones who are really guilty, and whether the punishment is adequate.

France and Germany propose that in addition to the punishment of the guilty officials, the Powers shall prohibit the importation of firearms into China, shall raze the Taku forts, establish a permanent military line of communication between the sea and Pekin, and garrison the legations in Pekin with strong guards.

A table given out by the Military Information Bureau in Washington reveals the fact that Russia has 50,000 troops in China, or as many as all the other nations combined; and has enough more men on the way to China to bring her armed strength up to 150,000 men, an army that will overshadow every other military force in the Far East, and will not need a navy to protect its line of communications, as every other foreign force in China will. The Czar is credited with a determination to get a large slice of the Chinese Empire, peaceably if he can, but forcibly if he must.

It is reported that the allies will demand an indemnity from China which will aggregate \$200,000,000.

It is reported from Chinese sources that the Imperial Court has been removed to Si-Ngan-Fu.

General Chaffee has designated the Ninth Infantry, the Third Squadron of the Sixth Cavalry and Battery F to remain at Pekin. He estimates that it will take a month to get the American troops out of China.

The Philippines.

General MacArthur reported last week to the War Department that five soldiers had died in the mountains of Laguna Province, after having made their escape from the insurgents, by whom they had been captured. Thirty natives and one American were killed last week in a fight on Bohol Island.

General MacArthur cabled from Manila that Second Lieutenant Max Wagner, Twenty-sixth Regiment, U. S. Volunteer Infantry, was killed between Paris and Santa Barbara, Island of Panay, on October 1. Lieutenant Wagner was a resident of West Medford, Massachusetts, and during the Spanish War was a lieutenant in the Signal Corps.

Other Foreign News.

In the British Parliamentary elections the Conservatives have won a sweeping victory, and return to Parliament with a larger majority than before. The election is considered an emphatic endorsement of the Salisbury Ministry's conduct of affairs in South Africa.

The steamer Mlowera, from Sydney, brings news to Vancouver that the plague has broken out again at Townsville, New South Wales. Five cases are reported, with two fatalities.

The Italian Government has sent to Washington a protest against the "excessive liberty" accorded to Anarchists in the United States.

The recent census of Nicaragua shows that 48 per cent. of the 380,000 population are Indians, and 42 per cent. of mixed Indian and Spanish blood. Only 7 per cent. are whites. One per cent. are negroes and 2 per cent. Zambos.

Statistics show that 544,283 children below 14 years of age are engaged in industrial pursuits in Germany.

DOMESTIC.

The Great Coal Strike.

The Independent Coal Operators Association of the Lackawanna and Wyoming Valleys have announced an in-

crease of 10 per cent. in the wages of their miners and a reduction in the price of powder to \$1.50 a keg. The larger companies have also offered their men an increase of 10 per cent. in wages, and it is believed that a convention of the United Mine Workers will be called to consider the offers.

The North Franklin colliery, at Treverton, the last of the Reading Company's operations at work shut down last Friday.

Many of the miners' families are becoming destitute, and are receiving aid from the treasury of the United Mine Workers.

A strike of miners at Baskett, Kentucky, for recognition of the union, has been won. The settlement carried with it a reduction of wages. The owner of the mines never recognized the union, but paid wages averaging five cents more than the union schedule. This probably is the first strike for lower wages ever made.

President Mitchell, of the United Mine Workers of America, claims that a canvass of the field shows 5,000 miners at work and 137,000 on strike in the anthracite regions.

Politics.

A sharp trick was played on the Democratic Congressional Committee last week, by some Republican clerk who enclosed Republican campaign tracts in several tons of Democratic documents that were sent to voters all over the country. The campaign managers have not yet found the joker.

Ex-President Harrison will not go on the stump this campaign. The Republican leaders have often pressed him to do so, but he says that he does not feel like engaging actively in campaign work at this time of his life. He has been active in every campaign since the days of Fremont, and feels that he needs a rest.

The Massachusetts Republicans have renominated W. Murray Crane for Governor, and in Massachusetts the Republican nomination is considered equivalent to an election.

Allen D. Candler (Dem.) was re-elected Governor of Georgia last week by a big majority. The Populist party in Georgia, which cast 85,000 votes four years ago, has shrunk to 25,000. The Republican party cuts no figure in Georgia.

W. W. Stickney, Vermont's new Governor, was inaugurated last week.

The Republican National Committee gave out a statement last week estimating that 266 of the 447 votes in the electoral college will be cast for McKinley. The Democratic National Committee followed the next day with a statement predicting that 320 electoral votes will be cast for Bryan. Both estimates are considered exaggerations, issued for political effect.

Indiana is considered the most doubtful State in this campaign, and the campaign managers are waging a hot fight within its borders. Spellbinders are canvassing the State on special trains, torchlight processions and mass meetings are of nightly occurrence all over the State, and no expense is being spared to lead the voters to the true light, whether it be Republican or Democratic.

Galveston.

A Galveston despatch says that corpses of those killed in the great storm are still being recovered at the rate of fifteen to twenty-five a day. It is now certain that the dead in the city will exceed 5,000, beyond the city limits, 1,200, and on the mainland more than 1,000.

It is estimated that the cotton damage caused by the recent floods and high water in Texas will reach 400,000 bales, worth at least \$20,000,000.

Mme. Melba has promised to sing at the forthcoming Galveston fund entertainment in London. It will be her only appearance in London before her American tour.

The British steamship Benedict, which was blown on Pelican Island during the recent storm at Galveston has been floated. This leaves five foreign steamers still stranded.

The fund which S. W. Hanauer, United States Vice Consul at Frankfurt-on-the-Main, is raising for the Galveston sufferers has reached 11,000 marks.

The total subscriptions for the Galveston sufferers is still less than a million dollars. Over three millions were raised for the Johnstown sufferers, and the sum was not found to be too large.

Other Domestic News.

The population of Arkansas, the first of the States to be enumerated, is 1,311,564. This is an increase over the population in 1890 of 16.25 per cent.

The receipts of Klondike gold at the San Francisco Mint and Seattle Assay Office, from July 1 to September 20 aggregated \$16,047,555, and of Cape Nome gold, \$2,311,801.

Dr. D. W. Shepperd has been selected as president of the Northwestern University, at Evanston, Illinois, to succeed Dr. Henry Wade Rogers. According to State Factory Inspector Campbell there are

448,000 more persons employed in Pennsylvania in 1900 than in 1896.

The Government receipts for September amounted to \$45,304,326, and the expenditures to \$39,169,671.

THE DRUG NEWS.

N. A. R. D. NOTES.

Chicago, October 6, 1900.

President William C. Anderson has announced the appointment of the following standing committees:

COMMITTEES.

National Legislation.—John C. Gallagher, New Jersey; Charles A. Rapelye, Connecticut; F. W. Herbst, Ohio; Frank N. Drake, California; Henry Willis, Quebec, Can. Trade Marks and Patents.—Louis C. Hopp, Ohio; William Bodemann, Illinois; F. W. Vaughan, North Carolina; Charles E. Ward, Colorado; D. F. Jones, South Dakota.

Commercial Relations.—W. E. Bingham, Alabama; Dr. M. L. Porter, Maine; F. B. Lillie, Oklahoma; W. C. Gordon, West Virginia; Sid. J. Coffee, Montana.

Pharmacy Laws.—J. F. Guerin, Massachusetts; C. E. Crecelius, Indiana; John H. Pickett, Iowa; Robert M. Dadd, Wisconsin; W. S. Parker, North Dakota.

Form of Organization.—A. A. Broadie, Iowa; W. M. Federman, Missouri; W. F. Root, Vermont; F. W. Fenn, Delaware; James M. Mann, Washington.

Auditing.—H. F. Hasselbrock, Missouri; H. H. Arrington, Georgia; J. A. Gnocchio, Arkansas; G. Frank Lip-pold, Maryland; Charles W. Horner, Louisiana.

Transportation.—W. G. Markell, Pennsylvania; George E. Thorpe, New York; Mason B. Wood, Rhode Island; J. W. Thomas, Jr., Virginia; J. A. Conover, Florida; James L. Haslett, Texas; H. A. Small, Nebraska; A. A. Pardee, Wisconsin; J. L. Franken, Utah; Dr. J. A. White, Oregon.

The following extract from a letter of one of the officers of the N. A. R. D. to an interested jobber is deserving of the thoughtful consideration of a number of druggists who are apparently waiting for something to turn up:

"It will be impossible for us to comply with the requests contained in your letter that — be placed on the list of aggressive cutters unless there is some indication on the part of the druggists of — that they desire price cutting stopped. We have no association in your city, and none of our efforts to form one there have met with encouragement. Our officers and Executive Committee are doing everything that lies in their power to improve the condition of the drug trade of the coun-

try; however, you will appreciate that we cannot go into a community and undertake to improve conditions there if the druggists of the locality will do nothing on their own behalf."

The delightful frankness of the following communication is a sufficient excuse for its publication. It emanates from the secretary of an association whose members get full prices for everything, the direct result of exercising a little common sense:

"After three or four years of vigorous and ruinous cutting of prices we finally got together about two and a-half years ago. We called a meeting one night and when we each got a fair look at the other fellow (which was really only a reflection) we involuntarily and spontaneously came to the unanimous conclusion that we were an aggregation of damned fools. We adjourned as such sine die, and forthwith organized the ——— Pharmaceutical Society and went to work on the plan that it was not right and proper to sell goods at a loss, and, as the story goes, 'we lived happy forever after.'"

The unanimity with which the big and little price demoralizers all over the country are talking and writing against trusts is almost pathetic.

The watchword of the association is "Co-operation," but it means only the kind of co-operation that co-operates.

At the session of the N. W. D. A. held Thursday morning, September 20, the following was read:

The Proprietary Goods Committee desires to make a supplementary report to that submitted yesterday.

The following telegram has been received relative to placing the name of the house sending it upon the list of manufacturers who have selected a definite list of wholesale distributors:

"Burlington, Vt., Sept. 19, 1900.
"F. A. Faxon, chairman: Our president and treasurer have arrived to-day from Europe. We have decided to sign proprietors' agreement.

"(Signed.) WELLS & RICHARDSON CO."

Respectfully submitted, F. A. FAXON, Chairman.

New York and Vicinity.

MEETING OF GERMAN APOTHECARIES' SOCIETY.

The German Apothecaries' Society met at the rooms 192 Third avenue, Thursday evening, October 4, for the first time following the summer vacation. Very lively discussion was occasioned by the action of the recent convention of the N. A. R. D. at Detroit in shutting out the so-called buying clubs. George Gregorius championed the cause of the Consolidated Drug Company of this city, a "buying club" that was not accepted on the list of recognized wholesalers by the N. A. R. D. The trouble began after Felix Hirseman, the delegate of the German Apothecaries' Society, read his report.

Before action was taken on the report, Mr. Gregorius introduced William McIntyre, of Philadelphia, president of the Philadelphia Retail Druggists' Association, and a member of the Philadelphia Drug Company, Limited, and Julius Hammer, a member of the Retail Druggists' Association of this city, and of the Associated Drug Co. The visitors were allowed the privilege of the floor, and Mr. Hammer was first to speak. In part he said: "I attended the meeting of the N. A. R. D. in Detroit because I believed it my duty. I went there on a mission and that mission was to look after the interests of the

retail druggists, but I found these were not cared for because the National Association of Retail Druggists is led by a clique of wholesalers and a man in the pay of wholesalers. Mr. Holliday is chairman of the Executive Committee. If the wholesalers pay Mr. Holliday, they pay him to do certain work and he has done it well, for he practically delivered to them the retail druggists of the United States. There were manufacturers at the convention, but if they had a purpose there they did not state it; they seemed afraid and they had to be intimidated to be made useful. The retail druggists were used as a club over them. I asked that the interests of the retail druggists be looked after for one moment, but I was not given the privilege. I tried to tell the convention that conditions in New York were different; that here many retailers were interested in wholesale firms. These retailers needed protection, as the manufacturers were persecuting them, and I wanted to know if it was a crime for a retail druggist to want to protect his profits through the so-called buying clubs. But little attention was paid to me and less to the buying clubs, which were designated as the 'black sheep.' The whole scheme of the convention in regard to the buying clubs is that they promise the retailer a few cents to replace the dollars taken by the suppression of the buying clubs. I was not interested in the election of officers,

but I could not help being impressed with the methods used for their election. Mr. McIntyre, of Philadelphia, also tried to be heard in the convention, but he was shoved aside. He was granted the floor, but with restrictions that no motion could be made. The most important business of the convention was saved until the last day, when Mr. Holliday, who is not interested in the retail druggists, was re-elected as chairman of the Executive Committee. This was left to the last day for fear some one would get up and move the election of someone else. Then to gain time a Salvation Army meeting, which was named an 'experience meeting,' was held. During this a large number of delegates left the meeting. Then when it was thought time to elect the committee some one took the floor and moved that the secretary cast one ballot for the nominations as made; this was seconded and the vote cast, I being taken as voting for Mr. Holliday although I was not in favor of him at all. I have not reported officially to my organization in this city, but I have had talks with a number of the members and we have come to the conclusion that our interests are not represented by the N. A. R. D., although it may be some good some day. The questions now arise, are we to abide by the N. A. R. D. or are we to try and knock out this clique. We must work together. If we are going to fight we must withdraw and fight together. We could select two or three men from each of our organizations interested with us and there are many in the country that we know not of, and take some definite action either to stay in the association and fight or to withdraw and declare for ourselves."

There was considerable applause when Mr. Hammer had finished. He was followed by Mr. McIntyre, who not only seconded all Mr. Hammer had said, but called the pharmaceutical press of the country to account for failing to print a speech he had made at the convention, which was a plea to have the Philadelphia Drug Company, Limited, placed on the accepted list of wholesalers. Mr. McIntyre said in part: "The reason I am here is that I wanted to learn the true situation in New York and I wanted to see you men and get my information from you. Mr. Holliday came to Philadelphia some time ago and told me the Philadelphia Drug Company was not to be permitted on the list and you're not to be permitted either. This idea of excluding us was not born in Detroit, but in St. Louis and Cincinnati, and I went to the convention because I wanted to see if they were going to do right and allow the existence in legitimate business of men who were harming no one." Applause greeted this remark and then Mr. McIntyre went into details concerning the situation in Philadelphia. He said that last year the Philadelphia Drug Company, Limited, had been allowed on the list through agreement. He further said he was president of the Druggists' Association in Philadelphia and had been re-elected. "My associates must have known my position when I went to Detroit. I went to present the retailers' side of the situation, but my opportunities were limited. Mr. Holliday used the term 'buying clubs,' which is offensive to me and which term I do not believe can be applied with truth to any firm in existence." He then complimented Secretary Wooten on his truthfulness, saying he was the only official who did adhere to the truth. He related that the proceedings in not permitting the retailers to present their side of the question astounded him and then he arraigned the pharmaceutical press and followed with a few remarks along the same lines as Mr. Hammer's suggestions regarding the action to be taken.

Mr. Hirseman then stated he had used his best efforts to faithfully advance the interests of the retail druggist and if he had not done this in a manner acceptable to some he was sorry. He said he believed every effort in Detroit was made honestly and by honest men.

Mr. Faber said Mr. Hirseman had represented other organizations at his suggestion, as he thought it would mean less expense for the German Apothecaries' Society. Mr. Faber said he had always considered the N. A. R. D. plan impracticable.

Mr. Goldman then spoke in favor of adopting Mr. Hirseman's report. He asserted that Mr. Hirseman had done his best and if he had not pleased some in the organization he had discharged his duties with a feeling that he was doing justice to all.

R. C. Werner, of Brooklyn, said as far as Mr. Hirseman was concerned personally he was in favor of the report, but it could not be accepted as there was nothing in it that would denote it a report to the German Apothecaries' Society. Mr. Faber asked Mr. Werner to state his reasons for such an assertion, and Mr. Werner used the argument advanced by others that nothing had been done for the Consolidated Drug Co.. Mr. Gregorius moved that Mr. Hirseman's report be laid on the table inasmuch as Mr. Hirseman had failed to properly represent the interests of the German Society, his contention being that Mr. Hirseman should have upheld the cause of the Consolidated Drug Company. There was considerable debate on this motion, not a few personalities being hurled by the speakers, much to the annoyance of President Schleussner, who vainly rapped for order. The motion was finally adopted by a vote of 26 to 24. Then followed chaos. Several pairs of members were arguing with each other, some in German and others in English. When order had been restored Mr. Werner said he wished to make a motion that the German Apothecaries' Society withdraw from the N. A. R. D. President Schleussner told Mr. Werner that to permit such a motion would be a shame to the organization. He explained that not more than one-sixth of the whole membership was present and he did not believe such a motion should be made except at a meeting where all had previously been notified of it. Mr. Werner insisted on immediate action, but the motion was not entertained and it was said it would be brought up at the next meeting.

Two members were elected and Paul Arndt was named chairman of a committee of five to arrange for an entertainment. Early in the meeting Mr. Kreiger had complained he had recently been arrested for "counter prescribing" in an emergency case and on advice of his attorney had been fined \$50. He wanted the society to reimburse him, which action was taken following a long debate, and Mr. Kreiger immediately donated the money to the aid of the Galveston sufferers. George Kleinau reported progress in the telephone question. He had letters from W. H. Eckert, president of the Knickerbocker Company, in which it was stated that the company had not consolidated with any other company and was pushing the work of construction as rapidly as possible; and another from U. N. Bethel, general manager of the New York Telephone Company, in which a promise was made to adjust the grievances presented some time since as soon as possible.

NOTES OF THE DRUG TRADE CLUB.

—A section of the Board of Governors ceased its labors on Wednesday of last week and on Thursday the annual meeting was held, when a new set was chosen to supply the vacancy. The last official act of the old board was the election of eighteen resident and two non-resident members, swelling the resident list to the limit of 300 and the non-resident list to eighty. Hereafter names proposed will be placed on the waiting list until vacancies shall occur. With the retirement of the section of the board an excellent corps of workers was lost and President R. P. Rowe was not slow in appreciating this, for he congratulated each and every member. But the members had previously praised the retiring president for his excellent period of leadership and his persistent work in stirring the members to a quickening interest in club affairs. Mr. Rowe retired with much honor, in that it was through his efforts that the limit of membership was reached, this being the first time such a feat has been accomplished since the organization of the club. In fact the board left at a time when the club is in the very zenith of its success. It is financially able, an aid to business and a social medium that has proven to be a source of good fellowship which means closer business relations and incidentally better business. The new board elected at the Thursday meeting is composed of Alexander Robb, Harry Hall, W. H. Childs, William O. Allison and G. D. Dorsey. W. S. Ginnell was chosen to fill the vacancy in the board for 1902 caused by the removal from the city of George MacLagan. The remaining members of the board are S. H. Carragan, Jesse L. Hopkins, William Hamann, Charles A. Schieren, George W. Kenyon, E. L. Upjohn and Hector M. Hitchings.

DOES A VALISE RETAIN A SEAT.

The Supreme Court of this city has been called upon to settle an interesting question in a suit for \$1,000 damages for "personal injuries" brought by George William Kemp, of the firm of Lanman & Kemp, against T. Rhys Smith, a civil engineer, and the commuters along the Connecticut shore of Long Island Sound are deeply interested and impatient for the outcome. The suit was precipitated a few weeks ago by the stand Mr. Smith took in relation to the valise question. It happened in the Grand Central Depot in a car on the New Haven and Hartford Railroad. Mr. Kemp came in the car and looking for a seat saw the one with Mr. Smith's valise in it, he having gone to another car. Mr. Kemp removed the grip and sat down. Shortly afterward Mr. Smith appeared and demanded the seat, which Mr. Kemp refused to give up. Then, the story goes, Smith laid violent hands on Kemp, removing him from the seat to his personal injury and humiliation. Mr. Smith says he did not act aggressively toward Mr. Kemp, but that the latter "evidenced a desire to vacate the seat" when informed by Mr. Smith that he had placed the satchel in it to retain it. Officials say this is the custom on trains of holding seats by placing articles in them, and further that a regulation of the company admits of the practice.

"McK. and R." AND "B. AND S." IN THE DRUG TRADE.

Two firms in the drug trade have been afforded an unusual opportunity this year to become associated in an indirect way with the Presidential campaign. When the nominations of the Republican party were made some time ago, almost everyone in the drug trade said that it was a good thing for McKesson & Robbins, the initials of the Presidential candidates, McK. & R., being the same as the initials of this well known firm. The firm took advantage of the coincidence recently by distributing to its employes handsome buttons in the shape of a pennant on which were enameled the initials McK. & R. The employes are having much sport with the buttons. When some of their friends who are of opposite political faith see them with the button on, they express astonishment at the wearer's change of opinion, but when told the initials stand for McKesson & Robbins they appreciate the paradox. There is another firm in the drug trade which has experienced the same situation as that of McKesson & Robbins. This firm is Boehringer & Soehne, whose firm initials are the same as Bryan & Stevenson.

"CHARLIE" ERB'S WEDDING.

The latest to join the ranks of the benedicts of pharmaceutical celebrities is "Charlie" Erb, president of the Alumni Association of the New York College of Pharmacy and a half-dozen other things. Mr. Erb was married to Miss Anna Conway, of Philadelphia, at her home, 1403 North Sixteenth street, September 19, at high noon. Dr. Harry B. Ferguson, of the New York College of Pharmacy, acted as best man and Miss Bertha Conway was bridesmaid. Dr. George C. Diekman and Virgil Coblenz were ushers. Following the ceremony a wedding breakfast was served, after which, amid a shower of old shoes and rice, Mr. and Mrs. Erb left for a three weeks' trip through Canada and Western New York, from which they have just returned.

NOTES.

—Some time ago A. B. Baltzly and Dr. Shibley decided separately they would like to open drug stores at some favorable site uptown. Mr. Baltzly, in looking for a place, found the landlord of a flat building at Ninety-sixth street and Broadway anxious to let the corner store in the building to him, and he immediately signed a ten-year lease for the store, depositing a sum of money to bind the agreement. Then he began preparing to open the store. He had not been at work long when he learned that another drug store was to be opened at Ninety-seventh street and Broadway in the adjoining building by a Dr. Shibley. The two became acquainted, and Mr. Baltzly told his neighbor the conditions under which he had leased the store, and Dr. Shibley replied

they were identical with the terms of his contract. It was then learned that the landlords of the two houses, which had been separated by law owing to a dispute in the title of the original building, were not on speaking terms, but that each wished a drug store in his building, and had transacted the business with the druggists, hoping to defeat each other. Mr. Baltzly and Dr. Shibley are now anxious to unload their leases and quit the locality, but the landlords are obdurate. In the meanwhile, both druggists are working like beavers to be first to open the doors for business. Mr. Baltzly will continue his pharmacy at Seventh avenue and 134th street.

—The McKinley and Roosevelt and Sound Money, Drug, Paint, Oil, Chemical and Glass Trades Campaign Club will begin its work in the campaign Monday, when the first of a series of noon-day meetings will be held in the headquarters, John street, corner of Dutch street. The exercises will include speech making and a banner raising, and there will be plenty of music. S. H. Carragan, chairman of the Campaign Committee of the club, is making every effort to have a large meeting. It is expected the club will turn out between 5,000 and 6,000 men in the sound money parade on November 3.

—The case of John D. Park & Sons Company against the N. W. D. A. was up for argument before the Appellate Division of the Supreme Court in this city last week. It came in the form of an appeal from judgment sustaining demurrers and dismissing complaint in an action brought to restrain the National Wholesale Druggists' Association and others from boycotting plaintiff in its business and to restrain them from carrying into effect certain rules and regulations which defendants had adopted from time to time.

—Among the druggists who called on the trade during the last week were: Frank Pierson, Leominster, Mass.; C. M. Woodruff and Mr. Riddell, Detroit, Mich.; J. H. Harvel, Portland, Me.; W. H. Quinn, Ballston Spa, N. Y.; A. S. Corbett, Chariol, Pa.; A. C. Baylis, Fort Washington, N. Y.; W. A. Spalding, New Haven, Conn.; E. E. Fisher, Bridgeport, Conn.; Harry E. Dupee, Bridgeport, Conn.; J. E. Lobdell, St. Paul, Minn., and C. F. Polk, of Polk & Calder, Troy, N. Y.

—The drug trade is excellent in the State of Oregon, according to Frank Nau, proprietor of the Portland Hotel Pharmacy, of Portland, that State, and head of the firm of F. Nau & Company, No. 4 Vesey street, this city. Mr. Nau is here on a visit, and he is glad to be able to announce such an encouraging state of affairs. He says the Presidential campaign has had no effect on the prosperous condition of trade.

—Julius L. Baldauf, a well known wholesale druggist of Harrison, Ky., and who is well acquainted with the trade here, is to be married to Miss Gertrude Flexner, of Louisville, Ky., at her home, No. 1,438 Third avenue, in that place to-morrow. Mr. Baldauf remembered a number of his old friends here by sending invitations.

—Every week some new drug corporation makes its appearance, the latest being the Nicholson Drug Co., of this city, which is to engage in conducting retail drug stores, using New York as a field. The capital stock of the concern is given at \$1,000, and its sponsors are Peter Nicholson, Jr., Meyer Birkowitz and Nathan Barkan.

—F. E. Reeder, of Welaka, Fla., visited the city last week, having been called by the serious illness of his wife, who withstood an operation in a hospital here some time ago. When Mr. Reeder arrived he found Mrs. Reeder much improved. Beside "doling" out drugs, Mr. Reeder looks after the village mails in Welaka.

—The Hawie Drug Company, of Brooklyn, has been incorporated, and will engage in conducting retail drug stores in Greater New York. The corporation has a capital stock of \$2,000, and the incorporators are William and Mary J. Hawie and Mary Kock, all of Brooklyn.

—The Helburn Chemical Company, incorporated under New York State laws to handle chemicals of all kinds, has opened in this city. It has \$10,000 capital, and the following incorporators: Julius Helburn, Hugo Helburn and Ernest Strauss, all of whom reside in this city.

—The imports of drugs, chemicals, etc., to this port for the week ending Sept. 28 reached \$871,208. The largest imports were as follows: \$51,407 of gambler; \$53,015 of plumbago and \$59,686 of gum shellac.

IN AND ABOUT BOSTON.

EASTERN DRUG COMPANY'S PLANT A MODEL ONE.

Boston, Oct. 6.—The Eastern Drug Company is now well settled in its fine new building on Fulton street, where it occupies an entire block. The great building of brick and stone is most attractive looking. On the entrance floor there are fine private offices for C. C. Goodwin, William W. Cutler and George F. Kellogg, who share one large room in common. Then C. F. West and Bernard Jenney occupy another spacious private office, and still another is used by Charles F. Cutler. Then for the bookkeepers, cashier and others of the clerical force fine quarters have been arranged. Chief clerks like Josiah Bryant, Walter R. Dolliver, Robert Anderson, Harry C. Wiggin and C. E. Harrington all have fine corners with large roll-top desks for their individual use. Then come desks also for several young women typewriters. It is planned to sometime have a travelling salesman's room on this floor. One half of the building is given over on the first floor to the stock of fancy goods and sundries and to the general shipping and freight department. In the basement are stored wines, malt extracts, heavy oils, etc. Also on the first floor are the telephone instruments, of which there are no less than forty-nine, with a big switch board for interior and outside service.

On the second floor of the building are the directors' room, the billing room, A. H. Bartlett's private office, order and packing room, patent medicines and the general working stock alphabetically arranged. The receiving and opening of new stock is done on this floor. The third floor contains a big laboratory, the finer oils room, drugs, chemicals and pharmaceuticals. The fourth floor has a big stock room and on the fifth the main supply of drugs is kept. Much needed machinery also is located on this floor. There are two general elevators and two dumbies all operated by machinery. The building throughout is well arranged for its intended purposes and the Eastern Drug Company in its new home ought to be well contented with its model plant.

NOTES.

—Dr. C. D. Harlow, owner of the Harlow Pharmacy at Weymouth, has a remarkable Maltese cat about three years old and weighing ten pounds. He is known to everyone as "Joe." A little brook runs from the yard under one corner of the doctor's store, and there the smelts come up in large numbers. It is a common thing for "Joe" to bring in perhaps a dozen smelts in one day, all of which he has caught. The fish come up into the shallow water and this shrewd cat fishes them up with his paw and brings them up into the store and there eats them.

—The drug store of Edward Callahan, formerly Callahan & Kelley, at Woburn, has suffered recently from two or three calls by burglars. The first time a small amount of cash, cigars, etc., was taken. The second time the burglars actually tried to steal the safe, a rather small one. They got it as far as the rear door, where it stuck. The third time the midnight visitors were frightened away. Mr. Callahan is now sleeping in his store to "welcome" the burglars on their next visit.

—A drug store not a thousand miles from Boston has a "back number" method of conducting its night trade. The clerk who sleeps in the store is not a registered pharmacist. A boy also sleeps in the store, while the owner has rooms in a hotel across the way. Whenever there is a night call, the clerk wakes up, sends the boy across the street to call the proprietor and he dresses and comes over to attend to the wants of the customer desiring a prescription filled.

—At the annual meeting of the Board of Registration in Pharmacy, held a few days ago, the principal business was the election of officers for the ensuing year, which resulted as follows: President, Charles F. Nixon; secretary, Amos K. Tilden. Examinations were held during two days with the result that these candidates were granted certificates: William W. Talbot, Lewiston, Me.; J. Cyrenus Roy, Fall River; William R. Webster, Boston.

—Samuel Schmidt, a druggist who conducted a store at the corner of Boston Road and Jackson avenue in the Bronx, died last week. He was quite well known in the trade and he will be greatly missed.

—Nathaniel Nicolai, one of the traveling force of the local branch of Parke, Davis & Co., was married to Miss Patience Haslup Robinson of Baltimore, Md., at that place Monday, Oct. 1.

—Harry C. Yager, detail man for William R. Warner & Co. in this city, is receiving congratulations from his many friends over the arrival of a baby girl in his family last week.

—Thomas Voegeli, retailer of Minneapolis, Minn., who has been spending three weeks in pleasure seeking and sightseeing in New York, returned to his home Tuesday, Oct. 2.

—Dr. B. T. Whitmore, of the local branch of Parke, Davis & Co., is in Asheville, N. C., in attendance at a meeting of the Mississippi Valley Medical Association.

—Drugs to the amount of \$79,306 were exported from New York for the week ending Oct. 2. For the same period in Boston the exports amounted to \$30,078.

—The Apothecaries' Bicycle Club went on its weekly run to Oakwood, Staten Island, last Thursday, and today they are enjoying a trip to Englewood, N. J.

—George W. Mutter, head of the chemical department of Parke, Davis & Co., at Detroit, spent a day in town last week at the local branch.

—C. H. Jeffras, secretary of the local branch of the William S. Merrell Chemical Co., was in Troy, N. Y., on business last week.

—Lehn & Fink hope to be in their new building on William street before long. The work so far has reached the second story.

—Dr. G. W. Lacey of the local State travelers for Parke, Davis & Co., has recently returned from a pleasant vacation in Montana.

—Max Hollender, formerly of Hoboken, N. J., has bought the Arcadia Pharmacy, 115th street and St. Nicholas avenue.

—Merry O. Martin, one of the traveling staff of Parke, Davis & Co. in Northern and Western New York, was in town last week.

—William J. N. Gervais, of Lehn & Fink, stopped in town a few days last week prior to making a trip through the State.

—William R. Warner, of William R. Warner & Co., Philadelphia, visited the New York branch last week.

—The Edison Chemical Co. has been awarded a judgment for \$76 against W. D. Boyce & Co.

—L. B. Wheeler, of the Lexington Drug Company, was in the city for a few days last week.

—The C. E. Cowell Company has started a new store at 205 Gates avenue, Brooklyn.

—The fall term of the New York College of Pharmacy opened Tuesday, Oct. 2.

—D. K. Brown has recently opened a store at 197 Saratoga avenue, Brooklyn.

—C. Albert will open a store shortly at 116th street and Lenox avenue.

Like Salvation—Free.

We send entirely free of expense, delivered in your drug store, a generous supply of advertising matter for Humphreys' Specifics, Humphreys' Witch Hazel Oil and Humphreys' Veterinary Specifics—books, signs, picture cards, counter wrappers, etc. Remember, they are all free of expense to you, but a postal card. Address, the Humphreys' Homeopathic Medicine Co., cor. William and John streets, N. Y. City.

Aperient Pads.

"Aperient Pads" are now recognized by retail druggists as very useful and a source of economy to them. The circulars, which are tastefully printed on only one side, are white in color and of large size, and, being "padded," they are very convenient for wrapping up articles.

By mentioning this journal and the name of the jobber from whom they buy the "Aperient" Hungarian Aperient Water, retailers can obtain a supply, free of all charges, by applying to the United Agency Company, 503 Fifth avenue, New York City.

—John F. McCarthy, of Springfield, where he has been prominent as a member of social clubs and who for nearly eight years has been a clerk in A. E. Lerche's pharmacy, has resigned his position to take another with Charles Killgore, of New York, manufacturer of tablet triturates. Mr. McCarthy will represent the house in New York State and Pennsylvania.

—The American Remedy Company has purchased formulas, trade marks, stock, good will and general business of the National Drug Company, manufacturers of Dr. Ray's Remedies. Arrangements have been made with Dr. Ray to devote his time to the business. Offices have been opened in the remodelled Music Hall building, Hamilton Place and Winter street.

—Miss Drew, daughter of John Drew, resident manager in Boston of the X-Zalia Company, has just gone to Europe for an extended trip. Miss Drew is a journalist by profession and over the name of "Margery Daw" has written much for the different New York newspapers. She makes her home in New York and goes to Europe on the fruits of her literary labor.

—W. E. Hamblin, of Boston, is the treasurer and H. W. Russell, of Manchester, N. H., is president of the American Drug and Chemical Company, organized at Portland under the laws of Maine with a capital stock of \$100,000, of which \$30 has been paid in. The company proposes to make and deal in drugs, chemicals and medicines.

—Billings, Clapp & Co., manufacturing chemists, this city, are losers to the amount of about \$1,000 by fire in their laboratory at Tiverton, R. I., caused by the explosion of a carboy of nitric acid. Lack of fire apparatus made the matter worse than it otherwise would have been. The loss was fully covered by insurance.

—The License Commissioners of Chicopee, at their last meeting, granted a druggist's license to Wilfred Cote, of Chicopee Falls. Nothing definite was done about granting the extra license allowed by the increase in population, because no official returns have been received.

—Under the extra provision for more licenses, due to the census returns showing an increased population, George O. Levasseur, the Washington Square druggist at Worcester, is among the earliest to apply for a license.

—After serving for ten years as head clerk at W. P. Draper's drug store, in Springfield, Marshall R. Johnson has taken a position in S. A. Richard's drug store on State street in that city.

—What formerly was the drug store of Berkley Johnson, on State street, Newburyport, is to be occupied for a like purpose by A. J. Casey & Co., of the Central Pharmacy.

—The week's exports from the Port of Boston include among other things, drugs and chemicals, \$30,078; india rubber manufactures, \$3,987; spirits, \$15,157; hops, \$4,194.

—Frank E. Haskins, of Brattleboro, Vt., who has been clerking with Horace I. Johnson, Waltham, for the last two years, is studying medicine at Tufts.

—John Ferrin has purchased the Dudley pharmacy at Park Square, Boston. Mr. Ferrin also owns a store on Tremont street.

—Louis Lebossiere, clerk at A. B. Morse's pharmacy at Milford, has entered the Massachusetts College of Pharmacy.

—Edward S. Kelly, formerly of the firm of Kelly & Durkee, Boston, is traveling for Fraser & Co., of New York.

—The drug store of Dr. George Rice at South Framingham has been bought by C. F. Thayer and T. F. Rice.

—Charles H. Pinkham is mentioned at Lynn, where he lives, as a coming candidate for mayor of that city.

—M. W. Semers, Blue Hill avenue, Roxbury, is enjoying a three weeks' trip to Yarmouth, N. S.

ELESWHERE IN NEW ENGLAND.

—C. W. Gulley has purchased the Mead Drug Store at Portland, Me., of C. H. Mead. The stand is an admirable one, having been conducted for a number of years by George W. Seymour, and later for eight or ten years by Mr. Mead. Mr. Gulley was for years associated with George S. Conkey in the drug business. Mr. Goodnough, who has been in Mr. Mead's employ for some time, will remain with Mr. Gulley.

—Captain Aaron W. Ingalls, of Portland, Me., has disposed of his drug and periodical business, and with his wife has started for California, hoping that a change of climate and occupation will restore him to his normal health. The new owner is Giles O. Bailey, a veteran printer and journalist, and who, until recently, was editor.

—In some unaccountable manner an electric wire was the cause of a fire at Hall & Cheeney's drug store at Morrisville, Vt., a few days ago and did considerable damage to the building and goods. Mr. Cheeney moved his goods the next day to the Darling block on Portland street until his store can be repaired.

—Arthur Hull, clerk in A. T. Pinkham & Co.'s South End pharmacy at Dover, N. H., has resigned to enter the Massachusetts College of Pharmacy. Another young man to leave that town, also for the purpose of study at the same college, is Fred Bennett, clerk at Lothrop & Pinkham's drug store.

—Work has been begun on the addition to Hogan's New Haven, Conn., drug store, which is in Mayor C. T. Driscoll's building at the corner of Meadow and Water streets. The Meadow street side of the store will be brought out to the sidewalk line and a new entrance put in.

N. H., has been having a display of more than twenty-five kinds of mineral water in his window. These are waters from Austro-Hungary, Germany, France, Japan and England, as well as all of the American varieties, both medicinal and for the table.

—For a number of days recently a large crowd of people was assembled in front of the Augusta, Me., drug store of Bowditch & Webster, and the excitement was all occasioned by a windowful of spruce gum from the neighborhood of Mt. Kathadin.

—Druggist John T. Hillhouse, of Fair Haven, Conn., who recently attended the reunion of the Twenty-ninth New Jersey Regiment at Keyport, N. J., was hospital steward of the regiment during the War of the Rebellion.

—Ralph Foster, head clerk at Cone's Pharmacy, at Waterbury, Conn., has returned from his vacation spent at Boston, Hartford and other cities. He was accompanied by his wife on the trip.

—Orrin Ives, of Waterbury, Conn., formerly connected with the Apothecaries' Hall, but late of Hartford, has accepted a position as travelling salesman for the Boston Drug Company.

—Alfred Woodward, of Middlebury, Vt., has returned from several weeks' vacation in Plattsburgh, N. Y., and has resumed his place as head clerk in Sheldon's drug store.

—Henry W. Flint, of Hartford, Conn., has made application for a druggist's liquor license, as he intends setting up a drug store in Coe & Pickett's old building in Tariffville.

—George Healey, head clerk at Harvey's drug store in Manchester, N. H., who has been seriously ill for some time, is now able to be at the store again.

and publisher of the Portland Sunday Times.

—J. J. Holland, well known druggist of Manchester,

One of the most successful of the newer remedies is Five Drops, a specific for Rheumatism, Neuralgia, Asthma and Catarrh. We give a representation of the trade mark here. This preparation is made by the Swanson Rheumatic Cure Co., 160 E. Lake St., Chicago. It is sold by all jobbers, but the manufacturers put out an attractive line of advertising matter which it would be well for every druggist to send for. The preparation sells for \$1.00 a bottle, and each bottle contains 300 doses. While it has been extensively advertised to the consumer, it has not yet reached a point where druggists feel called upon to cut the price, and ought, therefore, to interest those who are looking for something on which they can make more profit than on some of the staple preparations now in demand.

One of the best known label manufacturers in this part of the country is F. Huhn, 72 Pine street, New York. He makes lithographed labels and pill and powder boxes of the highest grade. He has an attractive catalogue which he sends to druggists who are interested, and is pleased to send it to any one inquiring.

PHILADELPHIA.

MEETING OF THE P. A. R. D.

Philadelphia, Oct. 5.—The October meeting of the Philadelphia Association of Retail Druggists was held Friday, October 5, and was attended by one of the largest gatherings of the year. President McIntyre informed the members that the Burlington County (N. J.) Retail Druggists' Association was present in a body, and he proffered the privileges of the floor and debate to the visitors. Mr. Thorn, replying for the Burlington County Association, said that his association had just held its meeting, and election of officers in one of the college rooms, by courtesy of the faculty, and that now they had the pleasure of meeting the members of a body that had done more than any other to encourage them in their work, the Philadelphia Association of Retail Druggists. One thing in particular that the P. A. R. D. had done of late was of the utmost benefit to country druggists, its success in heading off department store "drug stores" by the exercise of common sense methods, for, if the department stores entered into competition with country druggists in the sale of many articles, much valuable trade would be lost to those members. Vice-President Poley, chairman of the Committee on County Organization, speaking of "cut-rate evils," related an experience with one of the leading cutters of the city, who had said that where he had the advantage of the smaller druggists was that he cut on patent medicines only, and would not think of cutting on prescriptions, as did many druggists who put their skill on a level below that of a plumber or tinker. This, he thought could well be taken home to every druggist and pondered over, for this is one of the worst evils of the day, and one that loses them more money than do cut prices on patents.

The financial secretary reported receipts of \$74 from fifty-five members, and \$10.25 from Mr. Perry, N. A. R. D. delegation, leaving a balance of \$415.09 in the treasury.

The Executive Committee reported four new members. Bills to the amount of \$21.90 had been audited, and passed.

President McIntyre announced that he had given a great deal of thought to the formation of a committee on "Free Dispensaries," to act with similar committees from the State pharmaceutical and medical associations, and that he had appointed Messrs. Warrington, Myers and Milligan to act on this committee.

Mr. Eppstein, chairman of the Committee on "Lit Bros.," said that the committee had been very pleasantly received by Mr. J. D. Lit, by appointment, on Monday, September 17. After a presentation of the druggist's side of the question and a discussion fully entering into every phase of the matter, Mr. Lit asked for a short time to return his firm's answer. In due course of time, the committee received a notice from Lit Bros. that they had decided to abandon their idea of a drug store, in view of the feeling on the part of the retail druggists of the city and the arguments that had been laid before them.

Mr. Campbell, a member of this committee, then called the attention of the meeting to the fact that other department stores were selling articles peculiarly the province of the druggist, and earnestly recommended that the P. A. R. D. take some action in the question. An earnest debate followed. On motion of Mr. Poley, the committee appointed to wait on Lit Bros. was continued with authority to act in the present matters, and to visit the firms mentioned and others to endeavor to cause them to discontinue the sale of medicinal preparations. A vote of thanks was given to the committee for its successful handling of the Lit case. The advisability of buying in Lit Bros.' stock was left in the hands of the Executive Committee to decide.

At this point, Mr. Holliday, chairman of the National Executive Committee, was introduced by J. C. Perry, who announced to the members that Mr. Holliday would be a citizen of Philadelphia for the coming year, associated with Mr. Shoemaker, of the National Wholesale Druggists' Association, in N. A. R. D. work. Mr. Holliday spoke of the high esteem in which the P. A. R. D. and its work was held by the National Association officials,

it being looked upon as the banner association, both as to membership and activity. He pointed out the successful action of the association in the Lit case as a proof of the benefits of organization, a success which he, as a National officer, felt to be of the utmost importance as establishing a most excellent precedent, and expressed his firm belief that better prices all along the line would soon come in Philadelphia.

Chairman J. C. Perry, of the delegation to the National Convention at Detroit, then presented the report of the delegates. He urged every member to read the published reports of the convention, and of the proprietors and jobbers, too, and to reflect upon the vast amount of work that had been done for the retail druggists by these bodies. Certain resolutions passed in the several conventions were then read, as outlining what had been done, and the importance of Resolution B, as amended, particularly, the result of these resolutions being to place the question of regulating prices, locating cutters, etc., in the hands of local associations, with full power given them to act. "Nothing," he said, "now remained but to perfect our organization and reap the fruits of the labors of the past year; make friends of your competitor, and instead of trying to cut under his prices, get together, both of you, and agree on better prices! The social features of the convention were pleasantly referred to, with mention of the very cordial reception given the delegates by Parke, Davis & Co., and members were urged to take advantage of the offer of the Sterling Remedy Company and thereby help the treasury of the National Association. President McIntyre, one of the delegates, now took the floor and spoke of his experiences at the convention. What he wished to impress most upon members was the action of the N. A. R. D. in Resolution B; cutters could now be located, reported to jobbers and cut off from supplies with the least possible embarrassment from any interpretation of the "trust laws of certain States. He also expressed his earnest conviction of the earnestness and enthusiasm of the convention.

Dr. C. B. Lowe then spoke of the forthcoming series of pharmaceutical meetings to be held at the college during the winter, and, for the faculty, invited the association to attend. He also requested that every member bring any difficult or unusual prescription or pharmaceutical stumbling block to the college for advice and mutual benefits.

Mr. Perry now brought up the matter of "prices schedule." He said that replies as to the position they would assume toward a uniform price list had been received from practically every cutter in the city, and that only one persisted in defying the wishes of the majority, as expressed by their pledges to maintain prices. The most active and largest cutter in Philadelphia had promised a committee, of which National Committeeman Holliday was a member, to submit a list of articles on which he was willing to advance prices within the next forty-eight hours. Speaking of this, Mr. Holliday said that this alone was worth all the labors of the local association, for this gentleman had been brought to see that his interests were the same as his smaller competitors, and that he had met the committee with a spirit of good will and fairness that was certainly most encouraging. Answering a member's question as to the position of the proprietors in the matter of non-secret remedies being sold by druggists and jobbers, Mr. Holliday said that wherever a jobbing house had been making a patent medicine which had an established sale, this was not expected to be discontinued, nor was the retailer expected to stop the sale of his own remedies or a line of "non-secrets." But the demand of the proprietors was that when an article was called for by name the druggist should furnish it without seeking to force his own or another on the customer; however, when a "good remedy for so-and-so" was asked for, then the druggist could use his own discretion and eloquence to sell what he thought best. Speaking on this topic Mr. Holliday expressed his belief that the course of every honest and conscientious druggist would be to comply with this not unreasonable demand, provided, of course, that proprietors kept their part of the agreement not to supply cutters. No complaints had as yet been heard of

and the resolution of the Proprietors' Association was expected to apply to a very few houses only. Several members then spoke of their visits to "cutters" in the various wards; all along this line a most harmonious spirit and feeling was reported, every one visited expressing their willingness to co-operate with the P. A. R. D. in the maintenance of uniform prices.

The Executive Committee here reported that the committee had decided to ask the association for an appropriation to carry out a thorough and comprehensive scheme of bringing in new members and perfecting the organization of this body. For this purpose it was proposed to employ an organizer who could devote all his time for two or three months to this alone. After a discussion it was decided to allow the Executive Committee \$150 for the salary and expenses of an organizer.

Mr. D. L. Witmer then read a few notes to the members on certain phases of the "patent medicine question," which were along the line of the druggist competing where cut prices rule with his own remedies.

A motion by Mr. W. L. Cliffe was read by the recording secretary which pledged the P. A. R. D. in favor of commissioned rank being given the military pharmacists of the State Guard, and insisting that a certificate as "registered pharmacist" be a pre-requisite to such appointment. The resolution was unanimously passed.

Mr. Ott presented a communication from the chairman of the State Medical Association, Dr. Rosenthal, asking the support of the P. A. R. D. for the repeal of the present State Pharmacy Law, which is entirely inadequate and unjust, and the formulation and support of a suitable law that will protect both physicians and druggists. This matter, as being of considerable importance, was referred to the Committee on Legislation for their immediate action in communicating with the State Medical Association, and a report was asked for the near future.

President McIntyre here called the attention of the meeting to the fact that no Committee on Legislation had yet been appointed, so a motion to the effect that one such should be at once appointed was passed by a unanimous vote.

The Burlington County Association members present were now asked to address the meeting. Mr. Thorn, on behalf of his association, spoke very highly of the efficient services that had been rendered by Mr. Rumsey for them at the Detroit Convention, Mr. Rumsey having volunteered to represent them by proxy when it was found that their delegate could not attend the convention. He tendered the sincere thanks of the Burlington County Association both to Mr. Rumsey and to the other delegates of the P. A. R. D.. Mr. Rumsey, replying, said that it had been a great pleasure to him to represent such an earnest and active body as that from Burlington County, and that he felt highly honored by his mission. Other short addresses followed, after which the meeting adjourned.

P. C. P. NOTES.

—The series of "Pharmaceutical Meetings" for the coming college year will begin on Tuesday, October 16, and these will be held every third Tuesday in the month until May at the college. Tuesday's meeting, the first of the year, is to be held in the Museum Hall of the college, and, as there will be more or less ceremony in the inauguration of these popular gatherings, a large attendance is expected. The programme for that afternoon, commencing at 3 P. M., will be a paper on "The Origin and History of the Wholesale Druggists' Association," by Mahlon N. Kline; a paper on "Ointments, with a Formulary of the Ointments in Use at the German Hospital, Philadelphia," by M. I. Wilbert; and the exhibition of specimens of interest. Some belladonna plants grown at the League Island Navy Yard will be shown, with a few notes on the experiences in the culture of these and other drug plants by F. T. Gordon.

—Actuary W. N. Stem reports the matriculation of 180 students for the coming year, of which number eight are of the fair sex. Of late it seems that more and more of Philadelphia's aspiring young ladies are turning their thoughts toward pharmacy as a life work, and the demand for "young lady clerks" seems to be growing. Indeed, if young men do not look sharp they will find themselves forced to meet a formidable competition, for, alas, as an old druggist says: "Girls do not drink, nor do they

seem to get addicted to the use of drugs, and as a class they are far more reliable than young men."

Burlington County, N. J., Association.

By courtesy of the College Faculty a meeting of the Burlington Retail Druggists' Association was held at the P. C. P. Friday afternoon for the election of officers and the transaction of business. After adjournment of their meeting the Burlington County members went as a body to call on the Philadelphia Association, which was then in meeting in Museum Hall, where they met with a warm and hearty welcome. The following officers were elected for the ensuing year: President, George T. Williams, of Burlington; vice-president, E. S. Adams, of Beverly; secretary and treasurer, E. R. Sparks, of Burlington.

The Burlington Association is planning a campaign of organization and education among the druggists of Trenton, Camden and other nearby towns and cities with the object of forming affiliated associations in the territory immediately surrounding Burlington County.

State Board Examinations.

The next examination of the State Pharmaceutical Board will be held in the old Boys' High School, Broad and Green streets, Philadelphia, on Saturday, October 20, at 1 P. M. The board had asked permission to hold the examinations in the new Boys' High School, which has just been completed and is now occupied for the first time by its students, but the School Board of the city refused on account of the risk of damage to desks, chairs and other new fixtures.

NOTES.

—H. L. Barber, of 800 South Tenth street, was the victim last week of a very clever thief. During the night his store was entered and a massive cash register, weighing over 200 pounds, was carried out into the yard and broken open, the thieves securing about \$10 in bills and change. Then the overcoats of both Mr. Barber and his clerk were taken, with all the other garments, etc., in sight. The odd part of the affair is that the thieves could have carried out such a heavy cash register through a narrow space behind the counter, past a pyramid of soap, and through two rooms into the yard without disturbing a thing or waking any one in the rooms above.

—Clinton Shoemaker, of Shoemaker & Busch, has been elected chairman of the Committee on Proprietary Goods of the N. W. D. A. As was the plan last year, the chairman of the N. A. R. D. Executive Committee has been assigned to the chairman of the N. W. D. A. committee as an assistant so Mr. Holliday will soon move his family to Philadelphia and take up his residence here for the year of duty with Mr. Shoemaker.

—Dr. Moses Stearn, of Fifth and Lombard streets, has been nominated for Congress on the "Sunday Opening" ticket. The doctor has for his hobby the opening of art galleries, libraries, etc., on Sundays for the benefit of the working classes.

—Wm. McIntyre, president of the Philadelphia Association of Retail Druggists, has been quite ill of late, but his friends were much relieved and pleased by being able to greet him at the meeting of the P. A. R. D. of yesterday.

—There is a vacancy at the League Island Navy Yard for a hospital apprentice for duty on the Yankee. A good chance for some bright young man to enter the Navy and work up to hospital steward's rank.

—Dr. George McFadden, of Twentieth and Dickinson streets, has settled down to business again after having spent the summer in a trip which took in the Paris Exposition.

—W. W. Chalfant, of down-town fame, has secured the services of a "young lady clerk," his new employe being a matriculate of the P. C. P. for the coming term.

—W. H. Lantz has removed from Second and Cumberland streets to Sixteenth and Lehigh avenue, where he now has a handsomely-appointed pharmacy.

—The drug store at Forty-third and Fairmount avenue, formerly conducted by R. J. Weber, has been sold to a former clerk.

—L. C. Funk, of Forty-first street and Lancaster avenue, paid a flying visit to Lancaster last week on business.

BALTIMORE.**Drug Trade Bowlers at Work.**

Baltimore, Oct. 6.—The members of the Baltimore Drug Trade Bowlers Club got down to active work last Tuesday night, when the teams of the Winkelmann & Brown Drug Company and of James Bally & Son lined up for a series of three games, the latter taking two contests and giving their opponents one by 606, 678 and 736 points against 634, 707 and 660 points, respectively. On Friday night McCormick & Co., the new team, which takes the place of Gilpin, Langdon & Co. in the club, met Muth Bros. & Co., taking two out of the three games from last year's tail-enders. The scores were: McCormick & Co., 673, 660 and 675; Muth Bros. & Co., 637, 689 and 671. Smuck, for McCormick & Co., had the highest score of the evening to his credit, making 194 points in the second game. Vordemberge, for the Winkelmann & Brown Company, made 171 on Tuesday evening. The outlook for an interesting season is very encouraging. Much enthusiasm prevails among the different teams, and the system of handicapping arranged will add greatly to the interest of the contests. Quite a crowd of spectators witnessed the opening of the season.

Wilkinson Heard From.

Baltimore, Oct. 1.—Howard M. Wilkinson, the Dover (Del.) druggist who eloped with his wife's sister, was brought back by a detective and then disappeared a second time with the young woman, has been located once more. It has been ascertained that he is conducting a pharmacy at 163 Swan street, Buffalo, N. Y., Miss Packard, the object of his infatuation, being employed in the store as clerk. Wilkinson, when seen by a reporter, said that he would not defend his wife's action for divorce. Miss Packard, he explained, was living in a respectable Swan street boarding house, while he resided over the store. He still expresses the intention of marrying the girl as soon as a divorce is granted, and also imparted the information that Miss Packard's relatives have become reconciled to the situation.

Maryland College of Pharmacy.

Baltimore, Oct. 5.—For the second time in the history of the Maryland College of Pharmacy that institution has a lady student. The first one, who graduated last year and afterward married a physician, was a Miss Johnson, a Baltimore girl; the new matriculate is Miss Emma Davis, of Scranton, Pa. The junior class is especially large, exceeding in number all others in the history of the college. The greater portion of the students, as usual, come from the South, but Pennsylvania is also extensively represented. All the indications point to an exceptionally successful year.

NOTES.

—Druggist E. O. Streett, Mount Royal avenue and Charles street, is making a number of improvements, which will enhance the attractiveness of a store previously well appointed. New show windows of spacious dimensions are being put in, and the laboratory is being extended so as to afford enlarged facilities. Mr. Streett has been very successful since he located at the above mentioned corner several years ago.

—Among the out-of-town druggists in Baltimore last week were M. C. Cameron, Perryville, Md.; Capt. Thomas G. Forwood, Belair, Md.; T. H. Nicholson, Murfreesboro, N. C.; Mr. Roberts, of Roberts & Co., Racoon Ford, Va.; Dr. J. N. Simonson, Crisfield, Md., and John K. Cullen, Catonsville, Baltimore County, Md.

—A depot for the sale of patent medicines and specialties has been opened at No. 1223 Pennsylvania avenue by the Barley Medicine Company. This concern will devote itself especially to proprietary articles.

—Russell Talbot, a retail druggist at the corner of Light and Randall streets, was married two weeks ago. The young couple have gone housekeeping on East North avenue.

—Druggist William H. Dull, Gay and Exeter streets, is also improving his pharmacy by enlargement, new fixtures and more attractive display.

—Charles E. Dohme was in Philadelphia last week in attendance upon the meeting there of the trustees of the Pharmacopoeia Convention.

—The Lexington Drug Company has removed its store from the corner of Paca and Lexington streets to No. 633 West Lexington street.

CINCINNATI.**MEETING OF THE HAMILTON COUNTY ASSOCIATION OF RETAIL DRUGGISTS.**

Cincinnati, Oct. 6.—The last meeting of this association was the best attended and most enthusiastic since its organization. The meeting room at Odd Fellows' Temple was crowded with druggists anxious to hear the report of the delegates to the Detroit Convention; also to vote at the annual election of officers for the ensuing year.

A. O. Zwick and A. D. Wells submitted their report as delegates and every druggist present left the hall after the meeting adjourned feeling that the local organization was ably represented at the National Convention and confident that Cincinnati has started and will continue to eradicate the cut rate system.

Mr. Zwick read the report of the committee and held his audience interested, although the report was a very long one. After delivering the proceedings of the convention and outlining the work that must be done to make the N. A. R. D. a grand success, Mr. Zwick admonished every member to have patience and perseverance, and, above all things, the maintenance of the local organization at any cost.

Mr. Zwick also stated that he was proud that Ohio had the distinction of contributing more money to the cause of the N. A. R. D. than any other State in the Union. Alfred De Lang, of the Hamilton County Association of Retail Druggists, whose constant hard work and faithfulness to his duties was largely responsible for the grand showing made by Ohio, was unanimously re-elected to the National Executive Committee. In conclusion, Mr. Zwick stated that though Detroit did much for their guests, it was frequently referred to and acknowledged that the first annual convention held in Cincinnati last year will go down in history as the "Great Convention of the N. A. R. D." Its work in Cincinnati was fundamental to all that succeeded, all that will succeed, and it was the real beginning and will forever remain historic in the annals of the N. A. R. D. Four new members joined before the election of officers, which leaves only three druggists who have not entered the fold.

The resignation of Mr. Apmeyer as executive was accepted, after which the election of officers was held. Several of the offices were contested and considerable electioneering was made. The result of election was as follows: President, A. O. Zwick; first vice-president, N. E. Smith; second vice-president, Otto Rauehuss; secretary, Chas. Freericks; treasurer, A. D. Wells; Executive Committee, Emil Zorn, two years; Henry Waltermann, two years; Otto Groenland, two years; A. L. Boehmer, one year.

NOTES.

—D. Lynn Gooch, president of the Cincinnati Drug and Chemical Co., was nominated for Congress in the Sixth District of Kentucky. Mr. Gooch had a hard fight against two Populist candidates, one of them being the present Congressman, A. S. Berry. Mr. Gooch has never entered into politics heretofore, and as the district has always gone Democratic the Covington, Ky., druggists are sanguine of his election.

—While bathing at the Lagoon a few days ago Wm. F. Knemoeiler had the misfortune to severely hurt his left foot by jumping from a trapeze into the lake and striking a hidden log. The force of the collision caused a fracture of the great toe and also a wrench of his ankle.

—W. T. Gray, president of the Gray & Huston Co., spent a few days with Fred. Westing, the Indiana representative of the G. & H. Co., at Indianapolis the past week.

LOUISVILLE, KY.

Druggist Murderer and Suicide.

Louisville, Oct. 4.—John P. Bossung, a druggist at Fourteenth and Jefferson streets, murdered his mistress, Mamie Coe, on September 26 and then committed suicide. The deed was caused by jealousy. A single-barrel shot gun was the weapon used by the infuriated druggist. Bossung purchased the drug store about four years ago and moved there with his wife and son. He was divorced from his wife about a year ago and she has not since been seen. About four months ago the Coe woman went to live with him. Three weeks ago the trouble began. The little drug store became too quiet for her and she longed for her former life. Bossung was exceedingly jealous and for the past three weeks they quarreled constantly. She left on Wednesday afternoon and the druggist went to the home of Mrs. Susan Humphrey, 816 West Walnut street, in search of her. He became unruly and was arrested on the charge of disorderly conduct. He was released on bond, however, and returned to his home. Shortly after he returned home the woman arrived. They quarreled and the druggist picked up the shot gun and fired the contents into her face at short range. The woman fell over dead. Bossung reloaded the gun and stepped into an adjoining room. There was another report and when the clerk reached the room the druggist was also dead. Bossung bore an excellent reputation. He was sober when he committed the deed and an insane jealousy is the only motive for the crime. He was a graduate of the Louisville College of Pharmacy. The woman was known under several aliases. She came to Louisville from Ottumwa, Iowa, about ten years ago.

Druggists and the Telephone.

Louisville, Ky., October 6.—The druggists are dissatisfied with the manner in which the telephone company is conducting its business in Louisville. Recently the company placed long distance telephones in the drug stores and made all of them pay stations. The plan would have worked smoothly had it not been that the telephone company saw an opportunity to greatly increase their receipts and they compelled everybody to pay for even a city message. Only the proprietors of the stores and the members of the press are exempt and it is this rule that is responsible for the objection. The trouble has been a blessing to the small drug stores, however, and they find their sales increasing rapidly. The druggists have heretofore regarded the telephone as a nuisance and greeted the change with delight. When they found, however, that the telephone was responsible for many small sales, they saw their mistake and now are eager for a return to the old mode. The telephone company have found the plan a money maker and they are in nowise anxious to surrender their advantage. There is some talk of organizing a new company composed of Louisville citizens. The proposition has resulted in nothing tangible and it will probably be a failure. Said a prominent druggist to the correspondent for the Era: "The plan is a failure. My best customers walk in the store and are compelled to pay a nickel or dime for a message of five or ten minutes. They think that I am in on the deal and they naturally become indignant. An explanation is not believed and they leave in an angry mood. Probably they will never return and I have lost a good customer. The young man who smokes and the young lady who is fond of ice cream soda also contributed to my sales on account of the telephone. They felt that they were compelled to make some small purchase when they used the phone and they would pass the store without a phone to come to mine. Now the telephone company charges for the message and the people feel that they have paid for what they have received and are therefore under no obligations to me."

NOTES.

—John W. Renaker's drug store at Cynthiana, Ky., was wrecked and his brother, Houston Renaker fatally injured by the explosion of a barrel of varnish one night recently. The young man descended the stairs to draw a gallon of varnish and carried a lighted match. The

next instant there was a terrific explosion and the floor of the store gave way. The proprietor and another clerk barely escaped alive, but they returned to the building to rescue young Renaker. The building caught fire, which added to the danger of their undertaking and after a few minutes in the ruins they were compelled to seek the fresh air. The fire department had arrived by that time and a stream of water was quickly playing on the blaze. Assistant Fire Chief Shelton Reed volunteered to enter the burning building and rescue the unfortunate man, but it was thought that he was dead and the crowd refused to allow what they thought a needless sacrifice. The fireman could not be dissuaded from his purpose, however, and with a leap was among the burning embers. Cynthiana is not a large town and the only fire protection is a volunteer department. One engine and one hose constitute the equipment, and the only hose was turned on the brave fireman. The flames gained a new start and it was thought that both would surely be lost. For ten minutes nothing was seen of the plucky fireman or the man whom he had gone to rescue. Then Reed emerged with the lifeless body of the young druggist. The fireman's face and hair were singed and he was almost overcome by the smoke. So weak was he that as he again reached the open air he tottered and fell unconscious at the feet of the crowd. Artificial means were tried and after an hour's work the attending physician succeeded in restoring a spark of life into the breast of Renaker. He was unconscious, however, and his death certain. The fireman was quickly revived and is now a hero in the town. The condition of John W. Renaker, the proprietor of the store and William Conner, the clerk, who attempted to rescue their companion was not serious, and except for a few slight burns they escaped unhurt. The store was a complete wreck. The loss is covered by insurance.

—A wedding in a drug store at midnight is rather an unusual occurrence, but Scribner's pharmacy at Sixth and Jefferson streets bears that distinction. On Monday night, shortly after 11 o'clock, a man and woman entered the store. They were nicely dressed and were prosperous looking. The man was embarrassed and haltingly called Frank Stein, the night clerk, to one side. "We have eloped from Anderson, Ind.," he said, "and want to be married. I got here this afternoon and have the license in my pocket. I expected the girl this afternoon, but she missed her train and did not arrive until to-night. Will you let us have the ceremony performed in here?" The groom pleaded earnestly and the clerk gave his permission. A minister was secured and just as the bell of the City Hall tower across the street struck the hour of twelve, they were married. They answered to the names of George Hewling and Mamie Cole.

—F. H. Heavrin, a student of pharmacy, was found dead in bed at his boarding house, 121 West Gray street, on last Saturday morning. His death is surrounded in mystery and there is a report that he committed suicide. Heavrin had spent one year at one of the local colleges of pharmacy and was working as a motorman on a street car to obtain funds to complete his professional education. One of his companions says that for the past two or three weeks he had been gambling and that the loss of his money was the indirect cause of his death. His relatives, and they are all prominent, claim that there is no foundation for such a statement and that had he needed anything he could have obtained it. The verdict of the coroner was that Heavrin's death was caused by poison.

—Scott Newman, the Fourth avenue druggist, is receiving the congratulations of his friends on the splendid race of his celebrated trotter, Boralma. The mare won the Transylvania stakes at Lexington on Thursday in very fast time. For a betting proposition the race was one of the best ever trotted in the country. More than \$200,000 changed hands and of that amount the owner bet \$50,000. The race was marred by a collision in the first heat, but the judges allowed Boralma to continue. She captured the three succeeding heats and the race with remarkable ease.

—The druggists of Louisville, both wholesale and retail, are happy for the Carnival is in its last days and trade has been brisk. As a means of attracting trade the Carnival has been an immense success and no one has any

complaint to make. The Commercial Club and the Manufacturers and Wholesale Association petitioned the Elks to continue the Carnival an additional week and instead of having two weeks' fair it was continued for another week. That was the best indication that it was bringing trade to the city.

J. T. Van der Espt, the druggist at Preston and Lafayette streets, is one of the greatest ball cranks in the country and is trying to arrange for the placing of a ball club in Louisville. Mr. Van der Espt is anxious to see Louisville represented in one of the large leagues and is willing to put considerable capital into the venture. He represented Louisville at the meeting of the baseball magnates which was held in New York last spring and opposed the movement to oust the club from the major league.

A representative of Hall & Ruckel, of New York, spent the past week in Louisville arranging a new schedule of prices for the sale of Sozodont. He visited all of the dry goods and drug stores and arranged to have the preparation sold at the uniform price of twenty and fifty cents. Heretofore the druggists have had no regular price and have been selling it at any price obtainable.

J. B. Rogers, for several years a well known druggist at Wickliffe, Ky., has moved his stock to Columbus and will in the future conduct a drug store in that city. He has purchased an entirely new set of fixtures and his store will be one of the prettiest in the State. Ralph Rasco left with him and will be his general manager and prescriptionist.

Newport, Ky., will be the scene of a wedding in which two druggists will be the contracting parties. Robert Quehl, a former Newport boy, but now of Winter Place, Ohio, and Miss Ada Scheffner, the druggist at Fifth and York streets, will be married about the middle of this month.

J. C. Brown, the druggist at Williamstown, Ky., has sold his stock of drugs to James A. O'Hare & Company and will leave for Owenton to take charge of his father's store. The elder Mr. Brown is in ill health and will leave for Colorado to recuperate.

Louisville druggists are becoming afflicted with the bowling craze and several have signified their intentions of joining some good club this winter. The sport is very popular in Louisville and a city league has already been organized.

J. W. Moore's old stand at Sixth and Lexington streets was sold at auction last Tuesday. Mr. Moore recently took the bankruptcy law. It is said that he will open a drug store at Crescent Hill, one of the fashionable districts of Louisville.

James O. Cook, of Hopkinsville, Ky., is moving his drug store from its present quarters to the Center building. The new quarters will be more imposing and Mr. Cook recently purchased the building.

Lou Holzhauer, manager of the G. Holzhauer estate, Newport, Ky., will wed Miss Florence Winter, daughter of John Winter, of Voige & Winter, the well-known cigar house of Cincinnati, on October 23.

The Louisville druggists are well pleased at the increased trade brought by the Elks' Carnival and are heartily in favor of the week's extension which has just been announced.

The stock of the R. H. Venamle Drug Company has been moved from the old stand at 1131 West Walnut street to the corner of Seventh and Jefferson streets.

The holiday line of Lazell, Dalley & Co. for the season of 1900 embraces thirty-seven styles, seven of which are in cut glass, and a large assortment to retail at 25 cents, 50 cents, 75 cents and \$1, although they run up to \$6 each. On another page they publish an assortment which they suggest as a trial order that will afford a handsome profit, to demonstrate the effectiveness of the line. The assortment contains forty-one pieces, costing \$18 net and retailing at \$27, leaving a profit of \$9, or 50 per cent. on the cost. These goods may be ordered directly of Lazell, Dalley & Co., or may be purchased through a jobber, but it should be borne in mind by every druggist that Lazell's Perfumes are only sold to the drug trade. This is a policy which they consistently carry out, and one very seldom sees an article of Lazell's manufacture in a dry goods or department store.

PITTSBURG.

Western Pennsylvania Retail Druggists' Association Meeting.

Pittsburg, Oct. 4.—At the regular monthly meeting of the Association on Thursday afternoon, September 29, a letter was read by E. C. Garber, the financial secretary of the organization. It was a request from W. F. Crafts, L. A. Conner, Jr., W. C. Davis, A. H. Eames, R. J. Miller, W. C. Lilley, James W. Houston and M. L. Jennings, officials of the different reform bureaux of Pittsburg and Allegheny. The signers desired the members of the Association to adopt a resolution against illegal sales on Sunday, including soda water, cigars and candy.

The communication was read, marked "received" and filed by the members present, and then shelved until October 18. Mr. Garber, in speaking of the affair after the meeting, stated that for a druggist to abstain from selling the articles mentioned would practically mean to close up shop at 12 o'clock Saturday night and reopen Monday morning. Personally Mr. Garber is in favor of closing the stores on Sunday not in order to grant the request of the innumerable religious and reform orders, but to allow the worn-out druggist to have a day of rest. It is hardly likely that the request of the reformers mentioned in the communication will be granted as these staple articles represent the main source of revenue on Sunday.

State Pharmaceutical Board Suits.

Pittsburg, Oct. 4.—The State Board has been extremely active in this neighborhood recently and with telling effect. Private detectives have been hired to investigate the number of druggists, managers, qualified assistants, and others who have been so careless of the law as to omit the formality of framing and hanging certificates with their renewals in their stores. The number has surprised the officials in that it appears to be legion, including some of the most prominent pharmacists of the two cities. One alderman alone has over one hundred cases on hand. Several druggists have paid their fine and costs, amounting to \$12. Many druggists expressed the opinion that the crusade is a good thing while a few look upon it as a blackmailing scheme. However, as Louis Emanuel, president of the State Board, says, "Honest druggists will have no cause for complaint when the Board has finished its work."

Pittsburg College of Pharmacy.

Pittsburg, Oct. 4.—The local college opened its portals on October 1 with a large class of senior and a still larger class of juniors. The senior members have fallen into the habit of withholding their cards of membership until a short time before the opening day, a rather reprehensible one in that it retards enrollment and consequent preparation for the year's work. No especial effort has been made to improve the appearance of the college, which, though one of the most successful in the country, is not by any means one of the city's attractive features. The same corps of professors will preside this year, as follows: Julius A. Koch, professor of the theory and practice of pharmacy and director of the pharmaceutical laboratories; F. T. Aschman, chemistry and director of the chemical laboratories; Adolph Koenig, materia medica and botany; William J. McAdam, microscopy; Richard A. Skalweit, Latin; Thomas S. Brown, lecturer on pharmaceutical law and jurisprudence. The assistants are Albert F. Judd, William L. Sutter and Edgar K. Shumaker.

NOTES.

—George Eckhardt, manager of W. J. Gilmore & Co., had an amusing experience while visiting Eugene Ross, of Johnson & Johnson, in New York City recently. The pair were at a chop house at the corner of William and John street and were seated at a table near the window. A passer-by was observed to stand and gaze up at the window, then accost another pedestrian, who stopped, glanced at the pair and nodded his head in acquiescence. Gradually the number of window gazers increased until

an almost impassable crowd was formed. An obsequious waiter finally solved the mystery by informing Ross that he was being mistaken by the hero-loving crowd for the great and only Fitzsimmons! Mr. Ross possesses a few lineaments similar to Bob in that they both have a like noble brow and it was this same noble brow which was visible to the crowd. The pair of pharmacists succeeded in mingling with the people who saw no further resemblance, in fact, did not recognize Ross as the man at the window. But on entering an elevator nearby, the elevator youth who had witnessed the incident, said at once, "Hello, Mr. Fitzsimmons. I thought you wuz a dead ringer, meself. See?"

—Among the recent callers upon wholesale houses were the following representatives of well known firms: P. A. Howard, Watertown Thermometer Co.; H. F. Terhune, American Hard Rubber Co.; M. S. Seelman, A. Isaacs & Co.; F. P. Gragg, Japan Import & Export Commission Co.; E. Regensburg, Eagle Pencil Co.; A. B. Rosenthal, Rosenthal Bros.; H. Fretz, Chas. P. Sellers' Bros.; F. H. von Boemle, The Mechanical Rubber Co.; Mr. Edams, Charles Plunkett; J. G. O'Brien, Wilmot Castle & Co.; George H. Sargent, Tyer Rubber Co.; R. S. Arcularius, Mulhens & Kropff; Sam Mayer, Joseph Dixon Crucible Co.; W. H. Gatchell; J. Finley Smith & Son; S. B. Thorp, Wh. H. Noyes & Bro.; I. Pineus, Lasker & Bernstein; T. T. Brown, F. R. Arnold & Co.; Eugene E. Baehr, Geo. Bergfeldt & Co.; E. H. Conger, The Celluloid Company; James D. Ferguson, Goodyear India Rubber Glove Manufacturing Company.

—The delegates and other members of the Western Pennsylvania Retail Druggists' Association returned from the convention at Detroit after a most enjoyable trip in which Secretary Garber covered himself with honors as a post-prandial and any-other-time speaker, A. L. Johnson, local representative of Parke, Davis & Co., proved himself a peerless host, and W. B. Markell brought home the honor of an office. Outside of the delightful hospitality of the Detroit and Wayne County Retail Druggists' Association, Parke, Davis & Co., and others, the delegates are satisfied with the prospects of the successful issue of the convention.

—L. M. Hamilton, of Walnut street, has the sympathy of all in the loss of his oldest son, John Chambers Hamilton, aged 25 years, who died recently from the effects of intense grief over the death by drowning of his only brother Charles, mentioned in the Era two weeks ago. The double loss which deprives Mr. and Mrs. Hamilton of sons is most deplorable.

—S. L. A. Burke, a druggist of New Castle, Pa., was brought to Greensburg, September 14, on a bench warrant for the non-payment of costs on a charge preferred against him before Squire Wharton, of Ruffsdales, in 1898. The case was settled.

—That Ohio druggists are fond of turf and field sports is evidenced by the winning of the 225 pace at the Lisbon Fair by H. V. George's Chicago Bay, and the purchase by G. P. Curry, of East Palestine, Ohio, of Hal Braden, Jr.

—The matrimonial engagement of George Reeves, of this city, and Miss Dollie Phinney, of Rockford, Ill., is announced for the first time. The marriage will occur after the holidays.

—Mr. Messner, of the Apollo Drug Company, purchased Nevin Brothers' store at Vandegrift. The new store will be called the Vandegrift Drug Company, F. E. Hart, manager.

—George F. Siehelstiel, of W. J. Gilmore & Co., and E. L. Walther, of the Walther Drug Company, represented the wholesale dealers at the Chicago convention.

—W. L. D. Wolfe, of Chicora, Pa.; A. Bossert, of Washingtonville, Ohio, and Col. D. Mellinger, of Lenton, Ohio, spent a few days in the city lately.

—Thomas Ecker, a former druggist with the Crystal Pharmacy, Ellwood City, is now with L. G. Nall, of the People's Pharmacy, Ellwood City.

—William G. Schirmer, treasurer of the Pittsburg College of Pharmacy, is enjoying a three months' European trip.

—Stanley Zarzinski has opened a new store at the corner of Thirty-fourth and Josephine streets, South Side.

—Harry E. Gelsenheiner and Mrs. Gelsenheiner spent a couple of weeks at Cambridge Springs.

CHICAGO.

Health Board After Bogus Doctors.

Chicago, Oct. 6.—As an aftermath of the illicit doings of the Metropolitan Medical College, which was closed some time ago by the postal authorities, the State Board of Health of this State has found it necessary to prosecute several persons who were practicing medicine under bogus diplomas issued by this alleged college. The Board of Health has declared war on all persons who are practicing medicine in the State without a license. King Lee, a Chinaman, was recently arrested on this charge and fined \$100 and costs, but has since renewed his claims as a physician and the authorities are again seeking his arrest.

A. Edward Ryetsel and Bronisloo Wodzinski have been arrested and judgments have been entered against them before Justice Richardson for \$100 each and costs. The former lives at 284 South Halsted street and procured his diploma from the Metropolitan Medical College. Wodzinski posed as being able to cure every known disease and had worked up quite a practice among the Polish residents in the section of the city in which he lived. He also made and sold a tasteless liquid for fifty cents a bottle, claiming it would cure rheumatism.

NOTES.

—The annual meeting of the Chicago Drug Trade Bowling Club was held last night at the Union Hotel. The following officers were elected: President, John Blocki, the oldest youngster in the drug trade; vice-president, C. A. Storer, most favored pharmacist of the Upper Side; and secretary and treasurer, J. H. Odbert. The club now consists of thirteen members and meets on Friday. To prove still more conclusively that the members are not superstitious, a dinner will be given the next time Friday falls on the 13th of the month. The club has decided to join the Business Men's League of Bowling Clubs, an organization which bars all professionals and all who deal in bowling goods or who run bowling alleys.

—The Illinois State Board of Pharmacy has issued invitations to the officers of all the prominent pharmaceutical organizations in the State, the heads of pharmaceutical colleges, etc., to meet in conference at the Wellington Hotel on Friday evening, October 12, to discuss what pharmacy legislation it may be desirable to ask from the incoming Legislature.

—The James A. Davidson Bowling Club played the Lazell, Dalley & Company team at Mussey's bowling alleys this afternoon. The former team is composed of George Ernst, Charles Zacharias, J. R. Vance and Clarence Davidson, and the latter is made up of Ed. F. Mallory, George H. Rice, A. J. Miller and Oscar Leistner.

—E. T. Hitchcock, a well-known druggist at 5501 South Halsted street, was married on October 1 to Miss Josephine E. Schiff, of South Charleston, Ohio. Mr. and Mrs. Hitchcock left at once for Utica, N. Y., where they will remain a couple of weeks. They will return to Chicago about the fifteenth of the present month.

—The Hyde Park Hotel Pharmacy, at 5101 Lake avenue, was sold out this week by order of the United States District Court. Proceedings in bankruptcy were begun against this store and its owner, E. O. Carlson, some time ago. The stock was sold piecemeal. Among the buyers were August Werz and E. O. Hesselroth.

—The "League of American Druggists" is no more. The manager and "whole thing," Richard Respass, can not be found and it is reported that he has left town. The \$2.50 apiece put up by the druggists who joined the plan have not yet been returned, and other creditors are still waiting for their pay.

—S. C. Fellows has opened a new drug store at Jackson Boulevard and Robey street. Mr. Fellows was for many years manager of Fred. Thomas' store at Western avenue and Jackson Boulevard, and has a host of friends who wish him success.

—The Montgomery Magnesia Spring Water Company, of Montgomery, Ill., has been incorporated by Hiram I. Keek, William Garnett, Jr., and Sidney W. Worthly to deal in mineral waters. The capital stock is \$2,400.

—J. H. Haley, Chicago representative of C. W. White

& Company, has just returned from a trip to the Pacific Coast. He reports a remarkably good business in that section, with an excellent outlook for further trade.

—Fred. H. Elsner, who was formerly with C. L. Clancy at Wrightwood avenue and North Clark street, is now with the Chicago office of Seabury & Johnson in the Garden City block.

—Bauer & Black this week filed a bill for an accounting and injunction against Edward E. Behlke, a well-known druggist in the First Ward.

—Clarence A. Davidson, of the druggists' sundries house of James A. Davidson, returned from Indiana with his family last Monday.

—Bingel & Golden, druggists at 316 Sedgwick street, have given a bill of sale of their store to John Weirter for \$3,000.

—The Sorrow Drug Company at 4701 Indiana avenue, has been succeeded by George McDonald.

—V. H. Dumbeck has opened a new drug store at 743 Cottage Grove avenue, Pullman, Ill.

—Albert Schreiner, a North avenue druggist, has sold his store to Julius Bernauer.

—C. Winholt has sold his drug store at 208 Grand avenue to Dr. Stanton.

—The Renaud Drug Company has confessed judgment for \$3,500.

THE NORTHWEST.

St. Paul Drug Men Up and Doing.

St. Paul, Minn., Oct. 5.—The St. Paul adjunct of the N. A. R. D. purposes doing its full share of the work of that great body. The Retail Druggists' Association is going to work in earnest for the protection of trade. A meeting will be called by the president for about the middle of the month, when steps will be taken, if possible, to prevent the sale of drugs by other than licensed druggists. The St. Paul delegates to the convention will report on the deliberations of the national body, and will explain the steps taken to protect the trade. The St. Paul association has not been in session for nearly two months, but the members have had several informal meetings, at which it was decided that energetic steps should be taken to secure legislation to prevent the sale of drugs by people who are not licensed druggists. This will be the first matter taken up at the meeting this month. Secretary A. W. Bork, of the St. Paul organization, is thus quoted: "The licensed druggists all over the country are about to organize under the national association, and we don't intend to be behind hand. Instances reach us daily of mistakes made by outsiders in handling drugs, and we will attempt to have the law enforced, or, if necessary, to have new laws to prevent this."

NOTES.

Wesley St. Clair, the popular and capable factotum of Joseph J. Conger, who conducts a drug store at Selby avenue and St. Albans street, this city, had an unpleasant experience at his abode a few days ago. A slight fire occurred there, and Mr. St. Clair was burned about the face, but not seriously hurt. As a result, as he puts it, "I had to get a new hat and a hair cut." Mr. St. Clair carries an accident insurance policy, and thought the company should at least allow him enough to buy a new hat; but the soulless corporation refused him. Mr. St. Clair heartily agrees to the general proposition that accident insurance men, like many others, need more convincing arguments to induce them to disgorge than to accept money.

—Successions: A. G. Kendall, Prairie du Sac, Wis., by the Kendall Drug Company; F. G. Sands, Ainsworth, Iowa, by Sands Bros.; Heag & Son, Blanchard, Iowa, by C. C. Clark; A. Olson & Co., Blooming Prairie, Minn., by Olson & Fjeldstad; S. M. Morris, Ashland, Neb., by Dr. C. D. Morrow; D. C. Steele, Fairmount, N. D., by Aug. Calberg & Co.

—J. W. Bowden is in temporary charge of Mr. Olaf Lee's store, at present, while the latter is chasing around with a gun somewhere in the Northwest in pursuit of the festive chicken.

—Andrew Johnson, of Packwood, Iowa, has gone to Valley City, N. D., to work for Proctor & Fish, in place of Chris Habborn, who died last week.

—F. W. Kruger, who is in charge of the drug store of Mrs. Ada McCoy & Co., Dassel, is up buying holiday goods this week.

—W. E. Burke, St. Paul, has been called home to Milaca on account of the dangerous illness of his father.

—E. F. Atwood, of Atwood's Pharmacy, Staples, Minn., has filed a voluntary petition in bankruptcy.

—An execution has been issued against J. M. (Mrs. C. E.) Blount, Huron, S. D.

—The senior partner of Junker & Konkle, Defiance, Iowa, has retired.

—R. Forsyth & Co., Jerome, Iowa, have moved their stock to Moravia.

—R. F. Terpenning & Co., Pukwana, S. D., are moving to Chamberlain.

—C. Q. Seaboria, Elk River, Minn., is reported negotiating to sell.

—S. N. Saunders & Son, Bazile Mills, Neb., are closing out.

—The Ed. Hollingshead Company has incorporated at Duluth.

—G. T. Giamcomini, Omaha, Neb., has given a bill of sale.

—L. S. Wood, Eddyville, Neb., has removed to Petersburg.

MONTREAL.

Montreal, September 29.

—J. E. Morrisson and Alex. B. J. Moore had an interview last week with Col. Roy relative to the government's promise to supply rifles to the Druggists' Rifle Club. At present prospects are very slim for shooting at the butts this fall, as the ranges are not yet completed. However, there is a likelihood of the members having some Morris Tube practice during the winter which will help to make them familiar with the new rifle. A meeting has been called for next week to get the views of those interested in the sport, also to ascertain if there is any probability of the club leasing rooms so as to make it more of a social body.

—It is to be regretted that a city like Montreal should send only one representative to the late meeting of the N. A. R. D., in fact the Retail Druggists' Association did not send one of its Montreal members at all, the only Montrealer present being S. Lachance, who went exclusively on his own account. It appears there was some misunderstanding between the members, hence the paucity of representatives from our city.

—J. P. Durand, M. C. P. '91, has severed his connection with Dr. Laviolette and has taken charge of a pharmacy opened in connection with a large grocery firm. There are rumors of cut prices emanating therefrom, in fact patent medicines and prescriptions are openly advertised at ridiculously low figures which will occupy the attention of the Retail Druggists' Association at their next meeting.

—The majority of the druggists in the east end are complaining bitterly of the stagnant state of trade. There is certainly ground for complaint in that section, but their confreres in the West End seem quite satisfied, probably due to the number of tourists which we have lately had visiting the city and who generally reside in the centre and west centre.

—The druggists of Montreal are looking forward to the next convention of the Wholesale Druggists' Association, which will be held here next year. It is principally due to the efforts of Henry Miles, of Leeming, Miles & Co., vice-president of the association, that Montreal was chosen.

—A. B. Evans, managing director of Evans and Sons, Limited, has returned from New York, whither he went to meet his brother J. J. Evans, of Evans Sons and Co., Liverpool. The latter will remain in Montreal for a few weeks and will be the guest of his brother.

—The pharmacy students have apparently given up the idea of holding any more banquets. Last year it narrowed down to the oyster supper, while this year they made another departure and held an excursion down the river which was very well patronized.

James H. Harte will shortly move into his new store at the corner of Drummond and St. Catherine streets. At present the store is undergoing very extensive alterations and when completed will be one of the handsomest pharmacies in the city.

John T. Lyons has returned much earlier from his trip to England and France than he expected. He says he could not get home quick enough and says there is no place like Montreal. It was his first trip abroad and probably his last.

Alban E. Ragg was married last week to Miss Hatch, of Toronto. The happy couple will reside in Toronto. Mr. Ragg was the recipient of a handsome gift and address from his fellow employees.

Apprentices appear to be at a premium here at present, and it is to be hoped that quite a number will make an attempt at the preliminary next month so as to meet the demand.

Maurice Dion, of Levis, is at present in the city studying with Prof. J. E. Morisson, for a major examination, which comes off next month.

A. H. Moffatt has returned from his holidays spent at St. Agathe, which place has become one of the most popular summer resorts in the Laurentides.

Fred Wooley, formerly eastern traveler for the E. B. Shuttleworth Pharmaceutical Company, has accepted a position with Lyman, Knox & Co.

J. E. W. Lecours has been appointed manager of the company which is recently formed for the manufacture of Dr. Rambeau's remedies.

Laferriere, late head clerk with J. A. Picotte, has accepted a position in the town department of Kerry, Watson and Co.

C. J. Covernton is again attending to business, having returned from a trip to England and Scotland.

H. Bavolet has accepted the position of head clerk with I. A. Picotte.

CALIFORNIA ITEMS.

A. L. Cook, formerly in the drug business at Wheaton, Ill., has purchased the Collett stock in East Los Angeles and is painting, papering and otherwise improving the appearance of the store.

W. C. Bennett, of Paso Robles, is taking a three weeks' vacation in Humboldt County, shooting bear and other large game. His brother has charge of the store during his absence.

Webb & Green, of Pasadena, have purchased the Wood stock and will run it under the name of The Modern Pharmacy. This firm now operate three drug stores in Pasadena.

Otis A. Langley, formerly with Saunders & Son, Lompac, is now clerking for Jones & Son at Ventura.

Druggist Hoff, of Pasadena, was recently fined \$100 and costs for the illegal sale of liquors.

Druggist Corbin, of San Diego, is now clerking in Bear's pharmacy, Bakersfield.

What is said to be the second largest cork works in the United States, and certainly the only one in New York City, is the new factory of the Paddock Cork Co., at 1209 De Kalb avenue, just beyond Bushwick avenue, Brooklyn. For many years they have been located at 21 Dodworth street, not far from where they are now, but the steady growth of their business made the old factory inadequate to meet their requirements and a new plant became absolutely necessary. They have now a large, two-story brick factory, over 200 feet deep, arranged to meet their requirements in every way. They think they now have the most complete and up-to-date cork factory in existence; at any rate, no expense was spared to make it so. The Paddock Cork Co. was established in 1875, and by making a specialty of fine goods it has secured an established trade which extends from one end of the country to another. In fact, Paddock Corks have achieved a standard reputation in the market.

There is satisfaction in showing your customers such a handsome line of Holiday Perfumes as Stearns, of Detroit, offers this season. Not only are the packages rich and artistic, but the contents are of that quality that brings back people for more of the same kind.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,
New York.

ALABAMA.—Montevallo.—Crowe & Wikinson, sold to Montevallo Drug Co.
Opelika.—W. E. Stowe & Co., succeeded by I. N. Stowe.
Tusculumbia.—Curry & Scruggs, sold to Webb & Drisdale.
CONNECTICUT.—Norwich.—James Duggan, 50 Main street, sold to John A. Dunn.
DELAWARE.—Milford.—Howard Mulliken, of the firm of Mulliken Bros, deceased.
GEORGIA.—Metcalf.—Monroe & Wheeler, burned out.
ILLINOIS.—Aurora.—Gleason & Groschopp, succeeded by E. Groschopp.
Ottawa.—Duncan & Perkins, 707 LaSalle street, succeeded by N. C. Perkins.
INDIANA.—Indianapolis.—Bull & Krauss, 1702 Washington, sold to C. M. Parker.
Princeton.—J. Zimmerman, sold to Wm. F. Craig.
Sheridan.—J. W. Cottrell, sold to Wm. Osborn & Bro.
Sullivan.—Frank N. French, assigned.
IOWA.—Clearfield.—Evans Drug Co., sold to Stephenson Drug Co.
Milford.—N. L. Erickson & Co., sold to J. O. Stephenson & Co.
Milton.—L. F. Summers, succeeded by Summers & Frantz.
Modale.—Allen A. Knecht, sold to Rhoden & Co.
Rhodes.—C. E. Frost, sold to J. H. Perry & Co.
Vail.—M. E. Ryan, sold to R. J. Logan & Co.
KENTUCKY.—Lebanon.—W. G. Spencer & Co., sold to Hugh Murray Drug Co.
LOUISIANA.—Albe ville.—N. C. Young, burnt out.
MAINE.—Brunswick.—F. E. Johnson, sold to E. E. Bickford.
MISSOURI.—Kansas City.—J. H. Hoover, 19th corner Vine, sold to Klee Bros.
Sedalia.—T. K. Fletcher, 418 Ohio, sold to W. S. Farris.
NEW HAMPSHIRE.—Manchester.—A. G. & Z. L. Straw, sold to J. L. Beaudry.
NEW YORK.—Canton.—C. H. Mead, sold to C. W. Gully.
NORTH CAROLINA.—Raleigh.—Adams & Moye, 133 Fayetteville, succeeded by Adams Drug Co.
OHIO.—Marysville.—Haines & McLaughlin, sold to W. P. Roberts & Son.
TEXAS.—Ozona.—Clayton & Prescott, succeeded by A. W. Clayton.
VERMONT.—Essex Junction.—F. L. Nichols, sold to C. G. Williams.

Mr. Daniel J. Puffer has resigned as a director and with Mr. Luther W. Puffer has withdrawn from the management of the American Soda Fountain Company.

The active management and supervision of manufacturing at the Boston factory has devolved upon Mr. Leonard Tufts, whose business ability and thorough familiarity with the mechanical departments especially well fit him for the position.

The A. D. Puffer & Sons' business will continue to receive the most careful attention at the Boston factory, Nos. 278-288 Congress street, and is not affected by the withdrawal.

Among the leading and most progressive box manufacturers now before the public is the firm of Joseph G. Talte's Sons, Philadelphia, who are well and favorably known throughout the country for the superiority of their Seamless Tin Boxes. Their goods have given the greatest satisfaction wherever they have gone, and for neatness, shapeliness and general finish they are not excelled. Manufacturing chemists and druggists use them extensively for ointments, cosmetics, salves and pills, and druggists using tin boxes of any kind will find it to their advantage to send for samples and prices, which will be mailed on application.

PATENTS

Trade-Marks, Designs, Etc.

PATENTS.

Issued September 4, 1900.

- 657,080.—William C. Belden, Joamosa, Cal. Telltale-funnel.
- 657,119.—Frank Klepetkl and J. T. Morrow, Great Falls, Mont. Refining copper from solutions containing antimony as an impurity.
- 657,307.—Max Bazlen, assignor to Badische Anilin and Soda Fabrik, Ludwigshafen, Germany.
- 657,320.—Armand J. Stiegelmann, assignor to Badische Anilin and Soda Fabrik, Ludwigshafen, Germany. Stable indigo-white and making same.
- 657,325.—Rosario Torchia, New York, N. Y. Making oxy-chlorid of mercury.
- 657,328.—William P. Allen, Chicago, Ill. Syringe.
- 657,462.—Peter T. Donovan, New York, N. Y. Inhaler.
- 657,426.—Oscar S. Kulman, Savannah, Ga. Antiseptic broom.
- 657,452.—Mathew E. Rothberg, Johnstown, Pa. Making magnesita-alumina.
- 657,453.—Mathew E. Rothberg, Johnstown, Pa. Obtaining alumina.

Issued September 11, 1900.

- 657,520.—Bernhard Heymann and A. Herre, Elberfeld, Germany, assignors to Farbenfabriken of Elberfeld Company, New York, N. Y. Monoacetyl-indoxyl and making same.
- 657,570.—George H. F. Schrader, New York, N. Y. Fountain-syringe or other cap.
- 657,606.—Adolf Gentzsch, Vienna, Austria Hungary. Raising the melting point of resins, waxes, and similar bodies.
- 657,710.—Emmet L. Smith, Chicago, Ill. Atomizer.
- 657,729.—William C. Curtiss, Boston, Mass. Non-refillable bottle.
- 657,761.—Joseph Davison, New York, N. Y. Pulverizer.
- 657,767.—Eugen Grossmann, assignor to J. R. Geigy & Co., Basle, Switzerland. Naphthol prepared with rosin soap.
- 657,813.—George W. Crout, Jr., Philadelphia, Pa. Chemical fire-extinguisher.
- 657,818.—Max Fremery and J. Urban, Oberbruch, Germany. Manufacture of cellulose.
- 657,851.—Tilgham H. Boyer, Allentown, Pa. Filter.
- 657,863.—Samuel Davis, New York, N. Y. Non-refillable bottle.
- 657,880.—Albrecht Schmidt, and G. Merling, assignors to Chemische Fabrik auf Actien, vormals E. Schering, Berlin, Germany. Compound of vinylidiaceton-alamins and making same.

Issued September 18, 1900.

- 657,937.—Charles B. Jacobs, East Orange, N. J., assignor by mesne assignment to Cyanide Company, of New Jersey. Manufacturing nitrogen compounds.
- 657,938.—Charles B. Jacobs, East Orange, N. J., assignor to Ampere Electro Chemical Company, Ampere, N. J. Manufacturing compounds of nitrogen.
- 657,970.—Joseph Tombeur, Brussels, Belgium. Fire-extinguishing compound.
- 658,107.—Frederic J. Gottlieb, New York, N. Y. Non-refillable bottle.
- 658,115.—Peter J. Gernan, Quincy Adams, Mass. Non-refillable bottle.
- 658,213.—Wilton A. and T. A. Hall, assignors to themselves and L. G. Hirth, Fernandina, Fla. Non-refillable bottle.
- 658,250.—Ferdinand R. K. Erfmann, Rotterdam, Netherlands. Chemical apparatus.
- 658,273.—Luther E. Moore, Marietta, Ga. Package for medicines, etc.
- 658,327.—Gerhard N. Vis, Schweizerhalle, Switzerland. Purifying brine.

Issued September 25, 1900.

- 658,411.—Johann C. W. F. Tiemann, Berlin, assignor to Haarmann & Reimer, Holzminden, Germany. Ionone derivative and making same.
- 658,416.—Andreas C. Jeosen, Niedrard, assignor to Vereinigte Cholinfabriken, Zimmer & Co., Gesellschaft mit Beschränkter Haftung, Frankfurt-on-the-Main, Germany. Obtaining vanillin derivatives.
- 658,576.—Paul Naef, New York, N. Y. Apparatus for making alkalies.
- 658,577.—Paul Naef, New York, N. Y. Apparatus for crystallizing solids from liquids.
- 658,611.—Edward Bausch, assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Microscope.
- 658,626.—Herbert S. Elworthy, London, England. Making pure carbonic acid.
- 658,627.—Herbert S. Elworthy, London, England. Apparatus for making carbonic acid.
- 658,628.—Herbert S. Elworthy, London, England. Apparatus for making pure carbonic acid.

- 658,632.—Max E. Fremery, Brounert, and J. Urban, Oberbruch, Germany. Making cuprammonium solutions.
- 658,723.—Paul Naef, New York, N. Y. Apparatus for making alkalies.
- 658,724.—Paul Naef, New York, N. Y. Apparatus for treating liquids with gases.
- 658,725.—Paul Naef, New York, N. Y. Apparatus for treating liquids with gases.
- 658,726.—Paul Naef, New York, N. Y. Crystallizing solids from liquids.
- 658,727.—Paul Naef, New York, N. Y. Chemical apparatus.

TRADE MARKS.

Registered September 18, 1900.

- 35,028.—Medical compounds for treatment of toothache. Louis Scheer, New York, N. Y. The word "Mhs."
- 35,029.—Certain named drugs. Dr. O. Kootler & Co., Plotzensee, Germany. The representation of two swimming swans arranged in a hexagon border.
- 35,030.—Dyspepsia remedy. Fairchild Bros. & Foster, Elizabeth, N. J., and New York, N. Y. The word "Diazyme."
- 35,031.—Remedies for skin diseases. Newton N. Gober, Atlanta, Ga. The letters "D. E. S."
- 35,032.—Medicated soap. Elizabeth M. Barthel, London, England. The word "Zinoline."
- 35,076.—Toilet powder. Waring & Co., Baltimore, Md. The word "Panza."
- 35,077.—Certain named toilet preparations. Melvin G. Hill, Tempe, Ariz. The word "Batholene."
- 35,078.—Preparations for the complexion. George T. Brandon, Cleveland, Ohio. The words "Belle's Delight."
- 35,079.—Toilet oil. The Maize Products Company, New York, N. Y. The word "Maizaline."
- 35,080.—Certain named medicinal toilet preparations. Henry Schuurman, Richmond, Va. The word "Hartoni."
- 35,081.—Breath wash. Juano L. De Zeabault, Birmingham, Mich. The compound word "Royal-Roman" and the representation of an ancient lamp.
- 35,082.—Certain named remedies. John Joseph Leek, San Francisco, Cal. The word "Hindoherb."
- 35,083.—Disinfectants. Vincenzo Cervello, Palermo, Italy. A fac-simile signature of the registrant, the word "Igazolo," and the letters "C. F."
- 35,084.—Polishing compounds. William H. Smith, Kansas City, Mo. The word "Borolene."
- 35,085.—Cleaning and polishing soap. Whittier Coburn Company, San Francisco, Cal. The word "Sapho."
- 35,086.—Liquids for polishing or burnishing metals. William Howard Hoople, New York, N. Y. A pictorial representation of an army encampment scene, with a cavalryman in the foreground engaged in burnishing his sword and an infantryman in the background or distance grasping the muzzle of his gun, the stock or butt thereof resting upon the ground.
- 35,096.—Certain named medicines. Herbert E. Small, Boston, Mass. The word "Rejuvenis."
- 35,097.—Certain named proprietary medicines. Charles S. Archer, Portland, Ore. A triangular figure, and the representation of an eagle in flight in the center, the letter "C" in the left corner, "P" in the upper corner, and "Co." in the right-hand corner, with a scroll curved from the small "o" under the letter "C," then to the left in a straight line slightly downward, terminating under the letter "C."
- 35,098.—Certain named medicinal preparations. Nutshell Remedy Company, Georgetown, Ill. The picture of a young lady, her face being in profile and her neck and arms bared and the left arm raised.
- 35,099.—Certain named medicinal compounds. William J. Gardner, Cleveland, Ohio. A bust portrait of the registrant.
- 35,100.—Internal remedies for certain named diseases. John T. Smith, San Diego, Cal. A figure having a series of angles on its perimeter within a circle.
- 35,101.—Specific for certain named diseases. Foster-Milburn Company, Buffalo, N. Y. The representation of a maple leaf.
- 35,102.—Headache cure. Frederick P. Pyke, Anderson, Ind. The word "Wafaretts."
- 35,103.—Ointment. Warren Brooks Crosby, Cincinnati, Ohio. The compound term "Petro-Pine."
- 35,104.—Ointments. Caroline W. Patrick, Norwalk, Ohio. The word "Listerol."
- 35,114.—Shaving and toilet soap. The J. T. Robertson Company, Manchester, Conn. The representation of a shaving brush with a mass of foam surrounding and extending from the bristles.
- 35,116.—Kauri gum. Edward Hill's Son & Co., New York, N. Y. A diamond shaped broken line parallelogram and the letter "H" in the center.
- 35,118.—Syringes. Victoria A. Wilhoft, New York, N. Y. The representation of a disk.

Registered September 25, 1900.

- 35,129.—Certain Named Medicinal Compounds. Charles Eugene Collard, Buffalo, N. Y. The word "Cauline."
- 35,130.—Certain Named Medicinal Compound. Leylin & Noble, St. Louis, Mo. The word "Alveolizer."
- 35,131.—Cough-Syrup. Willard G. Fletcher, Williamsburg, Iowa. The word "Cherry-mel."
- 35,132.—Tonic-Pills. Robert W. Gardner, New York, N. Y. The compound word "Hypo-Quindol."
- 35,133.—Remedies for Certain Named Diseases. Edgar O. Mitchell, Newburg, N. Y. The word "Sodelol."

- 35,104.—Salve for Certain Named Diseases. Joseph M. Malcom, Altoona, Pa. The letters "M R" arranged within a circle having a serrated inner edge.
- 35,135.—Salve. Sigmund Mulhauser, (Cleveland, Ohio. The word "Salvation" appearing upon a dark or contrasting diagonally-arranged background-forming strip.
- 35,136.—Effervescent Salt. Thomas W. Chelf, Richmond, Va. Four "Cs," represented by the four letters "C C C C," with which are associated the characters "4 cs."
- 35,137.—Distilled Water. Birmingham Ice Factory Company, Birmingham, Ala. The word "Hydrostil."

DESIGNS.

- 33,246.—Syringe-Nozzle. Walter H. Pumphrey, New York, N. Y. Filed Aug. 10, 1900. Serial No. 26,534. Term of patent 14 years. The design for syringe-nozzle.
- 33,173.—Filter-Body. Theodore Linke, New York, N. Y. Filed Sept. 12, 1899. Serial No. 730,275. Term of patent 7 years. The design for a filter body.
- 33,174.—Filtering vessel. David O. Joinville, Detroit, Mich. Filed Feb. 26, 1900. Serial No. 6,649. Term of patent 7 years. The design for a filtering vessel.
- 33,212.—Baby-Comforter. Christian W. Meinecke, Jersey City, N. J. Filed July 18, 1900. Serial No. 24,111. Term of patent 14 years. The design for a baby-comforter.
- 33,214.—Bottle. Moritz Rheinauer, New York, N. Y. Filed August 27, 1900. Serial No. 28,259. Term of patent 7 years. The design for a bottle.
- 33,215.—Water bag. George S. Van Pelt, New York, N. Y. assignor to William C. Howard, same place. Filed July 17, 1900. Serial No. 23,979. Term of patent 14 years.
- 33,216.—Fountain Syringe Bag. George S. Van Pelt, New York, N. Y., assignor to William C. Howard, same place. Filed July 17, 1900. Serial No. 23,978. Term of patent 14 years. The design for a fountain syringe bag.

LABELS.

- 7,778.—Title: "Grape Kola." (For Soda-water Syrup.) Liquid Carbonic Acid Manufacturing Company, Chicago, Ill. Application filed August 10, 1900.
- 7,779.—Title: "Quick Grip Cure." (For a Medicine.) J. B. Quick, Seattle, Wash. Application filed June 28, 1900.
- 7,784.—Title: "Crow in Your Throat." (For Cough Lozenges.) Jacob Mishkin, Philadelphia, Pa. Application filed August 21, 1900.
- 7,785.—Title: "Ferrinoids." (For a Medicine.) Dinet & Delfosse, Chicago, Ill. Application filed August 24, 1900.
- 7,786.—Title: "Sunflower Cholera Cure." (For a Medicine.) W. J. Roberts Medicine Co., Coldwater, Mich. Application filed August 13, 1900.
- 7,793.—Title: "Carter Lytle's Tooth-Jelline." (For a Preparation for Toothache.) Carter Lytle, Baltimore, Md. Application filed September 4, 1900.
- 7,794.—Title: "Tonic Wine Bitters." (For Wine Bitters.) Dodge & Camfield, Providence, R. I. Application filed August 31, 1900.

PRINTS.

- 265.—Title: "Fill Your Teeth." (For Toothache-Gum.) Pansey Tooth Ache Gum Co., Atlanta, Ga. Application filed August 3, 1900.

THE MEDICAL DIRECTORY OF NEW YORK, NEW JERSEY AND CONNECTICUT. Volume II. 12mo., 894 pages. Cloth. \$2.50. Published by the New York State Medical Association.

This volume is similar in style to its predecessor published last year. Besides being a medical directory, it contains a considerable amount of information which experience has demonstrated to be of value in the daily work of the general practitioner. Among the distinguishing features of the present volume are: an official list of the pharmacists registered in Greater New York; an alphabetical index of the regular physicians of the three States, giving their addresses in the larger cities; a list of the Health Board Stations in Greater New York at which antitoxin and culture outfits may be obtained, and information regarding medical societies, hospitals and such benevolent institutions as have a bearing on medical work. The work, as noted above, is published by the New York State Medical Association, and is given to its members and also to the members of the New York and Kings County Medical Associations. Copies may be purchased by others from G. P. Putnam's Sons, 27 and 29 West Twenty-third street, New York City, or from the secretary of the Publication Committee, Dr. Ogden C. Ludlow, 2,309 Seventh avenue, New York City.

THE VOLATILE OILS. By E. Gildemeister, Leipzig, and Fr. Hofman, Berlin. Written under the auspices of the firm of Schimmel & Co., Leipzig. Authorized translation by Edward Kremers, Madison, Wis. With four maps and numerous illustrations. 8vo., 733 pages, \$5 net. Milwaukee, Pharmaceutical Review Publishing Company.

The original or German edition of this valuable contribution to the literature of the volatile oils made its appearance about a year ago, and was reviewed in the columns of this journal Nov. 16, 1899, page 688. In English the work is sure to prove of still greater value, and we are much pleased with the fidelity with which the work of translation has been executed by Professor Kremers. The same general arrangement of the subject matter has been retained in this edition, first coming an historical introduction which includes (1) the spice trade in antiquity and during the middle ages; (2) history of volatile oils; (3) history of the methods of distillation and of distilling apparatus. Then follows the "General Part" of the book divided: (1) Theoretical basis for obtaining volatile oils by steam distillation; (2) the more commonly occurring constituents of volatile oils; (3) the examination of volatile oils; (4) list of plants, arranged according to families, from which volatile oils are obtained. Part III., by far the greater portion of the book, takes up for special consideration the history, origin, preparation, properties, composition, examination and commercial statistics of the volatile oils. The historical portions of the work are from the pen of Dr. Fr. Hoffmann, for many years a resident of the United States, and a well known contributor to pharmaceutical and chemical literature. Products of particularly American origin have also been discussed by him, as the oils of turpentine, sassafras, peppermint, etc. The chemical text with but few exceptions is the work of Dr. Edward Gildemeister. Not a least interesting part of the book is the bibliographic notes, and they serve to show the exhaustive character of the work done by the authors in their search for trustworthy information bearing upon this most interesting department of scientific investigation—the essential oils. The book is well printed and bound, and should be secured by every pharmacist for his reference library.

A Five Cent Liquid Glue.

Liquid glue is an article of so universal use that it may properly be said to be used by everybody. Liquid glues usually retail for 10c., and even as high as 15c.

and 20c., but McCormick & Co., Baltimore, Md., to create a quick sale article for wideawake druggists, have placed a 5c. glue on the market which they call "Iron Glue." The cheapness and excellence of this article have established its reputation all over the country. It will do the work assigned to it, and yet retails for but 5c., which includes a cap and brush. They suggest to druggists who have Iron Glue in stock, or who

contemplate buying it, that nothing will sell it quicker than a fine window display. A merchant who prominently displays such an article at half the price at which similar articles are usually sold, makes a very strong bid for business. At any rate, his display catches the eye, arrests the attention and brings customers into his store.

--At the meeting held by the Kansas Board of Pharmacy, at Pittsburg, September 5, thirty-five applicants were present and took the examination. The following were successful: Frank A. Swain, Klowa, Charles S. Butler, Florence; Charles D. Barnaby, Newton; John W. Marsh, Topeka; Rolla E. Ball, Sterling; J. M. McClintock, Florence; Arch E. Jones, Columbus; L. E. Garnett, Topeka; L. A. Baugh, Arkansas City; William Locker, Oxford; George W. Davis, Princeton; John G. Kaiser, Ottawa; Josephine McCoy, Oketo, Wm. S. Grisel, Ransom; A. S. Kane, Topeka. Registered assistants: Dwight M. Brice, Paola; Robert F. Haines, Niotaze; John D. Hunter, Fort Scott; Charles C. Parsons, Chanute. There were registered without examination, by virtue of being graduates of recognized colleges of pharmacy: Frank Edwin Salsband, LeRoy; James Mair Latta, Wilson; Frank C. Scammon, Hutchinson; Earl Hill, Ottawa; Louis J. Loewe, Arlington; David F. Deem, Stark; E. J. Thomas, Clay Center; Maurice R. Smith, Russell; Thomas H. Kelley, Ottawa; J. N. Dieter, Oak Hill; Earl R. Wheeler, Galena. The next meeting of the Board will be held at Saline, December 5, and those who desire to take the examination should notify the secretary, W. E. Sherriff, Ellsworth, Kansas, at least five days prior to the date of the meeting.

--At the September meeting of the Erie County Board of Pharmacy, the following applicants for registration were granted licenses: Pharmacists--Howard Marven Wilkenson, William Feeter and Henry C. V. Deichmiller, Assistant Pharmacists--Theodore Konzelman, William Peter Sayles and Homer George Biles.

STRINGTOWN ON THE PIKE, by John Uri Lloyd is announced by Dodd, Mead & Co., to appear in book form in October, price \$1.50. It is a study of Northern Kentucky during the war and brings to view conditions that involved the people of that border state during the boyhood of the author. Of it, the talented writer, Judge J. Soule Smith, of Lexington, Ky., writes: "No such vivid landscape painting in Kentucky seasons and Kentucky scenery is to be found in any other book." The New York World states that it "reminds one of the figure in American literature cut by physicians, from Dr. O. W. Holmes to Dr. Weir Mitchell and Dr. W. A. Hammond," and in this same line of thought the American Journal of Pharmacy, states that "Our faith in American literature is strengthened by the entrance into it of professional men like Weir Mitchell and John Uri Lloyd."

The Chattanooga Medicine Company made a great hit with De Voe's accurate predictions of the Galveston cyclone in the Ladies' Birthday Almanac and the Cardui Weather Chart and Calendar. The company issues 15,000,000 Ladies' Birthday Almanacs and 1,000,000 calendars every year to advertise Wine of Cardui and Theodor's Black-Draught. Professor Andrew J. DeVoe, who prepares the weather prognostications for these publications, predicted the Galveston cyclone to the day. His copy was prepared eighteen months ago and he set the date of September 9th. This remarkable achievement has attracted wide attention in the metropolitan press of the country, conservative papers like the Chicago Tribune and New York Times making extended reference to it. The New York Times of September 13th, commenting on the matter, said: "Galveston's disastrous storm was predicted with startling accuracy by the weather prophet, Andrew Jackson DeVoe, in the Ladies' Birthday Almanac issued by the Chattanooga Medicine Company at Chattanooga, Tenn., last January. Professor DeVoe forecasts the weather for the month of September as follows: 'This will be a hot, dry month over the Northern States, but plenty of rain over the Atlantic Coast States. First and second days, hot and sultry; third and fourth, heavy storms over the extreme Northwestern States causing thunderstorms over the Missouri Valley and showery, rainy weather over the whole country from the fifth to eighth. On the ninth a great storm will form over the Gulf of Mexico and move up the Atlantic Coast, causing very heavy rains from Florida to Maine from tenth to twelfth.'"

The Ladies' Birthday Almanacs are distributed to druggists free, but the charge for the Cardui Weather Chart and Calendar is uniformly 10 cents each.

STATE OF TRADE.

The Market Fairly Steady.

New York, October 9.--There has been no perceptible improvement in the demand for large parcels, but business in a jobbing way has continued very satisfactory and the general market has retained a fairly steady undertone. The quinine situation has developed some new features which have had a depressing effect on the outside market, and while manufacturers quotations remain unchanged and fairly steady, second hands have shown more or less anxiety to sell. The chief cause of the weaker tendency, was the reported heavy shipments of bark from Java during the month of September, and a consequent easier feeling among speculative operators in London, most of whom found considerable difficulty in caring for their October deliveries, and in a number of instances were obliged to grant material concessions in order to meet their obligations. As a result of the changed conditions abroad, local dealers have modified their views somewhat and are willing to sell at lower figures. There are some in the trade, however, who believe that the prevailing depression is only temporary, and more or less the result of speculative manipulation, as there is considered to be nothing in the statistical position of raw material to warrant the prevailing weaker feeling. Manufacturers certainly are not inclined to reduce prices while bark is held at present figures; on the contrary, they claim that values should be higher.

There has been no improvement in the demand for opium and the market has continued to reflect weakness, mainly on account of the slow inquiry together with competition among dealers. In some instances a further decline of 2½ cents per pound is noted in quotations for round lots, and the inside quotation for powdered shows a similar decline. Codeine has reflected weakness, owing to keen competition, and manufacturers have reduced their prices 10 cents per ounce. The decline is quite a surprise to the trade, as an advance had been looked for owing to the comparatively small available stock at the opening of the active consuming season. Cocaine continues very strong under the influences heretofore noted, and manufacturers have further advanced their quotations 25 cents per ounce. Menthol is higher in sympathy with a stronger position of the article in foreign markets, and reports from primary sources that the limited supply is in very strong hands.

Manufacturers of mercurial preparations have advanced quotations 2 cents per pound on all hard varieties, but soft remain unchanged. Lump arsenic is scarce and firmer abroad, and spot values are a shade higher. Thymol continues to harden in price owing to scarcity and only small parcels are offered at the advanced figures. Gum chicle is in a peculiar position. The bulk of the stock in first hands is under close control, and the holders decline to quote, claiming that buyers must submit bids. Small lots in the hands of dealers are held very firmly.

In the essential oil department, sassafras is very firm and quotations for round lots show a further advance. Wintergreen is held at higher figures owing to scarcity. Baltimore wormseed is firmer, the bulk of the stock having been concentrated in few hands. Anise is slightly easier and pennyroyal has further declined. In the seed line unbleached coriander is a shade higher and poppy slightly lower, both in sympathy with a corresponding condition of affairs abroad. Sweet herbs have not received much attention and fractional declines are noted in values of picked sage, savory and thyme.

Good Trade in Boston.

Boston, Oct. 6.--Weather conditions this week have been of a character to stimulate trade in almost every branch and the drug business has shared in the local prosperity. The approach of the holiday season plays an important part in the advances which are being made, and from now on the trade may look for a big demand in the goods that make a more general appeal to the public and which the drug trade supplies. In the line of chemicals the local demand has not been very active, although English sal soda is moving and blue vitriol rules firm, while nitrate of soda appears to be in steady demand. Drugs are rather quiet, with the demand for opium confined to narrow limits. There is a fair call for quinine. A fair volume of business is being done in the wax market, but as the new haps have not begun to come along very fast as yet, dealers are not willing to do much in this line in advance. Alcohol is rather quiet.

A Quiet Week in Philadelphia.

Philadelphia, Oct. 6.--Business has been very quiet during the past week, little or nothing outside of the customary fall trade being done. In wholesale circles the same quietness prevails, orders having fallen off somewhat in volume, although collections are good, showing a good condition of affairs. Out in Germantown great dullness is the rule, a condition attributed to the lateness of the opening of the fall social season because of the absence of so many residents at summer resorts yet. West Philadelphia gives a slightly better report, though no one complains of really bad business. Downtown seems to be in the best condition of all, trade there being quite up to the usual mark.

A general stiffening in prices of sundries and staple drugs is taking place all over the city in anticipation of the better prices hoped for from the work of the local association, but in one or two localities, sad to say, there seems to be an effort on the part of some to do still more desperate cutting before these parties are forced into line and made to be "good." A very aggressive cut rate store was recently opened uptown, Kensington way, but so far it seems to have little effect in disturbing local conditions because of the limited nature of its business. One of the largest cutters in the city has promised to advance prices on certain articles in the near future.

Business in Baltimore Active.

Baltimore, October 8.—The reports both from jobbing druggists and manufacturers of pharmaceuticals are of a most encouraging character. Orders were numerous last week, and the aggregate of transactions ran up to large figures. Local as well as out-of-town salesmen encountered improved conditions and were able to show comparatively excellent results. The manufacturers especially are busy, the laboratory forces being compelled to work after hours to meet the demands of the trade. The market is without special features, a continuance of fair prices being in prospect. Heavy chemicals are moving in moderately large quantities and business generally is in a healthy condition. It is certain that the volume of trade will considerably exceed last year's record.

October Opens Well.

Detroit, October 6.—The new month has started in very nicely, the first two days of it being phenomenal with regard to the number of orders taken by the wholesale houses. One house reported a gain of 18 per cent. on the average of the first days of the month, and the other fell but two or three per cent. short of that. Perfumers are very busy, working nights to keep up with their orders, and with the prospect of an immense business for the coming holidays.

Conditions Good In the West.

Chicago, October 6.—All the jobbers and other members of the trade whom your correspondent has seen this week report an excellent trade. The week has recorded a large business, and both jobbers and manufacturers are very well satisfied with the number and amount of the sales recorded. The demand has been principally for staple goods in both drug and sundries lines, though the holiday trade has held its own. The vacation season is over and business is being generally resumed with vigor. The political situation seems thus far to cause little apprehension from a general belief, apparently, that the outcome of the November elections will be a fortunate one for the business interests of the whole country.

Too Busy to Talk.

St. Paul and Minneapolis, Minn., October 5.—The Era man "has a kick coming." During his rounds this week he came across a druggist who was too busy to tell how busy he was. But this fact speaks louder than floods of ink and reams of paper, standing, as it does, representative of conditions in these cities. Of course, not all retailers are so "rushed" as the one that couldn't find time to say six words to the reporter; but at least four-fifths of them have their hands full these days. As usual, statements regarding collections vary widely, but this feature of the trade is, on the average, as fair as could be expected in view of the fact that customers are just now "blowing in" for their winter's coal supply. Prescription work shows little disposition to lag and the general business is quite satisfactory. The jobbers report slight lull in the receipt of orders. Election uncertainties are responsible for this. These uncertainties, 'tis only fair to add, have not yet attained the seriousness of apprehension, nor are they likely to.

The G. Holzhauer Estate, Newport, Ky., make another strong offer in this week's issue. For twenty days only they will give a half pound of Lazell, Dalley & Co.'s White Rose Extract with every order for five dozen Holzhauer's Chemical Corn Solution at 85 cents a dozen. As a matter of fact, the perfume pays for the cure.

The Corn Cure is well known in those sections of the country where they have introduced it. It is guaranteed to cure, and they authorize every druggist to guarantee it and to refund the full retail price to every dissatisfied customer. Their proposition is fair, and we should think it would be accepted by every druggist who is looking for a chance to increase his profits.

MARKET REPORT.

NEW YORK MARKET.

New York, October 9.—Continued satisfactory conditions prevail throughout the jobbing market, business in the aggregate reaching fairly liberal proportions and values ruling steady.

OPIMUM.—A continued light demand for small lots is reported with quotations unchanged and barely steady at \$3.45@3.55 for 9 per cent. and \$3.55@3.65 for 11 per cent. according to size of order.

POWDERED OPIMUM.—Small parcels continue to move moderately on consuming orders with values maintained at \$4.50@4.65 for 13 per cent. and \$5.10@5.25 for 16 per cent. as to quantity.

MORPHINE.—There is a steady demand from the consuming trade and quotations remain unchanged on the basis of \$2.40@2.60 for eighths, according to brand and quantity.

CODEINE.—Manufacturers have reduced their prices 10c. per oz. and the revised jobbing quotations are \$4.75@5 for alkaloid in ounces and \$5@5.25 in eighths. Sulphate 45c. per oz. less.

QUININE.—There is no change in the general condition of the jobbing market, and the ruling quotations are on the basis of 44@45c. in ounces, as to brand.

MERCURIAL PREPARATIONS.—Manufacturers' prices are higher, and jobbers have advanced quotations to 50@55c. for blue pill, 90@81 for corrosive sublimate, \$1@1.10 for calomel, 50@55c. for ointment 1-3, 60@65c. for 1-2, \$1.10@1.20 for red precipitate and \$1.15@1.25 for white.

COCAINE.—An advance of 25c. per oz. in manufacturers' prices has caused jobbers to mark up quotations to \$6.75@7 for large crystals and \$6.50@6.75 for small.

MENTHOL.—Values are higher in sympathy with foreign markets and the revised jobbing range is \$3.40@3.50 per lb. and 28@30c. per oz.

ESSENTIAL OILS.—Only small lots have received attention, but the general market has been moderately active. Lemongrass has further advanced to \$1.65@1.80, sassafras to 60@65c., wintergreen to \$1.85@2.10, and sweet almonds (French) to 35@50c. Pennyroyal has declined to \$1.45@1.70, and a revision of quotations for Baltimore wormseed shows a reduction to \$1.65@1.90.

SENEGA ROOT.—Owing to scarcity and higher primary markets jobbers have advanced quotations to 55@65c. for whole and 60@70c. for powdered.

THYMOL.—Conditions abroad are favorable to holders of the limited available spot stock, and jobbing prices show an advance to \$6@6.50 by the lb. and 40@50c. per oz.

ALCOHOL.—Jobbing quotations have been revised and show a still higher range, the new figures being \$2.50@2.51 by the barrel and \$2.58@2.75 for less; odorless, \$2.52@2.53 by the bbl. and \$2.65@2.75 for less.

NAPHTHALINE.—A continued firm market is noted with barrel lots held at 3½@3¾c. for balls and 3¼@3½c. for flake, smaller quantities of either, 4½@6c.

MANNA.—Quotations for small flake have been further advanced to 70@80c. and sorts 50@60c.

ALKANET ROOT.—Jobbers have advanced their quotations to 28@35c. as to quantity.

OLEORESIN.—A revision of quotations shows a decline in male fern to \$2.25@2.50 by the pound and 18@20c. per oz., cubeb \$1.85@2 per lb. and 20@25c. per oz.

CONDURANGO BARK.—Owing to scarcity jobbers have advanced quotations to 50@60c. for whole and 60@70c. for powdered.

HYDROQUINONE.—Manufacturers' prices are higher and jobbing quotations have been advanced to \$2@2.25 per lb. and 18@20c. per oz.

SPARTEIN SULPHATE.—Quotations for jobbing quantities have been reduced to \$1@1.10 in ounces and \$1.25@1.35 in eighths.

HENNA LEAVES.—Supplies are ample and demand slow, with quotations showing a decline to 80@100c. for whole and 95@81.10 for powdered.

CASTOR OIL.—Jobbers have reduced quotations for A A and Western to 13@13½c. in bbls., 13½@14c. in cases and 14@14½c. in cans. Crystal 1c. higher on all packages.

IODIDE OF SODA.—Jobbers have revised quotations and the new figures show a decline to \$3.25@3.50.

PIPERINE.—Manufacturers' prices are higher and jobbers have marked quotations up to 60@70c.

We have just received from James W. Tufts another sample of their handsome advertising work in the shape of an illuminated booklet, which is devoted almost entirely to hot soda. The booklet itself is extremely handsome, and quite in keeping with the class of work which their advertising department has been sending out recently. Its beauty invites closer examination, and not only the druggist who already has a fountain, but he who has none, will be interested in reading their description of new fountain designs and their formulas for hot soda drinks. The booklet will prove a valuable addition to any soda water dispenser's library, and they invite everyone interested in the subject to send for a copy.

THE ERA COURSE IN PHARMACY.

The lectures are now issued in monthly instalments, and the entire work of the Course can be completed within twelve months.

NEW CLASSES FORMED EACH MONTH.

Recitations and examinations are conducted by correspondence directly with each regularly matriculated student.

Especially valuable as a preparation for examination by a board of pharmacy, to those who cannot attend a college of pharmacy, and to all desiring to review their former study of the subjects embraced in the curriculum.

TOTAL EXPENSES FOR FULL COURSE, \$10.00.

For fuller particulars see announcement facing third cover.

THE PHARMACEUTICAL ERA.

THE ERA COURSE IN PHARMACY.

Part I. of the Era Course in Pharmacy was mailed to all matriculated students last Wednesday, October 10. This part is devoted to the subject of chemistry, especially notation and nomenclature, the mathematics of chemistry and an outline of analytical methods. There are a few students who were enrolled in last year's junior class who have written to us saying that this Part I. is merely a repetition of what they had last year. These students are laboring under a very great misapprehension, and though they say that they have carefully examined these lectures, it is very evident that they have not done so. The subject of chemistry is treated this year very differently from the past.

As has been thoroughly explained and published to every one interested, the former division of the Era Course in Pharmacy into two years of six months each has been done away with, and the course now is one of ten consecutive months, the study embracing in all essential particulars what was previously included in the two years' course. Much extraneous matter has been deleted and a large amount of new material added, so that the course as a whole is even more practical and serviceable than heretofore.

In making this change it has been impossible to avoid some repetition, and consequently there is some repeating of the work in chemistry. But these lectures on chemistry have been materially improved; much more attention is given to the mathematics of the subject, which the student must thoroughly understand in order to profit from subsequent lectures on the other subjects in the course, and a condensed exposition of analytical chemistry has been added. Much general matter, descriptive, historical, etc., previously included, has been omitted, and the student directed how and where to find this information in his text books and reference works. It is believed that the subject of chemistry is now on a much more satisfactory basis, being more systematic and more directly serviceable. The practical exercises and drills in notation have been greatly amplified, and the students of last year, if they carefully examine these lectures, will find them so different that they will be able to discover hardly any similarity between them.

Chemistry is the foundation of a pharmaceutical education. A knowledge of chemistry is essential to an understanding of all the other subjects which make up the study as a whole, and it is important that this ground work be laid securely and thoroughly. No excuse is necessary for presenting chemistry in this thorough manner, and students, even though they have heretofore studied the subject, are earnestly

advised to review it under the present conditions in order that their later work may be more easily understood and more easily mastered.

The remaining nine parts of the course will be found open to no criticism of the character under discussion. Our old students will find in them little or no repetition, but on the other hand a large amount of new and valuable material.

All students matriculating during the present month will be enrolled in the October class. Those whose orders are received during November will be placed in the November class, and Part I. mailed them on the 10th of that month. Under the new arrangements students are permitted to matriculate at any time, as a new class is formed each month, and to each class the lectures are sent at regular thirty-day intervals, the shortest time in which a student may complete the course being ten months. It is hoped that the November class will be even larger than the October one, which is most satisfactory in size. All interested in the work and contemplating entering upon it are earnestly requested to send in their orders as promptly as possible.

REPEAL THE STAMP TAX.

In the business community there is a growing conviction that the war tax on proprietary medicines should be repealed. It is class legislation whereby the drug trade has been singled out for a most onerous burden, unjust and unnecessary. If a determined and united effort is made, it is believed that Congress will take action to repeal this section of the act, so far as it relates to the drug trade. The Era wants to help the movement along to the best of its ability. It has prepared a petition and sent copies thereof to several thousand manufacturers, jobbers and prominent retailers in the country. This petition reads as follows:

Petition to the Congress of the United States.

We, members of the drug trade of the United States in its several branches, retail druggists, wholesalers and jobbers, and manufacturers of proprietary preparations, herewith respectfully petition the Honorable Congress of the United States to repeal the special tax imposed under Schedule B, Section 25, and its dependent sections of the War Revenue Act of 1898, now in force, so far as such tax is laid upon medicinal preparations.

We seek this repeal for the following reasons:—

- 1.—This tax on medicines is class legislation, unjust and unduly burdensome.
- 2.—The tax is unequally distributed, being placed upon medicinal preparations which are necessities, and at the same time allowing to escape taxation a large number of articles which are as truly proprietary and which enjoy special protection under the copyright and trade mark laws.
- 3.—The revenue created by the enforcement of the law is no longer necessary, and the amount collected under this Schedule B is but a small proportion of the total revenue derived.
- 4.—The drug trade is already heavily taxed. Alcohol, which enters so largely into the manufacture of the preparations sold by us, is already taxed about 1,000 per cent., and the imposition of further taxation, as provided by this act, makes its operation oppressive.
- 5.—The intent of the law was to tax proprietary medicines only, but owing to its peculiar phraseology and the construction placed upon it by the officials, it does not reach nor apply to a large class of medicinal chemicals protected by trade mark, while on the other hand, it applies to nearly all drugs and medicines which are a necessity to the sick.

We ask relief, believing that the honorable members of Congress will realize the justice of our claims by repealing these unjust and burdensome provisions of the War Revenue Act.

We have a supply of this petition on hand, and will be pleased to put it in the hands of every member of the drug trade who is sufficiently interested to sign it. Drop us a postal card stating how many copies you can use. We would suggest that now is a particularly good time to bring influence to bear upon your members of Congress, particularly those who are up for election or re-election. We believe every retail druggist is in sympathy with us in this matter and will be glad to sign this petition. We open the pages of the Era for a liberal discussion of the matter, and will welcome any suggestions as to what can be done for the further advancement of this cause.

A DRUGGIST PHILANTHROPIST.

Thirty-six years ago a New Orleans druggist gave to that city nearly \$17,000 for the establishment of a dispensary to furnish drugs and medical advice free to the poor. For a dozen years the income of this fund was used for the designated purpose, but in 1877 the authorities found the expenses exceeded the receipts and voted to stop the disbursements until the fund should have so increased that a free dispensary could be equipped and carried on in full compliance with the testator's desire. It is announced that this fund now exceeds \$83,000, and that when it shall have reached \$100,000 the plan will be carried out.

POISONING BY STRAMONIUM.—Dr. Duncan G. Newton reports (Quarterly Medical Journal; Dr. Cir.) two cases of poisoning by infusion of stramonium leaves. The infusion was taken under lay advice as a means of relief for asthma. In both cases there was delirium, dilated pupils, flushed face and small and rapid pulse, followed by deep narcotization. In one case stranguary existed. It was difficult to produce emesis, ordinary means failing, and it required the administration of one-fifth of a grain of apomorphine to produce vomiting.

NAME.

ADDRESS.

Pharmaceutical Celebrities.

JOHN C. GALLAGHER.

There is little need of printing here this man's name as an introduction to the pharmaceutical fraternity. Mr. Gallagher is widely known to druggists by name, by personal acquaintance to many, and this occasion is embraced merely to give all a speaking likeness of him for permanent preservation. But Gallagher has not long been so well known; it is only during a very few years past that he has "let her go" and made a prominent place for himself in pharmaceutical affairs. He was just a common, ordinary, every-day druggist, content to putter about in the very limited business and social circle peopled by other ordinary druggists, until the association bee began to buzz in his bonnet. The N. A. R. D. bee awoke him, and it was a splendid act on the bee's part. First Mr. Gallagher became active in his local druggists' association, at Jersey City, N. J., then stirred up the State Association, and vigorously, too, and what he has done in the N. A. R. D. is as a tale that is told. He has helped to make associations and associations have assuredly made him, in respect to a reputation for ability, integrity and hustie. The artist has pictured Gallagher in a characteristic attitude. The hands sunk deep in his trousers pockets signify his ever-ready willingness to "produce" liberally for any worthy object, and his open, frank countenance is certainly enough to call forth any man's confidence. Gallagher is a good fellow, a good druggist, a fair fighter in debate, and has honestly and honorably won a high place in the esteem of his fellows.

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

ANOTHER FAMILY OF APOTHECARIES.

I think I can equal Mr. Heineman's pharmaceutical family record. My great grandfather and my grandfather were apothecaries in Germany. My father is in the business in Richmond, Va., my uncle, Dr. E. C. Kamerly (deceased), Philadelphia, Pa.; another uncle, Dr. E. F. Kamerly, of Town Hill, Pa., was a Ph. G., and ran a store in Philadelphia, Pa. My cousin Ed. McNutt, P. C., now chemist for the U. S. at Boston; E. F. Kamerly, Jr., M. D., oculist, Philadelphia, Pa., but not a pharmacist, also his brother, J. C. Kamerly, D. D. S., Altoona, Pa., but not a pharmacist. With the addition of my wife's being a doctor's daughter, and having enough pharmaceutical education to help me in the store occasionally, I have two children a girl and a baby boy, both of whom will become pharmacists. The girl when a baby would play all day with a mortar and pestle, and though but six years old tries to help me, making all the ice cream and some of the syrups for the fountain, besides labeling boxes and making seidlitz powders after the ingredients are weighed. The boy is not yet two years old, but he is wild after bottles and books, and plays mixing medicines now. I think I can claim the honor of being connected by blood with as many pharmacists and medical men, although not the father of them, as the venerable Mr. Heineman, who is certainly the father of pharmacists and physicians, and deserves great credit therefore. Excuse this lengthy epistle, but I wish you to know that there are others.

Respectively yours,

L. WAGNER, Jr., P. G. P. D.

Buena Vista, Va.

LAXATIVE ELECTUARY FOR CHILDREN.—Manna, 1 ounce; calcined magnesia, 2 ounces; honey, 1 ounce. useful in habitual constipation. (Jour. des Practiciens.)

(For the Era.)

GIVE AID TO PROGRESSION: THE SECRET OF SUCCESS.

By JOSEPH F. HOSTELLEY.

Manners, habits, customs, thoughts and actions alter by the birth and death of years like the fleeting figures on the aging dial of time. Knowledge, progress and improvement follow the sand-glass and the scythe. Progression records the fertility of the intellect of man. Art, science and invention advance in utility and scope through the midnight oil and labor of the devotee of progress. To be a suitor for success in any walk in life there is necessity for action, for effort, for activity, for work. Fortune wooed and won by the lawyer, the physician, the litterateur, or man of humblest toil is but a victor's trophy from a rigorous contest of wit and will. In activity there is advancement, acquisition, ascendancy. In idleness there is naught of good. The inactive man of to-day is often the custodian of all that is obsolete, a disciple of moss-grown methods that feebly hobble on the decaying crutches of memory.

Independence of thought and action and confidence in one's own ability are fundamental requisites to success in every walk of life. To lean the weight of one's achievements upon the staff of a fellow mortal's brain or brawn is a gross injustice upon the efforts of another and a commentary upon the mental faculties of the man—a subject for the moralizer with indolence or apathy as his theme. He who foresees error and failure in every anticipated step is either one of nature's sad mistakes or a sorrowful evolution. Confidence and contentment see a bright outlook to the future. In the present are created the possibilities of time to come. Opportunities are converted into material advantages. From the favorable circumstances of to-day are computed the profits of tomorrow.

There is no thriving without striving. Inactivity breeds nothing but great stomachs and discontent. A modern social or business deportment is the result of activity and labor; the outcome of progressiveness; the effect of progression. Advancement should be favored, fostered, facilitated. The onward march of civilization and enlightenment should receive impetus from every hand. Let the individual seek to better his own condition mentally and financially; let him strive to incite a stimulus upon the efforts of his fellows; let him labor to add an entry of achievement in the archives of progressive deeds. Let every man give aid to progress.

The upward and onward trend of affairs in building and commercial circles has been so active in most every city in the past few years that the old resident has been interrupted in his inevitable retrospection to take note of another and yet another contribution to the industrial and architectural aggrandizement of his natal place. The rapid rise of some business firms from the commonplace to the superlative, from the ordinary and unpretentious store to the modern mart of steel and stone, has created some interrogative comment upon the part of the public audience as to "how it was done."

It was done by patience, perseverance, and progressiveness; by studying the ways of progression and by "keeping at it." These master merchants bore in mind that the Romans did not lead all roads to Rome, upon her seven hills, in one circuit of the sun, nor did they do it by procrastination or timidity of action. Our business men of noteworthy achievement are men of a modern trend of mind, men of advanced ideas and a progressive spirit. They are not fogys, mossbacks, faint hearts, cranks or croakers. They do not stunt originality and advancement by being sticklers for the old. They do not condemn every progressive proposition as a dangerous innovation. They force progression to the fore and the mossback to the wall. They lend no ear to the pessimistic forebodings of the klicker, crank or croaker. They neither halt nor hesitate at the prophecies of the political seer who reads calamity in the hand-writing on the wall. They let the obsolete ideas of our forefathers be numbered among the missing methods of the past. Their motto is "Excelsior" and they carry the banner of progress. They were no

rolling stones through life; they were cobblers that stuck to their lasts; they were good layers up and they're good layers out. Success was won as the worm by the early bird, by legitimate aggression.

No successful man of business need be asked the secret of "the way he did it." The answer is in the very atmosphere of his surroundings. His blazing furnace fires breathe it from the chimneys on the housetop. The whirling wheels of activity hum it from the basement to the loft. The busy, bustling throng about the counters tell the story in the single word—"Progressive!"—and along the crowded corridors a reverberating echo seems to answer back—"Aggressive!"

Progressive! Aggressive!

The secret of success. The way our business men "did it."

PRESERVING MUSHROOMS.

The most ancient method, and the one generally employed for preserving mushrooms for household purposes, is that of drying. Mushrooms of medium size are preferred, and the drying is accomplished either by natural or artificial heat. Carefully skin and clean them, just as if they were to be used at once, then plunge them in boiling water, into which the juice of a lemon has been squeezed or vinegar poured. Stir a few seconds and remove them. This is to prevent the mushroom from turning black. Be very careful not to allow any salt or saline matter to come near the mushrooms.

After taking the mushrooms from the boiling water, allow them to drain well on a wire screen; then string them like beads and stretch the string from wall to wall in a well ventilated room. Do not permit the mushrooms to touch each other. If the season or climate be too humid, place the strings of mushrooms in a gently heated oven. When thoroughly dry, put them in bags or boxes in a room perfectly devoid of moisture. It is true that mushrooms thus treated lose part of their aroma and flavor, but they keep indefinitely and are an article of standard commercial value in France.

Before cooking the dried mushrooms they must be soaked in warm water or milk to restore them. The dried mushroom is extensively used as a condiment in France, and highly appreciated by the gourmets. It is simply reduced to a fine powder and mixed with one-tenth to one-twentieth truffle powder.

The process of conserving mushrooms in oil or melted butter is, of course, more costly than drying, but the aroma and flavor are retained. Proceed to prepare the mushrooms exactly as above described, and let them drain well, but of course do not dry them. After sufficient draining, place them one by one in wide-mouthed bottles and pour over them melted butter or warm olive oil. Then cork and seal the bottles and put them in a cool place. There is great danger of fermentation, especially in the case of the melted butter, if the temperature of the storage room be too high.

The preservation of mushrooms, as here recited, is resorted to mostly by households or dealers on a small scale. The large manufacturers invariably employ the "appert" process.

"Appert" Process.—The mushrooms are peeled and thrown in water made slightly acid with vinegar. They are then allowed to drain well; after which they are plunged in boiling water until they are half cooked, or parboiled, then placed one by one in wide-mouthed bottles. Each bottle must contain three-fourths of its full capacity. The bottles are now well corked, and the corks tightly and very securely held in place by strings. Then the bottles are placed in large caldrons of cold water, the bottoms of which have been covered with straw. The bottles are also wrapped in straw to prevent their breaking. The caldrons are then put on the fire and the water slowly brought to the boiling point, which should continue ten minutes. The caldrons are then taken from the fire and the water allowed to cool gradually, after which the bottles are removed and sealed with wax. The process is very simple, and nothing more than a little intelligent care is required to assure complete success. (Consular report.)

THE COLLECTORS OF ACONITE IN INDIA.

Writing about the aconite collected by Sirba Bhotlahs dwelling in the Darjiling district, who occasionally make a journey to their country, Bhutan, a contributor to Chambers' Journal says: Of the deadly nightshade tribe, the aconite is a plant which yields to none in the virulent poison of its roots. It is to be found growing at an elevation of 10,000 feet above the sea level, and among other places on the Singailas, a mountain range which is the watershed boundary between Nepal and British territory northwest of Darjiling. Here two classes of aconite, *aconitum palmatum* and *napellus* or *nepalus*, grow freely.

Aconitum palmatum is collected in abundance at Tongloo, the southern termination of the Singailas; but *nepalus*, the more poisonous variety, requires a higher elevation in which to thrive. It takes kindly to the bleak, rugged crags of Sundakphoo (12,929 feet), and is to be found under the rhododendron covers and cold, shady watercourses. It seldom grows taller than 3 feet, a single stalk with blue flowers springing from each bulb or root. The natives, especially the hill tribes, take aconite in its crude state as a remedy for various ailments, and every Bhotlah has a few dried roots put away in some secure corner of his hut.

Early in October, when the aconite root has matured, one of the leading men of the village organizes a party, comprised of both sexes. He, for the time being, becomes their leader, settles all disputes and quarrels while out in camp, and, while keeping an account of the general expenses, supplies to each the daily requirements in the way of food. His first step is to take out a "permit" from the forest department, which costs 15 rupees. (If the party is proceeding to the Nepal hills no permit is required, but a toll is charged at each station on every load.) He wraps the pass up in a rag, and places it in his network bag of valuables, collects his band together, and sets out for the higher ranges. They travel as lightly as possible, each carrying a thumsl, or large bamboo basket, which contains a brass pot for cooking, a flat iron spoon to help out the rice, with a sufficient quantity of rice and vegetables to last five or six days. They also carry a thick Bhotlah blanket, with the indispensable kukri or hatchet-knife, also used by the Goorkhas, fastened through the waist-band. A strong sapling serves as a walking stick and as a support for the basket, which is not unstrapped from the back until a halt is made. When tired, they relieve themselves by balancing their load on the stick.

The first stoppage in their march is generally made near a running stream, when they remove the burdens off their backs and light a fire or two of brushwood by the aid of flint and steel carried in the sheaths of their kukris. They do not drain the water off the rice, as is generally done, but eat it in a moist mass on big leaves fetched out of the jungle, with vegetables fried in oil, and an amazing number of hot chillies. One hour sees them through their meal and ready to continue the march again. When evening comes on they make a second halt in some desirable place to spend the night, where they knock up temporary shelters made of bamboos, to keep off the night dew, squat round the fires they have made, crack jokes and relate adventures they have met with. The head man, who is usually the center of attraction, has a fund of stories at his command. Or, if a lama—as is not unfrequently the case—is the leader of the party, he gives extracts out of their religious writings. It is an interesting sight to see him perched on a raised bit of ground, with his followers lying around him in all postures, gazing with rapt attention while he gives episodes out of their sacred books. The Bhotlahs are of the Buddhist religion, and own as their spiritual head the Great Lama of Thibet; but the Buddhism to which they adhere is much interwoven with demon worship.

As night advances and the party thinks it is time to retire, they disappear within their bamboo shelters, taking the precaution to put their kukris under their heads, in case of a night attack from the robber tribes who hover about the frontier. Some of the harder of the Sirbas sleep in the open air, with a blanket about them, heedless of the cutting wind and thermometer

at zero. They are generally followed by a big woolly Tibetan dog, a fierce looking animal resembling a bear, with large blue eyes. It sleeps during the day, and keeps watch at night, giving low growls every now and again.

As soon as the party has arrived at the slopes where aconite is plentiful, they build bamboo huts about 5 feet high, with leaves for the roofs, and make their place generally habitable. After their morning meal, each should his basket and takes a spade, for which a handle has been made from a jungle sapling. They start for the slopes lower down, leaving the dog and one of the company behind in charge of the camp. Before beginning operations, a ceremony has to be performed.

The Nepalese seldom take up the trade of aconite collecting, as they have a superstition that the presiding demon of the hills imprisons evil spirits in this plant, which fly out as soon as it is dug up, and inflict dire calamity on the digger. Bhotlahs have this superstition also, with a remedy. They always have in their party a destroyer of these spirits; and every morning before digging, the lama, standing on a convenient hill with his crowd round him, makes a fire and burns some dhuna, a sort of resin; then putting two fingers in his mouth, he gives several shrill whistles. All wait in breathless silence till an answering whistle is heard, an echo, the cry of a bird—pheasant as a rule—from the gorge below, or the sighing of the wind among the pines, which they take as the dying dirge of the spirits.

Thus satisfied, they commence the digging, take out the mud and throw the roots into the basket. By evening you can see them climbing up the hillsides from various directions, making for the encampment, where they empty out the contents of their baskets in heaps, and cover them with bamboo leaves to keep out the heavy frost of the night. The collectors work in couples, and during the day the roots are spread out to dry in the sun. When a sufficient quantity is collected, and dried, bamboo frames are made, with a fire below, on which the aconite is placed when the flame has died out. Three to four days over this artificial heat dries up the root. While the firing process is going on, the man attending to it has a cloth tied round his head, covering his nose, as it is injurious to inhale the flames. It causes a feeling of heaviness, followed by symptoms not unlike intoxication.

While the aconite is drying, the collectors fill in their time snaring pheasants, which come to the open country to feed, trapping musk deer, which are plentiful on the Singailas, and shooting various other kinds of game to supply their immediate wants. The live pheasants and deer they put into bamboo baskets and bring into the stations for sale.

The whole trip generally lasts a month; and when sufficient aconite has been collected and dried, the roots are packed in baskets, with other goods and chattels on the top, which make a very decent load, varying from 120 to 200 pounds.

ELIXIRS OF THE UNITED STATES PHARMACOPOEIA OF 1900.

By PROF. P. E. HOMMELL.

The first elixir recognized by the United States Pharmacopœia was the elixir of vitriol, or aromatic sulphuric acid, admitted in 1860. In the year 1880 an addition was made, in order to satisfy the demand of progressive physicians for a palatable vehicle, in the form of elixir of orange. This proved to be so valuable in disguising the nauseous taste and heightening the effects of efficient remedies that it was retained in the issue of 1890, and beside it we find the elixir of phosphorus. Therefore, since the time that Dr. Lyman Spalding, in 1817, submitted to the Medical Society of the County of New York a project for the formation of a national pharmacopœia there have been but three official elixirs.

Now this does not speak very well for progressive American pharmacy, and an improvement is called for in this respect for the Pharmacopœia of 1900.

It is to be regretted indeed that the list of official elixirs has been so small for such a long time, as during that period the pharmacist and physician have lost considerably from a financial standpoint simply because the average physician before the introduction of the National Formulary would usually prescribe fluid remedies of an unpleasant odor, color and taste, and no fastidious lady or sensitive child would put up with them for any length of time. And the result in many instances was that some patent nostrum was sent for which was pleasant to the eye and to the sense of taste.

Of all forms of medication, I believe elixirs to be the best from a pharmaceutical and therapeutic standpoint. They mask as a rule unpleasant odor and taste, being aromatic; they also enhance the therapeutic action of most remedies and successfully promote their absorption into the circulatory system.

What elixirs should be introduced into the Pharmacopœia of 1900? Certainly more than the three of the 1890 book, as this is an age of progress, and the science of pharmacy should be as progressive as any of the other sciences.

I would suggest that at least twenty of the eighty-five elixirs of that valuable book, the National Formulary, become official. These I have ascertained by consultation with a number of reliable physicians and pharmacists of wide experience to be elixirs that represent drugs which have recognized physiological action.

Such preparations are the ones desired for the pages of the Pharmacopœia. We do not want to load it down with a lot of things which are here to-day and away to-morrow.

I certainly believe that official recognition of the elixirs which I will briefly mention will prove a good thing for the pharmacist, who in turn would prescribe them more often than at present, with the best results to all concerned.

The elixirs which are most in demand at the present time, and probably will be for a long time to come, are the ferruginous tonics, combined usually with some vegetable drug or its alkaloid. We find in the National Formulary about eighteen elixirs of iron, in combination. Of these I think the following should become official: Elixir ferri, quiniæ et strychninæ; elixir ferri phosphatis, quiniæ et strychninæ; elixir gentianæ cum tinctura ferri chloridi; elixir hypophosphitum cum ferro. Each of these preparations is an ideal one, easily prepared and agreeable.

Regarding the elixirs of the digestive ferments, elixir pepsini should find its way into the Pharmacopœia. It is needed there very much. This elixir is a success pharmaceutically and therapeutically.

The elixirs of potassii bromidi and sodii bromidi should be included. They are what the physician wants almost daily. Many who are familiar with the National Formulary are prescribing them, but we want more. I would suggest, however, that an elixir of the triple bromides be formulated, consisting of the bromides of ammonium, potassium and sodium; the three combined give better sedative and antispasmodic action, especially in the form of an aromatic cordial, which is always available for immediate absorption and action.

Cathartic, laxative and purgative agents, in a fluid condition, pleasant to the taste and agreeable to the stomach, are seemingly very much in vogue. The National Formulary offers six, three of which will fill the bill in every particular and they should receive the consideration of the Revision Committee: Elixir rhamni purshiana; elixir rhamni purshiana compositum; and elixir catharticum compositum.

The bark of viburnum opulus and v. prunifolium during the last ten years has been held in high esteem by physicians as a diuretic, tonic and sedative to the uterine and ovarian nerve centers. The fluid extracts ordinarily given with medicated waters and syrups are not sufficiently agreeable. The National Formulary, however, provides an elixir which should become official.

The elixir taraxaci compositum of the National Formulary is probably one of the finest vehicles for the administration of medicinal agents known and for that reason we find that it enters into fourteen other elixirs of that work, representing vegetable and animal drugs of positive value. On account of its elegance of aromatic combination, its power of disguising unpleasant medicines

and of enhancing their physiological action, it should become an official article.

Other elixirs which are admirable for masking the taste of drugs, especially the intense bitterness of the alkaloids, quinine, cinchonidine, etc., are the elixirs of glycyrrhizæ, aromaticum and of yerba santa. They are handy for the doctor and should receive the commendation of the Revision Committee.

As these are great days for brain and nerve tonics, it seems to me that the elixir apii graveolentis compositus should not be overlooked. It contains well-chosen ingredients, which commend themselves as efficient in connection with the bromides, hypophosphites and certain synthetics.

There are eleven elixirs of cinchona, two simple, the remainder in combination, to be found on the pages of the National Formulary. Of these the following should be adopted on account of the great popularity of cinchona bark: Elixir cinchonæ, elixir cinchonæ detannatum, elixir cinchonæ et ferri, elixir cinchonæ, ferri et strychninæ. Besides the elixirs mentioned there should be added elixir ammonii valerianatis and elixir anisi. (Dr. Cir.)

OSTEOPATHY UPHELD BY THE COURT OF APPEALS.

In the case of Harry Nelson against the Missouri State Board of Health, appealed from Jefferson County, the court decided that Nelson was entitled to practice his profession, which the learned court decided was not one of medicine. The opinion of the court was written by Judge Hobson, and concurred in by all the members except Chief Justice Hazelrigg. The American Practitioner says: "We regret that the learned court should have arrived at a conclusion so entirely at variance with that of Judge Sterling B. Toney, of the lower court. Barring any prejudice that we might have in the matter, it does seem that the distinguished high court must have strained a point to arrive at the conclusion stated, and we trust every doctor in this State will read with care the opinion of the high court. We present a synopsis, and leave our readers to judge for themselves if they are able to find any reason or justice in the decision."

"The proof shows that osteopathy is a new method of treating diseases, which is said to have originated with Dr. A. T. Still at Kirksville, Mo., about the year 1871. At the time the proof was taken in this case there were in attendance at the school established by him something over five hundred scholars from twenty-nine States of the Union, and several from Canada. In connection with the school was an infirmary, at which from three to five hundred patients were regularly treated. The buildings of the school are shown to be commodious and suitable for its purposes. The patients treated at the infirmary, as well as those treated by appellant, appear to have been satisfied with what they received, and many of them to have been materially benefited. There are four or five other colleges of osteopathy, which, with the one at Kirksville, form an association, and in five States of the Union osteopathy has been recognized by statute. The testimony of the witnesses, the character of the professors, and the evident sincerity of their statements leave no doubt in our minds that the school at Kirksville is a reputable school of osteopathy; but whether it is a reputable school of medicine within the meaning of our statute, or what are appellants' rights if it is not, are very difficult questions, depending upon the proper construction of the act itself. The terms 'physician,' 'practice medicine,' and 'medical college' used in the act have a well-defined popular meaning, and were used, we think, by the legislature in this sense. The term physician refers to those exercising the calling of treating the sick by medical agencies as commonly practiced throughout the State at the time the act was passed.

"The term medical college refers to those schools of learning teaching medicine in its different branches, at which physicians at that time were educated, or schools of that character organized since. At such an institution an essential part of the instruction was in teaching the nature and effects of medicine, how to compound and administer them, and for what maladies they were to be used. In such institutions surgery is an essential part of the instruction. Without a knowledge of surgery or medical agencies no person would be deemed equipped to practice medicine by any medical college; for those things lie at the base of the instruction given in such schools.

"Osteopathy teaches neither therapeutics, materia medica, nor surgery. Bacteriology is also ignored by it. As we understand the record, it relies entirely on manipulation of the body for the cure of diseases. Its theory is that a large number of ailments are due to irregular

nerve action, and that by stimulating or repressing the nerve centers by manipulation they enable nature herself to right the evil. It administers no drugs; it uses no knife. It does not profess to cure all diseases. When a case is presented requiring surgery or medication, the osteopath gives way to the physician. Faith cure or magnetism has no place in its system; it relies wholly upon manipulation, adding the *via medicatrix nature*.

NOT A SCHOOL OF MEDICINE.

"The main things taught in the school are physiology, anatomy, and the treatment of disease by manipulation. The system is new and of necessity imperfect yet, but if we may credit the evidence in this record, is often efficacious where the regular practice is ineffective. Still a school which teaches neither surgery, bacteriology, materia medica, nor therapeutics can not be regarded as a medical college within the proper meaning of those terms, as understood in this State when the act in question was passed.

"Having reached the conclusion that the school at which appellant graduated is not a medical college within the meaning of the statutes, it remains to inquire whether this act applies to him at all. The subject matter in the words of the legislature in passing the act was to protect the people from the practice of medicine founded merely on experience without scientific knowledge. . . . If this statute applies to him, it also applies to trained nurses and all others of that class who, for compensation administer to the wants of the sick. The results of such a construction would be to compel every one to employ a registered physician to care for him when sick, or to trust himself entirely to gratuitous services, however much he might prefer skillful nursing to medical treatment. . . . Appellant is in no proper case a physician or surgeon. He does not practice medicine; he is rather on the plan of a trained nurse. If by kneading and manipulating the body of the patient he can give relief from suffering, we can see no reason why he should not be paid for his labor, as other laborers. Services in kneading and manipulating the body are no more the practice of medicine than services in bathing a patient to allay his fever or the inflammation of a wound. Appellant may not prescribe or administer medicine, or perform surgery, but so long as he confines himself to osteopathy, without the use of medicine or surgical appliances, he violates no law, and appellee should not molest him. On the return of the case the court will enter judgment granting appellant a perpetual injunction restraining appellee from interfering with him, or prosecuting him for the practice of osteopathy, as above indicated."

RULES RESPECTING THE PRACTICE OF MEDICINE AND PHARMACY.

The Medical and Chirurgical Faculty of Maryland and the Maryland Pharmaceutical Association have submitted to their respective membership and to the physicians and pharmacists of the State generally, the following rules respecting the practice of medicine and pharmacy, believing a faithful adherence to these rules will conduce to the advancement and best interests of the two professions, and will give the public better service and secure for it more satisfactory results.

First.—Pharmacists should positively refuse to prescribe for customers except in cases of urgent emergency.

Physicians should carry with them or supply to patients emergency remedies only, except in remote rural districts, where the sending of prescriptions to be filled by pharmacists is impracticable.

Second.—The substitution of one article for another or one make of an article for another in a physician's prescription, without the physician's consent, is condemned as a most reprehensible practice.

Third.—It is as unreasonable for physicians to fix the prices to be charged by pharmacists as it is for the latter to determine the charges to be made by physicians for their services.

Fourth.—Whenever a physician, for any reason, objects to the refilling or copying of his prescription, he should plainly indicate his wishes on the prescription itself.

Pharmacists should refuse to refill prescriptions or give copies of them, when so instructed by the prescriber.

Fifth.—Copies should not be placed upon containers unless ordered to be placed thereon by the prescriber, even though the patient should request it. Nor should any word or label, like "For External Use," "Poison," "Caution," etc., be used unless specifically ordered by the writer of the prescription.

Physicians prescribing poisonous substances should add such directions as will indicate the use for which they are intended, and, if necessary to protect patients, should authorize the use of such labels as they may deem necessary. When unusual doses are prescribed, pains should be taken to indicate to the pharmacist that the quantity prescribed is understood.

Sixth.—In case of a suspected error or substitution by pharmacists in the compounding of prescriptions, physicians should always satisfy themselves by conferring with the pharmacist as to the true state of affairs, and in no case should the pharmacist be condemned by the physician, either to the patient and family or in the press, without previous careful investigation.

Whenever there is a doubt in the mind of the pharmacist as to the correctness of the physician's prescription or directions, he should invariably confer with the physician, in order to avoid possible mistakes or unpleasantness, and should not attempt to make any changes without such conference.

Seventh.—Pharmacists should never discuss physician's prescriptions with customers, nor disclose the composition thereof to them.

QUERY 19.

"With the local physicians supplying their patients directly with medicines, bought chiefly from some manufacturer, should the pharmacist be expected to refer his customers to the doctor, when asked to furnish a remedy for some simple ailment?"

By ROBERT S. MCKINNEY.

This query calls for an opinion on a matter of professional etiquette. We have been raised in the school that taught "always send the patient to the doctor; never prescribe." This motto has been so inculcated into our mind that we can scarcely believe anything else.

Yet time and circumstances sometimes call suddenly for a change of opinion.

While the laws of professional etiquette may call for one thing, yet the other principle that "self-preservation is the first law of nature," has such strong points in its favor that we cannot help sometimes turning down our first teachings.

When the doctor buys his supplies from the manufacturing chemist, and furnishes the same to the patient, surely the druggist makes nothing out of it, and there is little incentive to send the customer there. When the customer is sent to the doctor, and afterwards is directed to an opposition druggist with the prescription, as has been done, surely there is nothing in this to make the heart of the druggist glad.

From personal experience we know there is very little in professional etiquette that tends to fatten either the druggist or his pocketbook.

Therefore we draw these conclusions in answer to this query:

While we do not advocate general counter prescribing, and would not pretend to place the druggist in opposition to the doctor in diagnosing a case, yet we feel that under the circumstances set forth in this query, we would consider ourself justifiable in giving a remedy for a simple ailment when called on to do so.

The druggist's position is a dual one—not only does he have a professional position, but he has a mercantile side to his life that must be looked after, and in taking care of this part, as in the opinion given above, we do not think he sacrifices the professional part or the etiquette due the brothers of the kindred profession.

FOR APPLICANTS FOR STATE BOARD EXAMINATIONS.

In filing your application, wait until the limit has expired, and then denounce the board for being arbitrary in declining it.

Get letters of recommendation from members of Congress, legislators of your district, county officers, ministers, physicians and school teachers; then have as many as possible call on the secretary and urge him to see that you are passed. The law says you must pass a satisfactory examination, but a little matter of that kind is easily overcome.

Study all the books, including quiz compends, you can secure for one month before the examination, and after you have failed, write the board that you were not given a fair chance.

*A paper presented to the Maryland Pharmaceutical Association.

During the examination let your eyes wander about the room at frequent intervals. Walls have been heard to speak quite entertainingly.

Gaze longingly at the ceiling of the hall with that far away, inquiring look in your eyes. The "spirit" may tell you the proper answer to some of the questions that you feel you don't know.

When asked how paregoric is made, say that you "always consult the dispensary when in doubt." This reply will insure your receiving a certificate.

Write your answers in a miserable, scrawling hand, with a blunt pencil, and as close as you can crowd the letters. This indicates that you have a great deal to communicate on every subject, and the more difficult it is to decipher the better are your chances of success.

Advise each member of the board that you have bought a store, or that you have a good position waiting for you, and that your sister or mother is depending on your earnings to get bread. The "sympathy racket" works when all other means fail.

Carry to the examination room, dose books, note books, etc., and write a full list of answers to questions on your linen. These precautions have helped some young men "to get through" before the examination was over.—Midland Druggist.

MAKING THERMOMETERS.

The thermometer maker buys his glass tubes in long strips from the glass factories. The glassblower on the premises cuts these tubes to the proper lengths, and with his gas jet and blowpipe makes the bulb on the lower end. The bulbs are then filled with colored alcohol, and the tubes stand for twenty-four hours.

On the following day another workman holds each bulb in turn over a gas jet until the colored fluid, by its expansion, entirely fills the tube. It then goes back into the hands of the glassblower. He closes the upper end, and turns the tip backward to make the little glass hook which will help keep the tube in place in the frame.

The tubes now rest until some hundreds of them, perhaps thousands, are ready. Then the process of gauging begins. There are no marks whatever on the tube, and the first guide mark to be made is the freezing point, 32 degrees Fahrenheit. This is found by plunging the bulbs into melting snow. No other thermometer is needed for a guide, for melting snow invariably gives the exact freezing point. This is an unfailing test for any thermometer whose accuracy may be suspected. But melting snow is not always to be had, and a little machine resembling a sausage grinder is brought into use. This machine shaves a block of ice into particles, which answer the purpose as well as snow.

When the bulbs have been in the melting snow for a sufficient length of time, a workman takes them out one by one from their icy bath, seizing each one so that his thumb nail marks the exact spot to which the fluid has fallen. Here he makes a scarcely perceptible mark upon the glass with a fine file, and goes on to the next. The tubes, with the freezing point marked on each, now go into the hands of another workman, who plunges them, bulbs down, into a vessel filled with water kept constantly at 64 degrees. A standard thermometer attached to the inside of this vessel, shows that the temperature of the water is correct. Another tiny file scratch is put at 64.

Then a third workman plunges the bulbs into another vessel of water, kept constantly at 96 degrees. This is marked like the others, and the tube is now supplied with three guide marks, 32 degrees apart. A small tab is then attached to each tube, on which its number is written—for, owing to unavoidable variations in the bore of the tube, each one varies slightly from the others.

With its individuality thus established, the tube goes into the hands of a marker, who fits its bulb and hook into the frame it is to occupy, and makes light scratches on the frame corresponding to the 32, 64 and 96 degree marks on the tube. The frame has a number corresponding with the number of the tube, and the tube is laid away in a rack amid thousands.

The frame, whether it be wood or brass, goes to the

gauging room, where it is laid upon a steeply sloping table, exactly in the position marked for a thermometer of that size. The 32, 64 and 96 degree marks must correspond with the marks upon the table. If they do not, the error in marking is detected, and the frame is sent back for correction.

A long, straight bar of wood or metal extends diagonally across the table from the lower right-hand corner to the upper left-hand corner. On the right this works upon a pivot, and on the left it rests in a ratchet, which allows it to ascend or descend only one notch at a time. That notch marks the exact distance of 2 degrees. With the three scratches already made, for a basis, the marker could hardly make a mistake in the degree if he tried.

The marks made upon the frame or case are all made by hand, by a geometric pen, and India ink, if the frame is wood, and with steel dies, if it is of metal. The tube bearing the corresponding number is next attached to the frame, and the thermometer is ready for the market without further testing. Some makers use only two guide marks, but the best makers use three.

In the process of manufacture the ordinary thermometer goes through the hands of nineteen workpeople, half of whom are often girls and women. Some of the larger concerns in and near New York produce several hundred thousand instruments annually, and on every one of them the purchaser may see, if he looks closely, the tiny file scratches on the glass at the 32, 64 and 96 degree marks, or somewhere near them, as different makers use different points.

RATS AND PLAGUE.

Some of the difficulties in the way of destroying the plague-spreading rat are described as follows in the British Medical Journal:

"The rat is so commonly associated with the spread of plague, if not with its actual incidence, that the destruction of the animal seems distinctly to be called for as a measure of precaution. The method of getting rid of the rodent is, however, of primary importance. Should poison or fumigation be resorted to, one common effect is to scare the rats in the neighborhood from the locality, and, if they are infected with plague, the consequence will be an increase of the infected area. Another plan is to offer a reward for each rat destroyed. When this plan is adopted the rats are caught and carried to some authorized place, where they are counted and the rat-catcher rewarded. This plan necessitates handling of the rats, and it is possible that the persons who do this become themselves the subjects of plague, or contribute toward the spread of the disease. There is some evidence that it is not the rat itself that is the major source of infection when a diseased rat is handled, but that the vermin which inhabit the rat are themselves inoculated with plague, and as vermin quickly leave a dead rat, the impregnated parasites getting on the clothing of the rat-catcher tend to the diffusion of the disease. It would seem that the only method of killing rats which will do away with dread of their becoming a source of infection is by trapping them. This, however, is a slow process, and one which does not recommend itself to the rat-catcher who is paid by 'piece work.' Even when the rat is trapped the trap should be immersed in a disinfecting fluid if the rat-catcher is being paid according to results, or the rat should be removed from the trap by tongs and burned immediately. The latter process, however, annuls payment by results, as even if the tail is kept as proof of the number caught it will become a possible source of infection by the vermin inhabiting it. The rats, however, might be immersed in a disinfecting fluid, provided the rat-catcher does not handle the animal. It is not safe to attempt to exterminate plague-infected rats by hunting them with dogs or cats, as these animals may catch the disease, or the vermin in the rats may cling to their coats. It might be worth while trying the plan proposed by M. J. Danyasz, of the Paris Pasteur Institute. Briefly stated, this consists in the introduction into a given rat population of a coccobacillus presenting the general characters of bacillus coli, and thus resembling Löffler's bacillus typhi murium. The plan has been tried with considerable success at Lille, Hamburg, Copenhagen and Tunis, as well as in Paris."

BRITISH PHARMACEUTICAL NOTES.

A Suggested Pharmacy Reform.—Some pharmaceutical politicians have been propounding a scheme recently which, should it come to fruition, an unlikely event, however, would entirely revolutionize the condition of the pharmaceutical body in Great Britain. Roughly it is proposed to create two distinct classes of pharmaceutical practitioners, in place of the chemist and druggist. Theoretically of course, there are two classes existing, the pharmaceutical chemist and the chemist and druggist, but practically the privileges of the two sections are the same, the only difference being that the pharmaceutical chemist is exempt from jury service and that he has a distinct title. The new proposal is distinctly at variance with the Pharmacy Act of 1898, which tended towards unification by extending to chemists and druggists the right of becoming members instead of associates of the Pharmaceutical Society and of sitting on its council, privileges which had hitherto been reserved for pharmaceutical chemists only. The new scheme would create an inferior class of traders, who would be licensed to sell drugs and poisons, but not to dispense prescriptions. For the pharmaceutical chemists, who would be the sole recognized dispensers of medicines (except physicians), a compulsory curriculum would be imposed. It is not quite clear what would be the result as regards the present pharmaceutical chemists and chemists and druggists, but as confiscation can scarcely be intended it is to be presumed that both classes would be included without further examination in the new body of pharmaceutical chemists. Looked at broadly, the institution of a compulsory curriculum, provided that it were not made too stringent at the outset, would probably be to the ultimate advantage of pharmacy, but the suggested creation of an inferior body who would be nothing more than venders of drugs is on altogether different footing, and is open to every grave objection. One has only to look at the state of affairs existing in Ireland to see that the result would be anything but satisfactory. Then there are two bodies of registered men, the druggists, who are merely retail venders of poisons and the pharmaceutical chemists, who are alone licensed to dispense medical prescriptions. The result is constant friction between the two sections, the pharmaceutical chemist charging the druggist, often we are afraid not without grounds, with illegally dispensing prescriptions, and the druggist urging often with a good deal of justice, that the pharmaceutical chemist endeavors to harass him in every possible way. One result of this is that the Pharmaceutical Society which was originally intended to include both bodies practically only represents the pharmaceutical chemists, the druggists holding almost entirely aloof. The Pharmacy Act provided that the druggists could elect members on the council of the Pharmaceutical Society up to one third of its members, but as in no case could more than seven out of twenty-one members of the council be druggists, and therefore they could never have an equal voice in its proceedings, few druggists have obtained the right to vote by joining the Society, and such of their representatives as have gained the council chamber have done so by the grace of the pharmaceutical chemists. It is difficult to see how any arrangement of the sort can work satisfactorily. If the lower body were in sufficient numbers and their representatives on the governing body of the Society were not restricted, the exclusive privileges of those who had passed the higher examination would almost certainly soon be swept away, while if the druggists are limited in their representation on the council, friction and jealousy are practically certain to ensue. It seems that those who are advocates of the new scheme for Great Britain are reversing the sequence of things and promoting chaos out of order.

The Government Laboratory.—The annual report for the year ending March 31, 1900, shows that Dr. T. E. Thorpe and his staff have analyzed nearly 200,000 samples for the customs, consisting mainly of determinations of the alcoholic strength of wines etc., for import duty, and a large number of samples of tea for adulteration. In the Excise Department 68,287 samples have been dealt with and in addition to this 7,208 samples have been treated for other government departments.

The Sale of Proprietary Articles.—Is rapidly increasing in Great Britain and evidence of this is given by the Inland Revenue Report. All proprietary articles sold in Great Britain, but not in Ireland, have to bear a Government Stamp, varying in value according to the price of the preparation, the stamp on each article not exceeding one shilling in value being 1½d. The revenue derived from this source for the year ending March 31st last was \$1,445,000, and in addition 34,554 licences yielding a total of over \$13,000, were issued to venders of proprietary medicines, so that it will be seen the British Government draws quite a respectable sum from the patent medicine trade. The revenue from the sale of medicine stamps is \$110,000 in excess of the previous year, and another evidence of the growth of the trade is shown by the fact that in 1860 only \$220,000 was yielded by the tax. A very small proportion of the stamps sold are disposed of in Scotland, but this is due to the fact that most of the proprietaries of large sale are packed in England while a fair proportion, no doubt, are consumed in Scotland. The sale of stamped proprietaries in Great Britain must now exceed \$10,000,000 annually.

An American Soda Fountain in London.—A fair number of London druggists do a business in the summer time in effervescent drinks, but none of them so far as I am aware have fitted up a regular soda fountain. It has been left for one of the large drapers in St. Paul's church yard to initiate the British public into the mysteries of American drinks. Spence's the drapers in question, have fitted up in their windows a soda fountain which is in charge of a New York drug clerk, and the venture has been a success. I was amused one day when passing to see a party of Americans who had been visiting St. Paul's Cathedral make a rush for the shop directly they espied the familiar fountain which evidently reminded them of home.

German Trade.—A British consular report dealing with this subject, particularly as regarded the commerce between Germany and the United Kingdom, states that the year 1899 must be considered as an extremely prosperous one for German trade. One of the main features dealt with is the formation of a union which has a capital of \$1,600,000, and is expected to do much to increase the trade in German produced alcohol. This, however, is not likely to seriously affect either British or American makers as, although it may lead to increased consumption for various purposes in Germany, the export of German spirit will not be much increased. The export of sulphate of ammonia from Great Britain to Germany in 1899 was less by 3,593 tons than in the previous year, while still greater decreases occurred in the export to France and Belgium, the United States, however, took rather more British sulphate than in 1898, Germany consumed more, but the home production more than kept pace with the increased demand. The union of British and German manufacturers of oxalic acid has become extinct owing to the foundation of a number of new German factories and the price of oxalates has consequently fallen. In 1899 Great Britain exported 90,861 cwt. of raw and 11,844 cwt. of refined glycerine to Germany and received from that country 5,211 cwt. of the refined article.

The Pharmacopœia as a Standard.—Much difference of opinion exists as to whether the British Pharmacopœia is or is not a standard under the sale of Food and Drugs Act for all articles named in it. Dr. Atfield, the editor of the B. P. holds that except for the dispensing of medical prescriptions it is not a legal standard unless the purchaser specifies a B. P. article, and the view was taken by the Watford magistrates in a prosecution against a chemist for selling as Gregory's powder a preparation compounded with carbonate instead of oxide of magnesium, which the B. P. in common with the U. S. P., and in opposition to most other pharmacopœias orders in compound rhubarb powder. The case was dismissed.

The Vinolia War Fund.—It will be remembered that the Vinolia Soap Company at the commencement of the South African war determined to set aside one cent on every tablet of their soap sold and to donate the resulting sum as a subscription to the War Fund. It has now been decided to close the account, the scheme having been in force nearly twelve months, and the total sum of \$55,000 having been handed over.

The Alcohol Drawback.—English chemists have not the advantage possessed by some of their continental competitors of working with duty-free alcohol, there being an impost of 11 shillings on every proof gallon. The government, however, repay the duty on all tinctures, essences, etc., exported and last year drawback was allowed on 80,726 gallons against 9,715 gallons in 1890. These figures of course do not include goods manufactured for export only in bonded warehouses, as these pay no duty.

Manufacture of Methylated Spirit.—During the year ending March 31, 1899, 4,984,272 gallons of spirit were methylated in the United Kingdom, nearly all of this spirit was home produced while 10 years ago nearly one half of the spirit methylated was of foreign origin.

Picric Acid as an Explosive.—A serious explosion which occurred in a Huddersfield chemical factory this year has proved that whereas picric acid does not itself explode without the agency of a detonator yet it forms dangerous compounds with metals which readily explode. The report of the Government Inspector is to the effect that the explosion in question was due to the formation of picrate of iron (in a steam pipe) which was exploded by a blow from the chisel of a workman. The inspector recommends that the acid should be scheduled as an explosive.

The Madras Cinchona Plantations.—The report of Mr. Standen, the director of the government cinchona plantations in the Madras presidency states that 650,689 lbs. of bark were available during the year 1899-1900, 364,090 lbs. being the amount obtained during the year and the remainder being brought forward from the previous year. Part of the stock was purchased from private growers. During the year 10,188 lbs of quinine sulphate and 4,615 lbs. of other alkaloids were extracted in the government factories and 7,378 lbs. of quinine and 2,676 lbs. of other alkaloids were distributed; upwards of 561,000 five grain quinine powders were disposed of through local post offices at three pice per powder. The price has now been reduced to two pice and it is hoped that this will induce the poorer classes, the government sale being undertaken for the purpose of providing the alkaloids as febrifuges.

PHARMACY IN AUSTRALASIA.

Sydney, N. S. W., August 15, 1900.

There is considerable commotion and agitation among the retail pharmacists throughout the whole of the colonies consequent upon the wholesale actions and injunctions instituted by Condry & Mitchell, of England, against them for selling permanganate of potash as "Condry's Crystals." The agents of the firm made a simultaneous onslaught on the retail pharmacists in each colony by asking for "Condry's Crystals" and getting the permanganate as the equivalent. The rich firm have through their solicitors sent to all pharmacists the following circular: "It is reported that upon inquiry for Condry's Fluid being made at your establishment you have offered to sell Condry's Crystals and have sold permanganate of potash crystals under that designation, representing that the same would be equivalent in solution of Condry's Fluid. My clients instruct me to state that their preparations do not contain even the slightest trace of that chemical, and that it is therefore a fraud upon the purchaser to supply permanganate of potash as Condry's Crystals, or in execution of orders for Condry's Fluid." The Victorian pharmacists, especially those in Melbourne, have quite recently combined to fight the question in the Supreme Court and it is expected the point at issue will shortly be threshed out. The pharmacists claim that the term "Condry's Crystals" has been in general use for the last twenty years and has always been otherwise known as permanganate of potash. It is difficult to see where the retailers' strength of combine is, when Condry & Mitchell boldly assert that their fluid contains no permanganate. From two careful analyses made recently in Sydney, I am informed that the fluid is composed of permanganate of soda and common salt. If this be the case the pharmacists are quite out of court. Scores of them have settled the actions by paying the solicitors \$80 and costs

and signed agreements that they will not sell the permanganate as Condry's Crystals.

Federation being now an accomplished fact, we only await the elections for the Senate and the meeting of the Federal Parliament, which will be sometime during May, 1901. One of the first subjects to be dealt with is the tariff against the outside world, the intercolonial customs barriers falling with the operation of the Commonwealth Act. There is no doubt whatever that the tariff will be of strong protective character and the wholesale druggists of the United States should know this fact at once. Patent and proprietary medicines will be practically shut out if I can judge the pulse of the different Federal candidates as it beats just now. With the exception of New South Wales all the colonies have protective tariffs and the mother colonies' representatives in the Senate, even should they all be Free Traders, can have no hope against the majority.

Fearing another visitation of the bubonic plague, which is expected to come forth again in Sydney in a more virulent form, as it has done in other places, both the wholesale and retail druggists are laying in big stocks of disinfectants. In Queensland and Victoria the same course is being adopted. Queensland is badly affected with the plague at the present time, its ravages extending right through the northern ports, almost from one end of the colony to the other.

The Pharmacy Board of Western Australia have taken the extraordinary step of placing the following patent and proprietary medicines in the first part of their Poisons Act, necessitating in every instance the affixing of the label "Poison": Ayer's Cherry Pectoral, Battle's Vermin Killer, Boschee's German Syrup, Cantharidine Hair Washes and Restorers, Collis Browne's Chlorodyne, Easton's Syrup, Fellow's Syrup of Hypophosphites, Freeman's Chlorodyne, Godfrey's Cordial, Green's Corn Cure, James' Horse Blisters, Kay's Essence of Linseed, Powell's Balsam of Aniseed, Steedman's Soothing Powders, Steiner's Phosphorus Paste and Winslow's Soothing Syrup.

In the whole of Australasia there are only 2,658 registered pharmacists, while the total population is 4,382,930, or an average of 2,782 people to each business. The pharmacists in business in each colony are as follows: New South Wales, 453; Victoria, 430; New Zealand, 348; South Australia, 60, and Tasmania, 58. Victoria has 813 pharmacists on the register as against 711 in New South Wales.

A Society of Chemical Industry on the lines of the English society has been established in Victoria, the headquarters being at the Melbourne University.

DEHORNING CATTLE.—In a recent bulletin published by the Arizona Agricultural Experiment Station, G. H. True, of the Department of Animal Husbandry, discusses this subject most intelligently. In his opinion the best time to dehorn cattle is when they are calves, and the younger they are the better. During the first few days of the calf's life the horns to be are simply little buttons that are not attached in any way to the skull. They may then be removed by the use of a sharp knife, or by clippers made for the purpose, with very little pain to the calf and little or no loss of blood. Various chemicals and commercial dehorning fluids have been used for the destruction of the young horns. In the use of liquid preparations the greatest care should be exercised to prevent the spread of the fluid. The use of caustic potash is perhaps the most to be recommended, it being cheap, easily applied and efficient. It comes in the form of sticks which for the protection of the fingers should be wrapped in paper when handled. A stick will dehorn ten or a dozen calves. The hair should be clipped from the horn and the skin immediately surrounding it, the potash dipped in water and the moistened end rubbed upon the horn. A scab forms where the caustic potash has been applied and when it comes off the horn comes with it. There is no wound made and therefore no danger of trouble from flies and screw worms. This method of dehorning has proved effective on calves up to a month old.

WHAT KIND OF A LIBRARY SHOULD A PHARMACIST SEEK TO POSSESS?

As every pharmacist, in acquiring the rudiments of pharmaceutical knowledge, must be in possession of a number of elementary works on pharmacy itself, and its cognate sciences, he has in these a nucleus with which to start a good private library. If he has merely used them to cram with, the chances are that he will have such a fit of mental dyspepsia that it will be hard to persuade him that these books can ever be of any further service to him, and he will be ready at the first opportunity to discard them. If, on the other hand, he has been really interested in his studies, he will treasure these volumes as he would a fortune. His list should contain at least one work on botany, one on chemistry, one on pharmacology, one on materia medica, and a copy of the most recent United States Pharmacopoeia. To these he should add, as fast as his means will permit, works on microscopy, vegetable histology, special monographs on various drugs, a good Dispensatory, and the proceedings of his State pharmaceutical association, and of the American Pharmaceutical Association. He should subscribe to some pharmaceutical journal of recognized standing, and at as early a date as possible, secure a good encyclopedia. Naturally he will choose for himself such ethical, religious and philosophical works as he desires. Many students make the mistake of supposing they have done justice to themselves when they have secured one work on each particular subject, or, if this is extensive, on each branch of that subject. This is a very great mistake, and one that has misled many men.

As soon as a private library has covered with single copies the complete range of the requirements of its owner, other works on the same subjects by different authors should be quickly secured. Whoever confines his consultations upon a subject to a single author, unwittingly tends to create in himself mental narrowness of view on that subject, and causes himself to drift into dogmatic habits. He likewise makes it practically impossible for him to properly and fully understand many phases of the subject while he imagines he has gotten complete mastery of it. The more books by different authors upon the same subject we consult, the more we cultivate independent judgment, the better we can grasp the topics discussed in the various phases, and the less likely are we to become a slave of dogmatism. To see many books upon the same subject creates a critical mind, since the differences of authors are discovered and the reader is forced to use his own judgment as between them, weighing, of course, the facts presented by each. Even when authors agree, the fact that they present their subjects in a different manner, use different illustrations and view the matter from various standpoints, enables readers to get a better all-round conception of the subjects, while the repetition tends to fix them better in the memory. Very often readers will find it impossible to understand one author in the way he tries to explain something until after they have seen what some other author says on the same subject, when it all becomes clear.

Men who study from but one author acquire an absolute dependence upon that author as an authority, and are likely to accept his statements as certainty. One of the most dangerous phases of modern school and college education is the tendency to confine students to single authors upon the various subjects studied. It makes them slaves of that author in methods of thought for the rest of their lives. No one should ever depend wholly upon what one author has to say upon a subject. Even reliance upon a single dictionary creates a dangerous tendency to depend upon others where self-judgment should be used. When many authors are consulted the student soon acquires the habit of finding out why the author holds so and so, and thus be able to even correct the latter's shortcomings.

No book is ever perfect either in completeness of detail or in freedom from error. All books need to be checked by critical minds. No author is completely free from bias. Works on pure science probably reflect less of this than others, because their writers are constantly on guard to eliminate this bias, but even these cannot wholly avoid it. If there are not present sins of com-

mission, there may be those of omission that are nearly as bad. No student can know where these distortions occur unless he can check them by reference to a number of authors on the same topic. A pharmacist's library should therefore contain a good assortment of books on the same topics by different authors, and the more he can afford to have and consult, the better it will be for him. (Merck's Report.)

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Staining Shingles Green.—(B. and C.) A method recommended for staining wood green is to brush it over with a hot solution of verdigris in vinegar until of a proper shade. Just how satisfactory this application will work on shingles can only be determined by trial. Preparations for this particular purpose are sold in the paint trade.

Removing Coffee Stains.—(R. B. H.) Coffee stains on white linen cloth may be removed by dipping the spots in Javelle water (liquor potassæ chloratæ, N. F.) and warm water alternately. Ordinarily all stains produced by vegetable coloring matter can be removed by chlorinated lime solution, but care should be taken not to use it too strong, else it will rot the fabric.

Yield of Acetylene from Calcium Carbide.—(G. McC.) One pound of pure calcium carbide will yield about 5.89 cubic feet of acetylene. The ordinary commercial carbide contains only about 80 per cent. CaC_2 and yields in round numbers some 10,000 cubic feet of acetylene per ton or about 5 cubic feet of acetylene per pound of calcium carbide. An interesting article on the production of acetylene from calcium carbide was published in this journal July 20, 1899, page 88.

Binding Material for Emery.—(R. R. D.) wants a formula for the preparation of a compound which will make a hard mass when mixed with emery and one which does not contain glue.

We know of no practical process coming within the prescribed limits without the employment of glue. However, some artificial whetstones are made by mixing the abrasive material with certain proportions of kaolin and feldspar, the mixture being then moulded into the proper shape under pressure and finally baked in a furnace when the feldspar fuses, binding the whole into a solid mass.

Sodium Salicylate and Ferric Chloride.—(Ph. A.) asks how the following prescription should be dispensed:

Sodium salicylate	1 ounce
Glycerine	4 ounces
Oil of gaultheria	40 drops
Tincture of ferric chloride	1 ounce
Citric acid	20 grains
Solution of ammonium citrate, enough to make	8 ounces

Dissolve the citric acid and sodium salicylate in a sufficient quantity of the solution of ammonium citrate, add the oil of gaultheria and shake well. Add the tincture of ferric chloride to the glycerine contained in a separate vessel and mix the solution thus formed with the solution salicylate, adding the former to the latter, stirring constantly during the operation. Then add the remainder of the solution of ammonium citrate to complete the mixture. Prepared in this way a clear wine-colored mixture is formed which does not precipitate.

Blanching a Hair Brush.—(L. W.) asks how to bleach a hair brush which has become yellowish by age and water. He says he doesn't care to do any expert

menting as the brush is a valuable one which he has used more than ten years.

We have never had any practical experience in bleaching hair brushes although we presume the bristles of the brush may be bleached, after cleansing, by immersing them in a solution of peroxide of hydrogen to which a little ammonia has been added, or in a dilute solution of chlorinated potassa. To clean the bristles wash them for a few moments in a weak solution of ammonia, about one ounce of ammonia water to a pint of cold soft water. Then rinse in clean cold water and dry in a cool place. The mahogany or satinwood back of the brush must of course be kept out of the solution or the wood will become discolored. A hair brush which has seen ten years of service deserves considerable treatment.

Cleaning and Polishing Linoleum.—(J. M.) Wash the linoleum with equal quantities of milk and water, dry and then apply one of the following dressings:

Yellow wax	5 ounces
Oil turpentine	11 ounces
Amber varnish	5 ounces

Melt the wax, add the oil, and then the varnish. Apply with a rag.

A dressing recommended for brightening the appearance of linoleum consists of a weak solution of beeswax in spirits of turpentine. Another formula is:

Palm oil	1 ounce
Paraffin	18 ounces
Kerosene	4 ounces

Melt the paraffin and oil, remove from the fire and incorporate the kerosene.

Polish for Linoleum.

Yellow wax	1 ounce
Carnauba wax	2 ounces
Oil turpentine	10 ounces
Benzine	10 ounces

Melt the wax carefully, add the oil and benzine, and stir until cold.

PHARMACY.

USES OF ALUMINUM.—When a decade or so ago the problem was solved of obtaining aluminum at a comparatively low cost, it was believed by many that there would be at once an immense demand for the metal, and that it would replace iron and perhaps other metals for many purposes. While this has not been the case, the demand for aluminum and the corresponding output have steadily, if slowly, increased, and at the present time are increasing rapidly. In the *Zeitschrift für Angewandte Chemie*, W. C. Heraeus calls attention to the increasing use of aluminum in the chemical industries. One great difficulty heretofore in using aluminum for such purposes has been that when in contact with another metal, galvanic currents are generated which rapidly corrode the aluminum. It has hence been impossible to use vessels where the metal was soldered. A process has recently been devised which enables the welding of aluminum without the aid of a flux. This will greatly increase the usefulness of aluminum. The tensile strength of the metal is only one-fourth less than that of copper, and while its conductivity for heat is only half as great as that of copper, it is twice as great as that of iron. The use of aluminum as a conductor of electricity is also growing rapidly.—(Science).

ADMINISTRATION OF CASTOR OIL.—Washburn (Jour. Am. Med. Assoc.) repeats what he wrote more than fifteen years ago concerning the following method of giving castor oil: Fill the mouth with milk and hold it there; dip up a tablespoonful of milk and pour into this spoon—already full of milk—about a teaspoonful of oil; whether cod liver oil or castor oil, you will see that it displaces milk to the extent of its bulk, as any other liquid would do, but the globules of either of these oils, being different from the globules in milk, do not mix with the latter and the oil will be in a round ball, not touching the spoon. As you swallow the milk that has

been held in the mouth, take the spoonful of milk in the mouth and at once being to drink milk from a cup at hand. The author states that he has never yet found the person who, if the procedure was carried through in this manner, could tell whether he had taken castor oil or cod liver oil or taken none at all. There is absolutely no contact with the mouth or throat of any particle of the oil, nor can it be smelled on the spoon. All this implies taking immediately, but not with undue haste. The oils as well as the milk must be cold, and the colder the better. The quantity can be increased by degrees as the stomach will stand the oil desired, but if a larger dose of castor oil is desired it can be better given by repeating the procedure than by attempting to swallow too much at one time.

COLORED BOTTLES FOR MEDICINES.—An interesting investigation has recently been carried out by H. J. Møller, of Copenhagen, and published in the *Berichte of the German Pharmaceutical Society*, on colored glass, with particular reference to the proper color for bottles which are intended to protect medicines, etc., from the chemical action of the light. It was found that the best protection is afforded by black (opaque); red, orange and dark, yellowish-brown glass; light brownish-yellow, dark green (with no bluish tint), and dark, brownish-green glasses afford quite good protection; bluish-green, violet, milky, bluish and colorless glasses give little if any protection from the actinic rays of sunlight. For the preservation of wine, beer and liquors, dark brownish-yellow and dark yellowish-brown bottles are to be preferred, while light brown, light green and bluish-green glass is less to be recommended.—(Science).

AMALGAMS OF SODIUM AND POTASSIUM.—Guntz and Feree (Comp. rend.; Dr. Cir.) says that when sodium is dissolved in mercury and the mercury slowly cooled beautiful crystals of this amalgam separate out. These are of the cubic form and correspond to the formula NaHg_8 . If, instead of extracting the crystals, the mass is compressed in leather by hand, still the same amalgam remains; the liquid part, which is filtered off, is mercury saturated with sodium at the temperature of the experiment. The authors attribute this result to the fact of the compound NaHg_8 being a mixture of two amalgams, Hg_8Na and Hg_5Na . The latter amalgam has been obtained in a pure state. They have shown the existence of four distinct amalgams: Hg_8Na , Hg_6Na , Hg_5Na , Hg_4Na . Potassium gives results which are not quite so defined.

FATAL POISONING BY OIL OF WINTERGREEN.—Dr. B. Pillsbury reports in the *Medical Record* (Dr. Cir.) a case of fatal poisoning by oil of wintergreen. A man of middle age took by mistake for whiskey two ounces of the oil. His daughter gave him mustard as an emetic, the whites of a dozen raw eggs, milk and very little water. The patient resided in the country; it was nearly five hours after the taking of the oil when he was first seen by the physician. He was then perspiring profusely, complained of feeling "on fire" inside and the skin was very hot. The diarrhea continued and in forty-one hours after the oil of wintergreen had been taken death occurred from exhaustion.

ANTIDOTE FOR FORMALDEHYDE.—Andre (Jour. Pharm. et de Chim., Schweiz. Wochenschr.) reports a case in which a woman accidentally took a teaspoonful of 40 per cent. formaldehyde solution, producing severe caustic effect. As an antidote solution of ammonium acetate was administered with satisfactory results. Three volumes (about) of the solution are necessary to counteract one volume of 40 per cent. solution of formaldehyde, the administration of the former being followed with an alkaline mineral water to neutralize the acetic acid liberated in the reaction.

PRESERVATION OF RUBBER ARTICLES.—As the result of extensive tests Prof. Krollkowski (Jour. Am. Med. Assoc.) states that the best method of keeping rubber articles is in a 1 per cent. solution of formalin or zinc chlorid or a concentrated solution of borle acid. He asserts that red rubber keeps better than black, other conditions being equal. Rubber articles should never be left exposed to the air or to action of cold.

“Hold Fast to That Which Is Good”

The old Scriptural injunction is good, hard sense when applied to your business today. You can't build business with unreliable goods. The people are going to judge you by the things they get of you, and you can't help it. Your only defense is to sell them that which you know is good.

You know all about the J. C. Ayer Co.'s goods.

For nearly sixty years they have been steadily and surely doing all that was promised for them, and in addition strengthening the standing of the people who dealt in them.

The let-down season of Summer is over, and now comes the girding up of loins for the fall campaign. We have several bright, new things for you which will soon be ready to commence doing us both good. We only want your cooperation to make the coming year a record breaker. Let us help each other. Write us freely regarding anything of mutual interest.

J. C. AYER COMPANY.

Ayer's Hair Vigor, \$1.00 size only ; Ayer's Cherry Pectoral, three sizes, 25c., 50c., \$1.00—25c. size is a very rapid seller ; Ayer's Pills, 25c., more for the money now than ever ; Ayer's Sarsaparilla, \$1.00, in new cartons with sample box of pills free ; Ayer's Ague Cure, 50c. now, new and improved ; Ayer's Cherry Pectoral Plasters, 25c., “they take the ache.”

Latest Elegant Preparation — Ayer's Comatone.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of Era Readers.

FOREIGN.

China.

Another rebellious outbreak, presumably by Boxers, has occurred in Southern China, and the Chinese aver that fully 100,000 troops will be necessary for its suppression.

The American answer to the French note has given a satisfactory turn to the Chinese negotiations, and were it not for the reports of military activity in China on the part of some of the Powers the outlook would be excellent for a speedy opening of negotiations. Besides answering the specific proposition advanced by the French Government, the American reply expresses conditional approval of the course taken by France. The expedition to Pao-Ting-Fu, under Von Waldersee, the German commander, threatens to excite a serious outbreak in China, and it is opposed by the United States, which will take no further part in military operations against the Chinese. Quick action by the nations to begin peace negotiations are being urged at Washington to avert further troubles in the Empire.

It is reported at Shanghai that Russian troops from the South have occupied Mukden (Manchuria) without opposition, while the Russians from the North captured Tie-Ling, forty miles north of Mukden.

Lord Salisbury assents to M. Delcasse's Chinese note with a reservation as to the methods of prohibiting the import of arms and suggesting also that each nationality garrison one place instead of the proposed joint occupation of each locality.

The detention of a body of Russian troops last week as they were about to leave for China, with the information that they might be needed for hostilities elsewhere, has given rise to a rumor of a coming war between Russia and Germany.

The Russian generals are arranging winter quarters for large armies in Manchuria. Ten thousand troops will be quartered at Irkutsk ready to move up with the first opening of the river navigation in the spring.

The American marines from Peking have arrived at Taku whence they will sail on the Indian for Cavite.

Li Hung Chang has transmitted the reply of the Chinese Emperor to the demand of Germany in which it is ordered that three high Chinese officials are to be decapitated, others to be imprisoned and Prince Tuan is to be banished to the Siberian border.

Minister Conger has submitted to the State Department a list of ten or twelve names of Chinese officials who were prominent in the Boxer movement against the foreigners. These officials, Mr. Conger believes, should be included with Prince Tuan and others in any punishments which are to be inflicted upon those who took a prominent part in the Peking outrages.

Chinese reports say that the Dowager Empress is seriously ill at Tai-Yuan-Fu, Province of Shan-Si, and the free hand of the Emperor in affairs of state is regarded as confirmatory of these reports.

Other Foreign News.

The Sublime Porte has instructed the Turkish Ambassador in Berlin to inform the German Government that Turkey will repudiate all responsibility should anti-German feeling be manifested during the proposed visit of Crown Prince Frederick to Palestine.

Slight reverses occurred to the British forces in South Africa last week. The troops of De Lisle and the colonials, however, have driven the Boer General De Wet north of the Vaal River.

President Kruger, it is thought, will go directly to Holland, instead of landing at Marseilles, as at first intended.

The bubonic plague at Glasgow is said by the officials to have been checked.

The Viceroy of India reports the crops as excellent, and famine conditions disappearing, while the number of persons receiving relief has decreased to 2,746,000.

DOMESTIC.

Politics.

Senator Hanna is scheduled to make thirty-seven speeches in four days during his tour of the Northwest this week.

Postmaster-General Smith is making a stumping tour of Nebraska and Kansas.

Governor Roosevelt spoke in Illinois and Indiana and Mr. Bryan spoke in Illinois, Indiana and Michigan last week.

The betting on the New York Stock Exchange favors McKinley heavily. An even bet of \$1,000 was made last week that Bryan would receive the smallest vote in the electoral college, proportionally, that has ever been polled by a presidential candidate in the history of the country.

Ex-Ambassador Wayne McVeagh has announced his support of the Republican ticket.

Professor Ladd of Yale, who has just returned from a trip around the world, wrote a strong letter last week against imperialism.

Judge Wheeler H. Peckham came out for McKinley last week.

Many Delaware politicians believe the next Legislature in that State will be controlled by Democrats, in which event Mr. Addicks' Senatorial aspirations will be defeated.

David B. Hill will stump Indiana for Bryan this week.

The Coal Strike.

Both miners and operators believe that no settlement will be reached until the operators make some offer that is more satisfactory to the men. The miners believe that the operators who have offered a 10 per cent. advance in wages will only pay the higher wage rate until a large stock of coal has been mined and the cold weather is at its worst, when they will again cut down the pay, knowing that the men cannot endure the hunger and cold that will accompany a strike at such a time.

The men demand that the 10 per cent. advance in wages be given for one year at least, and they object to the "sliding scale" of wages, which, they say, gives the operators the power of making the wages what they please.

President Mitchell says that he wants to organize the anthracite field so that the operators and miners will agree to meet every year in joint convention and make out the schedule of wages, etc., for the ensuing year. This is the plan that is in operation in the bituminous coal fields, where it is found to work successfully in preventing labor troubles.

A policeman was killed and several other persons wounded in a riot at the Oneida colliery, near Hazleton, last week.

Other Domestic News.

Numerous conferences are being held by the cotton oil manufacturers of Mississippi with a view to controlling prices to be paid for seed in view of the short crop.

The trial of Henry E. Youtsey on the charge of being a principal in the murder of William E. Goebel, Governor of Kentucky, was interrupted last week by the sudden illness of the prisoner. He was seized with apparent insanity and doubts are entertained of his recovery.

Sir Thomas Lipton has sent another challenge for the America's cup.

The customs receipts at Havana during September amounted to \$853,179.99.

The copper plate engravers of Tiffany & Co., the New York jewelers, are out on a strike. The engravers receive from \$90 to \$100 a week and are not striking for higher pay but for a recognition of their union.

The big liner Oceanic ran aground on the coast of Ireland last week in a fog, but got off without injury.

The people of Honolulu have sent \$3,300 to the Galveston sufferers.

The new monitor Arkansas will be launched November 1 at Newport News.

Fishing vessels with crews aggregating over two hundred men are still missing on the Grand Banks; it is believed that the fatalities to fishermen from the great storm which swept the banks will reach three hundred.

The population of Connecticut is 908,355. In 1890 it was 746,258. The increase is 162,097, or 21.7 per cent.

The population of Delaware is 184,735, as against 168,493 in 1890, an increase of 16,242, or 9.6 per cent.

The population of the District of Columbia is 278,718, as against 230,392 ten years ago, an increase of 48,326, or 20.9 per cent.

The population of the State of New Hampshire is 411,588. In 1890 the population was 376,530, the increase being 35,058, or 9.3 per cent.

—At the last meeting of the Rhode Island Board of Pharmacy, held October 1, six candidates presented themselves for examination. Of these the following were successful and were registered as registered assistant pharmacists: Albert H. Brundage, Providence, R. I.; Frank E. C. Carter, Worcester, Mass.; Frank G. Kearnar, Whitinsville, Mass. Thomas O'Neill and Charles O'Leary have opened a new store at 412 Weybosset street, Providence, under the style of the City Pharmacy. New stores have also been opened by John C. Sullivan at Smithfield avenue and Weeden street, Pawtucket, and W. H. Salisbury & Co. at Lonsdale and Quincy avenues, Pawtucket.—Howard A. Pearce, secretary and registrar.

THE DRUG NEWS.

NATIONAL WHOLESALE DRUGGISTS' ASSOCIATION.

OFFICE OF COMMITTEE ON PROPRIETARY GOODS.

Philadelphia, Oct. 10, 1900.

To the Trade:

You have already been informed by a circular issued some days since by my predecessor, Mr. Frank A. Faxon, that he has relinquished the office of chairman of the Proprietary Committee of this Association, and that at the recent meeting in Chicago, I was duly elected to succeed him in this position. I now desire to advise you that the office of the committee has been formally removed from Kansas City to Philadelphia. All communications in regard to the work of the committee should be addressed to me here, and will receive prompt and careful consideration.

It shall be my earnest effort to maintain and strengthen the successful operation of the rebate plan, the continued existence of which is admitted by all to be absolutely necessary to provide even a moderate profit in our line of business. We have also repeatedly promised each other to give it our unqualified support. Justice to ourselves requires that these promises should be kept. No infraction on the part of salesman or purchaser should be excused or condoned by the manager or head of any jobbing house.

We are also pledged, both jobbers and proprietors, to give to the new Tripartite Plan a fair and honorable trial, and our best efforts should be directed towards insuring its success. The principle on which it is based, that of sales by proprietors at best prices to accredited jobbers only, is undoubtedly correct, and proprietors should realize that a strict and rigid enforcement of this rule will result to their advantage.

I would also strongly urge upon every legitimate drug jobber (not already a member of this Association) the desirability of joining it. We need the moral, financial and business support of every wholesale druggist in the land. Many members of the trade have given not only their money, but what is more valuable, their time,

to provide the results we now enjoy. It is but just that all those who benefit by existing conditions should contribute to their support.

I desire to express my appreciation of the numerous words of encouragement which have been spoken by members of the Association, and return my thanks for the same. I shall endeavor to merit a continuance of the kindly feelings expressed, and hope to receive your earnest, loyal and continued support. Very truly yours,
C. F. SHOEMAKER.

Branch Stores Must Be in Charge of Registered Pharmacists.

Registered pharmacists having branch stores in Pennsylvania must place a registered pharmacist in charge of each branch. In a recent opinion rendered by Judge White, of Allegheny County, the Court said: "Mr. B. was at that time the actual manager, and for a while he conducted the business entirely. This man G. was there assisting during a portion of the time that Mr. B. was actual manager, but Mr. B. entered some other business, and was there only a part of the time afterwards, but was still retained nominally as manager. He was not there at all times ready to fill prescriptions and compound medicines. Some days he was there only an hour or so. That is not a compliance with the law because the manager and his assistant should be there at all times ready to fill prescriptions and compound medicines."

The Mead Drug Store at Canton, N. Y.

The Mead drug store is located at Canton, N. Y., and not at Portland, Me., as was erroneously stated in the Boston correspondence of this journal last week. C. W. Gulley, who purchased the store some time ago from C. H. Mead, has sold it back again to the former proprietor.

New York and Vicinity.

KINGS COUNTY PHARMACEUTICAL SOCIETY.

The members of the Kings County Pharmaceutical Society are now bending their efforts toward securing a new and handsome college building to supplant the present quarters which are crowded for necessary space to accommodate the students, the attendance having increased 100 per cent. over last year. The matter was brought up at the meeting of the Society Tuesday afternoon, October 9, by William Muir, chairman of the Committee on Supervision and Examination, who said in reporting for the committee that the project was in a fair way to become realized. He had consulted a man at the head of a large financial institution who was willing to advance \$20,000 and build the college, provided the society would advance \$5,000. The building would be 40 feet front by 85 feet deep and three stories high. It was considered better to maintain this height than a four-story building as it would not come under the fire laws. A building of suitable appearance could be erected at a cost of \$20,000 with an additional cost of from \$5,000 to \$6,000 for lots, which it was thought could be secured near the site of the present building on Franklin avenue. It is absolutely necessary to have such a building because of the large increase in the college classes, there being 150 in attendance this year as against 100 last year.

Treasurer Ray stated that there was \$1,500 on deposit at 3½ per cent. for the building fund and the college funds would reach nearly \$3,000. Albert H. Brundage suggested that individual subscriptions be secured among those interested in the work, but as Mr. Muir's report was informal, action was deferred.

Prof. W. C. Anderson, president of the N. A. R. D., reported as delegate from the Kings County Society to the recent convention in Detroit. He said in part: "This is the third time I have reported to you on the same sub-

ject and I want to assure you it is the most gratifying report I have had to make. The National Association of Retail Druggists is doing a good and valuable work. Perhaps the first question which comes to your minds is 'Well, what has it done? What results has it accomplished?' There are some who will go so far as to think or to believe that such an association as the N. A. R. D. could organize on Monday night and be ready for business Saturday without any effort on their part to aid or further the work. The regulation of the cut rate evil has been the greatest undertaking, and in moving toward its accomplishment many obstacles have had to be overcome. In the first place it has been necessary to secure the cooperation of all sections of the drug trade, the proprietor, the wholesaler and the retailer. It was necessary to secure the consent of the proprietors because little could be done by the retailer without them. Then it was necessary to get the wholesalers." Prof. Anderson then briefly but comprehensively gave a short history of the struggles and handicaps the National Association had been compelled to sweep out in its onward movement. The last year had seen the association nearer to success than ever before, because the retailer had at last been aroused to action and it now remained for him to decide just how far this success should progress. Continuing he said: "It comes upon the pharmaceutical societies to say who are the legitimate druggists. Conditions in different parts of the country are different, and I do not mean to say we could advance the price of proprietary articles in full here first. I believe where druggists agree to maintain a set price they are to be considered legitimate, and those who refuse are the aggressive cutters. This organization should place itself in a position where it shall say who are the aggressive cutters. No need to keep a black list; just go about the matter peaceably, and I would suggest that letters be sent to all the dealers hereabouts informing them of the proposition of the N. A. R. D. It is not the

purpose; to oppose any, but to help all." Here he read resolution B, adopted at the last convention. It follows:

Resolved, That the National Association of Retail Druggists is gratified in being able to announce the success which has attended the efforts of its Executive Committee to secure the adoption of its plan for the prevention of price cutting on proprietary medicines by the manufacturing and jobbing branches of the trade.

That we reaffirm our belief in the efficacy of the plan, and our fidelity to its provisions.

That the success of the labors of the Executive Committee brings home to the retail druggists of every section the duty to themselves, locally, and to the retail trade generally, of prompt and decisive action upon their part, in conformity with the terms of the plan, which became operative August 17, 1900.

That we call upon the associations affiliated with the N. A. R. D. and all organizations of retail druggists throughout North America to proceed immediately to place their members in position to reap the benefits of the successful work of the national body, the manner of how best to designate aggressive cutters being left to the discretion of the local associations, under the advice of the Executive Committee, wherever desirable.

That the Association approve the recommendation of the Executive Committee that local associations confine their notifications to the local jobber, reporting actual conditions to the National Association, and that the National Association pledges itself in each and every case to render to the local association prompt, determined and loyal aid in securing the rights of the members of the local body.

That the Executive Committee is instructed to immediately transmit to the officers of the associations in membership detailed instructions respecting the steps necessary for the guidance of the associations in the enforcement of the terms of the plan.

That while the local associations have the right, under the plan, to employ their own judgment respecting the formation of a schedule of prices, the National Association urges these associations to prepare and maintain the most advantageous schedule possible, because of the great importance to the retail trade as a whole of such action on the part of the affiliated bodies.

He then recommended that the society appoint a committee of five to act with sister societies in relation to the adoption of the tripartite agreement. "Before leaving the subject," he said, "I want to call attention to the attitude of the wholesale and proprietary associations. At Detroit the conditions were most harmonious. All the societies worked toward one end and all seemed enthused with the subject. At Chicago the conditions were even more favorable to the retailer. The two associations at Chicago were more determined, I might say, than the retailers. They felt as though their lives and the lives of the retail druggists depended on the action taken." He stated it was not the purpose to antagonize, but to meet the aggressive cutter half way. In concluding he said: "There is no reason why the plan should not be a success if the retail trade will stand by the plans adopted by the N. A. R. D. The Kings County Society has an excellent and honorable record." Here he touched on many things that had been done by the society in furthering the interests of pharmacists and "when we look over our history we find we have always taken a legitimate stand. The Kings County Society as ever is ready to lending a helping hand and the N. A. R. D. is reaching out for that helping hand which our society shall give to help work out this plan.

Prof. Anderson was roundly applauded at the conclusion of his remarks, and on motion President Kleine extended the congratulations of the society to him on his excellent report. William Muir was then called upon and he gave an excellent report. He had a feeling of misgiving regarding the N. A. R. D. when he went to the convention, but this was removed when he saw the enthusiasm manifested. One of the most able delegates from this State was chairman of the Committee on Resolutions and he gave a patient ear to all desiring hearings. One or two talked on the co-operative plan, but this was not thought well of by the association. It is the desire of the N. A. R. D. to have all on the same level, and while the co-operative plan may be good for the man with a little money laid by to go into it, it is not good for the poor man. The N. A. R. D. could not adopt it. The convention talked of nothing but higher prices and Mr. Hirsman worked harder than any man in the convention, not excepting the president himself. He is honest and the best representative of his organization that could have been found, but he wouldn't be not to abide by a majority vote. He represented his organization faithfully and well. Mr. Hammer was there in the in-

terest of a new organization. He had nothing else to discuss or no other interest. He was referred to the Committee on Resolutions. Everyone had a chance to talk, if such is meant by the "experience meeting." I believe we should have more of them. There is nothing impracticable about the N. A. R. D. plan. Let's try it. If it don't go as expected I will be the first man to cry against it and the first one to vote against its continuance. We have done nothing but talk, and now I hope we'll act."

R. C. Werner asked if any of the jobbing trade in New York was represented at the Chicago meeting and on receiving an affirmative answer asked if C. N. Crittenton Co. was favorable to the tripartite agreement. To which he also received an affirmative answer. He then said he was glad the firm was in favor of it. He also wanted to mention that the agent in the pay of the jobbers, F. E. Holliday, had been chosen to the most important office, chairman of the Executive Committee, and he could not understand it. "I can't understand," he said, "why a man not a retailer should be chosen to such a position. It looks to me as though the manufacturers were being used as a club over the head of the retailers by the jobbers in putting such a man in such an office. The action has created grave doubts in my mind as to whether the plan of the N. A. R. D. can be carried out. It looks to me as though influence was exerted. I must confess that notwithstanding the great results that are expected to be accomplished I can only regret that such a man was elected, for, acting as the jobbers' agent, he cannot act independently."

Mr. Muir then said he went out to the convention filled with the same feelings Mr. Werner had just expressed, but when he learned what the man had done he doubted his sincerity no longer. He had accomplished much and was now in a better position to do more for the retailer. "All the retailers had contributed altogether was \$4,100, and of this the secretary had expended \$3,000. It was not possible to send a man all over the country on this. The retailers were without funds to send a man to represent them in this locality and in that, but when they were ready Mr. Holliday would go. I found I could not put a finger on a wrong act he had done. We expect everything when we have nothing to give."

Prof. Anderson said: "There is a different way of looking at his position as a retailer. I'd like to ask if any of you would be willing to give up your business to serve the retail druggists. He gave up his position in Topeka, Kan., sold out his interest in the store he held to serve the retail druggists, and he has proven a most efficient man. I know his work placed us in the position we occupy to-day. You may write letters to wholesalers, but you won't get results unless the retail druggists are organized. They are now organized, and if you should go around I dare say you will find 95 or 98 per cent. willing to listen to your plans. Mr. Holliday has brought eighty of the most prominent manufacturers into this agreement and 90 per cent. of the wholesalers. Because he had retired from the retail business but one year, should he lose his personality? No one can put a finger on him, and one year hence it may be said that by his effort we can report not only the wholesalers and proprietors, but the retailers as well working together."

Mr. Muir was heard again. He said: "We want a man in the retail end to devote his whole time to our interests and you can't do that and attend to business. We looked for a man who was willing, and we found in Mr. Holliday all that was needed."

Then Mr. Werner said: "The election of Mr. Holliday showed the spirit of the convention. He controlled it and everything went as he said. Scant courtesy was given to the co-operative business, which is just as legitimate as any jobbing business in the country. If I had been there I should have objected strongly to its being cried down. The jobbers object because it takes away some of their profits, and they were represented by Holliday. He controlled them. They (the jobbers) want the cream. The jobbers have been dictating to the retailer and under present conditions the jobbers' gain has been the manufacturers' gain, but not so with the retailers. We have been suffering most and in my opinion the convention of the N. A. R. D. at Detroit was but a side show to the convention of the N. W. D. A. at Chicago."

Mr. Muir said in reply: "He must be a good man who can control 200 picked men from all over the country, and if he can hoodwink such a delegation of some of the brightest men in pharmacy he deserves credit. But such talk is childish. He could not control those men and he didn't try. Mr. Holliday had nothing to say in the Nominating Committee nor in the Committee on Resolutions. No man could control us. It is easy to criticize when the meeting is over. I don't want such insults to be issued against pharmacists. No one man can control 200 or 300 of the best minds of the country; that is infant talk. I don't like men to come here after the meeting is over and complain. Why didn't you get elected a delegate from your own organization and go there and see for yourself. The man you sent represented the society well. He is greater than the organization. He rises above it, and I admire such men. Then to talk of controlling him. Hammer was there, though, and he had his hammer in action all the while, hammering at everything until he nearly hammered one man to death. McIntyre, of Philadelphia, was also there, and these two went out of the convention crying out against it. McIntyre never said 'No' when Holliday was elected. He was not put on any committee, and even the men from his own State did not support him. I was there during every minute of the convention and I wasn't controlled by any one nor could any one have controlled me."

Mr. Werner again: "Mr. Muir had the same opinion as Mr. Holliday, as did a great many others, and Holliday had the control of these opinions, as it were, being leader of them. I like to see him defend Mr. Hirseman because that shows his friendship for him. Hirseman's work as chairman of the Committee on Resolutions may have been excellent, but he made a mistake in representing three societies when these associations do not in all things agree. Hirseman was our delegate, and as such we expected him to present our views. If he represented us he had no right to act as he did."

Mr. Muir said: "That's a good deal like the man on the jury who said he was right despite the opinion to the contrary of the other eleven. Such was the case when two men stood up before the whole convention. There was no chance of what they proposed going through and Mr. Hirseman would have held himself up to ridicule had he sustained them. Mr. Hirseman told me he would like to get it through, but there was no chance."

Secretary Tuthill told the members of an association he had found in the Seventeenth Ward of Brooklyn, known as the Pharmaceutical Association of Brooklyn. It was composed of fifty-two drug store proprietors, and was working along on the N. A. R. D. plan with excellent success. It had a price schedule and was willing to contribute its pro rata share to the N. A. R. D. This ended the discussion.

A. H. Brundage next spoke of the fifty years' record of Dr. P. W. Ray, and concluded with a motion that a committee be named to draft a testimonial to Dr. Ray from the Kings County Society. President Kleine named the following: C. W. Kline, A. H. Brundage, F. N. Bliss, William Muir, R. C. Werner, Charles F. Schleussner and Prof. W. C. Anderson. A photograph of the delegates to the N. A. R. D. convention was ordered placed in the room.

E. L. Young was then given the privilege of the floor and he expounded a scheme whereby druggists could purchase sundries at prices considerably under the present cost by forming association. He was requested to present a prospectus at the next meeting.

Treasurer Ray reported a balance on hand, September, \$274.81; receipts, \$166; disbursements, \$67.90, leaving in the treasury \$372.91.

The degree of graduate in pharmacy was conferred on Miss Rosie Carp and George Reither.

Applications for membership were received from Avery L. Reed, V. M. Friedman and John Katterle. L. C. Morgenstern was elected to membership.

A communication was received from the Manhattan Pharmaceutical Association requesting that a committee of five be appointed to confer with a like committee named by the Manhattan body to devise means for working out the N. A. R. D. plan. President Kleine named the following: William Muir, Thomas G. France, Prof.

William C. Anderson, O. C. Kleine, Jr., and C. F. Schleussner.

Another communication was read from W. L. Schaaf, of the Grievance Committee of the Manhattan Association, asking that one or more members be sent to the next meeting of the Manhattan organization in reference to the siphon question, and William Muir was named to act.

TO FIGHT N. A. R. D.

Retail Druggists' Association Takes Action at Its Last Meeting.

At the last meeting of the New York Retail Druggists' Association, Friday evening, October 12, or rather, Saturday morning, for the session did not begin until 12 o'clock, it was unanimously decided to take the initiative in "an attempt," according to J. Hammer, the association's delegate to the recent convention at Detroit of the N. A. R. D., "to break up the clique ruling that organization." The committee named was J. Hammer and A. Goldman, and its duties are to communicate with sister organizations asking the naming of similar committees in order that enough strength may be secured to force the N. A. R. D. to place co-operative clubs in the list of recognized jobbers.

Mr. Hammer reported as follows: "I am sorry I cannot make as encouraging a report as Mr. Hirseman did on the floor of the convention at Detroit, but I was not as popular as he, and was regarded more as a black sheep in that I had fought for certain rights against the powers that be. I could have made an encouraging report of the work done had it not been in the hands of a certain clique. There were delegates present from all over the country, and they were quite intelligent, but there was evident that fault which has caused the ruination of many another good organization; these men were too trusting, too confiding, and therefore the scheming few did their work well. The chief executive officer of the N. A. R. D., the chairman of the Executive Committee, Mr. Holliday, is in the pay of the wholesalers' association. This was admitted by the president, who made apology for him by saying it was necessary for Mr. Holliday to have money for expenses to move around on. You understand when a business man invests his money he expects some return for it; it is the same way in this case; money has been paid for certain work to be performed, and it was done well. Mr. Holliday did all right. The association don't meet every month, and the work had to be done. It is a question whether it is dignified to receive pay from one organization and work for another, but then the N. A. R. D. is not an organization with a plan, but a plan with an organization. Try as hard as I and another man would, we could not make them believe this was not a retailers' organization. It was hard to bring this out, and he was always trying to hamper me, and, contrary to all parliamentary custom, some one made a motion contrary to the proposition I was trying to introduce, and it was carried. As far as the clique is concerned, it may be typified by the way the elections were conducted. There is a clause in the constitution of the organization which says elections must be by ballot, but not so with this election. This man Holliday was obnoxious to many men in the convention; there was opposition to him, and he knew it, but when a motion was made that he be elected, some one seconded it, and before five minutes had passed, he with the other seven officers was elected, not one objection being made, and I being classed as voting with the rest. The whole election was left to the last day. Then to gain time, there being only a half hour left for the session, a Salvation Army meeting was held, where any one who had any wind to blow off could blow it for all he was worth. One over-zealous delegate took advantage of the opportunity to fish out a lot of poetry he had written about pretty rainbows and all that sort of thing, and fully one-half of the delegates left the convention. Then the election was jammed through. The whole thing was run by the wholesalers. They used the manufacturers to make the retailers believe they were working for their interests. I met Mr. McIntyre, of Philadelphia, and he told me our efforts would be futile. He also informed me that I had a better argument to present than he, representing the Retail Druggists' Association.

as this association was better than the German and Philadelphia organizations. I might offer an argument that would act as a wedge against the argument offered by the association against Philadelphia. The resolution was brought up, put, carried and referred to the Committee on Resolutions. When I went before this committee to argue it, that resolution was not there. I had brought a copy of it with me, however, but it was never introduced. Holliday wanted to floor me by asking a few questions as follows, with my replies: 'Don't you buy goods cheap so you can give them to your members cheap and they can sell them cheap?' 'No; we buy cheap, sell cheap, and our members get regular prices.' 'Don't you buy so they can enrich themselves?' 'No; we buy as I have said, and are not looking for dividends.' Then he sat down, and my resolution was tabled. It was due to some extent to my influence that Hirseman was made chairman of the Committee on Resolutions. I thought he was not friendly toward me, but I wanted him there so if he was averse he would show his true colors. And as I expected, the resolution I had introduced and was referred to his committee, was lost.

"The pharmaceutical press is also in the clutches of the wholesalers, just as well as the N. A. R. D. The officers' stenographic reports were carefully blue-pencilled so that any reference to the wholesaler would be left out. I occupied sufficient time in speaking against the blind way in which business was being done to receive recognition, but all I said was left out of its columns. When I came back to New York, I was somewhat discouraged because I had been left out, but to my pleasure and salvation, I found my light was not to be hidden behind a bush, and the truth at last came out, when I spoke at the German Apothecaries' Society. I was wondering how I could let the society know its delegate had not done his work, when Mr. Gregorius called me up and invited me to be present. I was hampered at the meeting by the presence of Mr. Hirseman, and I could not take him over the coals and give him his due, so I left him out. The members rejected his report, and not being satisfied with this slap at the N. A. R. D., wished to withdraw from it, but it was finally considered advisable to lay the matter over to the next meeting.

"I would recommend that we take the initiative in this matter. There are societies all over the country which will join us when we have made our intent known. I would advise the appointing of a committee of two from this organization to confer with similar committees from the Philadelphia and German Apothecaries' Association, and that they work out a plan which all will abide by. I would not recommend withdrawing from the association, and I am loath to see it given up into bad hands. Next year we may be able to send more than one delegate, and if so, we can make a fight against that clique that will do some good. After we fail, then we will know that it is hopelessly in the hands of the clique, and we can withdraw. I believe it is better to fight within. We should write to others, and if possible turn this good weapon in bad into good hands."

Mr. Hammer's report was received, and a vote of thanks tendered him for his persistent labors in the interest of the retail druggist.

A Hammer asked for what purpose the so-called clique had been formed, and J. Hammer explained as follows: "The N. A. R. D. represents an association of men conducting retail businesses. The Associated Drug Company represents an association of just such men. These associations are coming up all the while. Retailers look upon them as a logical evolution of trade. This New York Retail Druggists' Association wants to accomplish such an end. The wholesale druggist, if friendly, would have this association put on the list, and that is why they employ paid agents, because they fear it, and don't want to give it growth. It has paid them to have such a man as Mr. Holliday, who, Mr. Gregorius has said, receives as high as \$5,000 yearly. It is said this year's business of the Consolidated Drug Company has reached \$225,000, and the Philadelphia association is making itself felt. Chicago is also restless. The whole purpose of the N. A. R. D. has been to divert the attention of the retailer from this "chasing rainbows," and trying to raise for them cents instead of dollars. This fight is for the retailers, and this is the

way the N. A. R. D. has treated the retailer, not the wholesalers nor manufacturer."

The motion for a Committee of Two, as above stated, was then carried.

A. Hammer started a discussion by stating he believed the whole matter should come before the directors of the Associated Drug Company, and not the Retail Druggists' Association. L. Marmor thought it would be well before opening the fight to communicate with the N. A. R. D., and ascertain its position. There the matter ended.

A. Goldman introduced a resolution that physicians should be provided with the formulas of common remedies in the National Formulary, but his motion was tabled. A. Bakst urged that each member act as a committee of one in bringing in new members. The receipts of the meeting were \$51.

OPPOSING THE WAR TAX STAMP.

At a meeting of the New York Board of Trade and Transportation, Wednesday, October 10, it was unanimously decided to begin an effort, by the appointing of a committee of seven, to confer with similar committees from other organizations toward the repeal of the war stamp tax. Thomas F. Main, of Tarrant & Co., was father of the resolution, and in discussing it said the board was already on record as being in favor of the repeal of the law as soon as practicable. He mentioned the statement made before the Ways and Means Committee at Washington by one of the leading manufacturers of proprietary medicines that the tax on his goods under Schedule B of the War Revenue Act amounted to 4½ per cent. on his gross sales and 25 per cent. on his net income. Mr. Main asserted that this tax was manifestly a discrimination against a limited class of proprietary articles and that it imposes, in fact, double taxation, in that the manufacturers of liquid medicines and perfumery are also heavily taxed by the duty on distilled spirits, particularly the tax on alcohol. The above manufacturer had testified that the tax on distilled spirits had cost him \$50,000 in addition to his heavy taxes under Schedule B of the War Revenue Act.

F. B. Thurber argued along the same lines, urging business men to bestir themselves and work toward having the act repealed. The same question will come up before a meeting of the Drug Trade Section of the board this afternoon.

Notes of the Drug Trade Club.

At a meeting of the Board of Governors held Wednesday afternoon, October 10, the following officers were chosen for the year: President, J. L. Hopkins; vice-president, William Hamann; secretary, Harry Hall; treasurer, Alexander Robb, the last two being re-elected. The board also elected these persons to membership: Resident—George W. Irwin, John N. Ryan; non-resident—W. J. Webber, Boston. President Hopkins announced the committees for the year as follows: House—G. D. Dorsey, W. S. Glunel, H. M. Hitchings; Finance—F. L. Upjohn, W. O. Allison, C. A. Schieren; Membership—S. H. Carragan, G. W. Kenyon, W. H. Childs.

The following registered at the club during the last week: P. G. Ott, Bangor, Pa.; W. A. Dawson, Hempstead, L. I.; F. W. Atwood, Boston; Dr. B. L. Lambert, New Haven, Conn.

The New York Credit Mens' Association will hold a business meeting in the rooms this evening, following which a dinner will be served.

Drug Trade to Parade for Sound Money.

The members of the drug trade in this city are concentrating their efforts in the McKinley and Roosevelt and Sound Money Drug, Paint, Oil and Chemical Trades Campaign Club to turn out in large numbers in the Sound Money Parade November 3. S. H. Carragan is chairman of the Campaign Committee of the club and he has recently sent out letters to all branches of the trade requesting the number of men each firm will have in line. Responses have come in favorable to an excellent showing and it is believed the trade will be represented by a larger number than in '96, when over 5,000 were in line.

The Society of Chemical Industry.

The first meeting of the session of the New York Section of the Society of Chemical Industry will be held at the Chemists' Club, 108 West Fifty-fifth street, to-morrow evening, at 8.15 o'clock. Prof. C. F. Chandler will address the meeting, and the following papers will be read: "The Electrolysis of Calcium Chloride Solutions with Reference to the Formation of Chlorate," S. A. Tucker and H. R. Moody; "Additional Analyses of Asafetida," R. W. Moore; "On Nitric Acid Analysis," J. R. Pitman. Prior to the meeting the usual informal dinner will be held at Hotel Grenoble, Seventh avenue and Fifty-sixth street. The section will hold all meetings hereafter in the Chemists' Club instead of at the New York College of Pharmacy as formerly.

NOTES.

—Sidney Faber, secretary of the Board of Pharmacy of the City of New York, calls attention to the fact that a number of persons who have passed their examinations before the board have failed to get their qualification certificates and urges them to get the certificates, as they entitle them to a State certificate after January 1, 1901, when the present board will cease to exist. The persons whose names are given below are requested to call for the certificates at the office of the board at 115 West Sixty-eighth street on Tuesdays, between 2 and 5 P. M., and the documents will be delivered on proper identification. Those entitled to the certificates are: John A. Bates, Harry C. Bloom, Frank Brust, Joseph H. Cahoon, Mary L. Campbell, John W. Casey, John C. Dalton, Jay S. Doudna, Arnold F. Goldwater, Simon S. Goldner, Frederick Helbig, Henry P. Hull, William R. Hoyt, Ralph E. Hughes, Frank Gilman Jones, Edward N. E. Kleine, Watler I. Krappe, Herman Lange, Robert S. Lehman, James H. Martin, Harry C. Nott, Thomas O'Neill, John M. Hopper, James F. Paisley, Isaac W. Price, Carmine C. Pugliese, Aaron I. Raisman, Charles F. Richter, William R. Robinson, Gustave Theodore Ruckert, Erich G. R. Sattler, Michil Schwartz, Albert C. Sellery, Walter P. Stowe, Bertram H. Townsend, Oscar Turgeon, Lacey Tyler, William W. Wasser, William Whitehead, Lionel Widder, Arthur D. Wyckoff.

—The following persons were convicted and fined \$50 each in the Court of Special Sessions, Manhattan, on October 11 for permitting unlicensed persons to compound prescriptions: Dr. Julius Lewinsky, 114th street and Madison avenue; Ralph B. Robbins, 503 Lenox avenue; Elias Goldstein, 1617 First avenue; Naum Fetter, 1474 Fifth avenue; Dr. William Feely, 379 First avenue; Ernest Denicke, 158 Second avenue. A number of persons are entitled to re-examination and the board particularly requests such to come up for examination no later than December, as this board goes out of existence at the end of the year and the succeeding State Board cannot permit such persons to come up for examination without payment of another fee.

—Walter S. Rockey has recently devised a new timetable for his employees, which he has established in his stores. By its operation the men change weekly, one coming on at 7 o'clock one week, the next week he begins at 8 o'clock and the next at 11.30. Beginning with the man who comes at 7 o'clock, the schedule is as follows: A.—7 to 11.30, 12.30 to 6.30; B.—8 to 12.30, 5.30 to 12 midnight; C.—11.30 to 5.30, 6.30 to 12 midnight; D.—7 to 11.30, 12.30 to 6.30; E.—8 to 12.30, 5.30 to midnight; F.—11.30 to 5.30, 6.30 to midnight.

—John Albert, Jr., one of the well known members of the German Apothecaries' Society, and a druggist at No. 225 First avenue, died at his home Wednesday, October 10, after a month's illness with typhoid fever. Had he survived until Friday, October 12, he would have been 43 years old. He was popular, an active worker in the German Society, and his loss will be deplored.

—The Le Maire Optical Co. has been incorporated in this State to manufacture, buy and sell optical goods, surgical instruments and druggists sundries, and will shortly begin business in this city. The capital stock is given at \$200,000 and the incorporators are Joseph A. Le Maire, Samuel C. Silverman, Benjamin Foster and William H. Ruby, of New York, and Joseph Le Maire, of Newark, N. J.

STORE OF BENJ. ROSENZWEIG,
BROOKLYN, N. Y.

—Among the druggists who called on the trade last week were: G. C. Himmelman, Akron, Ohio; S. H. Sarles, Mt. Kisco, N. Y.; A. B. Paine, Columbus, Ohio; C. H. Moore, Baltimore, Md.; W. H. Sullivan, manager for Dr. George F. Servis, Plainfield, Conn.; I. M. Swezey, Port Jefferson, L. I.; T. S. Armstrong, Plainfield, N. J., and C. E. Webster, Boston, Mass.

—The Drug Trade Campaign Club began the first of its series of noonday meetings in the headquarters, 51 John street, Monday. The meeting was highly successful and was largely attended. The Metropolitan Quartette furnished several pleasing songs. The meetings will continue to Saturday, November 3.

—The Globe Remedy Co., with offices in this city, has incorporated under the laws of this State for the manufacture and sale of drugs. The incorporators are P. C. Cowling, W. Phipps, Lottie Longley, M. E. Longley and H. V. Brandenburg, all of New York City. The capital stock is given at \$200,000.

—A. B. Baltzly states that he has not tried to break his contract for the rental of the store at Ninety-sixth street and Broadway, as was stated in the Era last week. Mr. Baltzly says he intends opening the new store in about ten days. There is a "To Let" sign in the window of the store at Ninety-seventh street and Broadway, which Dr. Shibley was to occupy.

—A new corporation to bottle and sell spring water was incorporated under the laws of this State last week, the firm name being William Seitz & Company. The capital stock is given at \$25,000 and the incorporators are Jacob Herb, William Seitz, Jr., and Otto Nuoffer.

—The new All-State Board of Pharmacy is in session at the Albany College of Pharmacy to-day, the meeting having been called for the purpose of discussing preliminary organization and deciding on a form of rules and regulations, certificate, books, etc.

—The annual meeting of the Jersey City Druggists' Association was held on Tuesday afternoon, October 16, when officers were elected and a report of the delegates to the N. A. R. D. convention at Detroit was made.

—G. C. McKesson will act as marshal of the company of employees of McKesson & Robbins which will participate in the Sound Money parade in this city November 3.

—Thomas P. Cook, manager of the New York Quinine and Chemical Works, is on a business trip in the South. He will remain away about a month.

—Harry Ferguson, of the New York College of Pharmacy, is active in politics, and last week he acted as inspector of election in his district.

—Matthew Kramer has opened a new store at Mulberry and Worth streets. He was formerly employed in Olliffe's pharmacy, on the Bowery.

—A. H. Solotaroff, of No. 71 Broome street, is receiving the congratulations of his friends over the arrival in his home recently of a baby boy.

—Harvey C. Clark, of Farrand, Williams & Clark, wholesale druggists of Detroit, was in the city for a brief visit last week.

—The Park Pharmacy, Walker & Driver, proprietors, has opened at 100th street and Central Park West.

—It is stated that A. E. Pickard, a well-known druggist of Roslyn, L. I., is to be married shortly.

—Percival A. Tilley, of this city, has accepted a position with Dr. A. M. Heron, Lakewood, N. J.

—Allen Brown, druggist and acting postmaster at Minerva, N. Y., was in town last week.

—Dudley T. Larimore & Co. will open a new store shortly at No. 537 Fifth avenue.

—L. M. Haanen, of No. 614 Vanderbilt avenue, is confined to his home by illness.

—J. F. Farley has opened a new store at 139th street and Eighth avenue.

—The Apothecaries' Bicycle Club spent last Thursday at Englewood, N. J.

IN AND ABOUT BOSTON.

Springfield Drug Clerks Want Shorter Hours.

Boston, Oct. 13.—The Drug Clerks' Union of Springfield held one meeting a few evenings since and are to hold still another for the purpose of coming to some definite understanding as to what shall constitute a reasonable time limit for a week's work. Thus far it appears to be the general opinion that seventy-five hours is enough for any clerk, but in Springfield, while some of the employes do not work that long, thanks to thoughtful employers, the majority are required to labor much longer. Another matter upon which the clerks would like to see some local legislation is the hour of closing. Some of the druggists of Springfield close their places of business at 10 o'clock, but they are not many, for most of them keep open until 11 and even 12 o'clock. The claim is made that comparatively little business is done after 10 o'clock, so there would be little or no loss to the business if there was a uniform hour established for closing up. To further bolster up their contention, the members of the Drug Clerks' Union claim that all physicians carry emergency cases, so there is seldom any need of filling a prescription during the night. It is understood that one of the prominent druggists who is in favor of the 10 o'clock closing movement recently circulated a paper among his fellow druggists for signatures to such an agreement, and all but four of the downtown druggists signed it.

NOTES.

—The Charlestown Navy Yard, so it appears from the officers and men there, has been overrun by bedbugs and waterbugs, enemies against which they have been contending and before which they have been forced to surrender. The pests not only have invaded the kitchens and dormitories, but have even encroached on the officers' quarters. Organized steps to remedy the matter have been taken from time to time, with but temporary and indifferent success. Various dealers in insecticides and poisons have submitted bids for cleaning out the undesirable visitors, and a contract has been placed for \$400 under which the bugs are guaranteed to disappear.

Gates' drug store in the Forest Hills section of the city was the scene of a sad occurrence an evening or two ago. A Mrs. John D. Mee, residing in the West Roxbury District, was on her way to a wedding accompanied by her husband. While on the electric car she complained of not feeling well as they approached the square at Forest Hills and was accordingly taken into Mr. Gates' store. She immediately lost consciousness, and although everything possible was done for her, she died in a short time. The doctor who was summoned pronounced it heart disease.

—Arthur Burwell, proprietor of the Adams House Pharmacy, has been held for the Circuit Court Grand Jury which convenes this month, by United States Commissioner Fiske, after a hearing on a charge of depositing a scurrilous and defamatory postal card in the mail. The card was sent to Dr. Oppé, of Hyde Park, a former employe of the defendant. Burwell was allowed to go on his personal recognizance.

The Boston City Hospital is soon to have a downtown relief station, which is to be erected on the site of the old Boston & Maine Railroad station in Haymarket Square. The building will cost \$100,000, and the basement will be devoted largely to medicines. On the first floor there will be a well-equipped pharmacy, where everything necessary in hospital work may be had.

—The moving of E. M. Smith, a Waltham druggist, to a new corner store in the Lawrence Block, is important to the residents of that city, inasmuch as the trustees of the public library, situated next to Mr. Smith's old store, long have coveted his place as an addition to the "many-storied" building. This now is made possible.

—The famous prize cattle from C. I. Hood's farm at Lowell continue to win admiration at county fairs. Besides capturing many fine prizes at the New England fair at Old Orchard, they have been on exhibition at Nashua and Rochester, N. H., Greenfield, Mass., Brattleboro, Vt., and other places.

—W. P. Draper, the well known druggist of Springfield, is home after a delightful Summer spent at various points along the picturesque North Shore. Mr. Draper was accompanied by his wife, and together they took in all the historic points of interest in and about Salem.

—Horace N. Cowan, of Woburn, has been made president of the Red Cross Chemical Company, recently organized at Portland, Maine, with a capital stock of \$25,000, of which nothing is paid in.

—Thomas Burke, of Marlboro, is named as treasurer and president of the Burke Drug Company, which was organized at Portland, Maine, with a capital of \$5,000, of which nothing is paid in.

—H. W. Goodwin, dealer in drugs, chemicals, essential oils, extracts and the like, who for a long time has been at the corner of Milk and Batterymarch street, is to move to No. 80 Broad street.

—The week's exports from the Port of Boston include, among other things, drugs and chemicals, \$15,290; India rubber manufactures, \$24,531; tobacco, \$181; spirits, \$20,787; hops, \$237.

—The Prescott street store of Clark & Mahoney, East Boston, was broken into Saturday night, October 6, the burglars securing about six dollars which was in the cash register.

—George Webster, one of the several clerks at Freeman's drug store in Chelsea, is spending a two-week's vacation at the White Mountains.

—Arthur Dearborn Reycroft, well known druggist of East Cambridge, was married this week to Miss Helen Gertrude Herlihy, Charlestown.

—Daniel H. Maguire, a druggist of Haverhill, has filed a petition in bankruptcy; liabilities, \$6,178.28, and assets, \$2,375.

—A druggist's license has been granted to J. Albert Sexton, of 372 Belmont avenue, Springfield.

—William B. Pitts is the new manager of A. O. Marshall's drug store at Beverly Farms.

A Profitable Side Line.

We display on another page the advertisement of Falker & Stern Co., Chicago, large wholesale dealers in china, bric-a-brac, lamps, etc. They have a magnificent line for the 1900 holiday trade which every druggist ought to see, and to those who are unable to visit their show-rooms at 150 Lake street, they will be very glad to mail their illustrated catalogue.

The class of ware which they handle makes an extremely profitable side line for any druggist. It is a line of goods which will bring customers into the store, and will afford a splendid profit after you get them in. The goods are easy to sell, they decorate the store and advertise it, and if well bought they sell themselves.

LUBRICATOR FOR BICYCLES.—The following has been patented in Germany: Olef, 60 parts; rosin, 20 parts; vaselin oil, 50 parts; castor oil, 5 parts. Melt together. Apply sold by daubing it on the axle. The motion of the wheel ensures its even distribution. (Nat. Dr.)

PHILADELPHIA.

The "Free Dispensary" Evil.

Philadelphia, Oct. 13.—There is considerable complaint in local drug circles over the spread and growing abuse of the free dispensaries. If the supplying of medicines by these dispensaries was confined to the really needy class, no one would complain, the druggist least of all, but this is just exactly what is not the case, and many persons are to-day applying for and receiving medicine and treatment as charity patients, who are well able to pay for what they get. It is no uncommon thing, so says an interne in one of the largest dispensaries, for women to dress in their oldest clothes, drive in their carriages to a point near the dispensary and from there walk to it, and apply for treatment free, as being unable to pay for even the medicines needed.

Of course, the physicians feel the effects of this abuse no less than do the druggists, and when one considers that there are no less than seventy "free dispensaries" in Philadelphia, it is small wonder that a feeling of indignation over this abuse of charity has arisen among men of the two professions. The city of Philadelphia employs two physicians, allopathic and homeopathic, for each ward, to visit and attend charity patients, and in each ward there is a druggist who fills the prescriptions sent him free of cost to the patient, for which he is paid a small sum by the city. The "ward druggist" is appointed after bids have been tendered and received for a net price to cover every prescription sent in, the one bidding the lowest price getting the appointment. In the past it has been no uncommon thing to find druggists bidding against one another with a reckless disregard of the welfare of others; ten cents is a fair average of the prices for which the druggist offers to put up every one of these prescriptions, regardless of what the formula may be. This phase of the question is receiving earnest attention from the P. A. R. D., and it is hoped that when bids are asked for the coming year better prices will be asked for by the competing druggists.

Committees from the State Medical and Pharmaceutical Associations and the Philadelphia Association of Retail Druggists have been appointed to work in co-operation to secure some restrictions on the loose practices of the "free dispensaries" and to endeavor to correct some of the many evils they have engendered.

P. C. P. Notes.

The first of the series of social meetings for the coming scholastic year was held in the museum hall of the college last Tuesday evening. First Vice-President Jenks, of the P. C. P., opened the function with a short address of welcome, expressing the wish that future entertainments would find an increasing number of druggists and students coming together to enjoy the social features of these evenings and to form friendships between the men of to-day and the men of the future. Prof. Kraemer, on behalf of the faculty, also extended the welcome of the college to all members of the many branches of pharmacy in the city. The programme of the evening was pleasantly arranged to include music, dancing, the reading of a few choice literary selections and the serving of light refreshments towards the close. Many of the attending druggists had brought their wives, sisters or cousins, and, of course, every student that could brought somebody else's sister or his hoped-for-wife-to-be, so with these fair assistants, the Committee on Entertainment of the Alumni were able to make even the most confirmed misanthrope thoroughly enjoy himself.

These social meetings will be continued until well along in the spring, and there is possibly nothing that could add more to the imparting of a friendly feeling among druggists than an attendance on them. "All work and no play makes Jack a dull boy," and for none is this truer than for the druggist.

College work has about settled down to its normal grooves by now. The students have all been enrolled and classes formed, societies organized and re-organized, and now nothing remains but the hazing of a few obstreperous freshmen to complete the opening functions. The attendance on the commercial course is greatly

increased, and the future druggists seem to enter into the mysteries of business transactions with a burning desire to learn all about 'em.

The Sale of Medicines in Department Stores.

The Committee on Lit Bros., of the P. A. R. D., in an investigation growing out of that question, made the unwelcome discovery a week or so ago that the sale of strictly medicinal articles is quite common in most of the big department stores. All of them but one, Snellenburg's, sell a number of articles, prominent among which is a so-called "Beef, Iron and Wine," which the public can buy for from 39 to 69 cents a pint bottle. One of these stores also sells Elixir of Iron, Quinine and Strychnine, Quinine Pills and Emulsion of Cod Liver Oil to those who like to get their drugs on the bargain counter. These facts occasioned some surprise among local druggists, and action of some kind was urged to be taken at once before the habit spread. One of these firms, Strawbridge & Clothier, expressed their willingness to stop the sale of all medicinal preparations at once when visited by the P. A. R. D. Committee, and it is hoped that the others can be brought to take similar action in the near future. The P. A. R. D. has taken the matter, up in earnest, and, judging by the success of this association in its past work in correcting local evils, it is safe to say that this, too, will be settled satisfactorily to the druggist.

P. A. R. D. Notes.

The Executive Committee expect soon to have an organizer to aid them in their work of increasing the membership of the association, the services of a "hustler" having been secured. It is the intention of the committee to have this gentleman visit every ward in turn, and, while endeavoring to secure members, to look up all the little local evils that may need attention from headquarters and to aid in establishing the price schedule by ascertaining the needs of each particular section. The Executive Committee would be greatly obliged to every druggist if he would post their representative on the conditions of their particular neighborhood and on any local evils or grievances; all such matters will receive prompt attention from them, and thus they will be enabled to render better service to their brother druggists. One effect of the N. A. R. D. convention is already seen in increased prices at Scranton, where they have an active local association.

Prominent Drug Men Dead.

Death has claimed two prominent drug manufacturers of this city. Thomas Moore, who for over thirty years was manager of the big Powers & Weightman laboratories, at the Falls of Schuylkill, died at his home, No. 1639 North Broad street, on Thursday morning. Pneumonia and heart disease caused death, serious illness having followed a cold contracted a week ago. Practically all of Mr. Moore's active life was spent in work for Powers & Weightman, in whose employ he entered while a boy. In 1861 he took charge of the laboratories, and subsequently became manager, retaining that important position until about fifteen years ago, when he retired. Mr. Moore was born in this city in 1834, and had ten children, five sons and five daughters. One of his daughters is the wife of Charles T. Yerkes, Jr. At the present time she is at sea, returning from an extended tour abroad. Deceased was prominent in Reformed Episcopal Church circles, and was really the organizer of the very first Reformed Episcopal Church in the United States. With Mr. Powers and Bishop William R. Nicholson he assisted very materially in the compilation of the prayer book used by Reformed Episcopalians, and also in the enactment of the original constitution and canons of the church.

Henry C. McIlvaine, of the firm of McIlvaine Brothers, drug manufacturers, also died on Thursday, at his home, No. 3308 Hamilton street. Mr. McIlvaine was sixty-two years old and had been ill since January with a complication of diseases. Deceased was born in Philadelphia and educated in the public schools and in the Polytechnic Institute. He served in the United States Navy from 1858 to 1870, retiring as chief engineer. Then he entered the drug business. Mr. McIlvaine was at one time presi-

dent of the Drug Exchange. He is survived by a widow, four daughters and one son.

NOTES.

—John P. Frey has completed extensive alterations at his main store, Sixteenth and Tasker streets, and will celebrate on the fifteenth of this month the twelfth anniversary of starting in business with an elaborate display in his store and the distribution of handsome souvenirs to his large and loyal roll of customers. Mr. Frey, by the way, has the honor of having caught one of the largest rock fish of the season at Sea Isle, the funny prize weighing eleven pounds and measuring thirty-three inches in length. Feeling that such a trophy should be reserved for a true disciple of Isaac Walton, he sent it up to D. E. Bransome, of J. & J. fame, with the recommendation that it be made into a plaster for internal use. Both of these gentlemen are ardent fishermen and can tell a choice fish story.

—Miss Reynolds, for several years apothecary at the Howard Hospital, has severed her connection with that institution and has taken a position with Mrs. Carrie E. Howard, of Sixteenth and Christian streets. P. Mitchell, whom she relieves, after a connection of several years with Mrs. Howard's pharmacy, has accepted the position of manager for U. G. Ruff's branch store at Twenty-sixth and Parrish streets.

—The old Wyeth property on Walnut street, near Seventeenth, was sold at public auction this week and was bought by Gumme Brothers, a real estate firm. Rumor has it that this property was bought in for a syndicate which proposes to erect a handsome and modern theatre on the site which is admirably adapted to such a purpose.

—W. H. Gano, of Seventeenth and Columbia avenue, has completed extensive alterations in his store, during which the entire building was remodelled. These improvements will give Mr. Gano a much larger and handsomer store, the former, indeed, had become an urgent necessity on account of a greatly increased business.

—Quite a number of out-of-town visitors were noted in the drug district during the week. Prominent among these were N. N. Snyder, of Lancaster; A. R. Lewis, sales department manager for J. & J., and A. Swisher, assistant to Mr. Bransome through the State for Johnson & Johnson's goods.

—W. J. Pechin is busily engaged in cleaning up his guns and putting his pointers through their "stunts" preparatory to a gunning campaign up-State. Mr. Pechin is one of the most ardent of the Philadelphia nimrods in the drug line, and is a good one, too.

—Jesse W. Pechin, the popular Columbia avenue druggist, has been confined to his bed because of a painful accident to his foot. At one time the trouble seemed so serious that the attending physicians feared that an amputation would be necessary.

—J. E. O'Daniel is starting a new drug store under the new apartment house at Thirteenth and Walnut streets, the Albemarle. Mr. O'Daniel's place will be known as the Albemarle Pharmacy, and will be a gem as to arrangements and fixtures.

—S. S. Ely, of 4828 Baltimore avenue, has just returned from a vacation of about ten months during which time he has traveled extensively through Mexico, California and the Pacific Coast and latterly in the Adirondacks on his way home.

—Among the many sportsmen who are now at the seashore seeking to beguile the gamy rock fish from his lair is Milton S. Apple, of Fifth and Cambria streets, who is said to be having true "fisherman's luck" down at Corson's Inlet.

—William McIntyre, president of the P. A. R. D., paid a flying visit to New York to attend the meeting of the "Deutsche Apotheker Verein," held last Thursday, and was honored with the privilege of the floor while in attendance.

—A. T. Pollard & Company are remodelling their Fifteenth and Locust streets store which, when completed, will be the largest and one of the handsomest drug stores in the lower section of the city.

—N. O. Harris is fixing up the southwest corner of Sixth and Pine streets as a modern pharmacy, and he expects soon to move there from his present location, the northwest corner, opposite.

—T. J. Lynch has purchased the drug store at the corner of Eleventh and Jackson streets, formerly owned by Mr. White and expects to assume charge very soon.

—E. Short, recently with J. J. Ottinger, has assumed the position of manager for the Kay Drug Company's store at Twenty-first and Norris streets.

—J. V. Slaughter is contemplating another trip to Mexico.

BALTIMORE.

Manufacturers and Retailers.

Baltimore, Oct. 13.—The movement to correct the trade abuses which afflict especially the retailer is practically at a stand still here. A meeting of the Baltimore Retail Druggists' Association was to have been called by President Peck a week or two ago for the purpose of discussing the situation and determining what should be done, but the matter yet remains in abeyance. Whether the organization can be maintained and sufficient interest aroused to give it life only the future will demonstrate. For the present Baltimore druggists are watching the course of events elsewhere.

With the Bowlers.

Baltimore, Oct. 12.—Although the Root and Herbs have lost one of their best men in the person of Andrew Baumgartner, who now heads the McCormick & Co. team, they have developed other excellent material, and promise to keep well in the front during the race for the cup this season. They met last season's winners on Tuesday night and took two out of the three games with decisive scores, the totals being: Root and Herbs, 773, 725 and 887; Sharp & Dohme, 785, 679 and 741. The leaders were composed of Waters, Beaumont, Baker, Milbourne and Davis, while Goldsborough, Blumner, Sattler, Kornmann and Dr. Dohme made up the Sharp & Dohme quintette. Colonel Waters did some remarkable bowling in the third contest, when he rolled up 254 points, Davis making 198 and Beaumont 187 in the same game. Blumner got the high score for Sharp & Dohme, with 176 points. Tonight the Winkelmann & Brown Drug Company met Parke, Davis & Co., and took two out of the three contests, Vordemberge being high man for the former with 180 points, while the best any of the Parke, Davis & Co. men could do was 153, made by Erich in the second and third games. All the teams have now had their first inning, and their standing is as follows:

Teams.	Won.	Lost.	Percentage.
McCormick & Co.....	3	..	1.000
James Bailly & Son.....	2	1	.667
Winkelmann & Brown Drug Co. 3	3	2	.500
Sharp & Dohme.....	1	2	.333
Root and Herbs.....	1	2	.333
Parke, Davis & Co.....	1	2	.333
Muth Bros. & Co.....	0	3	.000

NOTES.

—Last week's visiting druggists here included W. Mentzer, of Mentzer & Clugston, of Waynesboro, Pa.; A. J. Hutchison, of Cambridge, Ohio, and W. G. Burgess, of Newport News, Va.

—J. Turner Keenan, of Baltimore, has resigned his position as clerk in the pharmacy of Mrs. E. Toomey, Ninth and U streets, Washington, D. C.

—William H. Moore has bought out Merritt & Nordman, Gay and Dallas streets, this city, and will reopen the pharmacy this week.

—Theodore Smith, Pennsylvania and Lafayette avenues, is having a new plate glass front put in, fixtures of artistic design installed and the pharmacy otherwise improved. Mr. Smith is a progressive pharmacist who keeps in touch with the current of events.

Doane's Seldlitz Powder and Seldlitz Powder Machine have been known to the drug trade for many years. His powders are warranted, are accurate weight and are now sold at reduced prices. They are still made at the old address, Chas. R. Doane, 22 Mesero's street, Brooklyn, N. Y. He solicits correspondence in regard to them.

DETROIT.

—Harry T. Carver, of Farrand, Williams & Clark, has returned from a two weeks' vacation spent down in Jamaica, Vt., "a two-by-four town, beautifully situated in the mountains," as he describes it. Mr. Carver, with Harry Jr., explored all the country round, visiting the old homesteads where his ancestors lived for generations, and the old school house, where his father and mother went to school. Harry, Jr., took Harry, Sr., out frogging, and they spent a full day at husking corn. The foliage of the trees was in its glory, and they were "dryad days" to the Detroit child, who had never seen leaves do much more than turn brown and fall off. "On some trees there weren't two alike," he says. When other dissipations failed to sate his appetite, Mr. Carver visited the stores and the depot. There is not a drug store in the place, the physicians putting up their own prescriptions, but the general stores handle the well advertised patent medicines. At the depot Mr. Carver came across a large quantity of Robert Kellar's ink, a Detroit manufacture. Every time he felt any symptoms of home sickness coming on, he betook himself to one of the general stores where Stearns' Headache Cure was placarded all over the walls and counters. It takes three hours to get twenty miles away from Jamaica, and Mr. Carver thinks he prefers Detroit.

—This year it has been the fashion for the Ypsilanti drug clerks to spend their vacations in hunting and fishing. One of the boys started it, and he came back with such an entrancing story of the number of squirrels and partridges he shot and the number of fish he caught, that his neighbor decided to try his luck. The second one's report put the first story to shame, and a third one went out. If the supply of clerks holds out much longer, it is feared that the morals of the community will be in danger. One of the traveling salesmen who visits the town threatens to send each one of the clerks a copy of "Eben Holden" with the story of the "ol' settler" strongly marked.

—The Moxon Liniment Company, of Mount Clemens, has let two of its clerks go, owing to the let-up in business since the resort season closed. In the summer months, Mount Clemens has a population of about 8,000, but when the leaves begin to fall, it quickly dwindles down to about 4,000. Business falls off 50 per cent. Drug clerks are at a premium in the town for about four months of each year, and then they disappear off the face of the earth. A few weeks ago drug clerks were needed all over the State; now they are themselves a drug on the market.

—M. H. Goodale & Co., Battle Creek, have moved into one of the stores of the new hotel building, the Post Tavern. Reports make it one of the handsomest stores in the State. The decorations are in white and gold, the fixtures are all new and of the latest style, and the floor is a beautiful mosaic in marble. The lighting is another special feature. Altogether it is unusually attractive.

—Frank Shulte, for thirty years a druggist in Detroit, dropped dead on Sunday, October 7, while out taking a stroll after dinner. Mr. Shulte had known for some time that his heart was affected, but of late his general health has been so much better that his death came as a great surprise to his family and to his many friends. He was buried Tuesday morning.

—H. C. Knill, Jr., druggist at Port Huron, has been off for some weeks with his race horses. He takes a vacation that way every year. A few days ago Mr. Knill's best horse dropped dead on the race track at Charlotte.

—There will be a meeting of the Detroit and Wayne County Druggists' Association next Friday, October 19, at which time some important steps will be taken regarding the attitude toward the cutters.

—Fred. H. Holmes, formerly in business in Detroit, has bought out the Lester Drug Company, of Marine City, Mich.

—E. Bricker, Port Huron druggist, has lost his popular clerk, who has just started a new drug store at Point Edward.

CHICAGO.

C. R. D. A. MEETING.

Chicago, Oct. 13.—A meeting of the Chicago Retail Druggists' Association was held yesterday afternoon in room 712 Masonic Temple. President George A. Graves occupied the chair. The meeting was an important one in many respects, and its objects were outlined in the following call, issued a few days before the meeting:

For a long time the members of the Chicago Retail Druggists' Association, together with the other druggists of the country, have been talking co-operation. It is now proposed to quit talking and co-operate. One thing is certain, business conditions for the drug trade will never be better till druggists go to work to put their theories into effect. Several ward clubs in Chicago are proving to be the best investment the druggists therein have ever made. To date, the net results are: Better hours, increased profits, greater self respect.

So marked are the advantages gained wherever the plan has been tried, that it is now proposed to put it into operation throughout the city. Unless a more satisfactory arrangement is suggested, an organizer will be employed at once to take up the work. The question will be discussed at the fourth quarterly meeting of the Chicago Retail Druggists' Association to be held in room 412, Masonic Temple, Friday afternoon, October 12, 1900, at 2.30 P. M.

Very few Chicago druggists are complying with the law by filing with the Internal Revenue Collector monthly reports as to goods taxable under Schedule B, as required by the law now in force. The statement made at the collector's office that violators (every druggist is amenable to the law) are to be prosecuted, may be a "buff," but the Executive Board of the C. R. D. A. advises druggists against taking chances.

Many druggists are in the habit of removing tobacco from the caddies in which it is received and putting it into jars in order to keep it in good condition. This apparently harmless practice is a violation of the Internal Revenue law and the punishment is severe.

Have you tried the slot directory? If so, how does it work? What do you think of it?

The members of the association who attended the N. A. R. D. convention in Detroit are brimful of enthusiasm for the cause it represents, and will have some interesting things to report. They believe that the plans of the National Association should be made effective in Chicago, and at once. Come and hear the discussion of this important subject.

It is useless to say that you ought to be a member of the C. R. D. A.; you know that it is conducted in your interest and that you ought to help along the good work. Come to the meeting Friday afternoon if possible. If impossible to come send \$3 (one year's dues) to the secretary and add your influence to the forces now working for your good.

The dues to the organization were increased to \$3.00 for 1900 and 1901.

Members were instructed to use their influence with their congressmen to secure the repeal of the stamp tax. After some discussion it was decided to employ an organizer to organize the druggists by wards. Reports were received from the ward organizations in the 12th, 25th, 26th and 32d, showing that the plans outlined had thus far been very successful. The matter of employing an organizer was referred to the Executive Board to select one.

About seventy-five members were present and thirty new members were received.

The slot directory was discussed and approved, and a letter recently sent out by the Consumers' Company stating that they would make a charge against druggists for siphons and would rebate or their books for those returned, collecting for losses and breakages, was discussed and referred to the Board of Directors.

On motion of John I. Straw, the committee on ward organizations was directed to request these bodies to adopt minimum price schedules to suit the conditions in their respective wards.

ILLINOIS' BOARD MEETS.

Chicago, Oct. 13.—The Illinois State Board of Pharmacy met in Chicago this week. The preliminary examinations on Tuesday resulted in the failure of twenty-two out of 140 applicants, and the final results eliminated about thirty per cent. of the whole number. The next board meeting will take place on January 14, in Springfield, and the next one following after that will be in Chicago on February 18.

On motion of Mr. Bodemann the Board ordered that students must be on hand promptly or they will be excluded. Some students complain that their employers will not permit them to come on time.

A special meeting was held at the Wellington Hotel last evening. Members of the Board were present, together with several members and officers from the various pharmaceutical organizations in the city and throughout the State. Among the speakers were Professors Oldberg and Hallberg and Messrs. Engelhard, Jamieson, Oglesby, Butt and Straw of Chicago; Green, of Bloomington; Baumann, of Dundee, and Spillman, of Joliet. President W. A. Dyche presided. He stated the object of the meeting in concise yet exhaustive terms, called attention to certain defects in the present pharmacy law, and urged that if any action at all were decided upon all druggists should present a united front to the ensuing Legislature. Messrs. Green, of Bloomington, and Jamieson, of Chicago, advised that no changes be attempted. The whole matter was finally referred to a committee of ten to be appointed later. This committee will take up the matter and will report at the coming meeting of the Executive Board of the Illinois Pharmaceutical Association.

NOTES.

—The meeting of the Veteran Druggists' Association, at Henry Broth's house, in Blue Island, not long ago was a great success. Mr. Bodemann read a monograph on the life of the late D. R. Dyche, and Messrs. Ebert and Jamieson made some appropriate remarks on their recollections of Mr. Dyche. Mr. Bodemann entertained the company with an improvisation on the piano. The meeting was held in the open air where the host entertained the guests with a fine spread. A resolution of sympathy was extended to Herman Plantz, who has been ill for nearly a year. Capt. W. G. Morris talked very entertainingly of his experiences at the Paris Exposition. Everyone had a splendid time and a goodly number of members were in attendance.

—The State Historical Society, of Wisconsin, has invited Albert E. Ebert to attend the dedication of its new library and museum building at Madison, on Friday, October 19th. The dedicatory exercises proper will be held at 2 P. M. in the reading room, with brief remarks by the Hon. Charles Francis Adams, of Massachusetts; Dr. James K. Hosmer, of Minnesota; Dr. Andrew C. McLaughlin, of Michigan; President John Johnston; Dr. James Davie Butler; Dr. Charles K. Adams; Hon. James H. Stout, and Secretary Reuben G. Thwaites. At 8 P. M. the dedication address will be delivered by the Hon. Charles Francis Adams, president of the Massachusetts Historical Society.

—George W. Mathison, manager of the Western office of the Emerson Drug Company, takes great pride in a pile of Eras in his office. The file begins with the year 1892 and is complete up to date. It is about four feet high and weighs more pounds than one would care to lift. Mr. Mathison has just returned from Indiana where he enjoyed a very pleasant and successful trip. While in South Bend he was entertained by O. C. Bastian, in royal style at the Indiana Club.

—G. F. Sorrow has sold his drug store at Forty-seventh street and Indiana avenue. This sale may have been mentioned in a previous issue as a sale of the store of the Sorrow Drug Company.

—Albert E. Ebert returned last Thursday from Philadelphia, where he had been attending a meeting of the Board of Trustees of the United States Pharmacopoeial convention.

—I. H. Fufts, of Evanston, has transferred a one-half interest in his Evanston store to V. F. Gill for a consideration of \$1,200. The firm name is Gill & Fufts.

—Emil Zahn, a well known Chicago druggist, has sold out. His store was at Eighteenth street and Indiana avenue, where he had been for twenty-six years.

—Mr. Wangler, of Wangler & Brother, well known druggists of Waterloo, Ia., was in Chicago this week.

—Benjamin J. Baskerville, a quite well known druggist of this city, is reported to have sold his store.

—The North End Pharmacy of Chicago has been incorporated with a capital stock of \$5,000.

—The next meeting of the North Dakota Board of Pharmacy will be held at Fargo, on the 17th day of October, at 10 o'clock a. m. W. S. Parker, Assn. secretary.

THE NORTHWEST.

An Unfeeling Druggist.

St. Paul, Minn., Oct. 12.—It is hard to believe that a philanthropic a guild as the druggists should now and then develop a heartless member; but an instance of this kind must be recorded, if the report of a local paper is to be credited. The story goes that Mrs. Blanche E. Foote came before Judge Otis with a prayer for a divorce from Frederick W. Foote, and after hearing the story corroborated by sufficient evidence, the court granted the prayer. The plaintiff is 28 years old and the defendant 35, and they were married July 31, 1890, in Minneapolis, and lived together until July 7, 1898. There are two children.

Mr. Foote was a clerk in a drug store and worked at his business in various cities, including St. Paul, Minneapolis and Faribault. His wife was in poor health, and he told her that for his part he was tired of having a sick wife. He followed up this assurance of fatigue with the statement that he was going away never to return, and proposed to take the two children with him. She demurred to that at first, but as she was sick in the hospital, consented at last, that he might take them. The plaintiff is a dramatic reader.

NOTES.

—The following are among the past week's business changes: W. R. Brown, Council Bluffs, Iowa, succeeded by J. I. Henry; C. F. G. Bostelman, Bruning, Neb., by W. R. Caldwell; James T. Dana, Fond du Lac, Wis., by the Schley & Ordway Drug Company; Ehlers & Adams, Algona, Iowa, by Ehlers & Co.; Mellor & Royce, Malvern, Iowa, by Mellor & Co.; E. W. Bartlett & Co., Lake Crystal, Minn., by E. W. Bartlett; O'Hair & Walsh, Waverly, Minn., by Dr. P. O'Hair; G. D. Cottrell, Spencer, Iowa, by Cottrell & Billings.

—G. W. Foogman's drug store at Grafton, N. D., has been closed up as a result of a search for liquor made by the enforcement league, the State organization whose business it is to enforce the prohibition law. Mr. Foogman will ask to have the injunction dissolved. The case will come up for hearing before Judge Fisk of Grand Forks.

—A Kansas man has taken a Northwestern woman druggist to wife. Mrs. Belle Whitcomb Aldrich, for many years proprietor of the Pioneer drug store of New Richmond, Wis., was married a few days ago at Ludlow, Vt., her former home, to Mr. James Albert Roberts, of Sabetha, Kan., in which place they will reside.

—There is some curiosity as to the action to be taken by the St. Paul Retail Druggists' Association at its meeting—date not yet set, but now pretty near in the future—in the way of devising ways and means to prevent or greatly minimize the sale of drugs by persons having no license.

—A. J. Guernsey, St. Paul, is enjoying his annual vacation. He is spending the present week in Minneapolis, where he was formerly in the photographic business, and next week will go on a hunting trip.

—Henry Heinzel left Hudson, Wis., a few days ago and proceeded to Chicago, where he is attending a medical college.

—Stephen Fisher, of Fisher Bros., Velya, N. D., has returned to the medical college at Milwaukee.

—It is reported that F. S. Locke, Troutdale, Ore., will remove to Portsmouth.

—J. W. Bobisud, Bruno, Neb., contemplates moving to Brainard.

—Hartman & Schmitz have started a store at Stewart, Minn.

—J. J. Kelly is working for J. M. Landmark, at North Branch.

—O. M. Olson, of New Ulm, was in the city this week.

—R. L. Whitehead, Mercier, Utah, has been attached.

—J. F. Holden is now working in Winnebago City.

The remedies prepared by the Dr. Chase Co., of Philadelphia, are offered to the trade at the following reduced rates:

Dr. Chase's Blood and Nerve Food, per dozen, \$4 00.

Dr. Chase's Kidney Food, per dozen, \$4 00.

Dr. Chase's Liver Cure, per dozen, \$2 00.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,
New York.

ALABAMA.—Clayton.—West Bros., succeeded by J. P. West.
ARKANSAS.—Brinkley.—Charles H. Pasley, sold to T. C. Simmons.
Little Rock.—F. C. Bush, 906 Main street, sold to Berbig Drug Co.
COLORADO.—Denver.—John Campbell, 601 Sixteenth street, sold to Petty & Linde.—W. R. Samson, 700 Seventeenth street, removed to Telluride.
FLORIDA.—Tampa.—Diamond Pharmacy (Ybor City), sold to I. J. Taylor.
ILLINOIS.—Chicago.—Thomas C. Senn, Vincennes avenue and 103d street, sold to Wesley Pelton.
INDIANA.—Cowan.—Johnson & Barrett, succeeded by G. T. Barrett.
Fairland.—J. E. West, sold to G. R. Linville.
Kokoma.—Wm. A. Bowlm, sold to Kerlin & Scott.
La Porte.—H. K. Ehrlich, 724 Main street, sold to J. M. Callender.
INDIAN TERRITORY.—Velma.—F. A. Remington, new store.
IOWA.—Iowa Falls.—De Ford & Marshall, succeeded by De Ford Bros.
Shannon City.—W. D. Christy, sold to W. Wolf.
KANSAS.—Junction City.—Burt H. Ward, sold to The Popular Drug Store, Loeb & Hollis, proprietors.
Stockton.—Cooper Bros. & Co., sold to Hawerton & Winters.
Wichita.—Charles Lawrence, sold to W. A. Stanford.
KENTUCKY.—Berry.—L. B. Rosenfield, sold to A. H. Cochran.
Williamstown.—J. C. Brown, sold to James A. O'Hara.
MARYLAND.—Baltimore.—Mayer & Campbell, 1937 Linden avenue, succeeded by Mayer & Campbell's Pharmacy; R. E. L. Campbell, proprietor.
MINNESOTA.—McIntosh.—Neraal & Reese, succeeded by T. N. J. Reese.
Minneapolis.—L. A. Hanes, 4169 Washington avenue, N., sold to N. A. Winslow.
Worthington.—Ray Humiston, sold to F. A. Groezinger & Co.
MISSISSIPPI.—Gunnison.—Dr. F. M. Halbert, sold to Meek Bros.
MISSOURI.—Gallatin.—J. C. Minter, sold to Bartells & Buchholz.
NEW YORK.—New York City.—D. M. Alexander, northwest corner 169th street and Franklin avenue, new store.—Armin Herrmann, 1578 Madison avenue, sold to George Merker.—A. P. Kerley, 2035 Broadway, sold to Sherman Square Pharmacy.
Nunda.—Cooley's Pharmacy, C. A. Cooley, proprietor, removed to Batavia, N. Y.
OKLAHOMA.—Granite, Greer County.—Johnson & Spears should be added to D. D. List.
Ripley.—O. A. Thompson & Co., removed to Waukomis.
Stillwater.—W. R. McGeorge, sold to W. H. Hand.
PENNSYLVANIA.—Plymouth.—J. V. Perse, sold to Linkskill & Co.
TENNESSEE.—Knoxville.—John A. McMillan, 525 Gay street, sold to Gooding Drug Co.
TEXAS.—Bridgeport.—Emory Bros. & Lackey, sold to Z. F. Sneed.
UTAH.—Salt Lake City.—T. A. Sloan, corner Second South and State streets, sold to C. F. Little.

Red Clover Blossoms.

One of the best known proprietary preparations sold in the trade is Needham's Red Clover, put up in the form of dry blossoms and in fluid and solid extracts. They offer it to the trade as one of the best blood purifiers known, and in fact the efficacy of Red Clover in such cases is well known. They will cheerfully supply druggists with counter advertising with the druggist's imprint on, and solicit correspondence in regard to advertising matter, etc. Druggists interested should address D. Needham's Sons, Inter-Ocean Building, Chicago, Ill.

WISCONSIN PHARMACEUTICAL ASSOCIATION.

The Wisconsin Pharmaceutical Association held its annual meeting at Waupaca, September 4, 5 and 6. President Charles Spencer delivered the annual address, which contained many recommendations of importance. Treasurer W. P. Clarke reported the receipts for the year ending July 31 to be \$668.30, and the disbursements \$447.11, leaving a balance on hand of \$221.19. A list of sixty-three names was reported to the Executive Committee to be dropped, seven of them by request, the remainder for unpaid dues. The association indorsed the present movement to obtain advancement for hospital stewards in the Marine Hospital Service, both as to grade and pay. The association also decided to request "that the hospital steward of the new battleship Wisconsin be a Wisconsin pharmacist." Papers were read by Messrs. Reinhardt, David A. Taylor, Jos. Hammel, A. A. Dumez, Otto Boberg, E. G. Rauber, C. Widule, R. Denniston and others.

Resolutions were adopted requesting that a sufficient sum be donated by the State to erect a new building on the Wisconsin University grounds for the Department of Pharmacy, and that the Committee on Legislation be directed to push the matter at the next session of the Legislature. This committee will also endeavor to secure the enactment of a law against street hawkers and illegal peddling. The N. A. R. D. was indorsed, and D. A. Taylor, W. W. Albers and T. H. Spence were nominated as the representatives of the association from which the Governor is to select a member of the Wisconsin Board of Pharmacy. The following officers were elected: President, J. H. Kamps, Appleton; vice-presidents, T. H. Spence, La Crosse, and William Barr, Milwaukee; secretary, Henry Rollmann, Chilton; treasurer, W. P. Clarke, Milton; local secretary, R. M. Bell, La Crosse. The Ladies' Auxiliary, W. P. A., whose aims are purely of a social character, met at the same time and decided to do away with its constitution and by-laws, and hereafter all ladies attending the meetings of the association will be considered members. Mrs. R. M. Bell, of La Crosse, was elected president, and Mrs. T. H. Spence, of La Crosse, secretary and treasurer. The traveling men of the association elected the following officers at their annual meeting: President, A. A. Calkins, La Crosse; vice-president, W. C. Bell, Detroit; secretary-treasurer, C. F. Yates, Janesville; Entertainment Committee: R. M. Bell, La Crosse; C. F. Geisse, Fond du Lac; E. A. Oakes, Milwaukee.

About thirty new members joined the association. George E. King being awarded first prize for securing the largest number. The entertainment programme included a boat ride around the lakes, and a long list of athletic and other contests, in which the winners were awarded prizes of various kinds. The time and place of next meeting were left to be decided upon by the new officers.

—The Pennsylvania Pharmaceutical Examining Board has started a crusade against druggists in various parts of the State who are alleged to be practicing pharmacy in violation of the law. At Verona, Pa., James Hodgson, a druggist, was arrested charged by the agents of the board with operating a drug store without having a competent man in charge. M. P. Sykes, who was acting as manager for Hodgson, was also arrested at the same time charged with failing to display his certificate. Decision in the case of Hodgson was reserved by the local court, and Sykes was held in \$300 bail for trial at the December term of the Circuit Court. The board insists that where the owner of a drug store is not himself registered, the store must be constantly conducted by a registered pharmacist. This does not mean that the store may be in the constant charge of a qualified assistant and under the nominal charge of a registered pharmacist, who will call at the store once or twice a day.

—The Fond du Lac, Wis., Pharmaceutical Association, which has been in a state of lethargy for the past five years, was reorganized at a smoker held at the residence of Charles F. Geisse, representing Peter Van Schaack & Sons, of Chicago, on the evening of October 3. The officers elected were Anton Pfel, president, and Ed. Huber, secretary and treasurer.

PATENTS

Trade-Marks, Designs, Etc.

PATENTS.

Issued October 2, 1900.

- 568,747.—Julius Altschul, assignor to Actien-Gesellschaft für Anilin Fabrikation, Berlin, Germany. Compound of gelatin and tannin and producing same.
- 658,769.—Hugo and E. Erdmann, Halle-on-the-Saale, assignors to Actien-Gesellschaft für Anilin Fabrikation, Berlin, Germany. Methyl ether of anthranilic acid and making same.
- 658,788.—Edward E. Murphy, Somerville, Mass., assignor to New Era Carbonator Company, Charlestown, W. Va. Carbonating apparatus.
- 658,857.—Thomson McGowan, Cleveland, Ohio. Desulfurizing petroleum oil.
- 658,880.—Frank M. Brooks, New York, N. Y. Bunsen burner.
- 658,895.—William Hinton, assignor of one-half to G. O. Queensberry, Hinton, Va. Non-refillable bottle.
- 658,908.—Franz L. Ungethum, Oetzsch, Germany. Massage apparatus.
- 658,989.—John P. Kampf, assignor, by mesne assignments, to Infalible Truss Company, Toledo, Ohio. Hernial truss.
- 659,041.—Jokichi Takamine, New York, N. Y., and E. V. Hitch, Chicago, Ill. Filter bag or strainer.
- 659,130.—Charles A. Bucklin, New York, N. Y. Syringe.
- 659,184.—Francis J. Stallings, Effingham, Ill. Non-refillable bottle.
- 659,188.—George B. Underwood, New York, N. Y. Inhaler.

TRADE MARKS.

Registered October 2, 1900.

- 35,175.—Veterinary remedies. Wright & Hills Linseed Oil Company, Chicago, Ill. The compound word "Lin-Hoof."
- 35,176.—Liniment. Thomas Milburn, Toronto, Canada. The word "Troop."
- 35,177.—Remedy for certain named diseases. Leopold Gerstle, Highland Park, Tenn. The compound word "Kis-Ko."
- 35,178.—Cure for certain named diseases. Anton Karczewski, Colegrove, Cal. The word "Uiga."
- 35,179.—Disinfectants. The Moore Chemical and Manufacturing Company, Kansas City, Mo. The compound word "Car-Sul."
- 35,180.—Antiseptic. Orienta Chemical Co., Mamaroneck, N. Y. The word "Thymodine."
- 35,181.—Alkaloids. Chemische Fabrik Guestrow, Germany. The word "Yohimbine."
- 35,182.—Tonic. Alfred R. Ashby, Brunswick, Ga. The representation of a flamingo.
- 35,183.—Nutritive Ferruginous Preparations. Adolf Jolles, Vienna, Austria-Hungary. The word "Fersan."
- 35,197.—Talcum and Tooth Powders. Leopold Mayer, New York, N. Y. The word "Flora."
- 35,198.—Certain named toilet article. Amelia Mayer, Omaha, Neb. The hyphenated word "Re-No-May."
- 35,199.—Certain named toilet articles. Harry K. Buck, Philadelphia, Pa. A representation of the Liberty Bell.
- 35,200.—Medicated bathing liquids. George Buckle, New York, N. Y. The representation of a human figure standing in a well charged with electric sparks.

LEMUEL H. BROCK, of Lynn, Mass., a former manufacturer of patent medicines has just died in that city. He was born in Strafford, N. H., in 1837, and attended the schools there a few years. At the age of fifteen years he went to the academy at South Berwick, Me., thence to Wolfboro, N. H., coming to Boston at the age of twenty. He first taught school, then was a grocer and produce dealer and later a hotel proprietor, establishing the famous old Lynn Hotel. He sold out his hotel business and engaged in real estate and finally took up the manufacture of patent medicines, building up a large business. He represented the twentieth Essex District in the House of Representatives for two years, and ran for senator, falling of election only by a few votes. He was a prominent member of West Lynn Lodge, I. O. O. F., a member of Nantushmet Tribe of Red Men, and a member of Fraternity Encampment, I. O. O. F. A widow and two daughters survive him.

DR. JOSEPH HASKEL MYERS, formerly of Falmouth, died on the night of September 27 at Marlinton, W. Va., where he was established in the retail drug business. He was sixty-six years old. The remains were taken to Baltimore for interment.

COUNTERFEIT CASTORIA FACTORY UNEARTHED.

Manufacturers Arrested and Labels Seized—Plant on South Second Street the Scene of Operations—Defendants Give Bonds.

The Centaur Company of New York City, manufacturers of Castoria, recently learned that their well-known preparation was being counterfeited in this city and that worthless imitations were being sold.

Charles H. Fletcher, president of the company, at once dispatched agents to St. Louis, who were instructed to ferret out the counterfeiters.

After a careful investigation it was learned that a preparation in imitation of Fletcher's goods was being prepared by the Palestine Drug Company, of No. 107 South Second street, and sold by a few druggists. Detectives who were assigned to the case succeeded in securing admittance to the place and purchased a quantity of the spurious stuff. Later other purchases were made, and when sufficient evidence was secured warrants were sworn out for the imitators. Yesterday John Bick, president of the offending company, and Benjamin Chireaun, chemist of the concern, were arrested, but later were released on bond.

The case will be tried before Judge Clark of the Court of Criminal Correction. Judge Harvey and the firm of Seddon & Blair will represent the Centaur Company, which has determined to protect the public from worthless imitations of their goods.

Deputy Sheriff Clayton, who served the warrants, found between 5,000 and 6,000 counterfeit labels which Bick was attempting to hide at the time. Two boxes, which had originally contained the genuine Castoria, were found filled with the counterfeit preparation. Each contained about six dozen bottles of the spurious stuff. A large can of the counterfeit preparation was also found ready to be bottled.—St. Louis, Mo., Republic, September 30, 1900.

While the use of live plants has always been a very potent factor in making the home attractive, the introduction of natural prepared plants for store decoration is of comparative recent date.

The advantage of really good plants of the latter description can be readily seen. The live plants must be tenderly cared for, carefully guarded against cold, trimmed and watered regularly, in fact, nursed like a child. The others, being the natural plants put through a scientific process of preservation, retain their natural fresh colors the year round and require nothing more than an occasional dusting. The salesrooms of Frank Netschert remind one of the tropics, his artificial plants

are made of natural leaves, and the rumble of the traffic in the street is all that keeps one from wondering if he has not been transported to some garden of the tropics. Palms, Arecas, Date Palms and Roses, everything around seems to be growing, and yet there is no life in any of these plants. Mr. Netschert explained that the druggists are taking a great interest in his plants because they add an attractive line to their business, since they were able to sell them at a profit of 300 per cent, as well as use them for decorating purposes. His catalogue for 1900-1901 is a price list for the consumer to choose from, and is subject to a discount of 50 per cent. to 60 per cent. Write to Mr. Netschert either at 7 Barclay street, New York or 187 South Clark street, Chicago, Ill.

The Lightning Medicine Co., of Muscatine, Iowa, is furnishing the retail trade a handsome window display, cut of which will be found displayed in this issue of the Era. With a small purchase of \$5.51 of goods goes a liberal proposition for advertising the dealer in his home town. Within ninety days this company has placed over one thousand of its "Old Pioneer" status. Carrying charges are prepaid. For further information drop a postal to this company at Muscatine, Iowa.

SECRETARIES OF BOARDS OF PHARMACY.

Alabama.—E. P. Galt, Selma.
 Arizona.—Has no pharmacy law.
 Arkansas.—W. W. Kerr, Russellville.
 California.—S. L. Waller, San Francisco.
 Colorado.—A. W. Scott, Fort Collins.
 Connecticut.—Willis L. Mix, New Haven.
 Delaware.—C. D. Sypherd, Dover.
 District of Columbia.—R. N. Harper, 609 Pennsylvania avenue, N. W., Washington.
 Florida.—Thomas Clarke, Jacksonville.
 Georgia.—George F. Payne, Atlanta.
 Idaho.—Law provides for boards in each county.
 Illinois.—L. T. Hoy, Springfield.
 Indian Territory.—Has no pharmacy law.
 Indiana.—C. E. Creelius, New Albany.
 Iowa.—C. W. Phillips, Des Moines.
 Kansas.—W. C. Johnston, Manhattan.
 Kentucky.—J. W. Gayle, Frankfort.
 Louisiana.—F. C. Godbold, New Orleans.
 Maine.—D. W. Haseltine, Portland.

 Wisconsin.—E. B. Heimstreet, Janesville.
 Wyoming.—J. J. Steffen, Douglas.

—The Wisconsin Board of Pharmacy at its recent meeting held in Waupaca, granted certificates of registration to the following pharmacists without examination, they having passed their examination in other states: 2,230, F. G. Danielson, Hudson, from Minnesota; 2,240, E. E. Reebuck, Hayward, from Minnesota; 2,241, C. O. Danielson, Hudson, from Minnesota; 2,242, H. A. J. Westphal, Milwaukee, from New York; 2,243, A. Kristiansen, Greenwood, from Iowa. Forty-seven applicants were examined for certificates. Of this number the following received licentiate certificates: C. A. Love, River Falls; A. H. Woltersdorf, Columbus; A. H. Voigt, Sheboygan. Assistant certificates: D. E. Billington, Hayward; Mary V. Douglas, Norwalk; E. A. Krueger, Wausau; O. F. Sauerberg, Milwaukee; R. J. Strauss, Appleton; F. J. Janda, Waupaca. The next meeting for examination will be held at the capitol building, Madison, October 24. The members of the Board realizing that the examinations are sometimes hurried, have decided to make the examinations two days instead of one as heretofore. The new rule will take effect at the December meeting at Milwaukee.

—The Vermont Pharmaceutical Association elected the following officers at its annual meeting, held in Rutland, September 19-20: President, A. L. Dutcher, St. Albans; vice-presidents, W. F. Wood, Brattleboro; A. F. Sherman, Ludlow, and F. A. Morse, West Rutland; secretary, C. W. Ward, Rutland; treasurer, G. L. Harwood, Chester. The association will hold its next annual meeting at Vergennes.

The Brawner Stopper.

The great objection to sprinkler stoppers has been their liability to corrode, and this has deterred many manufacturers from using them, although a sprinkler top would increase the popularity of the preparation dispensed with it. But this objection is now entirely removed in the Brawner Patent Self-Closing Glass Sprinkler Top illustrated here. Although it is a perfect sprinkler, it is made only of glass and cork, and cannot, therefore, corrode. It has all the appearance of a ground glass stopper, but at much less cost, and can be made to fit any bottle. The sprinkling device is in the shape of a dumb-bell, the head of which rests on a shoulder in the lower end of the cork, thus automatically closing the bottle when the sprinkler is not in use. In this way evaporation and loss of strength is entirely prevented, and the contents preserved even if the stopper is thoughtlessly left out. The Brawner Stopper costs less than metal or ground glass stoppers, and is as effective as the former and as

handsome as the latter. It is extremely simple in principle, and cannot get out of order, and it seals the bottle properly. It is already recognized by perfumers and manufacturers of toilet preparations as the best sprinkler for all purposes on the market. The manufacturers and patentees are Swindell Bros., Baltimore, Md., to whom inquiries should be addressed.

Wooden Boxes.

To those druggists or manufacturers who require lock-cornered mailing boxes made of soft wood or highly finished hardwood boxes, cases, cabinets, etc., we present the name of the New Haven Mills Manufacturing Co., New Haven Mills, Vt. They also make special cabinet work to order. They solicit trial orders and will be glad to correspond with any manufacturer wishing their line of goods.

American pharmacy is to be congratulated on account of the international recognition of American pharmaceutical literature. The Paris Exposition of 1900 has announced that the highest award (the grand prize) was bestowed upon Remington's Practice of Pharmacy. The work was exhibited by the publishers, J. B. Lippincott Co., of Philadelphia.

CHARLES H. TEIPEL, for thirty-five years engaged in the retail drug business at the corner of Frederick road and Bentalon street, Baltimore, Md., died there suddenly waiting on a customer when he fell over unconscious and expired shortly afterward. He had suffered from Bright's disease since last spring. Mr. Teipel was sixty years old and established himself at the above-mentioned location shortly after the war, in which he participated as hospital steward. He was a native of Germany, but came to this country when only ten years of age. His acquaintance in Southwest Baltimore was extensive and he had many warm friends. The people in the neighborhood held him in high regard. At different times he devoted his spare hours to birds, rare plants and mechanics. An industrious reader of the best literature, he possessed wide information on numerous scientific and technical subjects. He spoke several languages and had a fine intellect. His second wife and six children survive.

ALKALINE SECRETIONS OF ANTS.—Janet (Compt. Rend., L.; Br. and Col. Dr.) has discovered that the secretion of ants when undisturbed is decidedly alkaline that this reaction, however, changes to acid as soon as they are irritated, those species secreting the most markedly alkaline fluid (formicinae), also yielding a correspondingly stronger acid secretion. The author infers that this alkalinity serves as a protection against self-poisoning. After an attack, the ants' nest is saturated with this abundant discharge of formic acid.

STERLING REMEDY CO.'S N. A. R. D. OFFER.

Editor Pharmaceutical Era:—The N. A. R. D. treasury is in need of funds. Knowing this fact, the writer, representing the Sterling Remedy Co., made an offer to the N. A. R. D. in convention at Detroit, September 18, which, we hope, will result in putting the association into a condition of financial prosperity, thereby enabling it to perfect the organization so auspiciously begun, and proselyte to the cause every retail druggist in America.

At least \$10,000 ought to be the amount of the check which we will turn over to the N. A. R. D. treasurer for a Christmas present. It would please us better, as showing a more universal interest, if the amount would accrue to \$20,000 or more. The conditions and necessary blanks of the offer tell their own story well. It is now up to the retailers and the friends of the retailers to say how much the S. R. Co. contribution shall amount to. We have prepared to do our part, to make the conditions of the contract the easiest possible for the retailer (actually guaranteeing the sale of the goods bought under this offer) and stand ready to take out of our profits \$10,000 or \$20,000 or \$40,000 if the retailers will have it, and hand it over with enthusiasm for the welfare of the trade.

As friends of the retailer we have made this offer, and all we ask is that the other friends of the retailer shall help this matter along. There is only one object to be considered and that is to raise money—lots of it—for a Christmas present to the N. A. R. D.

Very truly yours,

STERLING REMEDY COMPANY.

H. L. KRAMER,

Treas. and Gen. Manager.

Indiana Mineral Springs, Ind., Oct. 10, 1900.

The offer is as follows:

The Sterling Remedy Company will donate \$1 to the treasurer of the N. A. R. D. for each order amounting to \$10 or over, net, all discounts and rebates deducted, received from the retailers within 60 days after this offer is sent out on special N. A. R. D. blanks which have been prepared for this offer, the prices, terms, and rebates to be the same as now, all orders to come through a list of jobbers recommended by the N. A. R. D. No one firm or druggist will be allowed credit for more than \$1.

The druggist accepting the offer must agree on his part to sell all Sterling Remedy Company's goods at the full advertised retail prices. The order under this offer must be properly filled out and signed by the retailer and endorsed by the jobber who fills the order.

MOUTH-WASHES TO PREVENT DENTAL CARIES.

—For the purpose of preventing caries of the teeth, perfect asepsis of the mouth must be maintained, particularly during the sleeping hours; otherwise fermentation may take place in the organic material left between the teeth or against the buccal mucous membrane. For this reason Huchard employs the following antiseptic solution with good results.—(Ther. Gazette):

Crystallized carbolic acid.....	1 dram
Eucalyptol	15 minims
Menthol	7 grains
Thymol	2 grains
Alcohol, 90 p. c.....	3 ounces

Enough cochineal to add proper coloring. This is to be employed as a mouth wash after it has been diluted with three or four parts of hot water. Instead of this the following solution may be employed:

Crystallized carbolic acid.....	1 dram
Eucalyptol	15 grains
Salol	30 grains
Menthol	4 grains
Thymol	2 grains
Alcohol (90 per cent.).....	3 ounces
Tincture of cochineal, q. s.	

Use in the same manner with hot water.

Other formulas are:

(1) Chloral	3 drams
Essence of peppermint.....	30 minims
Alcohol (90 per cent.).....	3 ounces
(2) Chloroform	1 dram
Crystallized carbolic acid.....	1 dram
Eucalyptol	10 drops
Peppermint water	3 ounces

STATE OF TRADE.

Market Continues Firm and Dealers Confident.

New York, Oct. 16.—A fair degree of animation has prevailed in local drug circles, and the undertone indicates continued firmness and confidence on the part of dealers. There have been no important developments in the quinine situation beyond a slight improvement in the tone of the outside market, second hands showing less inclination to part with their holdings at a concession in prices. Manufacturers have been fairly busy filling contract orders and have reported an improved inquiry from the consuming trade. Conditions abroad have not changed materially and there are some in the trade who adhere to the opinion that the depression in the speculative market in London is entirely due to manipulation. Opium has remained inactive, with transactions limited to small parcels to meet current requirements of consumers. Foreign markets are firmer owing to reports from the growing districts in Turkey to the effect that the autumn sowings have been seriously damaged by protracted dry weather, but the local market has not yet been favorably influenced.

The market for cocaine has continued to harden under the influences heretofore noted and manufacturers have further advanced their quotations 25c. per ounce. The tendency is still upward and the indications are favorable to extreme prices. Raw material has steadily advanced in producing markets and buyers claim that it is difficult to secure supplies even at the higher figures. Caffeine is in very light supply and decidedly higher, manufacturers having advanced their quotations 50c. per pound. The tone is very strong owing to influences similar to those affecting cocaine. Salicylic acid crystals have been reduced by foreign manufacturers to meet competition from domestic makers, but there is no quotable change in amorphous. Menthol has shown further improvement, and large dealers are indifferent sellers, as spot quotations are yet below the advanced import cost. Vanilla is easier to the extent that quotations for one of the higher priced brands have been reduced about 30c. per ounce. Competition continues very keen and further developments are awaited with no small degree of interest.

In the department of essential oils there has been a generally firm market for all leading descriptions, with the volume of business of satisfactory proportions, some showing a marked increase of activity. This is especially true of peppermint, but the trading in this article has been chiefly among dealers, some of whom, having been unable to supply their wants in producing markets, found it necessary to purchase here. Sweet almonds shows an advance of 4c. per pound, due to light stocks and reported shortage in the crop of almonds. Cloves are higher, in sympathy with the spice and sassafras firm owing to scarcity. Petit grain is a shade easier and rather quiet.

Ergot has improved both here and abroad and spot values for round lots are fully 2c. per pound higher. Calendula flowers are very scarce for prompt delivery and held at extreme figures. Cannabis indica also is firmer on account of scarcity. Sassafras bark is slightly higher owing to light stocks and extreme views of holders at producing points. Serpentina root is offered very sparingly both here and in primary markets and spot values show an advance of 1@2c. per pound. Egg albumen is in reduced supply and holders of the better grades are firmer in their views.

Favorable Reports from Boston.

Boston, Oct. 13.—Reports regarding the condition of the drug trade seem to be favorable. In the Boston market quinine has been rather active and is firmer. Other drugs, as a whole, are inactive. Oil of clove is looking up a bit, with activity in sight. Chemicals are not over lively nor are dyestuffs and tanning materials. All these lines are not likely to show any special activity until after election. Alcohols are rather firm. Waxes are lifeless.

Business Dragging the Past Week.

Philadelphia, Oct. 13.—Things have been dragging along the past week about as for the rest of the month, business being very slow and dull. A slight improvement is noted in the way of sales of cough medicines, quinine and such like for the many colds brought on by the recent spell of chilly weather, but this is no more than is to be expected at this time of the year. Many druggists have already put in their hot soda apparatus and are reaping a good harvest from their forethought. In wholesale circles, dullness still rules, although no one complains, as business is really above the mark for a Presidential year. No sales of special interest are reported; collections continue good. The prospect for the adoption of better prices for proprietary articles in the very near future has been greatly enhanced by the action of Philadelphia's leading cutter; a schedule covering about 110 preparations has been submitted by this party to the Executive Committee of the local association, with an increase of selling price on these ranging from 5 per cent. to 20 per cent. This action will make the task of educating the public up to higher prices vastly easier

for the small druggist, who can now set his price without fear of the great cutters.

A general complaint is heard from the retail druggists that prices on prescriptions are being cut too low by a number of the small stores who seek to draw trade by this questionable policy. Indeed, from the necessity of meeting these ruinous prices and of keeping in stock so many different manufacturers' preparations, there is now very little profit on prescriptions in certain localities, and every one is complaining of the condition of affairs in this line.

Quiet Among the Jobbers.

Baltimore, Oct. 14.—Marked quiet prevailed last week among the jobbing druggists of this city, although a moderately fair amount of business was done. The manufacturers of pharmaceuticals were also to a considerable extent affected by this state of affairs, while the activity in the laboratories continued unabated. The full effect of the national campaign is now being felt, and there are abundant indications that the remainder of the year will be relatively better than the past two months. No developments of moment took place in the market for botanicals, with the exception of a tendency in sassafras and birch oils to rise, while one or two other articles are less firm. The movement in heavy chemicals is about normal, and the retail druggists experience about the usual amount of business conditions.

A Little Quiet in Detroit.

Detroit, Oct. 13.—In the country departments the wholesalers have been reasonably busy during the week, but things have been a little quiet in the city departments. Uptown retailers, living in the residence portion, say they have nothing to complain of, but the downtown stores, depending on transients largely, are passing through a very dull spell. The weather is decidedly "between the seasons." Soda fountains have quit, and winter business has not yet opened up. Manufacturing chemists, as usual, report excellent trade. They say they cannot do any more than they are doing without more room, more machinery and so on. The three principal manufacturers of the city are making additions to their plants as fast as possible.

Chicago Trade Improves.

Chicago, Oct. 13.—The tone and general condition of the drug trade have improved in the last few weeks. No one asserts that business is quiet, but the opinion seems to be general that an improvement is noticeable. All the jobbing houses are busy and the manufacturers say that their business this year is larger than ever before. Sundries and staple goods are both active and one or two houses are working nights to get out their orders.

An Uneventful Week.

St. Paul and Minneapolis, Minn., Oct. 12.—It must be voted a pretty uneventful week when, as in this case, the only special feature to be noted is a fall of a cent in the price of linseed oil. This is positively all that can be said without repeating with new variations the statements that have been uppermost in this correspondence for the past three weeks or more. Only one retailer interviewed complained of a quiet week, though others had, as usual, run up against a quiet day here and there. The druggists do not specify any particular portion of their business as being active. They "go the whole hog" by asserting themselves from moderately to very busy along the entire line.

TERPINE HYDRATE.—Keutmann (Pharm. Zeit.) recommends the use of hydrogen peroxide in the preparation of terpine hydrate. A mixture of 8 parts of oil of turpentine, 2 parts of nitric acid and 1 part of commercial hydrogen peroxide gives, at the expiration of a few hours, a fine crop of crystals of terpine hydrate.

—The semi-annual meeting of the South Carolina Pharmaceutical Association will occur in Columbia on October 31. The State Examining Board will hold its session there on October 30 and 31.

MARKET REPORT.

NEW YORK MARKET.

New York, Oct. 16.—Business in jobbing quantities has continued to reach fairly liberal volume in the aggregate, with prevailing conditions satisfactory to dealers and the more important price changes in favor of holders.

OPIMUM.—There is no improvement in the demand from consumers and a continued tame feeling is manifested on the part of dealers, with quotations nominally unchanged at \$3.45@3.55 for 9 per cent, and \$3.55@3.65 for 11 per cent., according to size of order.

POWDERED OPIMUM.—Only small parcels are receiving attention and the market remains quiet with jobbers quoting the old range of \$4.50@4.65 for 13 per cent, and \$5.10@5.25 for 16 per cent., as to quantity.

MORPHINE.—There is no abatement of the steady consuming demand heretofore noted and jobbing quotations are maintained on the basis of \$2.40@2.60 for eighths, according to brand and quantity.

QUININE.—Quotations are unchanged on the basis of 44@45c. in ounces, as to brand, and a fair seasonable movement is reported with the tone of the market steady.

COCAINE.—A further improvement in manufacturers' prices has caused another advance of 25c. per oz. in jobbing quotations, and the revised figures are \$7@7.25 for large crystals and \$6.75@7 for small.

CAFFEINE.—Owing to scarcity and increased cost of raw material manufacturers have advanced their quotations 50c. per pound. Jobbing prices show corresponding improvement and the ruling figures are \$4.75@5 in bulk, 50@55c. in ounces and 70@80c. in eighths. Citrated is held at \$3.60@3.85 per lb., 35@40c. in ounces, and 55@65c. in eighths.

MENTHOL.—Values are again higher under the influence noted last week and jobbing quotations show a further advance to \$3.50@3.75 per lb. and 28@32c. per oz.

GUM GAMBAGE.—A slightly firmer feeling has developed and quotations for chips have been marked up to 60@70c.

ERGOT.—An advance in the import cost has imparted a firmer tone to the market, but consumers can yet supply their wants at prices within the old range of 65@75c. for whole and 75@85c. for powdered.

CALENDULA FLOWERS.—Owing to scarcity holders are firmer in their views and jobbing prices have been advanced to 75@85c.

CANNABIS INDICA.—Available stocks are steadily diminishing and jobbers have advanced their quotations to 40@50c.

ALTHEA ROOT.—Under a similar influence quotations for jobbing quantities have been marked up to 30@35c. for cut.

SERPENTARIA ROOT.—Producing markets are stronger and with higher prices for round lots, jobbers have advanced their quotations to 50@55c. for whole, 52@57c. for ground and 55@60c. for powdered.

FLAXSEED.—The market is stronger for all varieties and jobbing quotations for whole, cleaned, have been advanced to \$7.25@7.50 per bbl. and 56@7c. per lb. for less. Ground is held at 4@4½c. by the bbl. and 5@7c. for smaller quantities.

MANNITE.—Jobbing quotations show an advance to \$2.75@3 and the tone of the market is firm.

CASSIA.—Foreign markets are stronger and jobbing prices have been advanced to 15@20c. for whole and 17@22c. for powdered.

ESSENTIAL OILS.—The general market has been moderately active with the undertone steady, and the following changes in prices occurred during the week. Natural sassafras was advanced to 55@60c., artificial to 47@55c.; sweet almond, true, to 65@75c. and cloves to 75@85c. Neroli, petit grain, declined to \$5.50@6 per lb. and 45@55c. per oz.

In a New Jersey town a few days ago a customer went into a little grocery store and asked for a bottle of Jamaica ginger. He was handed some stuff, which he swallowed at a gulp, but the article proved to be laudanum, and the victim's life was sacrificed to the error. It is not necessary to moralize from this sad incident. It only affords another and a strong argument in support of the proposition that the handling of all medicinal articles should be strictly confined to those educationally and professionally qualified. Grocers' drugs are notoriously inferior in quality, and when it comes to dispensing laudanum for Jamaica ginger the condition is indeed serious.

THE ERA COURSE IN PHARMACY.

All students desiring to enter the October class should send in their applications for enrollment without delay, as students whose applications are received after November 1 are put in the November class.

NEXT CLASS BEGINS NOVEMBER 10.

Students who matriculate for the November class will receive the lectures on General Chemistry contained in Part I. Students who began the work in the October class will receive on November 10 Part II, of the lectures, or that part of the work known as "Pharmaceutical Processes Involving Masses and Volumes."

TOTAL EXPENSES FOR THE FULL COURSE, \$10.00.

If you are interested in this work, you should send in your order at once. For fuller particulars, see announcement facing third cover.

DETROIT DRUGGISTS AROUSED.

Detroit holds the very unenviable distinction of being the worst city in the United States, so far as the retail drug trade is concerned. Cutting on proprietary preparations is rampant, is practiced in every drug store, and to such a degree that no profit is made upon this class of articles by any one. A remedy has been sought repeatedly, but every nicely laid plan has been rendered inoperative by the holding out of one or two or more firms from the proposed agreement. But now all, with one exception, being sick of the deplorable condition, are agreed that something radical must be done for the salvation of the trade. The largest cut-raters have signified a willingness to join with the retail druggists in an advance of prices, and prospects are very favorable for a solution of the affair in the near future.

We allude above to one exception, a cutter who for years has been a demoralizing influence in the trade in Detroit, and who even now deters the druggists to make him be good. It is now proposed to get after him and make a strong fight against him. The N. A. R. D. plan will be adopted, and it looks rather as if this particular cutter's goose is cooked. If there is any virtue at all in the N. A. R. D. plan it ought to be shown in Detroit. If the majority of the retail druggists in that town wish to have this cutter's supply cut off, the wholesale drug trade and the proprietary medicine manufacturers are only waiting to be notified of this desire and the thing is done. Here is an excellent chance to see how the plan will work, and every one who has the best interests of the drug trade at heart will hope that it will prove quickly successful.

FORMALDEHYDE AS A MILK PRESERVATIVE.

The secretary of the Maine State Board of Health has made an exhaustive investigation of this subject with the view of ascertaining whether the use of formaldehyde should be allowed. He addressed specific inquiries to the State boards of health, to the departments of health of fifty-six of the larger cities, and to all the agricultural experiment stations in the country. The results of this research are set forth at length in the Medical Age, his paper concluding with the following summary:

Conclusions.—The results of my examination of all the available printed and other reports regarding the action of formaldehyde seem to me to justify and require the following conclusions: That used as a preservative it tends at least to impair the nutritive value of milk; that its tendency is also to interfere with the digestive processes—in either case it is only a question of dosage, and the limit of safety is difficult to determine; that though the inhalation of formaldehyde gas is much less dangerous than the breathing of the other gaseous agents much used in disinfectants, the results of tests

upon animals and one case of accidental poisoning of a human being indicate that formaldehyde taken into the digestive system may produce dangerous and even fatal results; that it would be unwise and unsafe to encourage or to suffer the use of formaldehyde in the public milk supply, even under any possible restrictive regulations; that in every State, as there are now in many, there should be a law prohibiting with effective penalties the use in milk of any chemical preservative whatsoever.

A THORN IN THE FLESH.

The Philadelphia druggists, through their local association, have done and are doing a grand work in the correction of trade evils, and especially in working out the N. A. R. D. plan for the abolition of the cut-rate abuse. But, as in every business community, there are some druggists who have no conception of professional ethics and responsibilities, who in their scramble for the pennies are ever ready to sacrifice to their own selfish and but apparent (not real) advantage the reputation and welfare of the profession as a whole. There is at least one of these obnoxious concerns in Philadelphia which is a disgrace to the profession. It sends out circulars, atrocious grammatically, advertising cheapness in drugs, prescriptions and specially patent medicines, and one whole page is devoted to the following:

HOW A WORD AS TO OUR MEDICAL DEPARTMENT.

To this part of our business we give special attention, as it is the most important part of our business. We fill prescriptions at lowest prices, any hour of the day and night. We use but the purest drugs and chemicals obtainable, and we do not substitute, always filling prescriptions as ordered by your physician.

Our physician in connection with this department is a graduate of one of the leading colleges, and has had vast experience in the hospitals of Europe as well as America. He is now connected with three of the leading hospitals of this city, and also has an extensive outdoor practice all over the city. He will give you his advice positively free of charge.

Testimonials from many of our patients should be sufficient guarantee of his ability. Chronic cases of long standing positively cured. Female complaints a specialty. Emergency cases promptly attended to.

Thanking you for past favors and soliciting your patronage in the future, remain,

Yours for health,

In modern slang, excusable under the circumstances, "Wouldn't that jar you?" If the N. A. R. D. scheme will shut off the supplies of such people or force them to act decently, what a grand thing it will be.

THE INVITATION NOT REGULAR.

The October number of the Canadian Pharmaceutical Journal contains an editorial, of which the following is the major part:

The publication in the daily press of a Chicago dispatch stating that the N. W. D. A. would hold the 1901 meeting in Montreal was at first thought by the members of the wholesale drug trade of Montreal to be a mistake, as nothing whatever was known of an invitation having been sent to the association, and it was considered that the latter would not come unless on such invitation. However, later it was found that a gentleman who at one time was in the wholesale drug trade, but who has not been connected with it for over ten years, had undertaken to secure an invitation from the Board of Trade and other bodies but had never notified the druggists of any such intention. This invitation has apparently been accepted by the N. W. D. A. without the previous knowledge or consent of the Montreal members of the association. Even the duly accredited representative of the drug trade on the council of the Board of Trade was in ignorance of the move which was being made, and was as much surprised at the news as any one else. * * * The whole move seems very peculiar. Of course, the Montreal wholesalers are angered that the N. W. D. A. is going to return here so soon after the '92 visit. It shows that the members must have been satisfied on the former occasion, but,

at the same time, they feel that they should have been consulted before an invitation was sent or accepted. However, now that the association has decided on coming, the wholesalers will do their best to make their visit an enjoyable one.

It is not too late yet to change the place of meeting, if the N. W. D. A. will not be welcome at Montreal.

OUR LETTER BOX.

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

AN EXPLANATION.

Chicago, Ill., October 15, 1900.

To the Editor.—In your issue of the Era October 11 I find among the Chicago news a note saying that Bauer & Black filed "a bill for an accounting and injunction against Edward E. Behlke," without in any way qualifying this statement. As it stands, it is liable to injure my credit as a business man, and if this should in any way suffer on account of your note, I must, of course, fall back on you.

The fact is that I sell in my store chest protectors manufactured by C. W. White & Co., in Boston, Mass., called by this firm "Klondike protectors," which designation Bauer & Black claim as their exclusive right. That is all. If you will recall to your mind the long suit involving the exclusive right of the respective parties to the name of "Fig Syrup" and the final decision that common words of the English language are not patentable, you will understand that the bill of Bauer & Black has no standing.

Respectfully,

E. E. BEHLKE.

MANUFACTURE OF ALCOHOL FROM ACETYLENE.—An article in United States Consular Reports consists of four reports by the Consuls at Paris, Berne, Berlin and Frankfurt, setting forth the present status of the industry. Letters from the leading authorities, Berthelot, Maercker, Rossel and Liebetang, regarding the future prospects of the industry are included. Descriptions of the manufacture are also given. The consensus of opinion appears to be that the fermentation-alcohol industry need not anticipate any competition from this direction. The cost of calcium carbide and the small yield of alcohol make the acetylene product about ten times as expensive as ordinary alcohol.

RECENT PROGRESS IN THE ALUMINUM INDUSTRY.—Jos. W. Richards (J. Franklin Inst.) says that the reduction processes are still the same in principle as the Hall process of ten years ago. The cost of materials and working has been materially reduced. The cost of aluminum is now about two-thirds that of brass. Aluminum is now worked into light and strong alloys; 5 per cent. of copper, nickel or manganese, or 30 per cent. of zinc make strong metals with aluminum. The use of the metal for culinary utensils, for novelty goods and bric-a-brac, for lithographic plates and the electric conductors has reached large proportions; over 500 tons were used last year for transmission lines and feed wires, replacing copper. Powdered aluminum is used for silvery printing and paint, as on the United States mail boxes; also for the reduction of refractory metallic oxides, such as those of manganese, chromium, tungsten, molybdenum, vanadium, uranium and boron. Many of these, alloyed with iron, are used in making steel at Krupp's works.

Petition to the Congress of the United States.

We, members of the drug trade of the United States in its several branches, retail druggists, wholesalers and jobbers, and manufacturers of proprietary preparations, herewith respectfully petition the Honorable Congress of the United States to repeal the special tax imposed under Schedule B, Section 25, and its dependent sections of the War Revenue Act of 1898, now in force, so far as such tax is laid upon medicinal preparations.

We seek this repeal for the following reasons:—

- 1.—This tax on medicines is class legislation, unjust and unduly burdensome.
- 2.—The tax is unequally distributed, being placed upon medicinal preparations which are necessities, and at the same time allowing to escape taxation a large number of articles which are as truly proprietary and which enjoy special protection under the copyright and trade mark laws.
- 3.—The revenue created by the enforcement of the law is no longer necessary, and the amount collected under this Schedule B is but a small proportion of the total revenue derived.
- 4.—The drug trade is already heavily taxed. Alcohol, which enters so largely into the manufacture of the preparations sold by us, is already taxed about 1,000 per cent., and the imposition of further taxation, as provided by this act, makes its operation oppressive.
- 5.—The intent of the law was to tax proprietary medicines only, but owing to its peculiar phraseology and the construction placed upon it by the officials, it does not reach nor apply to a large class of medicinal chemicals protected by trade mark, while on the other hand, it applies to nearly all drugs and medicines which are a necessity to the sick.

We ask relief, believing that the honorable members of Congress will realize the justice of our claims by repealing these unjust and burdensome provisions of the War Revenue Act.

NAME.

ADDRESS.

We want to send a copy of the above petition to every druggist in the United States who believes the stamp tax on medicines is unjust, unequally distributed, discriminative and unnecessary, and we believe every druggist holds this opinion.

The question is, are you sufficiently interested to do your share in a movement to secure the repeal of the tax? It will cost you one cent for a postal card to let us know you want a copy of the petition. If you are not willing to spend this amount, you don't deserve relief, and, if there are many like you, you will not get it.

But we are sure you all want it. The petitions signed by from one to twenty names, are coming to us daily by the hundreds, but we want everybody in on it.

Read what various members of the trade say on the subject, and let us know how you feel on it.

Send for the petition.

OPINIONS OF THE TRADE.

We have yours of the 12th inst. enclosing petition to Congress to repeal the tax on proprietary medicines. We are sure your points are well taken, but as this tax has been unloaded entirely on the retailer, the repeal of the law will fall of its purpose unless the manufacturers agree to return to old prices. You no doubt catch our meaning without further statement. We think that 60 per cent. of the manufacturers advanced their price more than enough to cover the tax. The retailer could get no advance, hence he has it all to pay. The passage of laws, or the repeal of pernicious laws, should be based on the good to the greatest number. The consumer was not injured by the passage of the law; the manufacturers, in many cases, were benefited. The middle man, the distributor, the poor devil who works from six in the morning to ten or eleven at night, was

called upon to foot the bills and pay the manufacturer 45 cents per dozen more than he got before, besides the tax. Now suppose you circulate a paper among the manufacturers pledging them to return to old prices. If this is done the 40,000 retail druggists in the United States and Canada will "rise up and call you blessed." Otherwise they would oppose the repeal as unjust class legislation, voting more money to the manufacturer and doing them no good.

I think you should write and publish an article elaborating these ideas, and unite the retail druggists in an effort to throw the burden off themselves, not off the manufacturer, and leave it on their shoulders.

W. S. JOHNSON & SON.

Henderson, Ky.

We should be very glad to get signatures, and could do so if we had any assurance from the manufacturers that their price list would be changed. As a matter of fact a large percentage of manufacturers who had been at \$1.50 dozen put price \$1.75; \$1.75 people put price to \$2; \$8 people went to \$8.50, etc. Now if the tax were repealed, we do not believe that those manufacturers, i. e., a percentage of them, would move their prices one iota. The repealing of the law, now that it is a law, we believe would not largely help the retailer, but would be that much money into the hands of the manufacturers. If jobbers had some assurance from manufacturers at large that a revision of prices would be made we would be very glad to urge the repeal of the stamp tax.

N. L. WILLET DRUG CO.,

Augusta, Ga.

N. S. WILLET, President.

I happen to reside in a district represented by the Hon. Seno E. Payne, chairman of Committee Ways and Means. He being a Republican and I a Democrat, anything I might say to him in the premises would have no effect. In the last session of Congress a very determined effort was made by influential committees of the several branches of the trade, but Mr. Payne said No. If the Democratic party shall be in control next year then there may be a good prospect of getting stamps off.

Auburn, N. Y.

WILLIAM FOSGATE.

We have signed petition for repeal of the stamp tax, and the writer was one of the delegation of druggists and manufacturers who went to Washington last April and were given a hearing by the Ways and Means Com-

mittee. Quite recently we again wrote General Sewell, United States Senator, and our representative, Mr. H. C. Loudenslager, urging that the repeal of the stamp tax under Schedule B be given early attention at the next session.

Woodbury, N. J.

G. G. GREEN,
Per D. T. Mathers.

We enclose your signed petition for the repeal of the War Tax on proprietary medicines and trust that you will be successful in getting the same repealed. It is quite a hardship on us on account of the immense number of bottles we manufacture. We are now using what influence we can on our members of Congress in Massachusetts, as we have a much better acquaintance there than in this State. We are willing to do our share in having this repealed, as we think it is quite unjust.

MONIE NERVE FOOD CO. OF N. E.,

New York Office. W. L. HILLS, Resident Manager.

At our first opportunity we will endeavor to get the signatures of as many druggists to the petition as we possibly can. We believe that you have taken a move in the right direction and will have our hearty co-operation in your efforts to bring about the repeal of the special tax imposed under Schedule B, Section 25 and dependent sections of the War Revenue Act of 1898, as we fully agree with you that it is class legislation.

EMERSON DRUG CO.

Baltimore, Md.

We hand you the petition signed by us and all druggists in the city. We Western men are doing all we can through the P. A. A., Chicago, to have this abominable tax on proprietary preparations repealed. It is an outrage and ought to be abolished, knowing well, as we do, the millions derived from this source are used for speculation.

PAGE HYPOPHOSPHITE CO.

Frankfort, Ind.

We return petition to you with signature attached. If the retail drug trade here were called upon through their association officials you would have nearly all, if not all, the trade represented upon the petition. Address to retail druggists through T. V. Wooten, secretary, 943 West Madison street, Chicago.

MORRISON, PLUMMER & CO.

Chicago.

We have little or no Congressional influence in the District of Columbia. I have, however, forwarded the petition to a friend who is in a position to secure more Congressional influence by far than I am, and while he is not connected with the drug business, in this matter I am positive he will accede to my wishes.

J. S. TYREE.

Washington, D. C.

Enclosed find petition for the repeal of the War Revenue Tax on proprietary remedies. There is no necessity for the tax except to perpetuate a political machine and to furnish places for "ward heelers," and should be repealed.

THE ANIMAL REMEDY CO.,

Akron, O.

Per A. M. ARMSTRONG, Mgr.

We take pleasure in enclosing herewith petition duly signed and thank you for your efforts to have this burdensome tax taken off.

STERLING REMEDY CO.,

H. L. KRAMER, Treas. and Gen. Mgr.
Indiana Mineral Springs, Ind.

Your effort in regard to repeal of the stamp tax has our warmest support. If you will send us a number of blanks we will have our travelers secure signatures to the same.

HUMPHREYS' HOMEOPATHIC MEDICINE CO.,

New York.

H. B. HARDING, Treasurer.

We have already communicated with our members of Congress on this subject. We are heartily in favor of its abolishment.

WISCONSIN PHARMACEUTICAL CO.,

Milwaukee Wis.

E. G. RAEUBER, Manager.

We are in sympathy with you in this matter and will use all the influence at our command to aid the drug trade in general to have the War Tax on proprietary medicines, as well as other medicines, repealed.

ETNA CHEMICAL CO.,

New York.

GEO. C. COOK, Pres.

We send the enclosed petition signed by the wholesale drug trade of this city.

Very truly yours,

SHARP & DOHME,

Baltimore, Md.

A. R. L. DOHME, 2d Vice-Pres.

We thank you for calling our attention to the matter. We have signed the petition as requested.

Burlington, Vt.

ATCCA CO.

CURIOSITIES OF A CHINESE DRUG STORE.

By L. DeV. MATTHEWMAN.

The drug store of a Chinese village is unique. That of Jangtschiazun, near Kiautschou, is a good example. Father and son run the store together. The former is the consulting physician and the latter the dispenser. The filling of prescriptions is carefully superintended by the father. After a short consultation the prescription is written out, and the son has the opportunity of learning both pharmacy and medicine at the same time.

The store itself is an ordinary Chinese house; outside there hangs a wooden sign on which are inscribed the names of the herbs and roots which are sold within. The room is somewhat large; every corner and cranny is filled to overflowing with drugs, mostly of vegetable origin. From the ceiling hang a dried tortoise, a wasp's nest and some dried fish. The particular odor which is so marked in an American drug store is absent, but the odor which is there is quite as striking. Dust and dirt are as noticeable by their presence in a Chinese drug store as by their absence in the American store.

The Chinaman sells the following substances: Rock salt, saltpeter, sulphur, alum, borax, arsenic, mercury, cinnamon, chalk, talcum, cement (both crude and burned), sugar of lead, vitriol, camphor, morphine, sulphonal, pastilles, burned bones, coal, alcohol, etc.; in addition, the following herbs: Angelica, lemon and orange peel, opium, orchid buds, pinks, musk, rhubarb, aniseed, red dyewood and a few others. The animal substances sold are remarkable and include the following: Scorpions, wasps, spiders, tortoise blood, dragon's blood (which is very expensive), centipedes, sepia and burned ox bones.

All medicines are sold in the shape of powders, pills, pastilles and plasters. The instruments used are many of them quite dainty and generally well adapted to their requirements. Particular attention is paid to the putting-up of proprietary articles such as tooth powder, complexion paints and gilded pills. The Chinese scales are balances, and although generally accurate are handled very carelessly. In the case of our apothecary the weights have been filed, so that short weight is the rule. This, however, is only one example of the corruption which permeates Chinese life. (Bull. of Pharm.)

BOTTLES FOR TRANSPORTING MERCURY—The bottles or flasks used for transporting quicksilver are generally made of boiler iron and are cylindrical in shape, about 12 inches in height and 4 inches in diameter, with a screw plug inserted in one end. The capacity of a flask is 76½ pounds and its weight about 14 pounds. Such flasks are used by all producers of quicksilver and pass through the hands of various dealers till they reach the consumer. The total number used in this country cannot be very large as the total product last year of quicksilver in the United States was but 28,879 flasks, and the same flask can be used again and again until it gets too rusty inside. A flask can easily last twenty-five years. Most of the second-hand flasks in use can be bought for 25 or 30 cents apiece. (Eng. and Min. Jour.)

THE PARIS EXPOSITION.

Publication of the Jury's Awards—The Ceremony of the "Distribution of Prizes"—United States Medallists, Etc.

THE ALIMENTARY SECTION.

The ceremony of the "distribution of prizes" took place in the Great Festival Hall of the Paris Exposition on Saturday afternoon, June 18. The spectacle was grandiose, some 20,000 persons being present, the uniforms of the home and colonial troops, the costumes of the officials, the ladies' summer toilettes and the banners of the corporations relieving the dense mass of ordinary black-coated humanity. The proceedings were short and simple, consisting of a speech by President Loubet, an address by M. Millerand, Minister of Commerce, and a figurative "distribution of prizes." As a matter of fact, the President of the Republic simply handed a list of the prize winners in each group to its official chairman. Some good music closed the proceedings.

M. Millerand reminded his auditors that there were 75,000 exhibitors, as against 62,000 in 1889; the space occupied by exhibits was 785,000 square metres, instead of 419,000, and 75,000 tons of goods had been sent in as against 35,000 tons of goods at the last Paris Exhibition. He quoted the chemical arts, silk, porcelain, jewelry, metallurgy and electricity sections as among the most remarkable features of the 1900 World's Fair. He gave also the total number of awards. We place the United States total in a parallel column that American readers may notice the proportion at a glance.

	Grand Total.	U. S. A. Total.
Grands Prix	2,827	218
Gold medals	8,166	486
Silver medals	12,244	583
Bronze medals	11,615	423
Honorable mentions	7,938	270

The American Chemical Section

was briefly described in our columns some months ago, and we may commence by quoting a few prize winners in this and the allied industries.

Grands Prix

(the highest award) were gained by the Standard Oil Company, of New York, who have a small exhibit in the Chemical Section and an important and remarkably handsome court, illustrating the American petroleum industry, in the Metallurgy and Mining Group; Colgate & Co., whose striking perfumery exhibit we have already noticed; the Tripler Liquid Air Co., the Eastman Kodak Co., and the United States Agricultural Department, for their tobacco exhibit, of which we give an illustration. The Boston Hygiene Bureau, Warner & Swasey, scientific instruments, and Carvajal & Co., tobacco, may also be mentioned. In the Educational Section the U. S. A. grands prix are too numerous to mention; Harvard, Philadelphia, New York State and Washington Universities, Prof. Michelson, of Chicago, etc., etc., are thus honored.

Gold Medals

have been awarded to the California Fig Syrup Co., of San Francisco; the Harter Medicine Co., Dayton, Ohio; the H. G. Hotchkiss Essential Oil Co., Lyons, N. Y.; Binney & Smith, Valentine & Co., B. T. Rabbitt, and the Liebig Extract Co., all of New York; Armour & Co., Chicago; the Vacuum Oil Co., the National Cash Register Co. and quite a number of exhibitors in the Tobacco Section; the Owl Commercial Co., Miller du Brul & Peters, Havana Commercial Co., Veltor & Co., Cullmann Bros., Jacob Stahl & Co., Cunningham, M. H. Clark & Bros., United States Tobacco Co., the Surbrug Co., Calixto Lopez & Co., etc., etc.

Silver Medals

have been allotted to the Michigan Carbon Works, Seabury & Johnson, the Thomsen Chemical Co., who have all a good show in the United States Chemical Section; J. I. Colman, Limited, the Russian Cement Co. (Le Page's glue), the J. B. Williams Co., whose soap exhibit we

U. S. AGRICULTURAL SECTION.

noticed, and the Sen Sen Co., who figure both in the Chemical and Alimentary Sections.

The Bronze Medallists

include Wm. R. Warner & Co., of Philadelphia; the Wm. Freck Co., of Chicago; Matheson & Co., Bremer & Co., Muzzy Bros., the Lambert Pharmacal Co. for their Listerine exhibit; Nepera Chemical Co., etc., while honorable mentions are accorded to the Murals Co., paints; P. Reiger & Co., perfumes; the Bilchert Manufacturing Co. and others.

This list does not pretend to be complete, even so far as pharmacy, etc., is concerned, while a host of awards for optical, surgical, photographic and other instruments, typewriters, tobacco, etc., have been intentionally omitted for brevity's sake. In the same manner we have not spoken of

The United States Alimentary and Agricultural Section.

which is one of the most important in the Exhibition and has been got up with a picturesque frontage to imitate one of the old mansions in California, as shown in our engraving. Here the great home and export food trade of the United States is illustrated, the exhibits being all placed in simple cases, of the type shown in our representation of the tobacco exhibit. Canned goods are naturally most in evidence, meats, vegetables, cereals, nuts, cocoa, chocolate, condensed milk, etc., etc., with pickles, sauces, condiments, etc., etc. The attractive dairy exhibit includes Babcock's milk testing apparatus, "modified milk" to physicians' prescriptions and other details. Anker's bouillon capsules, Swift's beef fluid and extract and the model of Libby's factory may be noticed in the meat exhibit. Various baby foods and breakfast foods, the Quaker oats display, sugar syrup, wheat gluten, Maltol, Bromose, etc., figure in the cereals court.

The Beverages

are very numerous, America's possibilities in this respect will be a novelty to many Europeans. To enumerate the whiskies and wines would require several pages, and to quote the total awards in these food and drink - -

U. S. VARIOUS INDUSTRIES SECTION.

tions would be scarcely easier, for a very large proportion have received some recognition of the excellence of their products. The California Wine Association, Klein, the Pleasant Valley Wine Co., the Sierra Madre Vintage Co., J. W. McCulloch, I. B. Kirk & Co., D. Netter & Co. and a dozen others might be quoted at hazard among the gold medallists.

The Mineral Waters

of the States are well represented; White Rock, Pluto, Almanates, Taskonas, Aetna, Bolen & Byrne, Lytton (Cal.), Bartlett Springs, Bythinia, Messesquer, Allouez, Saratoga Catharta, Adirondack and Lincoln, Bear Lithia, etc., besides ginger ales, champagne ciders, and

Sarsaparilla,

little known as a popular drink on this side of the Atlantic. We notice that the Vartray Co., who take a gold medal in this section, show this hygienic drink in addition to seltzer and soda, ginger ale, etc. Sugar and maple syrup, jams and preserves, candy and a dozen other toothsome aliments may close our notice of this section. Among these we ran across the second Sen Sen exhibit, where the "Sen Sen library edition" of the popular work, "A Rare Trick," possibly familiar to some of your readers, surmounts a neat case of chewing gum and cabbages.

But to return to the question of prizes.

The Legion of Honor

has been awarded to several notabilities. Mr. Peck, United States Commissioner, and Mr. Woodward having both been offered the coveted red ribbon.

Among the Frenchmen Prof. Troost, who organized the French Chemical Exhibit, has been named commander; Prof. Haller, M. Asselin, Dr. Martin and M. Hatton, officers; while the grade of chevalier has been conferred on M. Dupont, secretary of the Applied Chemistry Congress; M. A. Petit, president of the International Pharmacy Congress; M. Fumouze, who is chairman of the Pharmaceutical Specialties Congress; M. M. Prot, V. Bert and Piver, the perfumers; M. De Laire, manufacturer of synthetic perfumes; Dr. Ogier, of the Paris Municipal Toxicological Laboratory, etc.

Among the Jurymen

who made the awards above noted we may quote, in Class 87 (Chemicals and Pharmaceuticals), Prof. W. B. Rising and Dr. W. Douglas Hogg, of the Anglo-American Pharmacy, Paris; in Class 90 (Perfumery), Mr. Geo. R. Lorenz; in Class 60 (Wines, etc.), Prof. H. W. Wiley and Mr. L. J. Vance; in Class 62 (Various Beverages), Mr. Julius Schuller; in Class 3 (Higher Education), Mr. Henry L. Taylor, and in Class III. (Hygiene), Mr. Joseph Leidy. The jury in Class 87 also included Prof. Troost, Haller, Lauth and Riche, MM. Astier, Lefebvre, Adrian, Debuchy, Champigny, Lorilleux and many other well known Frenchmen; Prof. Mendeleef represented Russia, Dr. Witt and Dr. Brunck, Germany; Herr Bauer, Austria; M. Koch, Belgium; Senor Jose Fitter, Spain, and M. De Wagner, Hungary. Mexico, Sweden, Holland, Great Britain, Italy, Salvador and Peru were also among the nations sending jurymen to this section.

PHARMACEUTICAL CRIPPLES.*

My experience on the Board of Pharmacy brings me in constant contact with many pharmaceutical cripples— young men who go hobbling along, stumbling and blundering because they are too indolent or too self-indulgent to make the effort and sacrifice needed to secure themselves a pharmaceutical education. When I see a young man less than thirty years of age with no one dependent upon him for support, ignorant of the principles of chemistry, knowing only such pharmaceutical technique as can be picked up in the drug store, with little definite scientific knowledge of any kind and he tells me that he can't go to college because he hasn't the money, as a general thing I do not believe him. If he has a thorough determination to master his profession and has good health, I tell him that "where there's a will there's a way." Assiduous industry and rigid economy will enable such a young man in these days to secure a pharmaceutical education. He may have lacked early advantages at school. This loss can be made up by utilizing his spare hours and minutes. If he has had a fair preliminary education and is thoroughly in earnest in his endeavor to go to college, some way will present itself, provided he be industrious and economical.

There is another class whom I will call voluntary cripples, who, because they do not like some branch of science which is essential to the well-rounded pharmacist's education, deliberately refuse to study it. Even in college I have found young men who found chemistry difficult and therefore would skim it all they could, and others who, claiming that they were not going to be botanists but druggists, almost refused to study botany; and so with other subjects.

They are voluntary cripples because they are willing to remain in ignorance of a portion of the pharmacist's equipment while fair students in other branches, preferring to trust to their good fortune in being able to find some one who can help them out should they ever need assistance in those matters which they have failed to study, instead of mastering them themselves. They remind me of those two men who used to ride tandem on a bicycle in an Eastern city. One had lost his right arm and left leg and the other had lost the left arm and right leg. By dint of long continued, persevering practice these two men could get along as the average man by joining their forces together on a tandem wheel; but anyone can see that for all cycling purposes each of these was only half a man. These half men we have in our colleges and sometimes in our drug stores. They are voluntary cripples, because they have deliberately refused to study that which was difficult or uncongenial. How much better for each man, when he has the opportunity, to develop his powers in all needed directions, so that he may become a well-rounded pharmacist. And what shall we say to the young man who, by cramming with quiz compends, examination questions and other subterfuges for legitimate study, supplemented by no little cribbing, has managed, partly by good luck and partly by cunning, to get through the State Board.

*Portions of an address on "Cripples," by Prof. W. M. Searby, of the California College of Pharmacy.

and rejoices in the possession of a certificate as a full-fledged licentiate? Too often he thinks he knows it all. His case is the most hopeless that we have to deal with. He is like the blind man who has no sense of color. He does not know how much he loses by not seeing what others see, and it is hard for any one to tell him. He is beyond hope. Unlike the man who knows his own defects, he makes no effort to overcome them.

But there is another class of cripples, fortunately not so hopeless, whom I often meet in my capacity as dean of the College of Pharmacy. I refer to young men who wish to acquire a knowledge of pharmacy, but are crippled by reason of their defective general education. For almost a generation I have watched such young men and have seen how handicapped they have been in their efforts to learn their profession after they have set about it in good earnest. Often we see them hobbling along as indifferent students, because they find they do not make as good progress as others. This discourages them, and after a time they drop out altogether, having wasted time and money in a fruitless effort to build the top story before they had laid the foundation. I am not speaking of those who never were disposed to study and consequently made but little progress in the public schools and less in a school of pharmacy. Such persons are not fitted for any calling in which success depends largely upon the acquisition of scientific knowledge. These young men sometimes enter drug stores with erroneous views as to what will be required to make them successful pharmacists. Being adverse to study they acquire no more than a smattering of knowledge. It is scarcely to be expected under these conditions that they should persevere until graduation. Frequently they drop out after attending college a few months. Our best opportunity of serving the future pharmacists occur whenever we have an opportunity of inducing youths to postpone entering drug stores until after they have completed their high school course. By doing this we not only render them a service, but also promote the cause of legitimate pharmacy.

ESTIMATION OF ALKALOIDS.

The older systems for the extraction of the alkaloids from aqueous salt solutions were based on the supposition that they were not extracted from acid solutions by ether, petroleum spirit, chloroform, etc., because their salts are insoluble in these solvents, but were extracted quantitatively when the aqueous solutions were made alkaline.

The author investigated the extractive action of ether and chloroform on aqueous solutions of certain alkaloids containing hydrochloric, sulphuric, tartaric and oxalic acids in large excess. The liquids were well shaken together for about three minutes, when completely clear (1½ hours), the layer of ether or chloroform was washed with 1 to 2 Cc. of water, the solvent removed on the water-bath and the residue of alkaloid and alkaloid salt dried *in vacuo* over sulphuric acid. The proportion of free alkaloid was estimated by adding excess of 1-50 N. sulphuric acid and titrating back by 1-50 N. caustic soda, using a sensitive indicator. In the case of the volatile alkaloids, sparteine, conine, nicotine and pelletierine, the ether or chloroform solution was directly titrated by 1-50 N. sulphuric acid, adding water and indicator and well shaking; both layers of liquid were returned to the separating funnel, caustic soda added in slight excess, the layer of solvent removed, the aqueous solution repeatedly extracted by ether or chloroform and this solution titrated as before. The first result gives the free base, the second the sum of free base and salt.

It was found that chloroform extracts from the hydrochloric acid solutions more alkaloid than from sulphuric acid solutions, and that the solvent action, due to dissociation of the alkaloid salts, can be so far reduced by increasing the excess of sulphuric acid that in practice no appreciable error will be produced. From the acid solutions, ether extracts the alkaloids in far smaller quantities than chloroform. The alkaloid tartrates show, in aqueous solution, generally less dissociation than the salts of the mineral acids. In those cases in which the alkaloid is extracted in quantity by chloroform from acid

solutions, a quantitative extraction is either very difficult or impossible. The saturation of the acid alkaloid solution by common salt facilitates the extraction of chloroform. It was also found that the best results in the extraction of morphine and narceine from alkaline solution were obtained in the presence of sodium chloride. In this case chloroform containing 10 per cent. by volume of alcohol is more suitable than the usual amyl alcohol. Strophanthin is simultaneously extracted; it is more readily removed in this manner than by a mixture of chloroform and ether, as previously advised by the author.

The following scheme for the extraction of alkaloids and other poisons is given:

1.—To the aqueous solution, containing as small a quantity of metallic salts as possible, sulphuric acid is added until the liquid contains at least 1 per cent. of free acid. It is then warmed to 30° C., allowed to cool and twice shaken with petroleum spirit boiling at 30° to 50° C., which extracts fat, traces of veratridine and jervine, also small quantities of xanthine bases.

2.—The acid solution is heated on the water-bath to remove petroleum spirit and shaken with chloroform. Colchicine, digitaline, picrotoxin, cantharidine, papaverine, aconitine, narcotine, jervine, geissospermin and caffeine, small quantities of delphinine, brucine, emetine and thebaine, traces of narceine, strychnine, veratrine and cocaine are extracted.

3.—The acid solution is made slightly but distinctly alkaline by caustic soda and again shaken with chloroform. The following are extracted: Sparteine, conine, nicotine, atropine, codeine, pelletierine, emetine, brucine, strychnine, veratrine, delphinine, pilocarpine, apomorphine, hyoscyamine, daturine and scopolamine. In the alkaline solution still remain certain quantities of narcotine, papaverine, aconitine and caffeine.

4.—Strong alkaline bicarbonate solution is then added, then sufficient sodium chloride to saturate the liquid, about 35 grams to 100 Cc. are required; larger volumes are concentrated on the water-bath whilst acid. The solution is then shaken with chloroform containing 10 per cent. by volume of alcohol. The solvent takes up morphine, narceine and strophanthin, which can be quantitatively isolated by evaporating the solution to complete dryness and extracting with absolute alcohol.

The presence of metallic salts in the first three operations is to be avoided, otherwise alkaloid salts are dissolved by the chloroform.

The strongly acid solutions of many alkaloids may be conveniently purified by shaking with ether before the chloroform extractions. (C. Kippenberger in *Ztsch. Analyt. Chem.; Jr. Soc. Ch. Ind.*)

DYEING, STAINING AND FINISHING OF LEATHER.*

Bleaching.—The bleaching of chamols leather is best carried out by means of a solution made by dissolving 1 lb. of potassium permanganate in 10 gallons of water. The skins are immersed for about half an hour, with constant stirring, at a temperature of 40° C., and when dyed brown throughout they are washed in water and transferred to a solution made by dissolving 7 lbs. of sodium bisulphite in 20 gallons of water and adding 3 lbs. of hydrochloric acid. The skins are kept in this solution until they are completely bleached, a little more acid being added if necessary; they are then removed and washed in water.

Other bleaching agents are sulphur dioxide gas and sodium hypochlorite solution ("Javelle water").

The sodium hypochlorite bleach is used successfully for bleaching "Persian" and Australian basils, the treatment with sodium hypochlorite being substituted for the alkaline bath used to "strip the tan" from these goods.

Hydrogen and sodium peroxide have never, so far as the author is aware, been successfully applied to leather as bleaching agents.

Dyeing.—After the preliminary operations the skins are ready to be dyed.

There are three distinct methods of dyeing in use in

*M. C. Lamb. *Leather Trades Rev.; Jour. Soc. Chem. Ind.*

this country, namely, the "tray," "drum," and "paddle" methods.

The "Tray" Method.—In this method of dyeing the skins are paired together, flesh to flesh, and laid over a "tray" alongside the dye tray; the dye-bath is prepared in the tray and the skins placed therein, a pair at a time, as quickly as possible. The skins are kept in motion by transferring the pair of skins at the bottom of the tray to the top, this being repeated until each pair of skins have been moved from the bottom to the top three or four times or until the skins have acquired the desired depth of shade. The temperature of the dye-bath is about 60° C. before the skins are entered, the cold skins on being placed in the bath lowering the temperature down to about 45° C. The advantages of this method are (1) that the skins can be seen during the dyeing operation; (2) that where one or two skins, owing to their closer and more compact grain, do not take the dye as quickly as the rest, these may be allowed to remain in the dye-bath after the other skins have been removed, until they have acquired the necessary depth of color; (3) that the flesh sides of the skins are not to any great extent dyed, this meaning a saving in dyestuff. The disadvantages of the method are (1) that the dye-bath soon becomes cold without some special appliance for heating, and (2) that the labor involved in keeping the skins in motion is considerable.

The "Drum" Method.—In this method the dye-bath is made in the drum at a temperature of about 50°–60° C., the skins entered and the drum rotated.

The advantages of this method of dyeing are (1) that the goods are kept in motion without labor; (2) that the dye-bath only cools down a few degrees during the dyeing, and (3) the mechanical action of the drum causes a better absorption of the dye, also the dyeing is more even than in the "tray" method. The disadvantages of the method are that the goods cannot be seen during the dyeing operation; the drumming action is apt to "grain the skins up," and the flesh side of the skin is dyed.

The "Paddle" Method.—In this case the dye-bath is made in the paddle, the paddle started and the goods to be dyed entered. The advantages of this method over the "tray" method are that no labor is required to keep the skins in motion and the dyeing is more even. The disadvantages are, that more dyestuff is used than in the case in either of the other two methods; the flesh side of the skin is dyed, and that, unless the paddle is closed in, the dye-bath soon cools down.

The dye-bath is made by pouring upon the requisite quantity of dyestuff 200 to 300 times its weight of boiling water and stirring until dissolved. If the dye solution is not quite clear it should be filtered through a piece of canvas; should the water with which the dye-bath is to be made contain lime salts it should be rendered faintly acid with acetic acid.

The "acid" and basic dyes are those chiefly used in leather dyeing, the latter being least in favor owing to their partiality for accentuating defects caused by any part of the grain surface being damaged. The "acid" colors require double their weight of concentrated sulphuric acid added to the dye-bath, whereas the basic dyestuffs require no such addition.

It is better only to add one-third of the concentrated dye solution to the dye-bath at first, adding the remaining two-thirds at periods of about ten minutes each.

The length of time required in dyeing depends upon the depth of shade required and upon the dyestuff, but about three-quarters of an hour is generally sufficient.

After dyeing the skins should be well washed in tepid water; where "acid" dyes have been used the dyed skins should be washed in running water for at least three hours in order to free them as much as possible from the excess of sulphuric acid. The author recommends the addition of a little salt to the water in which the skins are washed, in order to prevent the "bleeding out" of the dyestuff.

After washing, the leather is "set out," then lightly oiled over the grain and dried out; when dry the goods are ready for the finishing.

EXAMINATION QUESTIONS.

NEW YORK CITY BOARD OF PHARMACY.

CHEMISTRY.

- 1.—Define the following terms:
(a) Filtrate, (c) Monobasic,
(b) Precipitate, (d) Dissociation.
- 2.—How many grammes of water can be obtained from 500 grammes of Hydrogen? How many grammes of Oxygen will be required?
- 3.—State how Nitrous Oxide Gas is usually obtained?
- 4.—Give the chemical title of each of the following:
(a) $\text{H}(\text{NO}_3)_3$, (c) Ag_2SO_4 ,
(b) $\text{K}_2\text{Cr}_2\text{O}_7$, (d) $\text{Na}_2\text{Cr}_2\text{O}_7$.
- 5.—Write the chemical formula for each of the following:
(a) Barium Carbonate, (c) Zinc Sulphide,
(b) Magnesium Hydride, (d) Silver Oxide.
- 6.—What do you understand by the terms "hard" and "soft" as applied to water?
- 7.—A sample of Precipitated Sulphur is suspected to be adulterated with Calcium Sulphate. How would you, by a simple process, ascertain that such is the case?
- 8.—State, giving formulas, what oxides are formed when the following are burned in air:
(a) Carbon, (c) Phosphorus,
(b) Sulphur.
- 9.—Give a characteristic test for each of the following:
(a) Sulphuric Acid, (c) Nitrous Acid,
(b) Nitric Acid, (d) Phosphoric Acid.
- 10.—Write the chemical formula and give the source of each of the following:
(a) Methyl Alcohol,
(b) Ethyl Alcohol.
- 11.—Give two methods by means of which Oxygen may be obtained. Give the physical properties of Oxygen.
- 12.—How is Bromine obtained? In what form does it commonly occur in nature?
- 13.—Cite an experiment which proves that the atmosphere is a mechanical mixture and not a chemical compound.
- 14.—Ammonia gas is passed into dilute Sulphuric Acid. What chemical change takes place? How can the gas again be obtained from the solution?
- 15.—Complete the following equations:
(a) $\text{Fe}_2\text{O}_3 + 3\text{H}_2\text{SO}_4 =$, (d) $3\text{Na}_2\text{CO}_3 + 3\text{Br}_2 =$
(b) $\text{SnCl}_2 + \text{Zn} =$, (c) $\text{Cu} + 2\text{H}_2\text{SO}_4 =$

PHARMACY.

- 1.—If 500 cubic centimeters of a liquid weigh 625 grammes, what is its specific gravity?
- 2.—What part of a liter is represented by 100 cubic centimeters?
- 3.—State briefly how the process of percolation differs from that of maceration. Why is the latter process preferred in some instances?
- 4.—Name two official exsiccated salts. How does the process of exsiccation differ from that of desiccation?
- 5.—You have a stock solution of Potassium Chlorate containing 30 grains in each fluid ounce. How many fluid drachms of it would be required to furnish 10 grammes of the salt?
- 6.—Pulvis Cretæ Compositus:
(a) What is its common name?
(b) What are its constituents?
(c) What is its official preparation?
- 7.—State how Adeps Benzoïnatus U. S. P. is prepared. Under what circumstances is the addition of 5 per cent. or more of white wax permissible?
- 8.—Aqua Chloroformi:
(a) State how it is prepared.
(b) Why should there always be an excess of Chloroform present?
- 9.—What is the common name of Potassa Sulphurata? State how it is prepared.
- 10.—Tinctura Opii Deodorati:
(a) Give details of method of preparation.
(b) How many grammes of crystallized morphine should 100 cubic centimeters of the tincture yield?
- 11.—Name the ways in which substances may be incompatible with one another and give an example of each.
- 12.—Give the per cent. of active constituent in each of the following:
(a) Wine of Opium,
(b) Tincture of Aconite,
(c) Diluted Hydrocyanic Acid,
(d) Chlorine Water.
- 13.—Liquor Ferri Subsulphatis:
(a) Give its common name.
(b) How does it differ from Solution of Ferric Sulphate?
- 14.—Give the official title of Goulard's Cerate and state how it is prepared.
- 15.—Lime Water:
(a) Give its official title.
(b) Give details of method for its preparation.
(c) Why does it become turbid when exposed to the atmosphere?

TOXICOLOGY AND POSOLOGY.

- 1.—Define: Antidote, corrosive poison, narcotic poison, demulcent, toxicology.
- 2.—Name the chemical antidote for Silver Nitrate; for Sugar of Lead.

- 3.—Give a characteristic chemical test for Corrosive Subimate; for Iodine.
- 4.—Name a poisonous vegetable acid and give the emergency treatment for poisoning by it.
- 5.—What emergency treatment should be employed for poisoning by Antipyrine? By Cocaine?
- 6.—What emergency treatment should be employed for poisoning by Belladonna? By Phenol?
- 7.—What emergency treatment should be employed for poisoning by Aconite? By a rat paste?
- 8.—What proportion of the adult dose of a medicine should ordinarily be given children at the following ages: 3, 4, 8, 10, 14 years?
- 9.—Name two of the most deadly poisons that the druggist dispenses in prescriptions and tell what emergency treatment should be employed for overdose of each.
- 10.—What influence does drug habit have upon the size of the effective dose? What precautions should the pharmacist employ in dispensing to a person known to have a certain drug habit, the drug such person takes?
- 11.—What is the dose of Arsenous Acid, Atropine Sulphate, Ammonium Carbonate, Gallic Acid, Potassium Acetate?
- 12.—What is the dose of Creosote Carbonate, Potassium Permanganate, Salicylic Acid, Sodium Bromide, Sodium Sulphocarbonate?
- 13.—What is the dose of Extract of Aconite, Extract of Hyoscyamus, Infusion of Digitalis, Oil of Gaultheria, Oleoresin of Aspidium?
- 14.—What is the dose of Mercurous Chloride, Phenacetin, Resorcin, Sulphonal, Urethane?
- 15.—What is the dose of Fluid Extract of Cimicifuga, Fluid Extract of Conium, Syrup of Lactucarium, Tincture of Digitalis, Wine of Opium.

MATERIA MEDICA.

- 1.—From what are the following obtained: Acetic Acid, Chrysophanic Acid, Muriatic Acid, Boric Acid?
- 2.—Name five official poisonous drugs; also five official non-poisonous drugs.
- 3.—Give the botanical name and habitat of the following drugs: (a) Nux Vomica; (b) Hemlock; (c) Jalap; (d) Pennyroyal.
- 4.—Name two official drugs that belong to the Natural Order Ranunculaceae.
- 5.—Is Croton Oil a volatile or a fixed oil, and from what part of the plant is it obtained?
- 6.—Name the official Lichens.
- 7.—Name four official drugs indigenous to New York State.
- 8.—To what natural orders do the following drugs belong: (a) Belladonna; (b) Digitalis; (c) Peppermint?
- 9.—Name four mineral acids; also four vegetable acids.
- 10.—Define the following terms: (a) Inspissated; (b) Procumbent; (c) Herbaceous; (d) Succulent.
- 11.—Canadian Moonseed: Give official name. What part official? Give official preparation.
- 12.—Name three official phenols.
- 13.—Give two official drugs that belong to each of the following classes and state the official title of each: (a) Flowers; (b) Roots; (c) Seeds; (d) Rhizome; (e) Leaves.
- 14.—From what is chloroform obtained, and state process?
- 15.—Give the official names of the following drugs:

Butternut,	Terebene,
Poison Ivy,	Vallet's Mass,
Pinkroot,	Cochineal.

THE DETECTION OF COAL-TAR DYES IN FRUIT PRODUCTS.*

By A. L. WINTON.

Soon after its discovery fuchsine came into use for coloring wines and replaced to a large extent the vegetable dyes which from very early times had been employed for this purpose. More recently various other coal-tar dyes, particularly the azo-colors, have been extensively used in wines, although fuchsine and acid fuchsine are still preferred by some makers.

Within the past few years the use of coal-tar dyes in articles of diet has attracted the attention of food analysts in the United States. In the case of confectionery, pastries and some other products they serve merely to render the articles more attractive to the eye without deceiving the purchaser, but as a rule they give imitation products the appearance of the genuine or, to use the legal phraseology, "they make the products appear better or of greater value than they really are."

Some of the results obtained by Winton, Ogden and Mitchell in the examination of foods at the Connecticut Agricultural Experiment Station illustrated the fraudulent use of dyes. In 1898, sixty-three samples of jellies purporting to have been made from fruit were examined, and of these, twenty-eight were spurious mixtures colored

with coal-tar dyes. Some of the most remarkable samples, labeled "strawberry jelly," raspberry jelly," etc., consisted of starch paste flavored with artificial "fruit ethers," sweetened with glucose and preserved with salicylic acid, the dye having been used to carry out the deception. Of twenty-eight samples of fruit preserves, eight were also colored with coal-tar dyes. During the following year (1899) ninety-two samples of soda water syrups, chiefly strawberry, raspberry and orange, were subjected to analysis. Of these, forty-five were colored with coal-tar dyes. As a rule the syrups which were artificially colored were also artificially flavored and contained no genuine fruit juice whatever. Dyes were also found in bottled carbonated beverages.

The relation of these dyes to public health deserves attention. The experiments carried on with dogs and other animals by Cazeneuve and Lépine, Weyl and others have proved beyond a doubt the poisonous nature of picric acid, dinitrocresol and Martius' yellow, among the nitro-colors, and of orange II, and metanil yellow among the azo-colors. Fuchsine, sulphonated nitro-colors and most of the azo-colors did not act as poisons although some of the azo-colors produced vomiting, others diarrhea and many developed slight albuminuria.

Although there is evidence that the bulk of the coal-tar dyes are not injurious to some of the lower animals, it is not safe to assume that they are entirely harmless to human beings. The dog, the animal used in most of Weyl's experiments, has a proverbially strong stomach and eats, with no apparent discomfort, many things which would disturb the digestion of a man.

The unwholesomeness of certain coal-tar dyes not classed as poisons is indicated by the experience of Weber, who tested their effects on the artificial digestion of fibrin with pepsin and with pancreatin. He found that oroline yellow (acid yellow) retarded the action of pepsin and that methyl orange, saffoline (acridine red) and magenta (fuchsine) seriously interfered with the pancreatic digestion. Of these, fuchsine, at least when pure, had been pronounced entirely harmless by earlier investigators who based their conclusions on experiments with lower animals and some few with men.

Even if the entire harmlessness of most of the coal-tar dyes is conceded, in view of the injurious properties of some of them and the difficulty of distinguishing these from the harmless dyes when present in food products, the safe course is to exclude all dyes of coal-tar origin from articles of diet. In Austria their use is entirely prohibited and in other countries they are regarded with suspicion.

In carrying out the work of food examination under adulteration laws the analyst is often called upon to determine whether or not a coal-tar dye is present, if not to identify the particular dye.

Numerous methods of testing wines for these dyes are described in the journals and in the works on food analysis, but almost nothing has been published on their detection in jellies, preserves, fruit syrups and other fruit products.

Because of the absence of special methods I have adapted some methods originally devised for wines for use in testing other products and publish the following details, with precautions learned by experience, for the benefit of others engaged in similar work.

In applying these tests to jellies and other semi-solid products it is necessary to bring into solution by boiling with 1 to 5 parts of water.

Arata's Wool Test.

One hundred Cc. of the liquid to be tested, prepared if necessary as described in the preceding paragraph, are boiled for ten minutes with 10 Cc. of 10 per cent. solution of potassium bisulphate and a piece of white wool, or woolen cloth, which has been previously heated to boiling in a very dilute solution of sodium hydroxide and thoroughly washed in water. After removal from the solution, the wool is again washed in boiling water and dried between pieces of filter paper. If the coloring matters are entirely from fruit the wool either remains uncolored or takes on a faint pink or a brown color, which is changed to green by ammonia and is not restored by washing in water; but if certain coal-tar dyes, chiefly of the azo-group, are present, the wool is dyed and the

*Jour. Am. Chem. Soc.

color on the fibers is either not changed by ammonia or, if changed, is restored by washing.

The dye present may often be identified by noting the color of the wool after addition of enough concentrated sulphuric acid to thoroughly moisten the fibers and again after dilution of the acid. As a rule it is not desirable to proceed further with the test although Arata gives instructions for removing the dye from the wool and testing the dye itself. For this purpose the wool is treated with dilute tartaric acid solution to remove vegetable colors, washed in water and dried between sheets of filter paper. It is then transferred to a test tube and saturated with concentrated sulphuric acid. After standing five or ten minutes, water sufficient to make 19 Cc. is added and the wool is removed. The solution after making alkaline with ammonia and cooling is shaken with 5 to 10 Cc. of pure amyl alcohol, to which a few drops of ethyl alcohol are added to facilitate the separation. The alcoholic extract is separated, evaporated to dryness and the residue tested according to the scheme of Girard and Dupre, Witt, Weingaertner or Dommergue.

I have applied this test to samples of juices, syrups, jellies and preserves prepared in the laboratory from the fruits, as well as to numerous commercial fruit products, including catsups. The woollen cloth used was "nun's veiling" cut into pieces one inch wide and three inches long.

When strawberry, raspberry, blackberry, currant, grape and cherry juices, without dilution, were treated as has been described, the wool acquired a dull pink or brownish pink color. With ammonia the color changed to green, and washing with water in no case restored the original color. Treatment with 10 per cent. tartaric acid solution in the cold was without effect, but on boiling for some time the pink color was largely removed. From orange, lemon, pineapple and tomato juice or pulp the wool absorbed no color at all, or only a faint yellow color.

Jellies, preserves, syrups, and catsups known to be pure gave up to the wool very slight colors, but many of the commercial products imparted to the wool intense red, orange, magenta and even green shades. Treated with ammonia these bright colors remained unchanged or, if changed, washing restored the original color.

Boiling with tartaric acid solution also failed to affect the colors. By treatment with concentrated sulphuric acid and dilution of the acid, color reactions for acid fuchsine, tropæolins, ponceaus, Bordeaux red, eosins and other dyes were obtained.

I have found it more satisfactory to test the dyed wool directly, rather than the color obtained from the wool as directed by Arata, because only a few dyes are extracted by amyl alcohol from alkaline solutions, and, as explained further on, tests of the residues left after evaporating the extracts are indecisive.

Care should be taken to determine whether the wool is dyed, or merely coated with the color. For example, chlorophyll from green coloring preparations of vegetable origin is deposited on wool, together with fat and resin, but the color, unlike the coal-tar dyes, rubs off on the fingers and is readily washed out with soap and water.

For the purpose of illustrating the amount of artificial color present in each glass of adulterated carbonated beverages I have employed 250 Cc. portions of the beverages (or 40 to 50 Cc. of syrups diluted to 250 Cc.) and pieces of nun's veiling six inches square. The dyed squares thus obtained furnish striking object lessons. From strawberry, raspberry, cherry and blood orange flavors brilliant red and magenta shades were fixed on the wool (acid magenta, Bordeaux red, ponceaus, etc.); from orange and lemon flavors, orange and yellow shades (tropæolins, etc.), and from mint preparations, bright green and yellow green colors.

Amyl Alcohol Test, Alkaline Solution.

Twenty-five Cc. of the liquid to be tested, made alkaline with ammonia, are shaken cautiously for some minutes in a separatory funnel, with pure amyl alcohol. If the clear alcoholic layer, when separated from the aqueous solution, is colored, or if addition of acetic acid

develops a magenta color (fuchsine), a portion of it, together with an equal bulk of water and a thread of wool, is heated on a water bath, the water lost by evaporation being replaced from time to time.

The presence of a coal-tar dye should not be affirmed until the color has been fixed on wool and the wool has been washed in boiling water, dried and tested with sulphuric acid. When fuchsine is present the color which appears on adding acetic acid to the alcohol extract is changed to yellow by hydrochloric acid. Ether or ethyl acetate may be used in place of amyl alcohol for extracting fuchsine.

Amyl Alcohol Test, Acid Solution.

Twenty-five Cc. of the liquid, to which have been added a few drops of hydrochloric acid, are shaken with amyl alcohol and dyeing tests are made as described in the preceding section.

A colored amyl alcohol does not prove the presence of a coal-tar color, as I have found that red coloring matters are extracted by this solvent from acid solutions of pure fruit juices. These solutions, however, do not dye wool when treated as above described.

Some authors recommend that the sulphuric acid test be applied to the residue left after evaporating the amyl alcohol extract. This may be satisfactory in wine analysis, but with fruit jellies, etc., this residue is liable to contain other organic matters which obscure the color reactions of coal-tar dyes.

If amyl alcohol extracts from the liquid, after acidifying, an orange color which has not been found to be of coal-tar origin, test may be made for cochineal.

The alcohol is washed several times with water and divided into two portions. To one portion is added a solution of uranium acetate, drop by drop, with shaking. In the presence of cochineal the aqueous solution acquires an emerald green color. As a confirmatory test the other portion is made alkaline with ammonia, which changes the orange color of cochineal to purple.

Girard's Test for Acid Fuchsine (Acid Magenta).

If a bright magenta color is fixed on wool by Arata's test and if ordinary fuchsine has been proved to be absent, test should be made for acid fuchsine.

To 10 Cc. of the liquid are added 2 Cc. or more of 5 per cent. solution of potassium hydroxide. The strongly alkaline liquid is mixed with 4 Cc. of 10 per cent. solution of mercuric acetate and filtered. The filtrate should be alkaline and colorless. Addition of a slight excess of dilute sulphuric acid produces a violet red coloration and if other dyes have not been found by the amyl alcohol test, the presence of acid fuchsine may be affirmed.

I have found this test useful in the examination of fruit juices and syrups but unsatisfactory in the case of jellies owing to difficulties in filtration and undecisive reactions.

Cazeneuve's Method.

Cazeneuve's mercuric oxide method for detection of coal-tar dyes which has been extensively employed in wine analyses did not prove satisfactory in the examination of jellies. This method, however, deserves trial with fruit juices and syrups, which are more easily handled than the gelatinous products.

In testing a suspected sample I apply first of all Arata's test. The other tests described are employed either to confirm the results obtained by Arata's test or to supply evidence in cases where that test fails.

The analyst should be extremely cautious in naming the particular dye present in a sample. It should be remembered that the number of coal-tar dyes on the market is exceedingly large and that new dyes are continually being introduced. A reaction which a few years ago may have been characteristic of a particular dye may to-day be common to several dyes. As a rule it is only necessary to learn whether or not a color is of coal-tar origin. In fact such terms as "red coal-tar dye" and "orange coal-tar dye" are often to be preferred in an official report to the cumbersome scientific names or the equally unintelligible commercial names. (Connecticut Agricultural Experimental Station.)

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulae and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Dyeing Carpet on the Floor.—(C. F. T.) wants to know how to dye a Brussels carpet without taking it up. The carpet has faded and he would like to have it dyed a deep crimson shade.

We do not know of any practical method by which a carpet may be dyed without removing it from the floor. There are methods by which carpets may be cleaned without taking them up and the faded colors somewhat freshened, but this rejuvenation is not done by the use of dyes. You might find serviceable the following formula known as "Clark's Wash for Carpets": Solution I.—Dissolve 10 parts of soap in 20 parts of water, add $3\frac{1}{2}$ parts of soda and $\frac{1}{2}$ part each of ammonia water and alcohol. Solution II., which is the actual cleansing liquid, consists of 4 parts ammonia water and 3 parts of alcohol, diluted with water. This solution is first used and when the dirt loosened by it has been removed the soap solution is applied. Carpets thus treated are said to regain much of their original colors, the entire operation of washing and drying requiring but a few hours and the carpet need not be taken up.

Liq. Carbonis Alcoh. and Ung. Boric. (Flav.).—(F. L. T.) received the following prescription which he was unable to fill:

B.
Hydrarg. ammon. gr. xxx.
Liq. carbonis alcoh. gr. xxx.
Ung. boric. (flav.), ad. 3 j.

He was unable to find anything pertaining to the preparation of the last two ingredients. The prescription had previously been filled in London. By "Liq. carbonis alcoh." is probably meant the solution of coal tar official in the British Pharmacopœia. It is quite strongly "alcoholic" and is made by first preparing a tincture from quillaya bark in No. 20 powder and alcohol by percolation, in the proportion of 100 grams of quillaya to 1,000 Cc. of tincture. To the tincture is then added prepared coal tar, 200 grams, and the mixture digested at 120° F. for two days with occasional stirring. It is then cooled and decanted or filtered. By Ung. boric. (flav.) is no doubt meant the boric acid ointment of the British Pharmacopœia made up with the yellow variety of soft paraffin, "flav." standing for "flavus," yellow. Boric acid ointment is made by mixing 30 grams of finely powdered boric acid with 270 grams of paraffin ointment, B. P. The latter is prepared by melting together hard and soft paraffin in the proportion of 3 of the former to 7 of the latter. For colored ointments the yellow variety of soft paraffin noted above is preferably employed.

Ka-No-Ma.—(L. W.) In further reply to your query concerning the concerning the identity of the first ingredient in the following prescription, published in this journal October 4, 1900, page 372:

R.
S. E. Ka-no-ma $1\frac{1}{2}$ gr.
" " Muirpaua $1\frac{1}{2}$ gr.
" " Haugnon $\frac{3}{4}$ gr.
" " Aurum et Sod. $\frac{1}{4}$ gr.

Dose, 1 to 2 after each meal.

J. A. P., M. D.

The prescription is a fraud and Ka-No-Ma is a fake, having no existence other than in the minds of the swindlers who are exploiting it in the regulation "grateful sufferer" style. A correspondent sends us some of the "literature" sent out by these "exploiters" who state that "Ka-No-Ma is the name of a shrub or small tree which is native to South America, where the natives use it," and as a consequence "many of them look as young

and vigorous at seventy as the average American does at forty. It is a famous nerve force producer, which any first-class, up-to-date druggist can compound, etc., but if your druggist cannot do so send us one dollar," etc. The circular from which we take this startling information is of a character no respectable person would care to read and it is a pity the post office officials cannot prevent its transmission through the mails.

Drunkenness Cure.—(J. K. F.) We do not believe in the efficacy of any so-called "cure" for drunkenness which may be put in food or drink without the knowledge of the patient. Permanent relief from the drink habit can only be effected by the absolute withdrawal of the supply of liquor to the patient by his consent and with his co-operation. It is true that nauseating drugs have been employed for administration in the manner suggested, the object being to make the habitué sick of liquor. Such treatment is not to be recommended, however, and it may prove dangerous. A remedy sometimes employed in the treatment of alcoholism of the chronic type is capsicum, since by its stimulating effect and hot sensation it often satisfies, at least to some degree, the craving for liquor. Under these circumstances Hare says it should be used in the dose of 5 to 10 drops of the tincture every 4 or 5 hours, or as the oleoresin in pill in the dose of $\frac{1}{2}$ to 1 grain. He gives this formula: Tincture of capsicum, $2\frac{1}{2}$ fluid drams; deodorized tincture of opium, 2 fluid drams; spirit of nitrous ether, 4 fluid drams; spirit of lavender, enough to make 4 fluid ounces. Dessert-spoonful every 4 or 5 hours.

The treatment of alcoholism has been frequently discussed in the Era and you will do well to consult the indexes of previous volumes.

Cigar Flavoring.—(S. W. T.) Here are some formulas from the Era Formulary:

- (1) Fluid extract valerian 1 ounce
Tincture tonka beans 8 ounces
Alcohol, enough to make 16 ounces
- (2) Tincture valerian 4 drams
Butyric ether 4 drams
Tincture vanilla 2 drams
Spirit nitrous ether 1 dram
Alcohol 5 ounces
Water, enough to make 1 pint
- (3) Valerianic acid 3 drams
Acetic ether 40 minims
Butyric ether 10 minims
Alcohol 4 pints

(4) The following formula was contributed to an exchange some years ago as one which was put up for cigar manufacturers:

Extract vanilla 4 ounces
Alcohol
Jamaica rum, of each $\frac{1}{2}$ gallon
Tincture valerian 8 ounces
Caraway seed 8 ounces
English valerian root 2 ounces
Bitter orange peel 2 ounces
Tonka beans 4 drams
Myrrh 16 ounces

Soak the myrrh for three days in 6 quarts of water (?), add the alcohol, tincture valerian and extract of vanilla, and after grinding the other ingredients to a coarse powder, put all together in a jug and macerate for two weeks, occasionally shaking; lastly, strain.

RECOVERY OF WASTE MENTHOL.—A. W. Gerrard (Pharm. Jour.) finds that impure menthol can be purified by sublimation or by crystallization. By distilling the impure material at a temperature of 140° F. the menthol was recovered in the form of silky, filamentous crystals of exceeding softness and lightness, and of high purity; but the process is much too slow to be of practical value. Pure menthol can be obtained from the waste material by two crystallizations from benzene, petroleum spirit, carbon bisulphide, methylated ether or acetone. With all the solvents except ether, the menthol obtained possessed a foreign odor which could only be removed by two or three days' exposure to the air. With the crystals obtained from ether, however, a few hours' exposure was sufficient to volatilize all traces of foreign odor.

STUDENTS' BULLETIN. ERA COURSE IN PHARMACY.

BOOKS FOR THE ERA COURSE IN PHARMACY.

We have received many letters from students who ask what books they must have to supplement their studies of the lectures in the Era Course in Pharmacy. To these we answer that the lectures are so arranged that the student may get along with but very few books indeed. At the outset he need not purchase any, and it would be as well for him to defer the whole matter until he comes to study the various lectures in which he will find much helpful advice on this subject. However, we do not wish to be understood as endeavoring to discourage the student from buying as many books as he can, for he will find them most serviceable to him all through his career as a pharmacist. It is also most desirable to possess the work of more than one author on the same subject, for in consulting them we are led to think for ourselves and thus to the exercise of an independent judgment. There is no paramount authority on any subject, and so we say the more books one can have on any branch of knowledge the better. The possession of the standard books and works of reference belonging to one's calling indicates in a most positive way that the possessor has a profession or business in which he takes considerable pride.

The most satisfactory method is to buy books as they are needed, beginning with some good work on chemistry, then another on pharmacy, following in due time with purchases of at least one book on each of the subjects of materia medica, botany, dispensing pharmacy, prescription writing, etc. With these one should have a U. S. Pharmacopœia and a dispensatory, works which he will find useful, even indispensable, in the study of all the branches treated in the course. With this advice and the suggestions made in the lectures on the various subjects there should be no difficulty experienced in making a satisfactory and judicious selection from the following list of standard works:

CHEMISTRY.

- Aitfield. Chemistry; General, Medical and Pharmaceutical. 16th edition, 12mo., 780 pages; cloth, \$2.75.
Bartley. Medical and Pharmaceutical Chemistry. 5th edition, 12mo., 700 pages; cloth, \$3.00.
Bloxam. Chemistry, Inorganic and Organic. New American from the 5th London edition, 8vo., 727 pages; cloth, \$2.00.
Fownes. Manual of Elementary Inorganic and Organic Chemistry. 12th edition, 12mo., 1061 pages; cloth, \$2.75.
Sadler and Trimble (and Coblenz). Text-Book of Chemistry. 2d edition, Vol. I. General Chemistry, 8vo., 850 pages; cloth, \$3.50. Vol. II. Analytical Chemistry and Pharmaceutical Assaying, 8vo., 330 pages; cloth, \$2.50.
Newth. Text-Book of Inorganic Chemistry. Revised edition, 12mo.; cloth, \$1.75.

QUALITATIVE ANALYSIS.

- Elliott. Qualitative Chemical Analysis. 2d edition, 8vo., 120 pages; cloth, \$1.50.
Muter. Practical and Analytical Chemistry. 2d American edition, 8vo., 228 pages; cloth, \$1.25.
Prescott and Johnson. Qualitative Chemical Analysis. 4th edition, 8vo.; cloth, \$3.50.
Fresenius. Manual of Qualitative Chemical Analysis. New edition, 8vo.; cloth, \$5.00.

PHARMACY.

- Caspari. Treatise on Pharmacy. 8vo., 680 pages; cloth, \$4.50.
Coblenz. Handbook of Pharmacy. 3d edition, 572 pages; cloth, \$3.50.
Remington. Practice of Pharmacy. 1899 edition, 8vo., 1448 pages; cloth, \$6.00.

BOTANY.

- Bastin. College Botany. 2d revision, 8vo., 451 pages; cloth, \$2.50.
Bessey. Botany. Revised edition, 8vo., 611 pages; cloth, \$2.20.
Gray. Lessons in Botany. 12mo., 226 pages; cloth, 95 cents.
Woods (O. R. Willis). Botanist and Florist. 12mo.; cloth, \$1.75.

- Culbreth. Pharmaceutic Botany. 12mo., 252 pages; cloth, \$2.00.

MATERIA MEDICA.

- Culbreth. Manual of Materia Medica and Pharmacology. 8vo., 812 pages; cloth, \$4.75.
Malsch. Manual of Organic Materia Medica. 6th edition, 12mo., 509 pages; cloth, \$3.00.
Potter. Materia Medica, Pharmacy and Therapeutics. 7th edition, 8vo.; cloth, \$5.00.
Sayre. Organic Materia Medica and Pharmacology. 8vo.; cloth, \$4.00.
White and Wilcox. Materia Medica, Pharmacy, Pharmacology and Therapeutics. Fourteenth American edition, 12mo., 704 pages; cloth, \$3.00.
Wall. Notes on Pharmacognosy. 12mo., 180 pages; cloth, \$1.50.

MISCELLANEOUS.

- MacEwan. Art of Dispensing. 6th edition, 12mo., 490 pages; cloth, \$2.00.
Gerrish. Prescription Writing. 6th edition; cloth, 50 cents.
Scoville. Art of Compounding. 2d edition, revised and enlarged, 8vo., 271 pages; cloth, \$2.00.
Robinson. Latin Grammar of Pharmacy and Medicine. 3d edition, 12mo.; cloth, \$1.75.
Crothers and Bice. Elements of Latin for Students of Medicine and Pharmacy. 12mo., 242 pages; cloth, \$1.25.
National Dispensatory. 5th edition, 8vo., 2025 pages; leather, \$8.00.
United States Dispensatory. 18th edition, 8vo., 1,999 pages; sheep, \$8.00.
United States Pharmacopœia. 7th decennial revision, 1894, 8vo.; cloth, \$2.50 (postpaid, \$2.75).

CORRECTION IN PART I.

By an unfortunate typographical jumble on page 2 of Part I. the table of elements is presented incorrectly.

In this table the eighteen Metals named are Aluminum, Antimony, Bismuth, Calcium, Copper, Gold, Iron, Lead, Magnesium, Manganese, Mercury, Nickel, Platinum, Potassium, Silver, Sodium, Tin, Zinc.

The thirteen Non-Metals are Phosphorus, Nitrogen, Oxygen, Arsenic, Boron, Bromine, Carbon, Chlorine, Fluorine, Hydrogen, Iodine, Silicon, Sulphur.

Students are requested to make the proper correction.

RAYS OF MINERAL LIGHT ABSORBERS AS REMEDIES AND DISINFECTANTS.—C. Roth (Zeits für angew. Chem.; Jour. Soc. Chem. Ind.) writes that "light baths" are frequently used as remedies in certain disorders, a common mode of application being to direct the rays of the sun, arc lamp, magnesium light, etc., from a parabolic mirror through a screen of blue glass upon the affected part. Only outer surfaces of the body can thus be irradiated, and in order to utilize such natural passages as the throat, bronchial, nasal and oral tubes for the treatment of parts inaccessible to direct illumination, the author proposes to use the phosphorescence rays from such light absorbers as the sulphides of calcium, strontium, lime, etc. These are mixed with adhesive, neutral substances, such as collodion and applied to objects suitable for the irradiation of external or internal surfaces. When in use these objects are re-exposed every fifteen minutes or so to the sunlight for a few seconds, until recharged and again applied to the disordered part. Bacteriological tests, in which different kinds of pathogenic micro-organisms were thus exposed to the phosphorescence rays of alkaline earth sulphides, are quoted and show that these rays destroyed the bacteria in a few hours. They may therefore be regarded as natural and cheap antiseptics, forming an important addition to the remedies of general hygiene.

Robbed of Her Diamonds.

Mrs. Charles Pfizer, wife of Charles Pfizer, of the big chemical manufacturing house on Maiden Lane, this city, was robbed of a box containing \$10,000 worth of her diamonds at her home in Bernardsville, a suburb of Somerville, N. J., Sunday evening, October 14. The burglary was committed while the family was out calling and the servants had gone to church. The work is supposed to have been done by David Richards, a butler in the employ of the Pfizer household, who had but recently been engaged. He disappeared about the time the loss was discovered. It is said that Richards also took with him money belonging to several of the servants and an overcoat of Mr. Pfizer's. The authorities are on Richards' trail and may have captured him before this item is printed.

MULTIPLE PERFECTION FILTER.

PAT. MARCH 27TH 1900.

ALWAYS CLEAN

PERFECT ORDER.

... THE ...

**Brawner Patent Self-Closing
Glass Sprinkler Top**

is perfect in all details. Nothing to get out of order, and being made out of glass, there is nothing about it to corrode, (which is the great objection to all metal sprinklers) besides giving to the package the elegance of a glass stoppered bottle. The sprinkling device is in the shape of a dumb-bell, the head of which rests on an offset in the opening of cork and the opening in the neck is always securely closed, (unless the sprinkler is in use) thus preventing evaporation and loss of strength, as well as protecting the contents from any hurtful influence. This stopper is recognized by the Perfumers and Manufacturers of Toilet Preparations as being the very best Sprinkler for their use on the market, presenting a handsome package at a moderate cost. It costs less than a metal sprinkler, and is very simple of adjustment and seals the package properly.

NEWS AND TRADE DEPARTMENT.

THE NEWS OF THE WORLD.

Compiled for the Special Convenience of
Era Readers.

FOREIGN.

China.

By far the most important development of the Chinese situation for a long time is the news that Great Britain and Germany have formed an alliance to keep open the ports of the Chinese empire and to preserve the territory and integrity of the empire intact. Austria, Italy and the United States will undoubtedly agree to this programme, and it is not believed that Russia and France will stand out against the other powers.

The Chinese royal edict, under which certain guilty officials were ordered to be punished, is said to have been a forgery concocted to delay military operations of the allies in the empire.

M. Thiebaut, Charge d'Affaires of the French Embassy at Washington, has presented a memorandum to the State Department from the French Government asking that peace negotiations with China begin immediately, in accordance with the favorable action of the Powers on the recent French note.

The Chinese complications took on a new phase last week, through the announcement made at St. Petersburg that the Russian government may act independently of any concert of the powers, her interests in China, it is said, being fully assured. Russia's determination to pursue a policy independent of the other powers in China is regarded by Washington officials as a most important development.

Hong Kong dispatches tell of the continued spread of the southern rebellion. The British torpedo boat destroyer Hlandy shelled 2,000 rebels who were advancing on San Chun, killing forty and wounding hundreds. Other serious risings among the rebels or reformers in China are reported, and in one battle the Imperial troops were routed and 200 killed.

The British Consul at Shanghai warns European women against going north from Hong Kong in the hope of joining their husbands, the situation in the Yang-tse Valley being very serious.

The Philippines.

Capt. Devereux Shields, who with fifty-one men of Company F, Twenty-ninth Regiment, United States Volunteer Infantry, was captured by the insurgents last month in the Island of Marinduque, was recovered last week by the American rescue force with all the members of his party.

A party of American troops last week under Capt. Elliott, of the Fortieth Infantry, surprised the rebel headquarters near Oroquieta, Island of Mindanao, and captured, without fighting, Gen. Alvarez, with his staff and twenty-five soldiers. The capture is important, and will tend to pacify the district. Alvarez had for a long time been provoking hostilities in Mindanao. It was he who made the disastrous attack on Oroquieta some time ago, and he was preparing another when he was captured.

Detachments of the Twenty-sixth and Eighteenth Regiments engaged the rebels near Tubagan in Southern Panay last week, routing them, killing twenty and wounding many.

Twenty men of the Twenty-fourth Regiment, repairing telegraph wires on October 10 at a point near San Jose, Luzon, were set upon by 200 rebels and were overpowered and scattered. Seven of the Americans reached San Jose, but it is probable that the remainder were captured.

The enemy surprised a party of scouts of the Forty-third Infantry three miles from Takloban, Leyte Island, last week, killing three at the first volley. Two escaped and gave the alarm, but the enemy succeeded in evading their pursuers. The native police of Takloban had conspired to surprise the Americans. The bodies of the dead soldiers were badly mutilated.

Other Foreign News.

Imperial Chancellor Hohenlohe has resigned, and the German Emperor has selected Count von Buelow as his successor.

Prof. Max Muller, of Oxford University, is very ill, and is not expected to recover.

The Dowager Empress Frederick of Germany is also seriously ill.

A camphor trust has been formed in Japan.

Thoum Botha, a brother of the Boer commandant-general, has surrendered to the British in South Africa.

Sir Alfred Milner, who is to be Governor of the conquered colonies, has arrived in Pretoria.

Count Zeppelin made some very successful tests of a new air ship in Wurtemberg last week. He succeeded in steering his apparatus in any direction, and went half a mile or more against the wind.

The announcement of the betrothal of Queen Wilhelmina of Holland to Duke Henry of Mecklenburg-Schwerin was made at the Hague last week.

The Sultan of Turkey has leased to Germany for thirty years the Island of Uroa, in the Red Sea, forty miles north of Kamaran, for a coaling station.

With the British elections over, the Ministerial and Opposition gains are practically a tie. The total number of Ministerialists elected is 398. The Opposition has elected 256 members. Consequently Lord Salisbury's majority will be in the neighborhood of that of 1895, namely 142.

DOMESTIC.

Politics.

Mr. Bryan is making a tremendous effort to win New York State. Beginning with his four speeches in New York City on Tuesday evening of last week, he has made a stumping tour of the State. He will speak in Madison Square Garden again next Saturday evening.

The Democrats intend to make a big effort next Saturday to have a Democratic rally, with speeches and fireworks in every town and hamlet in the country.

The betting on the New York Stock Exchange still continues to favor McKinley heavily, and Bryan money is hard to find.

Gov. Roosevelt made many speeches in Ohio last week. His physician says he must do less speaking if he wants to use his voice to the end of the campaign.

Admiral Dewey refuses to talk politics. "I have quit talking," he says; "I have decided not to say anything more for publication."

Senator Hanna made a number of speeches in South Dakota last week. His repartee with questioners in the audiences was a feature of the trip.

Mr. Bryan intimates in his letter accepting the Silver Republican nomination that he considers the question of imperialism paramount in this campaign to the question of free silver.

The Coal Strike.

A settlement of the coal miners' strike may be delayed by a complication over the price of powder, and strike leaders say another convention of mine workers may have to be called. Notices granting the greater part of the miners' demands have been posted at many collieries.

The men are being widely commended for the quiet and orderly manner in which they have conducted the strike, and it is believed that this has contributed greatly to their success. The employers, too, are commended for not trying to import labor from outside the coal fields, a course which, in other strikes, had always led to bloodshed.

Other Domestic News.

Ex-Postmaster-General William L. Wilson died last week at Lexington, Va., after a lingering illness, aged 57 years.

A party of Harvard men, accompanied by Prof. Delabarre, of Brown University, who have just returned from Labrador, report the discovery of a great mountain more than a mile in height, which the discoverers named Mount Elliot, for President Elliot, of Harvard. Another mountain was named Mount Faunce for President Faunce, of Brown University.

The New York Yacht Club has accepted Sir Thomas Lipton's challenge for the America's cup.

Eight persons were burned to death in a tenement house fire in Hester street, in New York, last week.

Mark Twain landed in New York last week after an extended stay in Europe.

Coal and gas in paying quantities have been found east of St. Joseph, Mo., at a depth of a little more than 1,000 feet.

Port Limon, Costa Rica, has been almost totally destroyed by fire. The losses are estimated at \$2,000,000.

The Venezuelan Government announces that it will make no exhibit at the Pan-American Exposition at Buffalo.

A bulletin issued by the Commissioner of Labor gives a summary of data on the rate of wages paid in various occupations for a period of ten years past. It shows that for six years following 1892 there was a decline in wages, but the rise in the last two years has carried the rate above the average prevailing in 1891.

A report issued by the Government Bureau of Statistics shows that the United States leads the world in the production of coal, iron and steel, the three fundamentals of modern commerce and industry.

Another report from the same Bureau shows that our trade with Spain has increased remarkably since the war.

The closing down of the steel works in South Chicago and Lorain, Ohio, last week, threw 5,500 men out of work.

The United States Supreme Court has assigned the cases involving the question as to whether the Constitution

extends over new possessions for hearing on November 12. The case of Neely, the Cuban postal official, will also come up on that day.

The Galveston relief fund now amounts to a little over \$1,000,000.

The population of the Territory of Arizona is announced as 122,212, as against 59,620 in 1890. This is an increase of 62,592, or 104.9 per cent.

THE DRUG NEWS.

New York and Vicinity.

THE MANHATTAN PHARMACEUTICAL ASSOCIATION.

C. Rudolph Schultz, of the Carl H. Schultz Mineral Water Company, was present at the meeting of the Manhattan Pharmaceutical Association Monday evening, October 15, and after answering a volley of questions concerning the matter of adjusting the prices of his goods on a basis satisfactory to retail druggists, promised to consider the matter and endeavor to evolve a plan for relief of existing conditions. Mr. Schultz was present with one of his assistants on the invitation of the Grievance Committee of the Manhattan Association, and through personal solicitation of William L. Schaaf, of the committee, who has had the siphon question, so-called, under consideration for some time. After Mr. Schultz had declared himself to the members, he stated it was his purpose in coming to the meeting to get some ideas for an adjustment of the retail druggists' grievances against his company and he would willingly listen to any such which might be offered.

J. B. A. Hartz, a druggist at College Point, then read an address in which he stated he believed Mr. Schultz's method of charging one price to druggists and another to physicians was wrong. It was unfair to discriminate and the only method would be to charge both alike. He also wished to know why Mr. Schultz's firm had neglected to answer a letter of his, written in 1897. Mr. Schultz replied to the latter question by stating he believed the tone of the letter displeased the firm. Mr. Hartz then produced a copy of the letter and read it, after which Mr. Schultz declared it would be attended to soon. William Muir, representing the Kings County Pharmaceutical Society on the siphon question, asked Mr. Schultz if the bottle law did not cover his bottles and, on receiving an affirmative reply, asked if Mr. Schultz took any greater risk in losing bottles than before the enactment of this law. Mr. Schultz replied there was no difference. He also stated that of the number of bottles lost yearly, some 50,000, the druggists lost nearly 50 per cent. The discussion that followed was along the same lines as all previous argument, to the effect that a parity in prices should be maintained, the druggist either being charged less or the physicians more. At present the druggist pays eight cents for each bottle and the physician five cents. Arthur C. Seales, John Delson, A. Bakst, W. L. Schaaf and several others took part in the discussion. George E. Schweinfurth proposed as a remedy that the druggists get the water at the same price as the physician, i. e., five cents a bottle. Mr. Schultz said the custom of furnishing the water to the physicians at this cost had been started forty years ago by his father as an advertisement and he admitted it was a burden the firm would gladly relieve itself of if a remedy was afforded. A vote of thanks was tendered Mr. Schultz for his attendance and he in turn thanked the members for their consideration, at the same time promising to give willing ear to any of the members who might call on him at any time.

Another guest at the meeting was Dr. Goldwater, president of the Greater New York Pharmaceutical Association, which is supposed to be an organization devoted to scientific research in pharmacy rather than a trade organization, but of which little is known because of

the tendency to withhold the names of members from the public. He assured the members that he was not present in his official capacity, but had come as a casual listener. He complimented the Manhattan Society on its activity and the thoroughly business-like manner in which its meetings were conducted. Secretary Swann asked him if it was true that the organization he represented was not interested in commercial affairs and received an affirmative reply, but Dr. Goldwater stated that the proposition of the N. A. R. D. had been considered and his society, he was sure, was in favor of it. A committee had been appointed in the matter. President Smith asked if this committee would favor working with other societies and Dr. Goldwater replied that he would assume the responsibility of stating that it would.

The meeting came to order promptly at 9 o'clock, with President Smith in the chair. The minutes of the previous meeting were read and approved and the treasurer's report submitted and accepted as follows: Balance on hand August, 1900, \$467.24; receipts, \$91.25; disbursements, \$135.80, leaving a balance of \$422.69.

William H. Porr reported for the Grievance Committee that the question of a rise in fire insurance rates at the last meeting had been investigated and it was found that an advance of 25 or 30 per cent. had been made by the Board of Underwriters which controlled the insurance business of the city. This had been caused by the recent fire at the North German Lloyd piers in Hoboken. Mr. Porr said he had sent a letter to Mr. Walker, of the New York Telephone Company, but had received no reply. George Kleiman had received a letter from Mr. Bethel, of the New York Company, stating the complaints of the druggists would be taken up at an early date. He also read a letter from President Eckert, of the Knickerbocker Telephone Company, in which it was stated that that company had not consolidated with any other concern and was still pushing the work of installing its plant. Secretary Swann read an article from a daily paper pleading for a five cent message rate in Greater New York.

George E. Schweinfurth stated that all the societies written to asking that committees be named to work out the N. A. R. D. plan had replied save one. Secretary Swann read communications from the Retail Druggists' Association stating that the required committee had been named, and from the Kings County Pharmaceutical Society saying similar action had been taken. The Jersey City Druggists' Association wrote it would propose the scheme at the next meeting, which has since occurred and the committee has been named. Action by the German Apothecaries' Society had been postponed. Communications were also read regarding the Stamp Tax Law and referred to the Legislative Committee of the organization.

A letter from H. L. Kramer, of the Sterling Remedy Company, concerning that company's offer to contribute \$1 to the treasurer of the N. A. R. D. for a \$10 order sent in by any or every druggist for the coming sixty days, was received and filed. Applications for membership from five persons were received and the applicants elected. Secretary Swann urged the members of the society to use individual effort toward securing new members. The Grievance Committee was instructed to continue its work on the siphon and other questions.

THE JERSEY CITY DRUGGISTS' ASSOCIATION.

The Jersey City Druggists' Association at its meeting Tuesday afternoon, October 16, adopted a scale of prices which its members believe will effectually stop aggressive cutting on proprietary medicines. The action is in accord with the plan of the N. A. R. D. and although the new prices will not actually go into effect until after November 1, they are practically in operation now. The Jersey City Association had adopted a price list before, having secured the consent of over 75 per cent. of the druggists in favor of the N. A. R. D. plan, and the discussion over the new scale was precipitated by a communication from the Manhattan Pharmaceutical Association of this city asking that a committee of five be named to confer with similar committees hereabouts with a view to working out the N. A. R. D. plan. Regarding the new schedule, there was some discussion before its adoption by reason of the difference in prices. In the prices formerly adopted five of the standard remedies were given at 75 cents each and all other \$1 articles were to sell at 85 cents; all 50 cent articles were to sell at 45 cents and some 25 cent articles were to sell at 20 cents, while others were to sell at 25 cents, and those not included in these two lists were to sell for 25 cents.

The new schedule is as follows: All articles marked \$1 are not to be sold less than 85 cents; all articles marked 50 cents not less than 45 cents; and all marked 25 cents not less than 20 cents; all 5 cent, 10 cent and 15 cent articles to be sold as marked.

Following the adoption of the new list it was also decided to sell Castoria for not less than 25 cents, it being deemed imprudent to charge more at the present time. On motion of F. O. Cole, President Gallagher was instructed to use his discretion in notifying the secretary of the N. A. R. D. of all druggists who, after November 1, sell under the prices given in the adopted list.

Eugene Hartnett, who is considered one of the aggressive cut-rate druggists of Jersey City, was present at the meeting and voted in favor of both propositions. Mr. Hartnett did not understand how under the adopted price list the cutting would be stopped. He believed that any large corporation, whether druggists or not, could secure a line of the numerous proprietary remedies and sell under the scale. The matter was explained to him by the president. It was decided to have the price list go into effect at once, but as the N. A. R. D. will not be notified of any violators of the agreement or aggressive cutters until after November 1, it practically holds over until then. The secretary of the organization was instructed to inform the druggists of Jersey City of the action of the meeting. President Gallagher stated there were sixty-three members of the association in favor of the N. A. R. D. plan and twenty-one other druggists also in accord with it. A motion to reconsider the price list for the purpose of making a change in it was lost. The price list theme occupied the major part of the meeting and the members evinced a strong interest in the plans of the N. A. R. D.

A report was to have been given by Secretary Kuehne, delegate to the Detroit convention, but owing to the stress of business this was overlooked.

A communication from H. L. Kramer with relation to his plan to enrich the treasury of the N. A. R. D. was read and many expressed a desire to take advantage of it. It was decided to levy an assessment of \$1 on each member to assist in carrying into effect the N. A. R. D. plan.

The election of officers followed. F. O. Cole took occasion to compliment the present officers on the successful work of the last year and moved that they be re-elected, but all declined. The following were then unanimously chosen: President, C. J. McCluskey; vice-president, Eugene Hartnett; secretary, James Foulke, and treasurer, Charles Levering. Treasurer Levering at once began a collection of yearly dues, together with the assessment levied, and before the meeting closed had a good sum with which to begin business.

The question of sending a delegate to the convention of the State Association was brought up. At the last meeting of the association John Kempel, Jr., who was

the association's delegate to the last meeting of the State body, sent a letter to the association declaring against the unfair treatment accorded delegates from sister organizations at the meeting and the letter was received and placed on file. Some of the members were in favor of sending a delegate when the matter was again brought up, while others favored going as individuals. The matter was left undecided. President McCluskey announced the appointment of the following committee to co-operate with the Manhattan Pharmaceutical Association, as requested by that body: J. C. Gallagher, chairman; John Kimpel, Jr., Eugene Hartnett, W. R. Laird and F. O. Foulke. A vote of thanks was tendered the retiring officers.

The question of the bottle law came up and a resolution was passed that members of the association refuse hereafter to dispense medicines in any registered bottle. John Kimpel, Jr., thought a new meeting place, more central to all the members, should be chosen and he was named a committee to secure the necessary quarters. The present place is in Phillips' Hall, Bergen avenue and Montgomery street. In relation to the Stamp Tax Law, Secretary Kuehne read letters from the two nominees to Congress each pledging himself to vote for the repeal of the law if elected.

STATE BOARD OF PHARMACY MEETS.

An informal meeting of the All-State Board of Pharmacy was held in Room 7 of the Ten Eyck Hotel, Albany, Thursday, October 18. Although the members were assembled only for the purpose of considering matters preliminary to perfect organization, the session lasted from 9 o'clock in the morning until nearly 7 o'clock at night, and when it adjourned, each member was willing to confess that he was tired. J. C. Smith, of Plattsburg, called the session to order and was chosen temporary chairman, while Sidney Faber, of this city, was named as secretary. Questions of books, proper form of certificate, rules, examinations, etc., were brought up, but nothing definite was adopted, the members being divided into three committees of five each to submit reports on the several topics. Dr. A. H. Brundage, of Brooklyn, was named chairman of the Committee on Books, Blanks and like matters; William Muir, of Brooklyn, was selected chairman of the Committee on Rules and Regulations, and Sidney Faber was chosen chairman of the Committee on Publication. The committees then held sessions, and afterward reported as a committee of the whole, but inasmuch as the meeting was an informal one, nothing decisive was done. However, many of the suggestions offered by the committees were considered available. One of these was the plan of holding one examination a month in three or more localities in the State on the same day, as for instance, New York, Albany, Buffalo and Syracuse would hold examinations at the same time, using the same questions. It has not been decided what shall be the manner of furnishing these questions. Some are in favor of having a bonded printer print them, while some favor mimeograph copies. This question will come up for adjustment at the next meeting of the board, which will be held Thursday, November 22, in the New York College of Pharmacy, in this city.

DR. MORETON DEAD.

Dr. Henry Moreton, perhaps the oldest pharmacist in New York was found dead in his favorite chair in his old-fashioned drug store at 233 Centre street, Manhattan, Saturday afternoon. He was ninety-three years of age and died as he had lived during his last few years, practically a hermit, for his later life consisted of a simple routine at his little drug store which, according to his own statement, he kept "as a home for 'Tom,' a friendless cat who came to me years ago." There was little to do in the drug store, as the once excellent trade it possessed had dwindled away with the ever-changing center of trade, and its supply of musty drugs and the dirt-begrimed windows with which it looked out on the street, had long since lost their attractiveness as trade drawers. Dr. Moreton, however, clung to the store just as he did his pet set of instruments which his father, a surgeon in the English Navy, used nearly one hundred and fifty

years ago. Dr. Moreton came to this country from England in 1828 with his brother, also a physician. They opened a drug store and office at Grand and Elm streets. Dr. Moreton, the pharmacist, never moved from that immediate neighborhood, although his surroundings leaned more and more toward the caste of undesirability; as he grew older he stayed, always retaining his old time bearing and preserving his old time customs and manners. He was educated in Paris and spoke English, French, German and Italian with equal fluency. He kept himself abreast of the progress in medical science by constant attendance at the meetings of the many medical societies to which he belonged and by reading current medical literature. Time was when the late Mrs. Paron Stevens and others who seldom are as far downtown as Grand street now, were numbered among his patients. But with other things his practice grew less until ten years ago, when his brother died, it ceased entirely, owing principally to his inability to properly care for it because of declining health. Then came the retirement in the drug store with the cat "Tom," which he found choking from a bone in the throat some nine years ago. He was set in his habits and was with difficulty dissuaded. At one time he was said to have money and it is stated that he was swindled out of \$10,000 bank stock he possessed. His sole income was from a pension of \$260 a year he received from England in quarterly payments. Friends buried him.

RETAIL BOWLENS ELECT OFFICERS.

Sixteen members of the Retail Druggists' Bowling Association met at Brinkama's alleys, corner Fifty-seventh street and Sixth avenue, Monday evening, October 22, and added further strength to the bonds of good fellowship by having an excellent time and incidentally "knocking down the pins" as a recreation. While the games were informal, the association has a beautiful medal which it allows the member attaining the highest individual score each night the privilege of wearing and which eventually becomes the property of the one having the best average score at the end of the season. It is a handsome gold affair, representing a laurel wreath resting on a solid base, across which are the figures 1900-1901. The wreath encloses a dainty little circle of blue enamel around the rim of which is the name of the association and inside of which are two ten pins, crossed, with a ball underneath them. This prize acts as a stimulus to the "boys" to put forth their best effort to wear it for a night and sometimes the scores are quite large. S. V. B. Swann, who was given a handicap of 40, secured the right to it last Monday night by scoring 328 in two games. The highest score of the evening was made by F. N. Pond with 183 pins to his credit. The association has also another pin to be offered for bowling merit which has been generously donated by Secretary G. H. Hitchcock for the member who makes the best improvement over last year's work, but this prize is not ready for exhibition.

After a few games had been played the members sat down to a light luncheon, during which a business meeting was held, President George E. Schweinfurth presiding.

The resignation of Gilbert T. Reeder was read and accepted with regret. Treasurer C. H. White gave his report as follows: Balance on hand October 1, 1900, \$4.25; receipts, \$118.35; disbursements, \$45.80; balance in treasury October 22, \$72.55. Prof. George C. Diekman and Thomas W. Linton were elected to membership; this brings the number of members up to within three of the limit of twenty-five. It was decided to name a Committee on Membership, also one to secure necessary articles to be used by the association on occasion of its informal banquets. The election of officers followed, the old ticket being unanimously re-elected as follows: President, Geo. E. Schweinfurth; vice-president, Matthew Mahler; secretary, G. H. Hitchcock; treasurer, C. H. White; captain of bowling team, R. H. Timmerman.

A NEW SWINDLER IN DRUG TRADE.

A firm in this city was swindled recently out of goods amounting to \$9.25 by H. M. Muhlenberg, who claims to be a physician and druggist of Ephrata, Pa. "Dr."

Muhlenberg has his business set forth on ordinary note paper instead of the usual business letter sheet and states on it "Prescriptions Carefully Compounded." He also is author of a "perfected home treatment for catarrh and hay fever which is really meritorious—well worthy of your consideration." He wrote a smooth letter to the firm in question requesting a bill of goods and representing that his order was given on recommendation of a salesman for the H. K. Mulford Co., who spoke "very highly of your products." As the Mulford Company is very well known, the victim sent the goods on ten days' time. When this had expired and no money came in answer to a statement sent, a sight draft was procured against Muhlenberg. But the draft came back with the information from the local bank at Ephrata that no such person as Muhlenberg was known there. Numerous other complaints against Muhlenberg have come to light. He seems to be a swindler of the Crosher type, but not quite so foxy.

Wholesale Trade Bowling League.

The Wholesale Drug Trade Bowling League held its first meeting recently and elected the following officers: President, George J. Seabury; vice-president, S. H. Caragan; treasurer, William J. Carr; secretary, C. E. Meeks. The teams in the league this year are from the following houses: Parke, Davis & Co., Dodge & Olcott, Seabury & Johnson, National Lead Co., General Chemical Co., Lanman & Kemp, Johnson & Johnson, Church & Dwight and Merck & Co. The teams from Roessler & Hasslacher Chemical Company and R. W. Robinson & Son have withdrawn, and it is possible that the one from Colgate & Co. will follow suit. As usual the games will be played on Saturday afternoons on Reid's alleys, on Church street. The league has accepted an invitation to play the Newburgh Wheelmen, who are mostly druggists, and one from the league of the Baltimore Wholesale Druggists' Association.

The first game of the season was played Saturday afternoon with the following results: Church, Dwight & Co., 698; Merck & Co., 767. Church, Dwight & Co., 697; Johnson & Johnson, 760. Merck & Co., 712; Johnson & Johnson, 719. General Chemical Co., 690; Lanman & Kemp, 743; General Chemical Co., 547; Dodge & Olcott, 687. Lanman & Kemp, 702; Dodge & Olcott, 843. The next game will be played Saturday afternoon, October 27.

Litigation Over "Matzoon."

Judge Lacombe, sitting in the United States Supreme Court on October 9, rendered a decision in the matter of Senekerim Gullian praying for an injunction against Dr. Dadirrian & Sons Company, restraining said company from using any methods or influence to prevent sale of petitioner's preparation, known as "Gullian's Matzoon," also to restrain said company from circulating a "notice of warning to the trade" regarding an opinion and order of Judge Gaynor in the Supreme Court of Kings County in the matter of Dr. Dadirrian & Sons Company against one John G. Wischerth. The prayer of the petitioner for the injunction is denied. The case grew from the infringement of the trade mark "Matzoon" by Gullian, who put up a similar article and called it "Gullian's Matzoon" and offered the same for sale in the above-mentioned Wischerth's drug store at 1076 Bedford avenue, Brooklyn. Dr. Dadirrian & Sons Company immediately began suit against Wischerth which ended in an injunction being granted by Judge Gaynor restraining Wischerth from manufacturing or offering for sale any preparation of fermented milk under the name "Matzoon" other than Dr. Dadirrian's. Dr. Dadirrian & Sons Company then issued a circular informing the trade of the decision of the court and Gullian sought to suppress this circular.

Hymen in Brooklyn.

The wedding bells rang merrily in the Borough of Brooklyn last week for Druggist John B. Mill, who has stores at 630 Clason avenue and 1392 Bedford avenue, who was married to Mrs. E. L. Dodge, widow of the late Dr. E. L. Dodge, of 851 Marcy avenue. The ceremony was performed in the church of the Epiphany, corner McDonough street and Tompkins avenue, by Dr. Babbitt.

The contracting couple wore traveling costume and the ceremony was unostentatious, being witnessed by friends only who, however, were profuse in their congratulations. Mr. and Mrs. Mill left immediately for Niagara Falls for a brief stay.

Another Wedding.

Charles Lawrence Riker, junior member of the well-known firm of J. L. and D. S. Riker, dealers in heavy chemicals, was married to Miss Selina R. Schroeder, daughter of Mr. and Mrs. G. Schroeder, of Barton-on-the-Sound, at Christ's Church, Pelham Manor, New York, Tuesday afternoon, October 16. Rev. Dr. Rainsford officiated. The wedding was without bridesmaids or ushers, because of the recent death of the bridegroom's brother, Henry L. Riker.

College of Pharmacy Meeting.

The regular meeting of the College of Pharmacy of the City of New York was held in the college rooms Tuesday evening, October 16, with A. C. Searles in the chair. The minutes of the previous meeting and the minutes of the Board of Trustees were read and approved. Prof. Rusby gave a comprehensive report of the meeting of the New York State Association at Newburgh. It was decided to have the paper on "Cinchona" by J. K. Stallman read at the next meeting.

NOTES.

—An interesting game of base ball, and probably the last of the season, was played on the grounds in Prospect Park, Thursday afternoon, October 6, between the Prospect Hill Club and the seniors of the Brooklyn College of Pharmacy. The game furnished excitement for its players and a respectable-sized crowd of spectators through seven innings, when it was called on account of darkness by Umpire Schappiro with the score a tie, each side having scored three runs. The players were:

B. C. P.	Position.	P. H. C.
Darling	Pitcher	Gelsbach
Welton	Catcher	McManus
Brandenburg	First base	Donelson
Holzman	Second base	Bannan
Weygandt	Third base	Spaulding
Meister	Short Stop	Smith
Stutenberg	Left field	Small
Kempf	Right field	Brady
Jacoby	Center field	Luther

—Philip Justice Sands, a member of the former firm of A. B. Sands & Co., which was well known in the drug trade, and was located for a number of years at the southwest corner of Fulton and William streets, this city, died at his home, No. 15 East Thirty-third street, Thursday, October 18, after a long illness. Mr. Sands was in his fifty-seventh year. He had taken no active part in business since the firm of A. B. Sands & Co. went out of existence in 1874. He was a member of several well known clubs and of the Alumni Association of Columbia University. He is survived by a wife and seven children. The funeral was held at the Church of the Incarnation, Thirty-fifth street and Madison avenue, Sunday afternoon, October 21.

—At the next meeting of the German Apothecaries' Society, which will be on Thursday, November 8, Prof. W. C. Anderson, of Brooklyn, president of the N. A. R. D., will be present to address the meeting, as at this time the motion of R. C. Werner to have the Deutscher Apotheker Verein withdraw from the N. A. R. D., tabled at the last meeting of the organization, will come up for action. Circulars have been sent out to all members of the society, with a request that each member state his position on the circular and mail to the secretary. It is claimed that a majority of the members favor withdrawal from the N. A. R. D., while many are desirous of proceeding slowly in the matter.

—A meeting of the Pharmaceutical Clerks' Association was to have been held Wednesday afternoon, October 17, but as a quorum was not present it was postponed. This is the second attempt made by the society to "get together," but there seems to be a great lack of interest, so much so that the president has not seen fit to be on hand. "It's about time to break up," said one of the enthusiastic members, who had been in both of the attempts to get a meeting, "when the officers won't get around. There is a need for such an organization in

the city and surely those interested in it and who would be benefited by it should stir up enough energy to attend at least one meeting."

—Among the druggists who called on the trade last week were: W. G. Ryan, Springfield, Mass.; A. L. Williams, Clayton, N. Y.; James U. Case, Somerville, N. J.; E. L. Scholtz, of the Scholtz Drug Company, Denver, Col.; Mr. Doolittle, manager for F. S. Calhoun & Co., druggists, New Haven, Conn.; Schuyler Rust, of Wm. Rust & Son, New Brunswick, N. J.; George M. Carslake, Bordentown, N. J.; M. R. Scott, Scott & Son, Worcester, Mass.; S. L. Beegle, Orange, N. J.; A. B. Collins, Westerly, R. I.; P. W. Newton, Hartford, Conn.; F. F. Pulver, Rochester, N. Y.; and P. Massie, Roanoke, Va.

—Another of the veterans of pharmacy in this city was taken away Thursday, October 11, by the death of William Fisher, who for forty-six years conducted a drug store at 327 Bleecker street. Mr. Fisher was not only a well-known pharmacist, but he was the best-known man in the old Ninth Ward and his drug store was one of the points of interest in Greenwich village. He was seventy-six years of age and is survived by a wife and several children.

—The creditors of William H. Riker, formerly a druggist at Sixth avenue and Twenty-second street, held a meeting before Margrave Coxe, referee in bankruptcy, in his office in Wall street, recently. About twenty creditors filed their claims. Among this number was a claim for \$125,000 made by William B. Riker, father of W. H. Riker, and to this objection was made. A hearing will be given to the objectors later.

—The Laxacola Company, which, according to its incorporation papers secured recently, is organized for the purpose of manufacturing, dealing and selling medicines and printing and publishing, is to be located in this city, and incorporates with a capital of \$3,000,000. The incorporators are: H. V. Brandenburg, J. M. Ostrander, E. Tibbits, A. S. Bowen and A. B. Calm, all of New York City.

—The noon-day meetings of the Drug Trade Campaign Club at the headquarters, 51 John street, during the last two weeks have been very successful and some good speakers have been heard. The meetings will be continued to Saturday, November 3. A feature at the gatherings is the singing of the Metropolitan Quartette.

—At a recent meeting of the Drug Clerks' Circle the following officers were elected: President, Benjamin Halpern; vice-president, James Conrad; treasurer, Harris Nevelson; recording secretary, William Sindey; financial secretary, Isidor Eisenbud; sergeant-at-arms, Max Flammenbaum.

—The trade is warned against having any dealings, unless on a cash basis, with the Mount Vernon Chemical Co., of Mt. Vernon, N. Y., as information has come to this office that the concern is a fraud. It is believed that the notorious drug swindler, Henry Crosher, is interested in it.

—R. B. Miller, manager for the Owl Drug Company, of San Francisco, Cal., has just returned from a trip of several months' duration in Europe. He stopped a short while in this city before returning to San Francisco.

—At the last meeting of the Sphinx Club, held at the Waldorf-Astoria recently, H. B. Harding, treasurer of Humphreys' Homeopathic Remedy Company, was unanimously elected president for the ensuing year.

—The meeting of the Drug Trade Section of the New York Board of Trade and Transportation, which was called for Thursday afternoon, October 18, was not held because of the lack of a quorum.

—Imports of drugs, chemicals, etc., to this port for the week ending October 19 reached \$126,464. Gum kauri was the largest article imported, there being \$126,464 worth.

—The store of A. Woodcock, at No. 371 Third avenue, was sold at auction recently to satisfy a claim against it, but it is said the store was bought in by Mr. Woodcock.

—Dr. J. B. Wainwright, of this city, has recently purchased the store of T. Antonides & Son, at Manasquan, N. J., and has named it "The Manasquan Pharmacy."

—Fritzsche Bros. announce that Arthur H. Elliott has been appointed resident agent in Philadelphia, with office at 145 North Sixth street, Philadelphia.

—A. M. Redmond, with J. Milhan's Son, has resigned

and accepted a position with Hlegeman & Co., 196 Broadway, where he had been previously employed.

—Edwin McGill, New England representative of Lehn & Fink, is confined to his home in Boston with typhoid fever.

—Wouter's Pharmacy has recently opened in Jersey City on Grove street, between First and Second streets.

—Mr. Sammis, of Sammis & Co., druggists at Huntington, L. I., was in the city last week.

—Imports of drugs, chemicals, etc., for the week ending October 12 amounted to \$726,779.

—Ferdinand Julius has sold his store at 536 Broadway, Brooklyn, to O. H. Hueffmeyer.

—E. Flint has resigned with Henry E. Brown, No. 50 Beaver street, this city.

—George J. Seabury, of Seabury & Johnson, has returned from a European trip.

IN AND ABOUT BOSTON.

An Exposition In Which the Drug Trade Takes Interest.

Boston, Oct. 20.—In the great Merchants' and Manufacturers' Twentieth Century Exposition, now open for a month at the Mechanics' Building, Huntington avenue, this city, there are found several displays of interest to the drug trade. Among them are those of the Moxie Nerve Food Company, the Horlick Food Company, of Racine, Wis.; C. F. Roberts, liniments, Dover street, this city; P. C. Tomson & Co., Tremont street, perfumes; Century Perfume Company, of New York; Brummell's candy, "A. H. B." Cough Drops; the Arabian Company, this city, ointments; W. H. Eastman, of Salem, cleaning fluids; H. S. Darling, nerve tonic; Harvard Brewing Company, Lowell, brewing extracts; A. L. Caldwell, of Everett, toilet articles; R. M. Blood, Tremont street, the same; American Chemical Company, of this city, disinfectants; Armour & Co., soaps; Pureoxia Distilled Water Company, ginger ale; the Welch Grape Juice Company, Westfield, N. Y.; Mme. Waitee, Temple Place, toilet articles; McGill & Grieve, tonics, Howard street, this city; A. W. Moore, blood tonics; Curtis & Son Company, of Portland, Me., gum; the Cushing Medical Supply Company, this city, process liquors, and there are several other exhibitors who make a good showing of wares in which chemists and druggists find interest. The fair as a whole, with its many departments, its fine band and orchestral concerts and other features, is proving attractive and instructive to many visitors.

Important Change by an Old Established Drug Firm.

Boston, Oct. 20.—The old-established house of Otis Clapp & Son (1840), manufacturing chemists and importers, manufacturers and dealers in homeopathic goods are moving, from day to day, from their old location at No. 6 Beacon street, corner of Tremont Place, to the fine new nine-story building just above, at No. 8A Beacon street. There they will have a well-arranged and well-lighted store, fitted especially for their purposes, in the building adjoining the historic Boston Athenæum and opposite the new Hotel Bellevue. It is to be conducted under the charge of W. W. Hicks, manager of the old store, who has been connected with this house more than a score of years. This firm has its principal store at 10 Park Square and this place and the Beacon street branch are the only pharmacies in Boston devoted solely to the sale of homeopathic medicines. The firm has another branch at 417 Westminster street, in Providence, R. I.

NOTES.

—Now that Green's remodelled pharmacy at Springfield is opened patrons realize what a notable addition it is to the business interests of that city. The recent formal opening was made an occasion in which thousands participated by invitation. The store was decorated with cut flowers and potted palms. The Springfield Orchestral Club of eight musicians was present and played many selections during the evening. Every woman was given a box of chocolates as a souvenir, 5,000 of these boxes being distributed. The soda fountain was a source of attraction. Four men were kept busy during the entire

evening satisfying the desires of the thirsty and nearly thirty clerks in all, eight of whom went up from Mr. Green's Worcester pharmacy especially for the opening, were kept busy attending to guests. The cigar counter was popular and this department is to be made one of the features of the store.

—Thomas Joyce, the South Boston druggist, is to be credited with a particularly gracious act toward newspaper men covering the recent senatorial convention at South Boston. At two o'clock in the morning he opened his store, which is across the street from Spelman Hall, where the convention was held, in order that the men might telephone the adjournment and result of the convention to their papers. It saved them all a long trip, besides much valuable time.

—The house of H. D. Padelford, the Gilman Square druggist of Somerville, was broken into at about noon time on October 18 and several articles of value were taken, including a gold and silver pin, a gold locket, a gold bracelet attached to which, bangle fashion, were ten gold dollars. Fortunately the thieves overlooked a pair of diamond earrings valued at \$300 and a purse containing about \$20.

—Harry C. Wiggin, for a long time an employe of George C. Goodwin & Co., and who later continued in their service and that of the Eastern Drug Company, is among those whom Cupid this month has led to the altar. His recent marriage to Miss Webster was an event in which his large circle of friends showed marked interest. The wedding took place at the home of the bride's parents, on Beacon street, where the young couple also will reside.

—The famous trial of Chance and Hogan for the murder of Charles Russell, a clerk in the United States Hotel drug store, is recalled at this time by the appearance in court on a criminal complaint, of Elizabeth Nagle, the woman who figured as the principal witness at the trial. She, however, was acquitted by the jury.

—The Benton drug store on Main street, Athol, has come upon the market through an auction sale. The quartered oak fixtures, art tile soda fountain and stock of drugs, patent medicines, fancy articles, sundries, confectioneries, cigars, etc., will be sold. The sale is by trustee's orders.

—The case wherein Arthur C. Burwell, the Adams House pharmacist, was accused of sending to a former clerk of his a postal card which came within the unmailable laws, has resulted in the Court's imposing a fine of \$10.

—The George F. Ropes Company, of Salem, have bought the Oxnard store of Beverly and will carry on a branch store there. It will be managed by Lawrence E. Pedrick, one of the members of the firm.

—Samuel A. Neill, one of the senior salesmen of the Eastern Drug Company, enjoyed his annual vacation by going with the Ancient and Honorable Artillery Company on its recent fall trip to Montreal.

—J. H. Purcell, of the Eastern Drug Company force, took his annual vacation late this year and passed it profitably and pleasantly in a gunning trip to Scituate, on the Cape, and thereabouts.

—The week's exports from the Port of Boston include, among other things, drugs and chemicals, \$7,804; india rubber manufactures, \$18,187; tobacco, \$2,869; spirits, \$20,173.

—Joseph P. Bergin, twenty-one years old, is under arrest charged with breaking and entering the drug store of Eugene Levitan, 44 Spring street, and larceny therefrom.

—Luther F. Carter, a druggist of Georgetown, has returned home after a pleasant vacation spent at Cape Ann, which took the form of a driving expedition.

—Clark & Mahoney's drug store at 75 Prescott street, was this week entered by burglars in the night time and several articles of small value were taken.

—Archibald Dakin, a druggist at Brockton, has just filed a voluntary petition in bankruptcy because of debts amounting to \$2,623, all unsecured.

—Joseph Menard, clerk in King's drug store at Chicopee Falls, was married in Brattleboro, Vt., one day this week to Miss Eva Fox of that town.

—Arthur E. Rose has resigned as manager for the J. C. Ayer Company at Lowell and is succeeded by Dr. Charles H. Stowell.

PHILADELPHIA.

P. C. P. NEWS.

Philadelphia, Oct. 20.—The first of the 1900-01 "Pharmaceutical Meetings" was held in the Museum Hall of the College Tuesday afternoon, October 16, Dr. R. V. Mattison, Ph. G., presiding, Prof. Henry Kraemer acting as secretary. The meeting was very largely attended both by druggists and students, and a most interesting series of papers and discussions rewarded their attendance. After opening the meeting with a short address, Dr. Mattison introduced Mahlon N. Kline, who then read a very interesting paper on the "Origin and History of the Wholesale Druggists' Association." Mr. Kline, from his long connection with that body, being indeed one of the founders thereof, was able to speak authoritatively on its history and aims, past and present, and his reminiscences of many important conferences and policies of the N. W. D. A. proved of exceeding interest to his hearers. In reviewing the work of the N. W. D. A., Mr. Kline said that his association had long ago recognized the mutual interests of the wholesalers and retailers, and that it had been his purpose and that of his successors as chairman of the Proprietary Committee too, to do all in his power to further the real interests of the retail druggist and to aid him in every way to combat and overcome the many trade evils threatening him. The address was greatly applauded.

M. I. Wilbert then read a paper on "Ointments," exhibiting samples and presenting a formulary of the ointments used at the German Hospital, Philadelphia. Mr. Wilbert, in his paper, expressed the opinion that much of the difficulty encountered by the pharmacist in preparing ointments from lard came from the poor quality of the lard now on the market, and recommended that every pharmacist should "try out" his own lard. In the discussion that followed, F. W. E. Stedem said that there was now a brand of lard on the market that met the requirements of the U. S. P. in every respect and that he had found that the question of securing a good lard was simply one of cost. It was also brought out by Messrs. England and Gordon that ointments containing water gave best results when absorption of drug was required, and that this fact should be taken into consideration when an ointment base was selected. Prof. Remington expressed his wish that the Pharmacopœia should contain very few formulas for ointments, that the selection of a base should be left to the physician prescribing the ointment, with due consideration for the purposes for which it was intended.

G. M. Beringer, of Camden, exhibited a centrifugal machine for the separation of sediment in urine, blood, sputa, etc., which was worked with a small water motor that could be run with water from the ordinary water faucet, it giving 2,000 revolutions a minute with thirteen pounds pressure of water. Prof. Moerk exhibited specimens of asbestos and magnesia in the form of pipe covering, cloth, etc., from Keasbey & Mattison's works at Ambler, Pa., in many different forms and for many uses. Mr. Gordon exhibited specimens of belladonna plants grown at the Navy Yard, League Island, during the past summer, also giving a few notes on the results of these experiments. He gave, as his conclusion, that belladonna, hyoscyamus and earthamus could be successfully grown in this climate with ordinary soil and attention.

The Zeta Phi Society was organized October 5 under the auspices of Prof. Morrison, LaWall, Stroup and Cook, Mr. Campbell, president of the Alumni Association presiding over the preliminary meeting. The following officers were elected: President, V. C. Michels, of Illinois; vice-president, Mr. Murphy, of Mississippi; secretary, Miss Margaret Florence Fegley, of Pennsylvania; treasurer, Otto Kraus, of Connecticut; Executive Committee, E. F. W. Gerber, T. W. Penrose, W. C. Wolfer, G. M. Musser and W. K. G. Harris, all of Pennsylvania. As class reporter, J. S. Fegley and F. O. Lewis were selected. The newly-elected officers were all called to the front and responded in eloquent addresses to the remarks of President Theo. Campbell of the Alumni Association.

The Beta Phi Society was organized October 3, Dr. Morrison calling the meeting of students to order, and

he, assisted by Messrs. Stroup, LaWall, Cook and President Campbell of the Alumni Association, proceeded to organize the class. The following officers were elected: President, W. L. Swartz, vice-president, L. M. Myers; secretary, Miss E. M. Goodman; treasurer, J. M. Toulson; Executive Committee, D. W. Ramsauer, I. S. Reice, W. B. Ackerman, H. W. Stuver, John Winstanley; class reporters, C. Croft, C. A. Jeffers; Reception Committee, J. J. Eyvards, C. Croft; Committee on Yells, Messrs. Parker, Swineford, Ashmead, Welgester and Jeffers. The address of Mr. Campbell was particularly pleasant and instructive and was taken home by every future alumnus. After the close of the election the officers responded in regular order in short addresses.

Is it a coincidence or more that the secretary of both Greek Letter Societies should be of the fair sex and a "Miss" at that? Some of the boys see a deeper meaning in this, and say that there will be some Misses missing from the ranks of Misses before long.

A number of social clubs are being organized, among them the Lowther, Remington and a glee club. The Century Club had its first meeting Monday, October 7; new officers are to be elected at its next meeting. With these and the monthly social meetings given by the alumni, the students look forward to a winter of wild social whirl. There are nine fair students, it must be remembered.

NOTES.

—A stranger in the neighborhood of Sixteenth and Tasker streets last Thursday evening would have thought that there was a fire or a riot in full swing from the crowds that had gathered there. However, no such disaster had occurred. It was only the celebration by John P. Frey of the twelfth anniversary of his Tasker street store. Mr. Frey has had artisans and mechanics at work all summer enlarging and remodeling his store, whose work was indeed well done, for he now has one of the finest, handsomest and most scientifically fitted drug stores in this section. A feature that appeals particularly to the physician is the commodious and well-fitted laboratory in the rear of the store, in which Mr. Frey has a microscope and other scientific instruments and a complete set of apparatus and chemicals for analytical work, all of which he has placed at the free disposal of physicians of the neighborhood. The store proper is elegantly fitted up with plate glass mirrors, handsome glass show cases, mahogany counters and woodwork, a decorated ceiling and, last, but not least, a beautiful onyx soda fountain of Mr. Frey's own design with every one of the latest sanitary appliances for serving cold sparkling soda. The reception given by Mr. Frey to his friends and patrons was a brilliant success. Some idea of its scope may be had from the statement that over 3,000 people visited the store during the day and 108 quarts of ice cream were given away in ice cream soda. Behind the prescription counter was a table loaded with cold meats, salads and choice tidbits, while for those who wished were wines, liqueurs and even good old rye. Quite a number of local physicians visited the store during the reception and all had nothing but praise for the complete scientific department which Mr. Frey has placed at their disposal. Mr. Frey is the owner of a few more stores downtown, but none of them are to him what his first one, Sixteenth and Tasker streets, is. This is his first love and on it he has lavished a small fortune in decoration and a big fortune in brains to make it a success. And it is.

—J. B. Stokes, Whitall & Tatum's representative, is a great sportsman and is now the proud possessor of a splendid moose head which he has had mounted to serve as an ornament to his "den" and as a memento of his prowess as a hunter. Mr. Stokes, with a little party of congenial gunners, spent some weeks on the Alleghash River, Maize, this summer, and the party was very successful, bringing down several deer and three large moose. Mr. Stokes says the sensation of bringing down this monarch of the forest was very much like "booking a big order from a man you thought didn't want anything."

—Dr. Adolph Miller has returned from an extended tour through Europe, including a long stay at the Paris Exposition. Dr. Miller is one of the most popular and elo-

quent orators of Philadelphia, combining a rare vein of humor with a flow of sentiment and poetry in a simple, straightforward manner that is the delight of all who hear him in his speeches and lectures. The doctor is now busy answering the many calls made upon him by colleges and societies who are eager to hear of his experiences and impressions of his European tour.

—Mr. and Mrs. Charles Leedom have just returned from a week's visit to the Northumberland Mountains, taking in Danville and the Bloomsburg Fair. Mr. Leedom, who is an ardent sportsman and one of the crack shots of Philadelphia, was invited to attend the first hunt of the Danville Gun Club, and, though the season had hardly begun, he succeeded in bagging ten quail, almost as many as the entire party secured.

—Isaac Cohen, of Twelfth and Market street, has made a very liberal offer to the P. A. R. D. in connection with the sale of his "Foodigests." Mr. Cohen has offered to give the P. A. R. D. 3 per cent. of all sales of this preparation sold through the jobbers of Philadelphia for the next three years, which will be quite a tidy sum if all take hold of the offer.

—A fire at Keasbey & Mattison's works at Ambler, Pa., on the night of October 18 damaged their magnesia plant to the extent of several thousand dollars. The fire is supposed to have originated in one of the drying rooms and was speedily controlled by the fire department of the firm, aided by the local brigade.

—B. J. Murray has purchased the store at Ninth and Susquehanna avenue formerly owned by Justin Diehl and will carry on business there in conjunction with his store at Falls of Schuylkill.

—W. S. Froelich, of Germantown, could not resist the temptation to visit the annual fair at his native heath and spent a week among the prize pumpkins and cabbages at York.

—S. Eschbaugh, the popular head clerk at Leedom's Filbert street store, who was recently married to Miss Jeanette Sticker, of Milton, Pa., is at his post again.

—D. F. Shull was recently elected president of the West Philadelphia Bank. His Thirty-ninth and Market store is one of the handsomest in that section.

—Daniel P. Little, of Germantown, has been engaged by the P. A. R. D. as their representative in the field of organization and is proving to be a hustler.

—The many friends of H. C. Blair will regret to learn that he has been confined to his room by a severe illness.

—Chas. B. DeWolf has been engaged by W. L. Cliffe as manager for his store at 2963 Kensington avenue.

—Mr. Twigle, a member of the Class of '01, P. C. P., has been engaged as assistant by H. L. Stiles.

BALTIMORE.

Retailers and Jobbers.

Baltimore, Oct. 16.—An important conference was held at the Hotel Rennett here yesterday by a number of prominent wholesale druggists representing houses in Philadelphia, Baltimore, Richmond and other cities. The primary object of the gathering was to give effect to the tripartite agreement between the Proprietary Association of America, the National Wholesale Druggists' Association and the National Association of Retail Druggists relative to the exclusion of acknowledged cutters from the list of buyers who can obtain goods through the wholesalers. The plan provides that when the retailers of any town declare a retailer to be a cutter he shall be shut out from the avenues of getting goods open to other pharmacists. In this way it is hoped to abolish the trade abuses and destroy the intense competition from which retailers have suffered, and to secure harmony of action between those branches of the trade whose interests are identical. The arrangement received the hearty endorsement of those present, and after a prolonged discussion it was resolved that the plan shall relate only to proprietaries, the effort to include all articles handled by druggists being regarded as futile, since the machinery for controlling the distribution of articles other than patents is wanting. No pledge binds the manufacturers of chemicals, for instance, and they cannot be prevented from selling to whom they please.

Another matter under consideration was the rebate plan. This was continued, all the price lists and discounts being declared in force as before. Mr. Shoemaker, of Philadelphia, acted as chairman of the meeting and Mr. Holliday, also of the Quaker City, was secretary. The question of forming a permanent organization or exchange for the Middle Atlantic States, which shall consider all matters of interest to the wholesalers, was referred to a special committee consisting of Colonel Purcell, of Richmond, chairman; Frank Baily, of Baltimore, and Mr. Leadbeater, of Alexandria, Va., with instructions to report at some future meeting.

Those present included: Colonel Purcell, of Purcell, Ladd & Co., Richmond, Va.; T. A. Anthony, of Bodeker Bros., Richmond, Va.; Mr. Taylor, of the Powers-Taylor Drug Company, Richmond, Va.; Mr. Owens, of the Owens & Minor Drug Company, Richmond, Va.; A. E. Mealy, of Gilbert Bros. & Co., Baltimore; J. H. Winkelmann, of the Winkelmann & Brown Drug Co., Baltimore; J. W. Carr, of Carr, Owens & Heineman, Baltimore; Simon Loewy, of the Loewy Drug Co., Baltimore; Frank Baily, of James Baily & Son, Baltimore; George L. Muth, of Muth Bros. & Co., Baltimore; M. N. Kline, of Smith, Kline & French Co., Philadelphia; Mr. Shoemaker, of Shoemaker & Busch, Philadelphia; T. Ashby Miller, of Richmond, Va.; William H. Terry, of Norfolk, Va.; Mr. Leadbeater, of Leadbeater & Son, Alexandria, Va.

While the wholesalers have been thus preparing to establish close relations with the retail druggists throughout the country and secure their good will along the lines laid down by the N. A. R. D., a movement has been started among Baltimore pharmacists to give effect to the co-operative idea. This method of self-help against the hardships to which retailers have been exposed took shape several years ago, when the Calvert Drug Company was organized, but has since remained in a quiescent state. The company had a nominal existence only. Of late, however, it has been proposed to enlarge the membership, raise a fund and begin business in earnest. The intention is to get a membership of about fifty, each druggist admitted contributing \$100 to the common fund, out of which the expense of renting a warehouse and laying in a stock of goods and other charges are to be defrayed. As fast as the goods are distributed and paid for the money is to be reinvested in supplies, which will be furnished at cost plus the operating expenses. The matter is now before the directors of the company for action. John M. Wiesel is president of the company and A. J. Corning is the secretary and treasurer.

In the opinion of the leaders in the movement nothing tangible or of real benefit is to be expected from the plan to blacklist cutters. In Baltimore, for instance, the 75 per cent. of druggists necessary to stamp a dealer a cutter could not be obtained because the retailers' organization is practically moribund. Consequently, say those who favor co-operation, no formal complaint could lie against even the most notorious cutter. The latter would be able to get goods as before and supply even the cutters of other cities, serving as their agent. It is a well-known fact that some cutters conduct branch establishments in a number of cities and maintain intimate relations with other houses, which will tend to defeat the tripartite agreement. The retail trade here is very apathetic toward the N. A. R. D. for the reason that its method of dealing with a question of vital importance to the trade is deemed ineffective. Some even hint that the N. A. R. D. has been captured by the jobbers and is under their control.

With the Bowlers.

Baltimore, Oct. 19.—From present indications there will be some shifting in the relative positions of the various teams which hold membership in the Baltimore Drug Trade Bowling Club. Sharp & Dohme, last season's champions, have already been defeated four times in the six games played. McCormick & Co. are the second team to take a fall out of the leaders. Three games were bowled tonight, McCormick & Co. making 653, 820 and 717 points against 757, 721 and 683 for Sharp & Dohme. Baumgartner carried off the honors of the evening with a high score of 191. Last Tuesday night James Baily & Son gave battle to Muth Bros. & Co., taking all three games by 714, 696 and 682 against 642, 625 and 622 points.

The highest score, 163, was made by Covey, of James Baily & Son. The standing and percentages of the several teams are now as follows:

Teams—	Games Won.	Games Lost.	Per Cent.
McCormick & Co.....	5	1	.833
James Baily & Son.....	5	1	.833
Winkelmann & Brown Drug Co. 3	3	3	.500
Sharp & Dohme.....	2	4	.333
Root and Herbs.....	1	2	.333
Parke, Davis & Co.....	1	2	.333
Muth Bros. & Co.....	0	6	.000

NOTES.

—Among the visiting druggists here last week were J. C. Knight, Franklin, Va.; T. Ashby Miller, of Richmond, Va.; J. L. Hurley, Tappahannock, Va.; Thomas Anthony, of Bodeker Bros., Richmond, Va.; W. S. Richardson, Washington; J. S. Richardson, Belair, Md.; S. S. Van Trump, of Trump, Md., and Joseph E. Ball, Westminster.

—At the monthly meeting of the Maryland College of Pharmacy last Thursday J. Edwin Hengst and John G. Beck were appointed a special committee to arrange a reception to the students of the college. The date of this event has not yet been decided upon.

—G. W. Fifer, a popular clerk in the employ of Hynson, Westcott & Co., and Miss Hattie G. White, the daughter of a Baltimore business man, were married recently and have just returned from their wedding trip.

—George L. Muth, senior member of Muth Bros. & Co., wholesale druggists at 13 East Fayette street, spent several days last week in Philadelphia, combining business with recreation.

PITTSBURG.

EXCITING TIMES IN THE RETAIL DRUGGISTS' ASSOCIATION.

Pittsburg, Oct. 20.—At the monthly meeting of the Retail Druggists' Association of Western Pennsylvania on Thursday, October 18, the resignations of General Secretary James W. Cheswright and Financial Secretary E. C. Garber were presented and accepted. Mr. Cheswright relinquished his position owing to ill health and Mr. Garber accepts a position under the secretary of the N. A. R. D., also going to Buffalo to organize an association there. Mr. Garber resigns from the local body owing to internal strife and to opposition by some members to his methods. He has been an active hustler in the interests of the association. His place is filled by E. E. Pritchard, of McKeesport, and E. E. Heck, vice-president of the association, was elected to fill Mr. Cheswright's position temporarily.

A fight which has been pending for the past two years was brought to a focus at this meeting. The action of P. W. Eggers in continuing to sell patent medicines at the Smithfield street store which had come under the ban of the association, precipitated trouble and a hot time was indulged in by all the members present. Previous to the meeting the Board of Directors had met and decided to expel Mr. Eggers, who heard of their intention and consulted his attorneys. Their advice was to be present at the meeting, and if he were expelled the matter would be taken into court and the charter of the association could be annulled. Mr. Eggers was present, and he himself made the motion to expel him, which was seconded but no further action taken except a bitter personal exchange of repartee which threatened to result in fistcluffs. The paramount question, Sunday closing, was forgotten in the excitement.

Mr. Eggers said after the meeting, "I think the fight is being done through spite, as almost every member of the organization knows that as soon as I can close up the estate left by my father I will sell the Monongahela House pharmacy and devote my whole attention to my new enterprise, but if they think they can force me to stop selling certain goods they are mistaken for I will continue to sell what I wish and as long as I wish. The fight is not over and it may be that they will suspend me from the organization, but when they do I told them that I would see some of them doing time as hospital stewards in a place they would not like."

Criminal Suits Entered by the State Board.

Pittsburg, Oct. 20.—As mentioned in this column in a recent issue of the Era, efforts would be made by the State Board to prosecute all druggists in Pittsburg and vicinity irregularly and illegally carrying on business, and the crusade was practically begun on Monday, October 15. James Hodgson, of Verona, Pa., was arrested on the charge of operating a drug store without having a competent man in charge, while M. P. Sykes, alleged to be in Hodgson's employ, was also arrested, charged with acting as manager without displaying his certificate. President Emanuel declares that the board is simply trying to correct an abuse, and that all reputable druggists should assist. He further asserts that a majority of the 6,000 druggists of this State are practising irregularly because of failure to possess or display certificates. About 20 per cent. are practising illegally, having no license. In Pittsburg and Allegheny the percentage is only nine, which Mr. Emanuel thinks too high. About 100 suits have been entered and as the penalty is severe, it is likely that there is considerable trouble ahead.

Greater Pittsburg Bowling Drug League.

Pittsburg, Oct. 20.—What promises to be one of the most successful bowling leagues in the country was recently inaugurated in this city through the efforts of O. A. McNichols, Pittsburg's representative of Ell Lilly & Co. There is no doubt of the success of the new league as there are some fine rollers among the druggists here, many of whom have rolled up some big scores of late. Six clubs have joined the league, to be known as the Greater Pittsburg Bowling Drug League, the games of which will be rolled on the Hotel Henry alleys. These clubs are the W. J. Gilmore & Co. Club, captain, George Eckhardt; George A. Kelly Club, captain, Charles Burgoyne; Walther-Robertson Drug Co. Club, captain, Chas. Miller; Pittsburg Druggists' Club, captain, J. A. Rankin; the Allegheny Druggists' Club, captain, H. W. Heckel; the Pharmaceutical Club, consisting of local representatives of drug houses, captain, O. A. McNichols. The officers are George Eckhardt, president; J. A. Rankin, vice-president; O. A. McNichols, secretary; H. W. Heckel, assistant secretary, and Charles M. Burgoyne, treasurer. Mr. McNichols' address is 5171 Liberty avenue, Pittsburg. The games are to be rolled every Monday and Friday evenings from October 12, 1900, to March 15, 1901. After a certain number of games has been rolled it is the intention of the league to have a ladies' night and to organize a cocked hat league.

The first match game was played on Friday, October 12 with the Pharmaceutical Club against the Gilmores, resulting in a victory for the latter.

The second championship match of the league was rolled on Monday evening, October 15. The contesting teams were the George A. Kellys and the Pittsburg Druggists. The latter won by taking all the games. The best work of the winners was done by Rayburn, while Burgoyne did the best work for the Kellys. There were five men on each team and the scores for the three games were: Pittsburg Club, 491, 527, 501; Kelly Club, 452, 520, 490.

On Friday, October 19, the Walther-Robertson and Allegheny teams met on the Hotel Henry alleys, and the former won by taking two out of three games. The scores were as follows: Walther-Robertson Co., 454, 456, 446; Alleghenys, 396, 443, 487. The teams now stand as follows:

	Won.	Lost.	Per-centage.
W. J. Gilmore.....	1	0	1.000
Pittsburgh.....	1	0	1.000
Walther-Robertson.....	1	0	1.000
Pharmaceutical.....	0	1	.000
Geo. A. Kelly.....	0	1	.000
Allegheny.....	0	1	.000

NOTES.

—The regular quarterly meeting of the Examining Committee of the State Pharmaceutical Board was held on October 19 in the Bellefield schoolhouse, Pittsburg. There were 134 applicants, five being women. The examination consisted of over 200 written questions, out of which the successful applicant must make an average of sixty-five.

An examination in specimens was also held. The required average to be a registered pharmacist in this State is seventy-five, with four years' practical experience with a reputable druggist. The papers turned in by the students on the 19th will be passed upon by the committee during the next four weeks and the names of the successful ones announced about the middle of December.

—The safe and money drawer of J. M. Linn, Swissvale avenue, Swissvale, were robbed on October 9 of their entire contents. A clerk employed by Mr. Linn a week prior to the theft is suspected as he is missing also. Mr. Linn is a student at the Pittsburg College of Pharmacy and needs an assistant to run his store during the day. The clerk answered an ad., and as he was of fine appearance Mr. Linn engaged him. The clerk left his certificate as a Q. A. in the store.

—Among the representatives of well-known firms calling upon the trade recently were: A. B. Thomas, for Eberhard Faber; Lewis G. Abbott, Davidson Rubber Company; A. Herr, Bawo & Dotter; George C. Shirts, Grand Rapids Brush Co.; J. L. Lambright, the B. F. Goodrich Company; Theo. H. Stark, C. Bruno & Son; E. J. George, Davol Rubber Company; H. C. Chambers, John M. Maris & Co.; G. W. Corning, Parker, Stearns & Sutton.

—Cyrus Edmunds, a druggist of Braddock, and Miss Melzie O'Donovan were married on October 17. Mr. and Mrs. Edmunds left after the wedding ceremony on a bridal tour and will live in West Braddock on their return.

—Mrs. Susan Perrin, mother of Druggist James M. Perrin, died at their residence in Carnegie, aged eighty-one years.

DETROIT.

OPENING THE CAMPAIGN.

Detroit, Oct. 20.—A special meeting of the Detroit and Wayne County Druggists' Association was held here yesterday evening to discuss the matter of dealing with the cut rate problem as existing in this city. The Executive Committee of nine brought in both a majority and a minority report, the majority advising an aggressive fight against the cutters, while the minority advocated conciliatory measures. A warm time followed, and was kept up till long after midnight. It ended in the appointment of a special committee of five whose duty it shall be to formulate the very best possible schedule of prices to which every druggist in town will be willing to agree. The gentlemen appointed for this committee are W. H. Burke, A. L. Walker, F. A. Cooke, B. M. Patterson and Wm. H. Hall. They were instructed to make the keynote of their report the idea of a "conciliatory basis," and to make the report as complete as possible, so that it will cover every ready seller in the proprietary category. Upon completion of the schedule they are to submit it to the principal down-town druggists, including the aggressive cutters, and to get their views of it before presenting it to the association and to modify it if it seems necessary and practical. All prices on the schedule must be up to the full wholesale price and almost everything will be elevated slightly beyond that.

After an agreement can be procured by the special committee a meeting of the association will be called to discuss the report made, at which time it will be either ratified or thrown down. In any case the action taken at that meeting will decide definitely the policy of the future—to fight or not to fight. The prospects are that there will be no fight, the majority of the druggists of the city believing that the cutters are ready to come into line.

And at the same time, it may here be said, that it seems to be the consensus of opinion among the Detroit druggists that the tripartite plan is not powerful enough to warrant precipitating a fight. This simply means that the best thinking men of the local association do not have confidence in the ability of the N. A. R. D. to effectually shut off the cutter. James E. Davis, a prominent member of the N. W. D. A., was present at the meeting and he advised conciliatory measures. His advice carried great weight with those present.

The Hon. John B. Corliss was also present and gave a talk defining his position on the War Revenue tax and his views as to what might be accomplished by the next Congress in the elimination or modification of that tax as it pertains to the drug business. While he does not believe that the tax can be repealed, he thinks it may be taken off all common household remedies—witch hazel, lithia tablets, for example—but not from those articles which are recognized as strictly proprietary. In case of his re-election he pledges himself to support whatever the druggists of this section think is best for their interests. He also promises to take up the question of legislation on copyrights and patents.

Not Guilty of Violation of Pharmacy Law.

Detroit, Oct. 20.—The case of Frank J. Lesinsky, in the courts for alleged violation of the pharmacy laws, has come up and Lesinsky discharged. It will be remembered that Lesinsky, "not being a registered pharmacist," sold an ounce of arsenic to a woman who came into his store. The woman, however, happened to be a Mrs. Viertel, a registered pharmacist herself, and the wife of a neighboring druggist. At the trial, Mrs. Viertel swore that Lesinsky could not have known her business for he gave her instructions how to use the arsenic, warning her of its deadly properties and so on. Lesinsky swore that he did know her and that, knowing her to be a registered pharmacist, he merely held himself to be under her supervision in selling her the arsenic, and that therefore he was within the law, which allows a "person not registered to sell under the supervision of one registered." The Court (Judge Whalen, Police Court) ruled that Lesinsky was right and he was accordingly discharged—to the very great surprise of everybody. Such a ruling, carried out, would evidently mean that no pharmacist can give evidence against another. All evidence against alleged violators of the law will have to come from outside parties.

Mrs. Lesinsky, who helps in the store, and who is no better off than her husband so far as certificates go, was arrested at the same time, charged with selling an ounce of carbolic acid. She was convicted and fined \$15 and costs.

The couple are said to be doing quite a thriving business, but under queer methods. A while ago one of the members of the State Board went into the store and turned over to Lesinsky a prescription calling for some calomel. He took it and put it up and was about to give it to the gentleman when Mrs. Lesinsky caught a glimpse of him and evidently sized him up for a suspicious character, for she called her husband back and talked to him, after which he came back with the prescription and refused to put it up. It is said that a stranger finds it very difficult to buy anything in the store, but that the Polanders of the neighborhood are not refused anything they order.

NOTES.

—Parke, Davis & Co. have invited the Detroit Drug Clerks' Association to be their guests next Thursday afternoon. Every drug clerk in the city is included in the invitation. The clerks will rally at the Russell House at 2 o'clock and there be met by Messrs. Parker and Wöhllich, representatives of the firm, who will escort them to the laboratory. After an inspection of the plant, refreshments will be served. The boys are glad it is now their turn to be the recipients of Parke, Davis & Company's hospitality, and every man of them is making arrangements to be on hand.

—Twenty-four of the druggists of Detroit have been made deputy postmasters and postal sub-stations have been established in their stores. It means \$100 each to them yearly and they are put under bonds of \$1,000 each.

—James H. Harvey, formerly clerk for Druggist A. L. Walker, of Detroit, will wed Miss Maud Smith, of Romeo, Mich., on Tuesday, the 23d. Mr. Harvey will soon open a drug store in Romeo.

—Wm. J. Dodds, Jr., son of Wm. J. Dodds, of the Michigan Drug Co., has been appointed to a cadetship at West Point.

CHICAGO.

AN OLD DODGE IN NEW CLOTHING.

Chicago, Oct. 20.—The coterie of druggists in Chicago who are opposing the pharmacy law are attacking State Attorney Charles S. Deneen, of Cook County. The method and the animus of their attack are disclosed in the following clipping from the Chicago Chronicle of October 14. Reprints of the article are being widely distributed among all the druggists of Cook County, it is alleged, by the local Democratic Campaign Committee. Portions of this article are as follows:

Druggists of Cook County, especially those outside the thickly settled districts of the city, are up in arms against what they term a "farming out process" instituted by State's Attorney Charles S. Deneen. They declare that through the activity of the chief county prosecutor a law that was passed in 1895 for their protection has been made retroactive and has inflicted irreparable harm. Of the 300 cases that have been brought against the dispensers of medicines for permitting persons other than registered pharmacists or apprentices to dispense nostrums, over 300 have been based on the purchase of a dozen quinine pills. Mr. Deneen's critics have brought matters to a head by forming an organization and preparing to petition the Legislature for a repeal of the act.

While the wrath of the discontented druggists is vented on Mr. Deneen as the head of the office, Kitt Gould, Republican candidate for the Legislature in the Third Senatorial District, is also criticized. To Mr. Gould it is asserted has been assigned, with the rank of "deputy State's attorney," the punishing of alleged violations of the law after satisfactory evidence has been gathered.

The terms of the statute provide that none but a registered pharmacist, assistant pharmacist or apprentice shall dispense medicines. It has been the custom of the men assigned to the agreeable duty of securing testimony to enter a drug store at a time when the proprietor—who, in the outlying districts, is usually the only pharmacist in the establishment—is absent, and ask for a limited number of quinine pills. The industrious wife would be found as a substitute, and, not finding the order in any way technical, would as a matter of accommodation, hasten to supply the patron. The surprise of the proprietor can only be imagined upon receiving notice the following morning to answer the charge in court.

To back up their allegations that they have been persecuted, the discontented druggists point to the coincidence that every one of the 300 cases has been set for the Hyde Park Police Court, where either Justice Quinn or Justice Porter presides. For a period of two years not a single acquittal was secured, and the fines ran from \$20 to \$50. Taking \$30 as a mean estimate, it is demonstrated that with 300 convictions, only two of which were appealed, the sum of \$10,800 was secured. A portion of this goes to the State Board of Pharmacy and its agent, and the remainder, it is asserted, is the reward for the vigilant prosecution.

The dockets of the Hyde Park Police Court have been occupied almost exclusively with these cases since Mr. Deneen was inaugurated. No matter where the alleged discovery of a violation of the statute was alleged to have been made, the summons always directed that the response should be made either in Justice Quinn's or Justice Porter's court. In many instances the unfortunate druggist whose business did not warrant the employment of an assistant, was compelled to close up his place and undertake a day's journey.

The facts in the matter are these: Mr. Deneen, at the request of the Board of Pharmacy, appointed an attorney to take charge of the board's work. He has nothing to do with it beyond designating the officer who acts as counsel for the board. For the enforcement of the law the board alone is responsible. Mr. Gould tries cases when they have been begun. He has no independent action in pharmacy matters and brings no cases until instructed to do so by the board. When so instructed his duty is to prosecute with effect if he can. That duty differs in no respect from that required from the attorney for the plaintiff in a civil case. It embraces fidelity to his clients and the effective prosecution of the cases assigned him. The assertion that Mr. Deneen had anything to do with the passage of the present pharmacy law is untrue. Mr. Deneen was not in office at the time the law was passed—he was not even in nomination at that time and had not been thought of as the nominee except possibly by a few of his intimate friends. The real facts are that all the changes in the old law were suggested by the Committee on Legislation of the Illinois Pharmaceutical Association, were approved by that organization and by its influence and the personal exertions of its committee the law was passed in its present form and was hailed by druggists of the State

with great satisfaction, the majority of whom to-day look upon it as superior to any pharmacy legislation in any other State. The reasons why cases are set in Hyde Park have been repeatedly stated. The board is not bound to coddle those who violate the law by bringing cases down town where the dockets are always full and delays are interminable, neither is it bound to bring cases in the justice court nearest to the residence of the offenders, where convictions commonly could never be secured no matter how damaging the evidence or how explicit the law. The board is acting within its legal rights as every lawyer knows. It is significant that out of the 300 cases brought in the last two years only two have been appealed. The upper courts have upheld the law in principle and practice in every instance. Mr. Gould does not get a percentage of the fines. He is paid by a fixed yearly salary out of the funds of the board.

At the meeting called last week by the Board to discuss changes in the pharmacy law, several gentlemen believed to be responsible for the above article were present, yet not one of them had a suggestion to offer not in line with the present policy and purpose of the law.

Those who, in the above article have assumed to state the object of the pharmacy law have missed the point. Its object is not to protect druggists, but to protect the public and to promote a better standard among pharmacists.

NOTES.

—J. P. Kitch, who recently bought out L. C. Wright at Pontiac, Ill., has given Mr. Wright possession of the store again.

—C. C. Wilkins, 913 West North avenue, was called away this week on account of the illness of his father.

—Emil A. Zahn last week sold his drug store at Eighteenth street and Wabash avenue to J. A. Patterson.

—Sagar & Lyon, Chicago, have been incorporated; capital stock, \$15,000; object, to do a general drug business.

—C. E. Matthews & Brother have sold their store at 247 West Madison street to Haessler & Willaman.

—G. F. Bermele has bought the pharmacy known as the Otto store at 2904 Archer avenue.

—The Matthews Drug Company has succeeded C. H. Perry at Bloomfield, Ia.

—Shuttleworth Brothers have bought J. H. Luer's drug store at Cresco, Ia.

—Herman Meyer has succeeded Kennelly & Walter at Lincoln, Ill.

—H. Soleman & Son, of Pana, Ill., were in Chicago this week.

—Herbert Wilson, 5700 Morgan street, is out of business.

THE NORTHWEST.

Soda Water and License.

St. Paul, Minn., Oct. 19.—F. G. Heinze, proprietor of a restaurant and soda fountain in this city, wanted to use alcohol in his soda without paying a liquor license. F. Von Baumbach, collector of internal revenue, thought Mr. Heinze should pay, and referred the matter to the Internal Revenue Commissioner at Washington. The latter "turns in" a decision instructing Mr. Von Baumbach to inform the soda water man that if the amount of pure gin or rum added exceeds 2 per cent. of the soda water, he will be obliged to pay a retail liquor dealer's license. No license is required of those who wish to use enough alcoholic tincture merely to give the soda water a flavoring.

Futty Exonerated.

St. Paul, Minn., Oct. 19.—A young drug clerk of this city was to-day happily freed from an unjust suspicion that has rested upon him for months. It is George Balfour, who for years has been in the employ of Conger Bros. The Grand Jury discharged him, with the assurance that he was entirely innocent of the charge of participating in the Anheuser-Busch robbery last June. Balfour is a St. Paul boy, only 17 years old, and has always borne a good reputation. By the merest chance he was near the depot when the chase of the robbers occurred, and an excited employe pointed him out as one of the men,

Police Chief O'Connor said it was absurd, but the man insisted and the arrest followed. Judge Orr practically said the boy should be released at once, but the legal forms had to be followed, and he was held under bail to the Grand Jury, which promptly discharged him. J. J. and F. A. Conger, young Balfour's employers, stood by him manfully from the start, and he has not for a moment suffered the slightest loss of confidence on their part, as he has continued in their service all the time.

NOTES.

—Successions: Nick Sontag, Harper, Iowa, by Sontag & Kanterberger; E. A. Nicholas, Riddles, Ore., by I. B. Riddle; Drybread & Co., Denison, Ia., by the Armstrong Drug Co.; H. L. Seyfert, Valley Junction, Ia., by E. J. Askew & Co.; Allen Knecht, Modale, Ia., by R. H. Rhoden; E. Warner, Big Stone, S. D., by G. F. Peabody.

—E. B. Rollins, the West Seventh street druggist, has been on the sick list for several weeks and is able to attend to business but very little.

—Curtis Stream, of the Curtis Stream Co., Des Moines, Ia.; Mile E. Ryan, Vail, Ia., and C. H. Perry, Bloomfield, Ia., have sold.

—E. T. Dillner, the druggist of Henning, Minn., was in the city a few days ago, as was also William Gausewitz, of Owatonna.

—Loepfe & Biebesheimer, Milwaukee, Wis., have dissolved, and A. W. Biebesheimer has bought out B. F. Hasson.

—L. A. Green, of Elwood, Neb., has bought out W. H. Pruner, of Kennerd.

—George Orr has secured a place in a drugstore at Lambert.

—O'Hair & Walsh have been burned out at Waverly, Ia.

—P. H. O'Hair is preparing to start at Waverly, Minn.

—Ennor & Spaulding, Potosi, Wis., have dissolved.

—Wood Broos, have started at Hanska, Minn.

ST. LOUIS.

Unjust Criticism of the Board of Pharmacy.

St. Louis, Oct. 20.—The Board of Pharmacy feel very much hurt over the fact that a few of the local fraternity have gained the impression that the board is to blame for the amendment to the pharmacy law being knocked out. All who know anything about the matter or care to look into it will certainly see how absurd such an idea is. Mr. Fleischmann and Mr. Brandenberger, of the board, have probably done more work than any other two druggists in the State towards getting better pharmacy laws. Mr. Currens is a younger member, but has also done his full share of work for the good cause. It is a wrong impression that the board desire to register as many as possible so as to swell their income. To register on a diploma costs only \$1. Out of this the board pays postage and furnishes a certificate, and the records show that there is not enough left to pay for the time and trouble in doing this work, as there is naturally quite a large correspondence connected with the secretary's duties. Furthermore, had the members of the board so desired, they could have had this amendment knocked out two years ago. All this time they have been continually threatened for refusing to recognize diplomas from medical colleges by parties who claimed the law would not stand in court. They naturally suspected that there might be something wrong under such circumstances, but they continued to do their duty towards the pharmacists whom they were appointed to serve, and for the good of the profession and to follow out the law as they interpreted it, and as they knew the pharmacists who secured its passage supposed it to mean. They acted on the defense, and when forced to do so they submitted it to the highest legal authority in the State, and are now abiding by his decision, and this decision is also concurred in by some of the other best legal talent in the State, which was employed by the Missouri Pharmaceutical Association to render a decision.

NOTES.

—The St. Louis Drug Clerks' Society is arranging to give a ball about the middle of November. The exact date will be announced in a few days. It will be held

at Pickwick Hall, Jefferson street and Washington avenue; charge, \$1 per ticket, admitting gentleman and ladies. Refreshments will be furnished free. This will be more of a good old-time reunion and dance, and a large attendance is expected.

—Max Schneider, formerly a well-known local druggist and one of the first presidents of the St. Louis Drug Clerks' Society, died of tuberculosis on the 9th inst. He had just returned from Colorado, where he went in hope of getting relief.

—The Alumni Association of the St. Louis College of Pharmacy gave a smoker at the college building on Tuesday evening, October 16. Dr. H. Prinz delivered a lecture entitled, "Story of an Old Tooth."

—L. F. Able has sold his drug store at Spaulding and Marcus avenues to Louis Stalle. Mr. Able will leave in a few days for California, where he hopes to recuperate his health.

—C. P. Walbridge, president of the J. S. Merrell Drug Company, and ex-Mayor of the city, has gone out on a three weeks' trip to stump the State for the Republican cause.

—William H. Brammeier, manager of the Century Drug Store at Eighteenth street and Washington avenue, is at Huey, Ill., where he was called to the deathbed of his sister.

—Dr. Enno Sander, the old-time pharmacist and proprietor of a line of mineral waters, has departed for Europe, where he will spend the winter.

—F. C. Christman expects to have his new drug store at Vandeventer and Washington avenues open for business in a few days.

—Isaac Reinholdt has purchased the drug store at Lee and Prairie avenues, formerly belonging to Mr. Luecke.

—Dr. J. F. Renter, of Reuter & Forthimer, Lee and Fair avenues, is quite ill at his old home, Ashley, Ill.

—Charles Reusch has been appointed head clerk for G. A. Hartnagel, of East St. Louis.

TO THE MEMORY OF JULIUS FAHLEN.

Whereas it has pleased God to remove by death from our midst Julius Fahlen, our fellow member in the St. Louis College of Pharmacy, therefore be it resolved by the officers, board of trustees and the faculty: In the death of Mr. Fahlen we have lost one of our most honored and valuable members, the pharmaceutical profession one of its most noble representatives and our city one of its best citizens. Be it further resolved: That we extend to his bereaved family our heartfelt sympathy, and that these resolutions, with a brief sketch of his life, be spread upon the minutes of the Board of Trustees of this college; a copy of same be sent to the pharmaceutical journals, and also that an engrossed copy of these resolutions be sent to the family of the deceased.

FRANCIS HEMM,
H. M. WHELPLEY,
THEO. F. HAGENOW,
Committee.

Emulsion of Cod Liver Oil, Fifty Per Cent.

Cod Liver Oil.....	8 fluidounces
Emulsol	4 drachms
Water	8 fluidounces
Oil of wintergreen.....	40 minims
Alcohol	½ fluidounce

Directions.—Put the Cod Liver Oil and Emulsol into a quart bottle and shake the mixture for five seconds; then add the eight fluidounces of water and shake vigorously for two minutes, or until a perfect emulsion is produced. Finally add the Oil of Wintergreen previously dissolved in the Alcohol. By using moderately warm water the emulsification takes place more quickly than when cold water is employed. (See Emulsol advertisement on front cover).

Smith's Menthol Inhaler.

The Smith Inhaler is filled with pure Japanese Menthol, not with cotton or shavings. It is enclosed in a nice metal case and is sold to the trade in neat counter stands containing one dozen. A customer gets more for his money in the Smith Inhaler than in any other. It is carried in stock by all jobbers at \$2 a dozen with discounts for three and six dozen lots.

A Handsome Show Card.

About a year ago it was our privilege to notice in the Era a handsome show card which we had just received from the Vapo-Cresolene Company, No. 181 Fulton street, New York. We said at that time that it was one of the handsomest advertisements we had ever seen. This card took so well with the trade, and they had so many demands for it, that the quantity they had

printed was soon exhausted; but they have decided to use the same card this year, although it will be hand tinted, which fact will add 100 per cent. to its attractiveness. The Vapo-Cresolene Company want to place one of these cards in the hands of every druggist who is interested in

their goods, but they are too expensive to send out promiscuously, and they want druggists to write for them. All it is necessary to do is to send your name and address to them, when a card will be sent as soon as possible.

Matthews' Soda Fountains.

The Matthews business has grown to its present proportions upon the principle that good goods at right prices will sell themselves. It is well known that the Matthews Apparatus, as far as quality is concerned, is second to none, if it does not stand in a class by itself. In their advertisement in this issue they state that they do not believe in expensive hot soda fountains and therefore offer at a low figure a new apparatus built from imported Japanese Moriage vases. Photographs of these fountains are now ready and will be sent to any druggist who is interested. They have a few accurately colored photographs of other apparatus which they will be glad to send on application. Address John Matthews Apparatus Co., 449 First avenue, New York.

A Porcelain Jardiniere Free.

In every case of Meredith's Malt Whiskey there is a coupon. The druggist is supposed to save these coupons and when he gets a certain number he can exchange them for an exceedingly beautiful Jardiniere and Pedestal worth \$15. It is a beautiful piece of furniture and costs the druggist nothing, because the whiskey is sold at a fixed price, whether the coupons are sold or not. The entire scheme will be explained by writing to G. W. Meredith & Co., East Liverpool, O.

One of the most useful books ever sold in the drug trade and one which has an exceedingly wide distribution in that trade is the Era Formulary, a collection of 5,000 selected formulas for druggists' use. These formulas cover a wide range of application and are so indexed as to be easily found. In it may be found formulas for technical and industrial processes, domestic and household preparations and miscellaneous articles not usually found in other works of reference. With this book in his possession any druggist can easily work up a profitable trade in specialties which his training as a chemist makes him proficient to engage in. The Formulary includes working formulas for metal polishes, starches, blues, embalming fluids, photographic developers, leather dressings, cleaning preparations, special soaps, varnishes, stains, cigar flavors and colors, cements, glues—in fact almost every conceivable process. The price of the book is only \$5 and it is sent, prepaid, at this rate to any part of the United States. Orders should be addressed to D. O. Haynes & Co., 306 Broadway, New York.

A Special Offer.

On another page of this issue will be found a handsome advertisement of the R. T. Booth Co., Ithaca, N. Y. They believe the greatest mistake the retail druggist has ever made was to offer to sell good customers a cheap substitute for some well-advertised article, and they think this is especially true regarding toilet and skin soaps. They make the statement that the dry goods and department stores sold last year over 80 per cent. of all the toilet soaps manufactured, because the customer was forced to go to them in order to get what was wanted. Without calling into question the accuracy of this statement, it is a fact that this trade has drifted largely away from the druggist, and the R. T. Booth Co. claim that their plan looks to the restoration of the toilet soap business in the drug trade and the consequent increased sales of other articles in this line. They are introducing Hyomei toilet, shaving, barber and hotel soaps to the drug trade only, on a new plan. They are not sold to department or to dry goods stores. It is their purpose to advertise them for the druggist and directly to the people in his neighborhood. They furnish free samples, which they think will do more to win steady customers than all the talk in the world. They make a special offer which it would be well for the druggist to look into carefully. This offer includes an exceedingly handsome window display, somewhat on the lines of the illustration in their advertisement. We suggest that the druggist send for a sample of the soap and ask their terms.

A Patent Respirator.

Every druggist and every employe whose duties include the manufacture of preparations which give forth noxious gases or poisonous dust should have a Hurd Patent Automatic Respirator. One of these Respirators will be found particularly useful in the manufacture of condition powders on a large scale. Anybody who has handled powdered golden seal in large quantities can appreciate what such a respirator will do. In the Hurd Respirator the air is inhaled through a thin wet sponge and exhaled through an automatic valve. They are made by the Morley Respirator Co., Saginaw, Mich., who will send a single one, if no more are required, on application. See their advertisement in this issue.

A Handsome Blotter.

A blotter is one of the handiest things that can come into a man's business office, and as nobody throws one away, no matter how many he may already have on hand, it is one of the best advertising mediums. Some blotters brighten up a desk, while others have no other virtue than their blotting powers. Beach & Clarridge Company, noted for their tasteful advertising, believe in combining beauty with utility, and they have issued a series of ten blotters which they will send to any Era reader by mail, prepaid, simply for the asking. It will do this paper some good, though, if the Era be mentioned when the request is made.

A Special Offer.

The American agent of Rubinat Llorach Water, J. D. Gomez, 75 Broad street, New York, is offering a special inducement to druggists to make window displays of the water, putting them in a position to make 100 per cent. on it, a greater profit than any other water affords, and even greater than most articles now sold by the retail druggist. He will send full particulars to any druggist who will take the trouble to write to him. Rubinat Llorach "yellow label" is a natural mineral purgative water; it acts quickly and without irritation, and the adult dose is only a wineglassful. It is carried in stock by the leading jobbers.

Caustic Pencils.

The only profitable method of obtaining 10 cents worth of Caustic is to supply Wetmore's Caustic Pencils. They are guaranteed to contain 90 per cent. nitrate of silver, are easy to dispense, handsome in appearance and exceedingly convenient to use. They are sold by all jobbers, or will be sent direct by writing to the S. H. Wetmore Co., New York City.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,
New York.

CALIFORNIA.—Rocklin.—C. B. Ruth, sold to Bradford Woodbridge.

COLORADO.—Salida.—The Salida City Drug Company, sold to T. D. Wycoff.

ILLINOIS.—Jerseyville.—Pittman Drug Company, sold to George W. Ware & Son.

Ottawa.—Duncan & Perkins, No. 717 Lasalle street, succeeded by N. C. Perkins, in issue of October 11, is an error. Should be N. C. Perkins, of the firm of Duncan & Perkins, deceased.

INDIANA.—Howell Station.—J. F. Freeman, damaged by fire.

Yalparaiso.—Heineman & Roe, succeeded by Heineman & Sievers.—Letherman & Sievers, succeeded by W. C. Letherman.

IOWA.—Bloomfield.—C. H. Perry, sold to Matthews Drug Company.

Deñance.—Konkle & Junker, succeeded by T. W. Konkle & Co.

KENTUCKY.—Henshaw.—G. T. Berry, sold to Hunt & King, in issue of October 4 is an error. Should be: G. T. Berry, sold to Nunn & King.

MAINE.—Booth Bay Harbor.—D. H. Moody, sold to F. H. Harris.

MASSACHUSETTS.—Fall River.—Sullivan & Clark, No. 624 Bedford street, succeeded by John F. Sullivan & Co.

MICHIGAN.—Detroit.—Frank Schulte, No. 255 St. Aubin avenue, deceased.

Marine City.—D. R. Lester, sold to Fred Holmes.

MINNESOTA.—Albert Lea.—C. B. Jelstrup, sold to L. A. Hanes.

MISSOURI.—Brighton.—H. Frady, sold to Brighton Drug Company.

NEW YORK.—New York City.—John Albert, Jr., No. 225 First avenue, deceased.—William Fischer, No. 327 Bleeker street, deceased.—Lyons & Emelin, No. 821 Seventh avenue, succeeded by E. J. Emelin.

Syracuse.—O. P. Barnum, No. 1636 North Salina street, sold to H. B. Thomas.

VERMONT.—Readsboro.—A. P. Bishop, sold to Henry S. Ward.

WISCONSIN.—Milwaukee.—Loepfe & Biebesheimer, No. 507 East Water street, succeeded by Alvin J. Loepfe.

NOVA SCOTIA.—Pictou.—A. R. McKenzie, new store.

Sydney.—W. S. Davison, new store.

PRINCE EDWARD ISLAND.—Charlottetown.—G. A. B. McDonald, new store.

PATENTS

Trade-Marks, Designs, Etc.

PATENTS.

Issued October 9, 1900.

659,202.—Otto Bonhoeffer and H. Dresner, Elberfeld, Germany, assignors to Farbenfabrikation of Elberfeld Company, of New York. Methylpropylcarbinolurethane and making same.

659,204.—Heinrich Brat, Rummelsberg, assignor to Actien-Gesellschaft fur Anilin Fabrikation, Berlin, Germany. Bromo-tannin-gelatin compound.

659,214.—Emule DeMeulmeester, Brussels, Belgium. Making yeast extracts.

659,236.—Albert C. Johnson, Baltimore, Md. Making sulfuric acid.

659,261.—Carl T. Setterberg, Stockholm, Sweden. Producing glue or gelatin from free fat.

659,213.—Einar Morterud, Konga, Sweden. Apparatus for manufacturing cellulose.

659,447.—Marc P. E. Letang, Paris, France. Preparation of carbide of calcium.

659,448.—Marc P. E. Letang, Paris, France. Generating acetylene gas from carbide of calcium.

659,470.—Anton C. Eggers, assignor to Goodyear's India Rubber Glove Manufacturing Company, New York, N. Y. Syringe.

659,485.—Jean A. Maignen, Philadelphia, Pa. Filter.
659,496.—Richard Taggesell, assignor to Schoelkopf, Hartford & Hanna Company, Buffalo, N. Y. Meta-amidotoloxaminsulfo-acid.
659,497.—Richard Taggesell, assignor to Schoelkopf, Hartford & Hanna Company, Buffalo, N. Y. Meta-amidotoloxaminsulfo-acid.
659,542.—Harry A. McIntosh, Liberty, Ind. Inhaler.
659,552.—Charles H. W. Schambach, Nevada, Mo. Insecticide.
659,593.—Charles W. Richards, San Francisco, Cal. Tooth brush.

Issued October 16, 1900.

659,640.—Harry S. Blackmore, Mount Vernon, N. Y. Disinfecting composition.

659,642.—Albert F. Blagdon-Richards, Swansea, England. Clinical thermometer case.

659,649.—William R. Clough, Alton, N. H. Machine for making corkscrews.

659,655.—Edwin Edser, London, England. Apparatus for electrolytic decomposition of alkaline salts.

659,733.—Martin Goldschmidt, Charlottenburg, Germany. Making oxalates.

659,820.—Auguste and L. Lumiere, Lyons, France. Making persulfate of sodium.

660,008.—Georg Eichelbaum, Berlin, Germany. Manufacture of food from yeast.

660,042.—William F. Barry, assignor of one-half to W. B. Lincoln, Woonsocket, R. I. Powder-insufflator.

TRADE MARKS.

Registered October 9, 1900.

35,208.—Headache Powders, Frank W. Klocke, St. Louis, Mo. The representation of two men with clasped hands.

35,209.—Medicine for Certain Named Diseases, Henry B. Summers, Baltimore, Ohio. Two concentric arcs having arrow heads and tails extending therefrom.

35,210.—Certain Named Medical Compounds, Gold Crown Medicine Company, Utica, Mo. Two concentric circles.

35,211.—Certain Named Medical Compounds, Joseph Alfred Musgrove, Ottawa, Can. The word "Uwanta."

35,236.—Clinical Thermometers, Oelschlaeger Bros., New York, N. Y. The representation of a crown.

Registered October 16, 1900.

35,248.—Certain Named Proprietary Medicines and Remedies, Iman Wisse, Grand Rapids, Mich. The word "Iman."

35,249.—Certain Named Medicines, David E. Wolfe, Coldwater, Mich. The hyphenated word "U-Need-A."

35,250.—Remedy for Certain Named Diseases, Simeon Seijas, New York, N. Y. The letters "SS" in monogram.

35,251.—Remedies for Certain Named Diseases, Smith-Gardner Company, New York, N. Y. The word "Euca."

35,252.—Throat Tablets, Robert W. Gardner, New York, N. Y. The word "Phosphamol," and the letters "P. T. T."

DESIGNS.

33,326.—Bottle, James F. McGuire, New York, N. Y. Filed August 17, 1900. Serial No. 27,217. Term of patent, fourteen years. The design of a bottle, substantially as described and shown.

33,361.—Nursing Nipple, Philip F. Hoffman, Newburg, N. Y. Filed September 18, 1900. Serial No. 30,361. Term of patent, seven years. The design for a nursing nipple.

LABELS.

7,814.—Title, "Erb's Health Capsules." (For a Medicine). Ludwig G. B. Erb, New York, N. Y. Application filed September 15, 1900.

7,823.—Title, "Nutril Emulsion." (For a Medicine). Nutril Chemical Company, New York, N. Y. Application filed July 24, 1900.

7,824.—Title, "Red Cross." (For Disinfectants). Charles E. Bennison, Boston, Mass. Application filed September 22, 1900.

PRINTS.

270.—Title, "Elixir Gualacol Co." (For a Pharmaceutical Preparation). William C. Alpers, Bayonne, N. J. Application filed September 12, 1900.

Pure Port Wine.

In the advertisement of the Duroy & Haines Co., Sandusky, O., in this issue, they make the statement that the purest, best and most delicious wine ever dispensed by the retail druggist is the Duroy Port Wine, and we are inclined to think the facts bear them out. It certainly must pay to handle this wine, as it is sold all over the world. Their trade is confined exclusively to druggists, and by the excellence of their wine they have made themselves the leading wine house in the drug trade in this country. They will send a sample of Duroy wine to any druggist who will take the trouble to ask for it.

ILLINOIS BOARD.

At the examination held by the Illinois State Board of Pharmacy in Chicago, at No. 141 Thirty-ninth street, October 9-11, the following passed as registered pharmacists and assistant pharmacists:

Registered Pharmacists—S. Aronson, G. J. Bacon, G. A. Belkuss, E. A. Benson, R. S. Boehm, F. E. Brawley, H. G. Cory, R. von Danden, A. E. Evens, A. Gale, L. J. Hall, F. J. Hanus, A. Henninger, W. Kunz, W. E. Kotz, L. P. McEhan, R. Meyer, D. W. Mott, J. C. Mills, J. P. McDonnell, A. Neumann, H. M. Ormsbee, W. A. Rennen, W. C. Reuter, C. F. R. Schaffarzick, A. Schellinger, E. L. Semsrott, H. H. Swan, A. C. Symmes, H. I. Sanford, W. R. Young, N. J. Zurawski, all of Chicago; J. W. Alexander, Elgin; H. W. Alvey, Mechanicsburg; J. S. Ashmore, Shannon; W. H. Barrick, Mt. Olive; O. H. Bryan, Kinmundy; E. D. Cone, Astoria; F. H. Drallmeyer, Quincy; P. M. Fahrner, Joliet; A. H. Figgen, Quincy; H. A. Goddard, Hebron; T. D. Gregg, Harrisburg; R. L. Halsted, Rock Falls; G. E. Hoffman, Peoria; F. M. Hargreaves, Evanston; G. M. Knochel, Lincoln; A. C. Moore, Wilmington; L. D. Perkins, Roseville; H. L. A. Rose, Columbia; D. S. Vannatta, Rockford; N. E. Williams, Quincy; P. Winimueler, Woodstock.

Assistants—F. L. T. Bowden, E. K. Caldwell, E. C. Gorgan, O. A. Daniel, W. E. Delehaut, O. J. Dewitz, D. E. Finkelstein, C. S. Fisher, R. Heller, H. H. Hewitt, H. L. Hull, A. C. Ibach, A. A. Johnson, A. Jaus, H. Jertellus, W. V. Keller, C. L. Krafft, F. P. Kujawski, E. Lessing, A. Levitan, M. U. Mator, L. P. May, J. Mesirov, F. C. Mitchell, S. A. Monllaws, F. L. Newman, O. B. Pierce, W. A. Sandoz, W. Schmitt, J. H. Skaggs, S. F. Waterman, E. Williams, F. A. Wiedemann, all of Chicago; L. P. Davis, Greenville; C. Fox, East St. Louis; E. W. Hogan, Amboy; R. Honn, Metcalfe; L. F. Knicks, Joliet; F. E. Smith, Girard; J. F. Wester, Rockford.

The Board of Pharmacy desires to have it distinctly understood that no applicant who has gained his experience in Illinois drug stores will be examined or given an interview until after being regularly registered as an apprentice.

The next meeting of the board for examination will be held in Room 3, State House, Springfield, January 15, at 9 a. m. The following examination will be held at No. 141 Thirty-ninth street, Chicago, February 19, at 9 a. m. New applications must be on file in the office at Springfield at least ten days previous to the above date. Those having applications already on file must also give a like notice should they desire to appear for this examination.

Under no circumstances will this rule be varied from, and no one will be given the examination who has not complied fully with these requirements. Affidavits from registered pharmacists of time service must be filed at least three days before the examination. Address all communications to L. T. Hoy, secretary, Springfield, Ill.

James W. Tufts, in his advertisement in this issue, presents a strong appeal for hot soda. He says that while the right hand of the soda water business is cold soda, the left hand is hot soda, and it is easier to do business with two hands than with one, as the two businesses can go hand in hand and the soda counter be made profitable the year around. They have many new designs this year illustrated in a catalogue which they will send for the asking. They give easy terms and take old apparatus in part payment. Address James W. Tufts, 282 East Congress street, Boston, Mass.

Mayell-Hopp's Witch Hazel Jelly is sold in a new package and at new prices. Each tube is packed in a neat carton, six cartons in a box. The price to the dealer is \$2 a dozen, with lower prices in one and two gross lots. The freight is paid on the last named quantity. All jobbers carry it in stock, but it may be had also by writing directly to the manufacturers, the Mayell & Hopp Co., Cleveland, O.

Any druggist who has need for rubber stamps, brass and aluminum soda and trade checks, would do well to get the 50-page catalogue which C. L. Safford, 181 East Madison street, Chicago, Ill., will send free of charge on application. This catalogue includes hundreds of new time, money and labor-saving ideas and ought to be in the hands of every retailer.

STATE OF TRADE.

Business Practically Restricted to Current Necessities.

New York, Oct. 23.—Increasing interest has been manifested in political affairs as the time for the Presidential election approaches, and in consequence business practically has been restricted to actual current necessities of the various consuming trades. Round lots have received very little attention, but while tame conditions have prevailed in nearly every department, the jobbing movement has continued of satisfactory proportions, with the firmness heretofore noted, still a feature of the general market. The quinine situation has not developed anything to materially change the condition of affairs in that leading commodity, but outside holders are somewhat firmer in their views, owing to the fact that shipments of bark from Java have again fallen off. It is argued that the supply of this raw material in producing markets must be light, for the reason that holders would naturally send everything available, forward, in order to benefit by the comparatively high prices, and if the shipments should continue to shrink during the balance of the year, there is little doubt that quinine will develop increased strength. At present, however, there is little doing in excess of deliveries on contracts, but in this way the bulk of the output of manufacturers is being absorbed.

Opium has undergone no important change, and the market remains inactive with the feeling among holders fairly steady, in sympathy with the stronger markets abroad, due to recently reported unfavorable crop conditions in growing districts. Morphine and codeine are in good demand, but without quotable change or new feature. Cream tartar and tartaric acid are slightly demoralized on account of competition from outside sources, and manufacturers have reduced their quotations 1c. per pound. Under a similar influence cumarine is easier and some holders are willing sellers at a decline of 25c. per pound. Caffeine is firmly held at the advance reported last week, and the available stock continues very light. Cocaine is very strong under light supplies and scarcity of crude material, and the bulk of the output of manufacturers is required to fill contract orders. Advices from the west coast of South America are to the effect that coca leaves are very scarce and steadily advancing, and that only small lots are offered at the higher figures.

In the department of essential oils there is a fair degree of activity in peppermint, and values have shown a hardening tendency both here and in Western producing markets, spot quotations having advanced 50/10c. per pound. Lemongrass is firmer under reduced available stocks, which are more closely concentrated. Clove oil continues strong in sympathy with improved prices of spice. Pimento is weaker owing to fresh competition, and in some instances quotations show a radical reduction.

Unsettled and irregular conditions in the market for yellow prussiate of potash, and a consequent decline in prices, have caused a weaker feeling among holders of potassium cyanide, and manufacturers' quotations are fully 1c. per pound lower, while outside parcels are obtainable at a still further concession. There is nothing in the outlook to indicate an early settlement of existent differences among the makers of yellow prussiate.

No changes of importance occurred in any of the leading indigenous roots, but continued steady markets are reported for golden seal, senega, and serpentaria. In the seed line, Dutch caraway is a fraction lower in sympathy with primary markets, and German rape is slightly higher on account of scarcity. Cardamoms are easier owing to competition among holders, and inside quotations for both whole and decaffeinated are 5c. per pound lower. Cantharides are decidedly firmer, and the stock of the Chinese variety is practically exhausted.

A Slight Increase.

Philadelphia, Oct. 20.—Retail druggists report a slight but cheering increase in business during the past week. The sale of remedies brought in demand by this season of changeable weather has increased considerably, and the profits on these are helping to make up for the dullness in other lines.

In the wholesale trade, the same general conditions continue. Nothing much is doing, and nobody expects anything until after election is the common remark, although many are commenting on the fact that business this year is far better than is usual just prior to a general election. Salesmen are taking quite fair orders, and collections are up to the mark. Active preparations for the holiday trade are beginning to be a factor in many large firms, all looking for a rush of orders as soon as the political questions are settled.

One of the many signs of a better condition of affairs in the retail drug business is shown by the remarkably small number of failures, bankruptcy sales and closing out of business for the past month, it being the lowest for years. And but few stores are being offered for sale, any such finding quick buyers in private arrangements.

Moderate Activity in Baltimore.

Baltimore, Oct. 22.—Only a moderate degree of activity prevailed here last week among the wholesale druggists, the number of orders being reduced and for small amounts. Beyond this, however, business appears to be in good shape. All the laboratories are pushed to their full capacity, and the demand for goods as a whole is large. The present quiet is attributed to the fact that this happens to be the lag end of the month and to the close proximity of the national election. A marked increase is looked for after November 6. Heavy chemicals reflect closely the conditions which prevail elsewhere, while the market for botanicals is devoid of unusual changes. The retailers differ widely in their reports on the state of their business.

Trade Very Uneven in Boston.

Boston, Oct. 20.—All sorts of weather this week has brought about a general uneven condition of trade. All this tends to create colds, from which a large number of people are at present suffering. This has called for increased sales of simple remedies at drug stores, and there has been quite a noticeable demand for these things during the past few days. Trade as a whole appears to keep quite steady, with no marked changes calling for special note. In the wholesale market there are found no important changes as to prices. Manufacturers report a pretty good demand for quinine. Opium and morphine show only moderate activity. Essential oils for the most part are quiet, as are balsams. Some activity is found in the general list of chemicals. Steady prices and a fairly good demand characterize the condition of dyestuffs and tanning materials. Better trade in these appears to be in sight. The market for hops is especially strong. Waxes are only fairly sought.

Rather Light Trade in Detroit.

Detroit, Oct. 20.—Wholesalers are running now with a full force, everybody having had his vacation, and that may be one reason why things have not seemed especially lively during the last week. There do not seem to be quite so many customers standing around waiting for their orders to be filled. The rise of 10c. per gallon on linseed oil on Thursday created some interest, it being the largest single advance made on the product in several years. Retailers report trade as rather light. Jack Frost keeps himself out of sight, and all Michigan seems to be waiting until after election to make any very heavy purchases in any line of business.

A Good Average Maintained.

Chicago, Oct. 20.—There have been very few changes in the demand this week. Business has been good in all staple lines and in sundries, and manufacturers and jobbers alike are busy. The holiday trade is beginning, and several fine orders are recorded among those who deal in such goods. The weather has been perfect, and the soda trade continues. Buyers are ordering liberally of all goods, and every one seems to be busy and reasonably prosperous.

Linseed Oil the Exciting Feature.

St. Paul and Minneapolis, Oct. 19.—The most stirring event of the week—or of many weeks, for that matter—was the action of the linseed oil "trust" in putting on the screws, which it did yesterday, raising the price 10 cents per gallon. It now stands at 74 cents, the highest figure it has attained for years and years; and the raise is one of the largest on record, the usual advance rarely exceeding two or three cents at a clip. Trade has experienced something of a falling off this week; nothing serious, to be sure, but still a decided lull. This is less felt by the jobbers than by the retailers, who without exception report slow sales and a quiet week generally. Furthermore, only one was found who could say that collections were at all good. But druggists always do undergo more or less of a slackening in business in October. The jobbers, too, notice something of a diminution of orders, but are not surprised. They know that the uncertainties of the Presidential campaign are largely responsible for this streak of comparative dullness, and are thankful that the whole thing is to be settled in less than three weeks. One of the big wholesale houses, speaking through a reliable representative, while acknowledging a decrease this month of about \$10,000 as compared with a year ago, says it is still "ahead of the game \$135,000 in comparison with the first ten months of 1899—the "banner" year up to that time.

MARKET REPORT.**NEW YORK MARKET.**

New York, Oct. 23.—Political affairs are diverting the attention of dealers to some extent, and the market is somewhat tame in consequence, but the volume of business in a jobbing way continues of satisfactory proportions, and the undertone shows no abatement of the steadiness heretofore noted.

OPIMUM.—A continued slow demand is reported with a consequent quiet market, but unfavorable weather conditions in the growing districts in Turkey have stimulated a firmer feeling in primary markets, and spot quotations are steadier, with jobbers quoting \$3.45@3.65 for 9 per cent, and \$3.55@3.65 for 11 per cent, according to size of order.

POWDERED OPIMUM.—Small parcels continue to receive a fair degree of attention, and a steady feeling prevails, with quotations unchanged at \$4.50@4.65 for 13 per cent, and \$5.10@5.25 for 16 per cent, as to quantity, the outside figures for single pounds.

MORPHINE.—The market has a moderately active appearance, with consuming orders absorbing a fair amount of stock, and jobbing quotations are steadily maintained on a basis of \$2.40@2.60 for eighths, according to brand and quantity.

QUININE.—The tone of the market continues steady under a fair seasonable movement in consuming channels, and prices are well sustained on the basis of 44@45c. in ounces, as to brand.

CREAM TARTAR.—Manufacturers have reduced quotations 1c. per pound, and the revised jobbing range is 22½@23c. in barrels, 23½@24c. in cases, and 26½@29c. in smaller quantities.

TARTARIC ACID.—This article also has been reduced 1c. per pound by the makers, and jobbers are now quoting 32½@32¾c. in barrels, 33½@34c. in cases and 37½@41c. for broken lots.

CUMARINE.—Competition and a light demand have caused an easier feeling among dealers, and the revised jobbing quotations are 70@80c. per oz. as to quantity.

OIL CLOVES.—Values have continued to harden under the influence of an advancing market for the spice, and jobbers have marked their quotations up to 65@75c. according to quantity.

OIL LEMONGRASS.—Stocks are gradually becoming depleted, and with the available supply under closer control, holders are firmer in their views and quotations for jobbing quantities show an advance to \$1.75@1.90.

OIL PEPPERMINT.—All varieties are stronger owing to higher prices in producing markets, together with an improved demand, and jobbers have advanced quotations to \$1.30@1.50 for Western, \$1.50@1.60 for Wayne Co., \$1.55@1.65 for H. G. H., and \$1.60@1.85 for redistilled.

OIL PIMENTO.—The market is easier owing to competition among manufacturers, and jobbing quotations have been reduced to \$2.75@3.00 as to quantity.

CANTHARIDES.—Advices from abroad are to the effect that the new crop is a partial failure, and the market is decidedly stronger with quotations for Russian advanced to 65@75c. for whole and 75@85c. for powdered. The stock of Chinese is practically exhausted.

RAPE SEED.—The market is slightly firmer owing to stronger primary sources, and jobbers have advanced their prices to 3¾@4¼c. by the bag and 6@8c. for less.

CARDAMOMS.—Values of round lots are somewhat easier owing to competition, and jobbers have modified their views to the extent of reducing quotations to 85c.@\$1.10 for Aleppo, 95c.@\$1.20 for Malabar, \$1.20@1.35 for bleached, \$1.35@1.45 for extra bleached, and \$1.10@1.25 for decolorated.

GRAINS OF PARADISE.—The market is better supplied and easier, with jobbing quotations showing a decline to 30@40c. for whole and 32@42c. for powdered.

TAMARINDS.—There is a good consuming inquiry, and the market is firmer with quotations advanced to \$2.00@3.00 per keg, and 12@15c. per pound for less.

LINSEED OIL.—Values are decidedly higher owing to increased cost of seed, and the revised jobbing quotations are 70@72c. for raw by the barrel and 75@85c. for less; boiled 72@74c. by the barrel and 78@88c. for less.

LARD OIL.—The market is slightly firmer and jobbers have advanced their quotations to 80c.@\$1 per gallon, according to quantity.

ANTI-KAMNIA IN PARIS.

We are in receipt of a photograph of the Antikamnia Chemical Company's exhibit at the Paris Exposition, which Frank A. Ruf, the genial president and treasurer of the company is sending to his friends on this side of the water as a souvenir of "Antikamnia in Paris." The photograph not only shows the exhibit of Antikamnia in the United States Chemical Section of the Exposition, but also gives a very striking likeness of Mr. Ruf in characteristic pose. Mr. Ruf expected to sail for home—"dear America," he calls it—October 1. The company's Paris office is at No. 5 Rue de la Paix.

THE ERA COURSE IN PHARMACY.

Students whose applications are received after November 1 are put in the November class.

NEXT CLASS BEGINS NOVEMBER 10.

Students who matriculate for the November class will receive the lectures on General Chemistry contained in Part I. Students who began the work in the October class will receive on November 10 Part II. of the lectures, or that part of the work known as "Pharmaceutical Processes Involving Masses and Volumes."

TOTAL EXPENSES FOR THE FULL COURSE, \$10.00.

If you are interested in this work, you should send in your order at once. For fuller particulars, see announcement facing third cover.

Write for new descriptive Prospectus. Address

THE MANUFACTURER'S RIGHT TO FIX HIS OWN PRICES.

The drug trade has been very much interested for some time past, a year or two, in a legal fight being carried on by the proprietor, Julius Garst, of Massachusetts, of the proprietary medicine, Phenyo-Caffein. In connection with the bill of sale of this article, the proprietor insists upon an agreement that the purchaser shall not sell it at retail below a certain specified price, and it is only upon the acceptance of this provision that the purchaser can obtain the goods from the manufacturer. Many dealers have, however, seen fit to cut the price, selling it at largely reduced figures, and against some of these the manufacturer has brought legal proceedings. The decision of the full bench of the United States Supreme Court of Massachusetts has just been rendered, sustaining Dr. Garst in his contention. This decision, which is brief, that retailers cannot cut the price of a patent medicine if the manufacturer is not willing, is liable to be very far-reaching in its application and of particular import to the drug trade. The decision of the court is that the particular retailer complained of is liable in damages for selling the article at cut price. At the time of the sale there was a condition imposed that the goods should not be sold for less than the regular price. The Court holds that even if this contention was not agreed to in writing by the retailer, the fact that it was imposed by the manufacturer and understood by the druggist to have been imposed was enough to make it binding. The Court rules that "when, as here, there is a secret preparation which the defendant presumably would have no chance to sell at a profit at all but for the plaintiff's permission, a limit to the license in the form of a restriction of the price at which he may sell is proper enough."

This ruling certainly disposes in a definite way of the problem which has vexed the drug trade a long time. It establishes the fact that the manufacturer of a proprietary preparation can control the selling price of his article after it leaves his hands. Were all manufacturers as earnest in their endeavor to protect retail prices as is this one, the cut rate difficulty would have been solved long ago and there would have been no need for the creation of the N. A. R. D. and other bodies of like character. The Court's decision applies to the drug trade in just the same way that similar rulings are in effect in other branches of business. If E. & W. collars, Huyler's candies and other trade-marked proprietary merchandise can be restricted in price, why cannot the same be done in the medicine business?

The principle is the same. Dr. Garst is to be congratulated upon the vigor of his prosecution and the gratifying success resulting therefrom. His example is one which it is to be hoped will be liberally followed by brother manufacturers, if they really are actuated by the same desire, namely, to have their goods maintained in the estimation of the drug trade upon the proper basis and sold at proper profits. The precedent established by the United States Supreme Court is a decidedly valuable and significant one.

THE WORK OF THE PENNSYLVANIA BOARD.

At several times, recently, this journal has given in its news columns paragraphs concerning the recent doings of the Pennsylvania Board of Pharmacy in the way of prosecutions of violators of the State pharmacy law. The board seems to have gone into this crusade in a very thorough way, if we may believe the stories coming from our correspondents and those which are published in the daily papers. It is related that the board engaged the services of a detective agency, and that a dozen or a score of detectives have been busily engaged for many weeks past in investigating the retail drug trade of the entire state of Pennsylvania.

The detective agency, as is natural in this report, is inclined to take a very gloomy view of the information it has secured. But even looking at it in an optimistic light, the best is bad enough. The superintendent of the agency says that about 4,000 retail and wholesale druggists have passed under the scrutiny of the agents of the board, and that only a small percentage have been found blameless. Some two hundred informations have been laid before the authorities in Pittsburg, and it is stated that a large number of cases will be started in various parts of the State. The detectives relate that they have bought poisons from every sort of unqualified person, from a scrub girl up; from employes who did not understand the English language and who allowed the detectives to help themselves to what they wished in the store. Among the violations of the drug laws which will be prosecuted are the following: Conducting a store without a registered pharmacist in charge; selling adulterated drugs; leaving a store in the temporary charge of a clerk not a qualified assistant; selling violent poisons without registering the name of the purchaser; selling less dangerous compounds without affixing a poison label and the address of the seller; selling drugs not up to the standard strength; substituting in prescriptions. The detectives claim that they have enough evidence in all of these divisions to convict very many druggists.

We by no means believe that the state of affairs is as bad as this report would seem to show. The fact is, however, that a number of suits have already been commenced, and there is without doubt altogether too much violation of the laws, perhaps not intentionally, but just as

reprehensible for all that, among druggists of Pennsylvania. We say Pennsylvania because that is the one state covered by this investigation; possibly a similar condition exists in other states, and could be similarly disclosed and punished. Some of the druggists of Pennsylvania claim that this crusade is one of persecution merely and for political effect. Its farther development and results will be awaited with interest by all, and perhaps with apprehension by some.

ERA BLUE BOOK.

We are now engaged in compiling the material for the next edition of the Era Blue Book, which will appear in January.

We ask all interested in this work to notify us of any additions to or omissions from the drug and chemical list and the proprietary medicine list. We will value suggestions looking to the improvement of these lists, especially the names and retail and dozen prices of new preparations heretofore not included.

Is there any patent medicine which should be in the list? Send us its name and its maker.

The Era Blue Book will contain numerous new features which will add very greatly to its practical advantage to the drug buyer and make it indispensable.

INDIGO IN CAMBODIA.—M. Cassier, chief of the French agricultural staff at Cambodia, has recently published an interesting report relating to the cultivation of the indigo plant and the preparation of indigo in that country. The indigo plant is cultivated in all the regions of that country which are covered annually by the fertilizing deposits of the rivers. The crop is highly esteemed, and the natives estimate that the cultivation of indigo brings in three times as much as that of cotton. The fresh stalks contain 1/1000 of the merchant indigo of Europe, but the natives use only the liquid parts for the extraction, which is carried out in the following manner: The maceration tank, which is sometimes a rude native vessel, is filled with the freshly cut stalks, which are piled in horizontally to within 12 inches of the top. Upon them is placed a framework of bamboo, which is held down by wedges. The vessel is then filled with water nearly to the top, and the whole allowed to stand for 12 to 15 hours. The water becomes a greenish color, and the leaves become greenish. The stalks are then removed and to the remaining liquid are added 10 to 15 pounds of lime, mixed with water to form a paste. The mixture is stirred to hasten the action, and is then allowed to stand for one hour, when the liquid becomes clear in the upper part and is decanted off. The remainder, a thick liquid, is then put into a special tank, where the liquid from several operations is accumulated. The mass is stirred and allowed to rest for 12 hours, when the top liquid is poured off and the remainder is drained off to the consistency of paste in a shallow vessel made of matting or of trellis-work of fine bamboo or reeds. The drying should be rapid, and it is for this reason that the vessel, which is placed on the ground, is only 8 inches deep. In two days the operation is finished and the paste, which still contains considerable water, is packed in jars. To estimate the efficiency of this method it may be remarked that a maceration tank holding 250 gallons and containing 200 to 220 pounds of stalks gives 33 pounds of the product sold in Cambodia, which contains only 2.3 per cent. of indigotine, the remainder being made up of lime, organic matter and water.—Sci. Am.

Petition to the Congress of the United States.

We, members of the drug trade of the United States in its several branches, retail druggists, wholesalers and jobbers, and manufacturers of proprietary preparations, herewith respectfully petition the Honorable Congress of the United States to repeal the special tax imposed under Schedule B, Section 25, and its dependent sections of the War Revenue Act of 1898, now in force, so far as such tax is laid upon medicinal preparations.

We seek this repeal for the following reasons:—

- 1.—This tax on medicines is class legislation, unjust and unduly burdensome.
- 2.—The tax is unequally distributed, being placed upon medicinal preparations which are necessities, and at the same time allowing to escape taxation a large number of articles which are as truly proprietary and which enjoy special protection under the copyright and trade mark laws.
- 3.—The revenue created by the enforcement of the law is no longer necessary, and the amount collected under this Schedule B is but a small proportion of the total revenue derived.
- 4.—The drug trade is already heavily taxed. Alcohol, which enters so largely into the manufacture of the preparations sold by us, is already taxed about 1,000 per cent., and the imposition of further taxation, as provided by this act, makes its operation oppressive.
- 5.—The intent of the law was to tax proprietary medicines only, but owing to its peculiar phraseology and the construction placed upon it by the officials, it does not reach nor apply to a large class of medicinal chemicals protected by trade mark, while on the other hand, it applies to nearly all drugs and medicines which are a necessity to the sick.

We ask relief, believing that the honorable members of Congress will realize the justice of our claims by repealing these unjust and burdensome provisions of the War Revenue Act.

NAME.

ADDRESS.

A copy or copies of the above petition will be sent to every druggist sending us a postal card request.

OPINIONS OF THE TRADE.

We beg to acknowledge receipt of your esteemed favor of recent date enclosing a petition to Congress in reference to the repeal of Schedule B of the Revenue Stamp Act and fully agree with all you say in reference to this unjust piece of legislation. We herewith return signed petition with an apology for not giving it more prompt attention and the only excuse we have to offer for our seeming neglect is press of business; we have been absent from the office for some time and you know what that means. We have secured the names of our local wholesalers and a few of the leading and most enterprising retailers. If time would permit and we thought it necessary we could, without difficulty, secure the signatures of every druggist of the three cities on the Falls of the Ohio River, numbering probably one hundred and fifty, but as the move is universally popular and the law was a disappointment even to those who formulated it (having failed in its purpose) we believe its repeal will be favorably considered by the next Congress. Our company stand ready and willing to do all that they can to accomplish this end.

CALIFORNIA FIG SYRUP CO.

Louisville, Ky.

Per A. G. NEWMAN.

We have read with pleasure and heartily endorse your articles in the Era. We have wanted to start something to throw off this unjust yoke of oppression ever since the infernal thing became a law. Send us a dozen or two blanks, and we will mail to the druggists of this and adjoining counties. How would it do to get up a form for the general public to sign? Druggists have lots of friends, consequently are a mighty power in this land if they will only go after a thing together. We don't think it could do any harm to let office seekers and holders know that we know how much our might entitles us to. Keep the good work going, and good luck to your efforts. We believe we are robbed by this Government of six or seven hundred dollars yearly and this amount comes out of our meat and bread.

L. H. OTT & SON.

Harrisonburg, Va.

We notice in the current issue of your esteemed weekly that you have issued a petition to the Congress of the United States, and we would ask whether you would favor us with about twenty-five or thirty copies of the same so that we may have such copies circulated among the members of this association. Thanking you for past favors, we are,

Yours truly,

NORTHERN OHIO DRUGGISTS' ASSOCIATION,
Cleveland, O.

E. R. COOPER, Organizer.

Regarding your letter of 12th inst. about repealing the Stamp Tax on proprietary medicines, we want to ask the question: If the tax will be repealed, is it going to benefit the retailer or the manufacturer? What, if after the tax is repealed, the latter do not return to the old price of medicines (\$8 a dozen for \$1 preparations, etc., and worse with some like J. C. Ayer & Co., etc.) or are they going to keep the new prices? This is what we want to know first before we sign a petition like the one you enclose.

W. M. STEPHENS & CO.

Sioux City, Ia.

We herewith return the petition with signatures of the three druggists in our town, together with our own. Will further say that our representative in Congress, who is up this year for re-election, was in town yesterday and have interviewed him in the matter. He will do all he can to forward the interest of the parties petitioning. We know him as "Our Dave," and know that he will do what he says.

THE HALLER PROPRIETARY CO.

Blair, Neb.

BELKNAP, Secy

You will find enclosed petition signed by all the druggists in this locality. We haven't had any only those directly interested sign this, so we thought it possibly might have more weight than a cargo petition signed by people promiscuously.

THIRTS' PILE TREATMENT CO.

Ravenna, Mich.

In circulating this petition the question has been asked by nearly every druggist, Will the manufacturers reduce their prices if the War Tax is taken off? We did not raise our prices, but paid it ourselves, as we thought that was the intention of the law. Do you think the prices will be reduced as eagerly as they were advanced? Enclosed we hand you the petition signed as requested.

THE GERMANO MFG. CO.,

Kenton, O.

R. H. M. Mgr.

Your communication in regard to the repealing of the Stamp Tax received and we have tried to get as many signers as we could and what we have are druggists and manufacturers.

We all feel that it is to our benefit to have it repealed and that we are suffering an injustice by being doubly taxed.

VICTOR REMEDIES CO.,

Frederick, Md.

Per J.

We herewith enclose petition to Congress signed by every druggist in our city, and the signatures are all druggists. The tax on proprietary medicines does seem an unjust taxation on the drug trade and it seems to us with the proper pressure upon the members of Congress they cannot help but give this matter due consideration and repeal the act.

WM. SMITH & CO.

York, Pa.

I am in sympathy with the movement, and promptly presented your letter to Mr. Ellington, one of our prominent retail druggists, who kindly consented to bring the matter up before the Retail Druggists Association about the 1st of November. They will no doubt take prompt action upon the same.

W. F. McBURNEY.

Los Angeles, Cal.

Enclosed please find petition to Congress with names of business men appended as requested. We hope that the Stamp Tax on medicines can be abolished, as it is not only a very large expense, but hampers and keeps a small firm down, and but for this unnecessary expense would otherwise be prosperous.

THE JOHN F. BAUER CO.

Mt. Morris, N. Y.

We take pleasure in handing you herewith our signature to the petition for the repeal of the Revenue Tax on proprietary articles. We sincerely hope this matter will receive favorable consideration at the next session of Congress.

PRICKLY ASH BITTERS CO.

St. Louis, Mo.

Your letter inclosing petition to Congress duly received and we have signed the same and hand it to you herewith inclosed. Should there be anything further we can do that will aid you in this matter, kindly advise us and oblige,

NEWTON CHEMICAL CO.

New York.

We enclose you petition with twenty-five signatures, all druggists but ours. Plimpton, Cowan & Co. are getting signatures also, so you can make a respectable showing in Buffalo. Hope the effort will be successful.

HART RHEUMATIC REMEDY CO.

Buffalo, N. Y.

Enclosed we hand you a list of petitioners from this city to Congress to repeal the Stamp Act. We hope sincerely that you will be successful in your efforts and will have this burdensome tax repealed.

POWERS-TAYLOR DRUG CO.,

Richmond, Va.

E. D. TAYLOR, Pres.

We commend the Pharmaceutical Era for its efforts to bring about a repeal of the Stamp Tax, and take pleasure in enclosing our signature to the petition to Congress.

MEYER BROS. DRUG CO.

St. Louis, Mo.

THEO. F. MEYER, Vice-Pres.

I wish to help to have the Stamp Tax repealed. Please send me four blanks.

Allow me to thank you for your interest in this matter.

H. F. Rühl.

Manheim, Pa.

We enclose petition signed by all druggists of our town. We are willing to do anything we can to help in getting this unjust tax repealed.

THE CROHARDT MFG. CO.

Chillicothe, Mo.

Commends the Effort to Repeal Stamp Tax Law.

Prof. W. C. Anderson, president of the N. A. R. D., stated recently that he was "heartily in favor of the efforts made by The Pharmaceutical Era for the repeal of the Stamp Tax law and that he believed it would be productive of a great good. The Era has taken a lively interest, and its work is to be commended."

OUR LETTER BOX.

XXXXX

We wish it distinctly understood that this department is open to everybody for the discussion of any subject of interest to the drug trade, but that we accept no responsibility for the views and opinions expressed by contributors.

Please be brief and always sign your name.

A PESSIMIST.

Pleasantville, N. Y., Oct. 20, 1900.

To the Editor—In your answer to query No. 14 in the Era of October 18, you are very blind. The doctor's profession and the druggist's profession are in direct opposition. There is a class war between the two. Overcapitalization drove the large manufacturers into a combine on compressed tablets, etc., and they are now straining every nerve to supply the doctors direct and to wipe out the smaller supply houses and incidentally the druggist. The drug store is decadent. What are the majority of druggists to-day? Patent medicine venders; sometimes ice cream dealers, hot and cold soda slush, half-way houses for the bicycle boy and the bicycle girl. Better take Valentine's advice to Gretchen in Faust. If the druggists are on the town let them come out boldly and state that they are in the huckster business—they might as well.

C. C. CROLLY.

Druggist and dealer in any kind of commodity from a hair pin to a second-hand pulpit as long as it lasts, until the manufacturer of pharmaceutical products and the large capitalist with his own stores, the department store, have wiped me out.

ELIXIRS IN 1830.

Indianapolis, Ind., Oct. 24.

To the Editor: I have read the article by Prof. Homell upon the question of elixirs. I am very much in accord with the professor in much that he says. My main object in this writing is to call his attention to an apparent error. He says "the first elixir recognized by the United States Pharmacopœia was the elixir of vitriol, admitted in 1800." I have in my possession a copy of the Pharmacopœia of 1830, which contains three elixirs, viz.: Elixir Vitriol, Elixir Proprietatis and Elixir Salutis, the latter of which was a true elixir, as it contained sugar. Elixirs are largely prescribed and there is a great traveling public, many of whom carry "a copy" of their prescriptions and who should be able to get various prescriptions refilled as easily and with the same certainty they get paregoric, which was also called "Elixir Paregoric" in 1830.

Yours truly,

GEORGE W. SLOAN.

Pharmaceutical Celebrities.

WILLIAM C. ANDERSON.

The subject of this sketch is a product of recent development. This statement is not so very strange in view of the fact that every age is certain to find out the thing that is essential to it. Just as the old worthies with their philosophies and teachings stepped before the procession when they were needed, so Anderson came along when he was wanted. About ten years ago the Brooklyn College of Pharmacy was organized and the Board of Trustees was looking for somebody to fill the chair of the theory and practice of pharmacy. Anderson came along and filled it and he continues to fill it to this day. Last year the members of the Junior Order of the United American Mechanics, a well-known fraternal organization, held an election and again the professor's pole knocked down the persimmons, he becoming the chief executive of the order. And as every reader of the pharmaceutical journals knows, he was elected president of the National Association of Retail Druggists at its second annual meeting recently held in Detroit. These various official positions, in addition to the active discharge of his duties as the proprietor of a well-known Brooklyn pharmacy, give him a field in which to work off his surplus energy. His specialties are pharmacy, fraternity and patriotism, and he is equally at home when lecturing to the students, talking to the "brethren of the order" or addressing his fellow citizens. He is patriotic to the core, and in his speeches he never fails to win applause by judiciously swinging the Stars and Stripes which he always carries with him to emphasize his points. Our artist depicts him in one of these interesting passages where he brings in "freedom from her mountain height." A study of our caricature reveals much more than is depicted in the pictures printed by our contemporaries and it is particularly gratifying to "show him up" as he is. The silk tie so carefully placed close at hand betokens the gentleman, the checked suit is indicative of his hustling capabilities and the characteristic pose of the left

leg is a notice to "traitors, beware." Anderson has his hobbies, rides them and enjoys the exercise. His pharmaceutical brethren seem to enjoy it, too, for with all of his idiosyncrasies he is a hustling and useful member of the profession.

HOW OINTMENTS SHOULD BE MADE.*

By ALFRED I. COHN.

Almost every pharmacist holds the belief that he has an especially good method of preparing ointments, and that his preparations cannot be excelled, yet an examination of specimens of ointments obtained from various sources will exhibit remarkable differences in appearance, smoothness, etc. Some will be found to be granular; in others, particles of the medicinal substance incorporated will be clearly visible, or felt on rubbing between the fingers; others will be "off color"—all due to improper methods of manipulation. As a matter of fact, all kinds and shades of differences will be observed.

The production of an unobjectionable proper ointment depends first, on the kind and quality of the fat employed, and, secondly, on the careful prosecution of a suitable process for the incorporation of the medicinal ingredient or ingredients.

Perhaps the most important, if not the most frequently used, of all the fats used in the preparation of ointments is lard. The quality of that which is ordinarily supplied in meat markets, groceries, etc., is, however, unfortunately inclined to be very poor. Not infrequently it presents a decidedly soggy appearance, is very soft, if not mushy, particularly in warm weather, and generally has an unpleasant odor. The employment of such a lard, whether bought in bulk, or put up in the familiar tin cans under the designation of "leaf lard," will never enable an operator to produce a superior ointment. Moreover, an ointment made from this kind of lard invariably becomes rancid quickly, and consequently is bound to entail considerable loss in the course of the year by reason of the quantity of spoiled material thrown away.

The only method whereby this loss, as well as the annoyances occasioned by it can be minimized, if not avoided, is to render your lard yourself, and thus assure at the same time the securing of superior results. The rendering of lard presents no difficulty whatever, and may be easily accomplished as follows:

How to Render Lard.

Secure any suitable quantity of the abdominal fat of the hog and cut it up into small pieces. After freeing these, so far as is possible, from the membranous parts, wash them thoroughly in a liberal allowance of very luke-warm water, until practically all soluble substances present have been washed out. Then introduce the fat, together with a little water, into a suitable vessel, preferably of the kind known as "enamelled" or "granite" iron, and heat over a naked fire until all the fat has been melted. As the water evaporates it should be replaced, otherwise there is danger of the fat becoming too highly heated, and thus acquiring more or less color, and perhaps an unpleasant odor. The writer has found it advisable to add to the melting fat a few pieces of peeled, raw potato, as the final product is thereby greatly improved. In fact, lard which has already become partially rancid may frequently be reclaimed and made perfectly sweet, or, at least, very greatly improved, by remelting it with a few pieces of potato, and continuing the heat until the pieces have become crisp or "fried." Too great a heat must be carefully avoided in order to prevent the possible discoloration above noted. If desired, the fat may be tried out on a water-bath, in which case it will be unnecessary to add any water to the fat. The melted fat is allowed to stand for ten or fifteen minutes, and is then strained through a piece of cloth, preferably of flannel. The water present will have settled out during the standing and may be readily removed after the lard has solidified.

The product, when cold, should be transferred to stone-ware jars, care being of course taken not to incorporate any of the separated water. The jars should be well covered and kept in as cool a place as possible. To

*Merck's Report.

further protect the lard from undue exposure to air and consequent rancidity, it is well to pour a layer of water or glycerin about an inch in depth on the surface of the lard.

Lard so prepared and kept has a peculiar firmness, crispness and pleasant odor, which are entirely lacking in the article bought ready-made. It is not nearly so prone to become rancid, and ointments prepared from it are superior in every respect.

So far as the incorporation of medicinal substances with lard is concerned, this must be varied according to the nature of the substances. This brings us to the discussion of the second requisite for the preparation of a good ointment.

Preparation of Ointments.

The method of incorporation employed depends largely upon the physical characteristics of the medicinal substances for the elaboration of a suitable process. For instance, let us take zinc ointment, which is, perhaps, as much as any, a source of considerable trouble in its manufacture. Many processes have been proposed for the purpose of obtaining a perfectly smooth product. Of all the processes tried none has given such uniformly good and reliable results in the writer's hands as the following, which has been employed for many years:

Ointment of Zinc Oxid.

Triturate the zinc oxid with a little alcohol, which promptly breaks up all lumps; then add a little castor oil, and continue the trituration until the mixture is perfectly smooth, and no gritty particles are felt under the pestle. To this mixture is now added the benzoinated lard previously melted on a water-bath, and stir until cold, frequently scraping the sides of the mortar with a flexible spatula. It sometimes happens that some gritty particles are encountered in the zinc oxid used which are not reduced by the alcohol, and which cannot be all crushed by the pestle. In this case it is necessary to strain the still fluid mixture of zinc oxid and lard through a piece of cheesecloth. This procedure will, however, rarely be necessary if a good quality of zinc oxid has been employed. The little alcohol used is rapidly driven off by the heated lard during the trituration; the small quantity of castor oil can scarcely be objected to, as in the proportion present, about four or five drams to the pound of ointment, it has no action even on the most sensitive skin.

Benzoinated Lard.

Benzoinated lard is another ointment which presents difficulties in the way of obtaining a nice product. The pharmacopoeial process is not a perfectly desirable one inasmuch as a prolonged heat (two hours) is necessary for the complete exhaustion of the benzoïn, because the latter cakes together and becomes hard. The process used by the writer has given most excellent results, and its use for a long time has demonstrated its efficiency. It is as follows:

Prepare a concentrated tincture from the benzoïn ordered, and pour it over some clean, washed and well-dried gravel, evaporate the solvent, and inclose the benzoïn-bearing gravel then in a piece of suitable fabric—woolen cloth, muslin, cheese-cloth, etc. Suspend the bag thus made in the lard heated on a hot water-bath, and retain it there until benzoïnation is complete. This takes place much more rapidly than with the official process (usually thirty minutes is ample), because a far greater surface of benzoïn is exposed on the gravel to the solvent action of the hot fat. Further, an advantage is gained in not having to keep the lard hot so long as to endanger its keeping qualities.

Ointments with Extracts.

Ointments containing extracts such as of opium, belladonna, aconite, stramonium, etc., are best prepared as follows: Heat the extract in a porcelain evaporating dish on a water-bath with a mixture of equal parts of diluted alcohol and glycerin until the extract has been dissolved and the alcohol and water practically all evaporated. Then incorporate the glycerinic mixture with the fat. Ointments so made keep far better than when made by triturating aqueous or hydroalcoholic solutions of an extract with the fat. The water present always disposes an ointment to become rancid more quickly.

Veratrine Ointment.

A smooth veratrine ointment can be expeditiously made by rubbing the veratrine with a little alcohol, in which it dissolves, then quickly adding a little castor oil, and continuing the trituration until the alcohol is practically evaporated and then adding the ointment base. By this means is avoided the sneezing which is most likely to follow the attempt to make the ointment by other processes.

Ointments with Heavy Minerals.

In preparing such ointments as those of ammoniated mercury, lead carbonate, lead iodid, etc., it will be found that a very little expressed oil of almonds will very materially assist in securing perfectly smooth ointments if the powders are first triturated with it.

Ointment of Mercuric Oxid.

Ointments of both yellow and red mercury oxids should be prepared by first triturating the oxids with a little glycerin, to which just enough alcohol has been added to overcome the viscosity—say, about one-tenth. The glycerin enables the powders to be more finely triturated than can be accomplished by water or alcohol alone, or by the ointment base, and secures more permanence for a product, which is, at best, very prone to spoil quickly. The very little alcohol is usually entirely dissipated during the trituration.

Cold Cream.

To obtain a fine, smooth cold cream the manipulation is almost of more importance than the formula followed. The following process has always yielded an excellent product:

Spermaceti	tr. oz.	2
White wax	tr. oz.	2
Oil sweet almond	fl. oz.	12
Water	fl. oz.	4
Borax	dr.	1
Oil rose	gtt.	20

Melt the spermaceti and wax in the oil on a steam-bath, taking care not to expose the mixture to heat any longer than is just enough to effect liquefaction of the solids. Pour this solution into a cold, capacious mortar, and immediately add the water, previously warmed, and in which the borax has been dissolved, pouring it in a steady stream into the center of the oily solution and without stirring. When all has been added, the whole is thoroughly mixed with the pestle, care being taken to frequently scrape the sides of the mortar and incorporate the firmer with the more fluid portion. When the ointment has become fairly solid, which occurs in but a very short time, scrape the sides of the mortar well, and get all the ointment together, then cover the mortar—a piece of paper, towel, etc., will answer—and set aside for a few hours. When perfectly cold and the ointment has "set," add the oil of rose and triturate until a perfectly smooth preparation results.

The writer prefers to use water and oil of rose rather than rose water, because the latter, although of finer flavor if the distilled product is used, is easily spoiled by heat, and its addition to the hot fat is not only likely to spoil it, but the odorous portion is largely driven off by the heat.

In very hot weather the quantity of wax and spermaceti should be somewhat increased, say about one-eighth, and in very cold weather diminished.

SODA WATER IN GREAT BRITAIN.

Following closely upon the English recognition of the desirability of the liberal use of ice, comes the interesting statement of Consul Halstead, of Birmingham, in a recent report, that the British are also taking kindly to American soda water. He states that for two months an American soda fountain has been used in Birmingham, which, at first looked upon with suspicion, has become a striking success. Following the installation of the fountain in a drug store came hot weather, and on one day the proprietor sold one thousand glasses of various flavors; on other days, six or seven hundred glasses, and even during recent cooler weather there has been a profitable business. The winter use of the soda fountain having been explained, he expects to build up a hot beef tea, hot clam juice (if he can get the clam juice) and soda tonics trade. It was not possible to introduce ice cream soda this season owing to the small size of the shop.

A QUIET EVENING IN A DRUG STORE.

DRAMATIS PERSONAE.

Mr. Pestle, a druggist.
 A Doctor.
 An Elderly Lady.
 A very much "Trained Nurse."
 The Reverend Paul Pry, B. A.
 Uncle Silas, an Ethiopian.
 Ancephalus Deilaas and Friend, two dudes.

Scene: A drug store in a small summer resort.
 Time: 10.30 P. M. on a hot August night.

Mr. Pestle pulls down the blinds, restores sundry boxes and bottles to their respective places on the shelves, and counts his cash.

"Well, not a bad day after all, thirty-six fifty cash, ten booked and cigars and soda ten twenty-five. I think I'll close up and I hope to goodness my clerk will be all right to-morrow. Confounded nuisance, the errand boy having to leave in the middle of the season. Goodness only knows where I can get another." (Changes his coat and prepares to turn out the lights.) Enter the doctor and Uncle Silas.

Doctor: "Awfully sorry to be so late, Pestle, but Uncle Silas' wife is very sick this evening. I've just been out to their place, and I want you to put up these two prescriptions. (Sotto voce.) Not a cent of money in the house, suffering like blazes, gave them my attendance, want you to help them out on the medicine, out of pocket, cost nominal—six suppositories, two grain morphine, vaginal, dozen capsules—possibly get Silas to do some odd job and get your pay that way—decent darkey as ever walked—sorry to give you such a tedious job at this hour, but case one of dire necessity."

Mr. Pestle: "All right, doctor, glad to do what I can in such a case. (To Uncle Silas.) Sit down and I'll get that medicine ready in half an hour, Silas. Anything else to-night, doctor? Well, good night." Exit doctor. Mr. Pestle weighs out the cacao butter and gets his suppository mould ready; weighs out the morphine and lights his spirit lamp. Uncle Silas fidgets uneasily in the front shop meanwhile.

Enter an elderly lady. She raps sharply on the show case and taps on the floor with her foot. Mr. Pestle re-enters the front store with a polite bow. "What can I do for you to-night, madam?"

Elderly lady: "I have a prescription here I wish dispensed at once, and I want to know what it will cost."

Mr. Pestle, reading: "Fluid extract nux vomica, one ounce; tincture of iron, one ounce; aque ad. q. s., four ounces. Sig., two teaspoonfuls four times daily! Excuse me, madam, but I don't know the name of the doctor who wrote this prescription."

Elderly lady: "It is a prescription from a well-known doctor in Bellevue Hospital. I got it from a trained nurse who is boarding in the same house I am. She said it ought to cost me about twenty-five cents."

Mr. Pestle: "I'm exceedingly sorry to say that it would cost me my diploma, and the county a coroner's inquest, if I put that prescription up, madam. Your friend has made a mistake and I couldn't possibly fill it."

Elderly lady, indignantly: "Well, of all the nonsense I ever heard. The person who gave me this is a trained nurse, and if you won't fill a prescription from her I will take it to some other drug store." (Takes the prescription and leaves the store in an indignant state of mind.)

Uncle Silas: "'Scuse me, sar, but I hope dar aint gwine to be many more folks come in; I've got free miles to walk and I aint so quick on my feet as I used ter be, and my old lady just screeching wid de pain all de time, a steady holler, no one else in de house but our littlest granddaughter and she sick wiv de mumps."

Mr. Pestle: "All right, Silas, I'll do all I can for you, but I can't possibly get these things done in a minute. By-the-by, I've got to keep that floor clean, and I can't have you chewing tobacco in here. If you want to smoke you can sit out on the sidewalk and I'll call you when the medicine is ready." (Retires to the dispensing department and goes to work at the suppositories. Exit Uncle Silas, who takes a seat on the stoop.) Interval of five minutes. Then suppositories are made and while they are cooling Mr. Pestle weighs out the ingredients

"Please, Mister, will you give us a glass of ice cream sody? Our livers is out of order."

for the capsules and commences to fill them. Enter the Rev. Paul Pry, B. A.

The Reverend Gentleman in reply to Mr. Pestle's salutation: "Good evening. I think I noticed some geological specimens in your window to-day. Can you inform me where they came from?"

Mr. Pestle: "From all over the world, sir. That case is a small collection of Mexican minerals, that one contains Canadian specimens of gold, silver, copper and lead ores, the third case contains fossils from the east coast of England. I bought the collection at an auction, and if you care to examine the specimens do so by all means. I have to keep the case with the gold specimens locked, but the other fossils and minerals are all named."

The reverend gentleman examines the cases while Mr. Pestle fills his capsules. After an interval he makes his way into the dispensing department.

Rev. Paul Pry: "Excuse me, Mr. Pestle, but I should like to speak with you on a matter I am deeply interested in. I am the honorary secretary of the American League for the Suppression of Opium, a league which includes over one hundred doctors and druggists in its membership already. Our aim and object is the total elimination of opium and all its compounds from medical practice, and the absolute prohibition of the use of the drug in any form, either as an external or internal medicament. I have taken a good deal of interest in medical matters and I know more or less about pharmacy; in fact many of my friends declare that I am half a doctor already. I can assure you."

Uncle Silas, outside: "Say, Mister, is them things neah done now? I've been waitin' quite a while."

Mr. Pestle: "In five minutes, Silas; the last batch are just cooling; say, you've got a long walk home and (goes outside) here's ten cents, run over to Gallagher's and get yourself a drink and when you come back I'll be ready for you." (Returns to dispensing department and finds the Rev. Paul Pry reading the doctor's prescription.)

Rev. P. Pry: "Why, Mr. Pestle! This is an order for morphine, and two grains at a dose, too! It's enough

to kill the patient outright. I wish I could see the doctor who prescribed it. I never heard of such a dose, and (eyeing the suppositories) such enormous pills. I never saw such pills before."

Mr. Pestle: "Not pills, I assure you; they are suppositories."

Rev. Paul Pry: "A distinction without a difference; however, I suppose you are in honor bound to defend a medical man who patronizes you. Now allow me to make a suggestion. In place of morphine, quietly dispense ten grains of bromide of potassium; your doctor won't know the difference; your patient will be benefited, and though the bromide will perhaps cost you a trifle more than the morphine, you will have the satisfaction of knowing that you have done exactly what is right. Allow me also to suggest that you make the pills with bread crumbs and of a far smaller size; they will be easier to take."

Mr. Pestle proceeds to explain the difference between pills and suppositories to the reverend gentleman when the elderly lady re-enters the store accompanied by a rather prepossessing "young person" of the "trained nurse" type, blonde hair, neat figure, retroused nose and rather a pretty face, age about twenty-two or three.

Trained Nurse (with frigid politeness): "I believe, sir, that you have just refused to fill a prescription I sent here by this lady?"

Mr. Pestle: "Certainly, if you wrote one that calls for a thirty minim dose of fluid extract of nux vomica, I did refuse to fill it. I also stated my reasons, and if necessary I will state them again. If you accidentally wrote 'fluid extract' for 'tincture' the dosage would be unusually heavy."

Trained Nurse: "I made no mistake at all. In the hospital I graduated from the doctor always told us to avoid tinctures, as an ordinary druggist knew nothing about making them, and to use fluid extracts whenever they are procurable. I presume you are out of fluid extract?"

Mr. Pestle: "By no means, madam; here is a bottle of Parke, Davis & Co.'s, here is one of Wyeth's, and if you notice the labels you will find that the dosage is 'from one to five minims' on both bottles. By-the-bye, from what hospital did you graduate?"

Trained Nurse: "From Bellevue, if you ever heard of that institution."

Mr. Pestle: "I have heard of it; but I never heard until to-day that the nurses at Bellevue were entitled to prescribe for their patients; and even if they were, a nurse's diploma does not entitle them to practice medicine on their own account."

Elderly lady: "Don't waste any more time here, Nurse; we can get the prescription filled elsewhere in the morning."

Mr. Pestle: You may possibly do so, madam, as one or two of the stores open before the proprietors come down. In the event of your getting the prescription filled by the errand boy the best antidotes are hypodermic injections of apomorphine, mustard, emetics, inhalations of chloroform and stimulants afterwards."

Exit elderly lady and trained nurse. Mr. Pestle re-enters dispensing department.

Rev. Paul Pry: "Mr. Pestle, I could not avoid hearing your remarks to those two ladies, and in my opinion they were most unjustifiable. I am boarding at the Columbia Hotel and the younger lady is at my table. I consider her a most intellectual individual, and I think she is quite equal to the ordinary doctor in point of medical knowledge. She has only spent one winter at hospital and her grasp of medicine is something entirely out of the common. She is perfectly in accord with me on the question of opium and stimulants, and she resigned her position at the hospital rather than administer drugs which she was firmly convinced were detrimental and debasing to her patients."

Mr. Pestle (somewhat tartly): "She is the first nurse I ever met who graduated from Bellevue Hospital after one Winter's experience. My private impression is that she got 'sacked' for trying experiments or neglecting orders. I've met some of that breed of nurses before, and I've also had the pleasure of meeting the genuine article."

Mr. Pry is about to reply when an hyena-like laugh is heard on the street. The noise becomes more and more in evidence. Finally the originators of the noise enter

the store; they are two weedy youths of twenty years of age, or thereabouts, arrayed in tennis trousers, negligee shirts and red and black "blazers." One of them seats himself on the counter, the other drags a stool up to the soda fountain. Mr. Pestle removes the suppositories from the mould and cleans it.

Ancephalus DeHaas: "Well I nevah saw such a joke, nevah, I weally fought ve old fellow would go cwazy, and just, just to see how he jumped ve fence! Hello, you fellah in vere, we want a glaws of sodah. Hlave you any sodah fit to dwink?" Mr. Pestle re-enters front shop.

Mr. Pestle: "What kind of soda do you want?"

Ancephalus: "Soda! Soda!! Stuff you dwink to quench your first. We would pwefer alligator phosphate, or in case vat dwink hasn't weached vese benighted regions you might gylve us a callifumpian cocktail." (Uncle Silas reappears, but beats a precipitate retreat on noticing Ancephalus and his friend.) Mr. Pestle restrains a desire to throw an empty glass at Ancephalus, and the Rev. Paul Pry picks up an invoice and peruses it.

Mr. Pestle: "I haven't any alligator phosphates or callithumpian cocktails." (Runs off a list of eighteen different drinks.)

Ancephalus: "Well, Algy, I suppose we had better twy owange phosphate, it's usually less loafsome van ve over dwinks one buys in countwy stores." (Mr. Pestle draws the soda; Ancephalus and Algy help themselves to half a dozen straws each and continue their conversation.)

Algy: "And just think what a run the old nigger had the ducks squawking in the fishing basket, and the old coon thinking he could run down a fellow on a wheel. By Jove, though, it was interesting when he struck the stone pile." (Mr. Pestle has retired inside; he finishes Silas' prescriptions.)

Ancephalus: "Gwacious! how ve vocks flew, I was weally afwaid I should get my bwains knocked out."

Algy: "But what on earth can we do with the ducks now we've got the confounded things? Oh, I know. Say, you fellah in there, do you like ducks?"

Mr. Pestle (who has not paid any attention to the conversation): "What!"

Ancephalus: "My fwend was asking if you liked ducks. Birds, you know, birds wif webbed feet and bills, because if you do we have two ducks in a fishing basket which we have no pwesent use for, bof alive, too."

Mr. Pestle: "I do not deal in poultry, and, like yourselves, I have no use for live ducks—or geese, either."

Algy (after a pause during which he breaks up his straws and strews them on the floor): "What was the Christian name of the brazen serpent which Moses made?"

Mr. Pestle: "Gentlemen, it's half past eleven, I have some work to do yet before I can go home, will you kindly pay for your soda and clear out, without asking any more idiotic questions? I am far more interested in getting to bed than in answering enquiries as to brazen serpents and ducks. You are quite old enough—"

Ancephalus: "It is a stwange fmg how much misunderstanding vat simple question awouses. My fwend never intended to insinuate vat you had any personal acquaintance wif ve veptile in question. Dwuggists are ve victims of a popular myff. Ve public suppose vey can answer any question vey are asked—"

Algy: "And we always make it a particular point to ask that question in every country drug store we patronize."

Rev. Paul Pry (emerging from the dispensing department): "I am truly sorry to hear you young men speaking so flippantly on scriptural subjects. I would advise you to study the second book of Kings, eighteenth chapter, and ascertain the name by which it was known after its destruction. Mr. Pestle, since you decline to accept my suggestion about the — er — suppositories, I shall call on Doctor Smith myself to-morrow morning, and make him acquainted with my views on the subject. In the meantime I consider you morally, if not legally, responsible for —"

Enter Uncle Silas and a policeman. Uncle Silas: "Dem's de men! Dem's de men as stole my ducks. I'se able ter swear to dem anywhere. Dey just tuk dem right outer my door yard and got clear on der bl-sykles. I near ketched dis one on der head wif a rock; good fer him I aln't as limber as I was."

Rev. Paul Pry: "Officer, there must be some mistake about this. This youth is the son of a well-known banker in New York" (indicating Mr. DeHaas) "and this one is very well known to me by sight though I don't know his name. They both board at the Columbia Hotel and —"

Policeman: "They're both going to board at the jail to-night. I've been watching their little games for a week or more."

Rev. Paul Pry: "But the charge is a ridiculous one. You have no right to arrest them without a warrant."

Policeman: "If you don't shut your head and get out of the way you'll get into trouble, too. I know my business, and I don't want your interference."

Mr. Pestle (as the officer of the law is about to march his captives off): "Hold on one minute, Johnson, I believe the boys stole the ducks, but they intended to return them; at any rate, they are still alive. Perhaps we can come to an arrangement with Uncle Silas. He has had a long walk into town, but his ducks are all right, and I'm sure these young men won't mind paying him for his time; you can suspend proceedings for the present, and if they misbehave again you can make it interesting for them on both charges."

Ancephalus (scared out of his lisp): "Yes, for goodness sake get the thing settled, the ducks are in my fishing basket in some bushes just back of the hotel. One of us will go for them while the other stays here." (Exit Ancephalus in a hurry; Mr. Pestle invites the policeman and his captive into the dispensing department. Uncle Silas and the Rev. Paul Pry remain outside.) The policeman administers a severe lecture to the prisoner who is on the verge of tears; it is finally agreed that Uncle Silas shall receive five dollars as a peace offering.

Enter the Doctor: "Hullo, Silas, I thought you would be home by this time, what on earth has kept you so long?"

Uncle Silas: "Waitin' ter get pay for dem der ducks I was telling you 'bout. I se met the boys who took dem."

Rev. Paul Pry: "Er—excuse the interruption, Doctor, but did you order six morphine suppositories for this man?"

Doctor (shortly): "No. I ordered them for his wife."

Rev. Paul Pry: "I was anxious to see you about it, and I have just been explaining my position to Mr. Pestle on the morphine question. He refused to listen to my suggestions and referred me to you. Knowing as much as I do of the evil effects of morphine, I thought I might suggest a change in the formula. Say ten grains of bromide of sodium or potassium in place of the morphine. I will call on you to-morrow morning with some pamphlets bearing on the matter—"

The Doctor (boiling over): "Are you an escaped lunatic, or have you never been under restraint? If not, I shall have much pleasure in writing a certificate that you are non compos mentis at any time. I've spent the last half hour with a youngster who has been nearly poisoned by a 'trained nurse' at the Columbia, and when I come over here I meet a gentleman who wants me to give a patient bromide of sodium in suppositories!" Enter Ancephalus DeHaas with a large wicker fishing basket containing two indignant ducks.

Ancephalus: "Here are the ducks."

Algy: "And here is the five dollar bill."

Uncle Silas: "Much 'bliged, gentlemen, guess I'll borry de basket to take de ducks back in."

Policeman: "You can go this time, young men, but remember, next time—" Exit Ancephalus and friend. "I guess there won't be any 'next time' round here; good night all." Exit.

Rev. Paul Pry: "Mr. Pestle, I should like to ask you if—"

Mr. Pestle: "I've no time to answer questions, sir, it's quarter to twelve." Exit Rev. Paul Pry in wrath.

Uncle Silas: "Doctor, dese here ducks is de ones I promist your missus. I'll jest carry dem up to de house and leave dem dere. De basket I'll keep as a 'membrance of de 'casion. Seeln's I've got paid for my lost time, I may's well pay for de medicine." (Pays up.)

Doctor: "And the ducks will just pay for the call, Silas."

Silas: "I wish I could get de same price for ducks eb'ry day."

Doctor: "I wish nurses would stop prescribing for, and cranks interfering with, my patients."

Mr. Pestle: "I wish to goodness the public would realize that there is plenty of time to ask questions between eight A. M. and ten P. M."

Policeman (passing the door): "Good night again, gentlemen."

Omnes: "Good night."

Tableau. Curtain.

THERSITES MENDAX.

BRITISH PHARMACEUTICAL NOTES.

London, Oct. 16, 1900.

The General Election.

Not many candidates connected with the drug trade have sought election to the new Parliament, and of those before the various constituencies comparatively few have been returned. Sir James H. Haslett, president of the Chemists' and Druggists' Society of Ireland, was re-elected by a large majority for North Belfast. T. H. W. Idris, chemist and druggist and head of the firm of Idris & Co., Limited, mineral water manufacturers, who stood for Chester, did not secure election, and C. Goddard Clarke, of the firm of Potter & Clarke, wholesale druggists, shared the same fate in the Mile End division of London. Both these last-named gentlemen are prominent members of the London County Council. Richard Winfrey, pharmaceutical chemist, has failed to be elected for Southwest Norfolk at the second time of asking. These are all the candidates directly connected with the drug trade, but a few others may be mentioned. Alexander Cross has been re-elected for one of the divisions of Glasgow. Mr. Cross is a chemical manufacturer of that city. Some years ago he was fined at the instance of the Pharmaceutical Society for selling a poisonous sheep dip at retail and he was specially prominent in the last Parliament as an opponent of the act which the Pharmaceutical Society secured in 1898. Another connection in which he has shown himself inimical to pharmacists has been the part he has taken in the hitherto abortive effort to have the exclusive sale of poisons for agricultural and other purposes not medicinal taken out of the hands of chemists and thrown open to general traders. Three members of the house of Brunner, Mond & Co., the large alkali manufacturers of Northwich, have been before the electors, A. Mond and J. F. Brunner have been defeated at Salford and Hyde respectively, while Sir John Brunner, the father of the first-named, has been re-elected for the seat he held in the last Parliament for Northwich. Dr. G. B. Clark, who was a director of a large company formed to purchase a number of chemist shops, mostly in London, but which came to grief some five years ago, and who is best known on account of his pro-Boer views, has lost his seat for Caithness. In addition to those named some other candidates more or less remotely connected with the trade, but who do not require special mention, have contested constituencies with various fortunes. During the election pharmacists in various parts of the kingdom have tried to influence candidates in favor of legislation to remove the grievances of the craft. In most cases favorable replies have been received, but we are not very sanguine that much benefit will result from this. Parliamentary candidates are apt to forget promises made before election when they become M. P.'s.

The New Pharmacy Bill.

It was expected that the draft Pharmacy bill would have been brought up at the council meeting of the Pharmaceutical Society last week as a report from the committee appointed to consider the matter, but it was postponed until the November meeting. It is rumored that the bill will be far more moderate in its demands than the measure drawn up two years ago. This sought to abolish company pharmacy altogether and to restrict the sale of even the simplest medicaments to chemists. Of course all pharmacists would be theoretically in favor of some such proposals as these, but it is utterly useless asking Parliament to sanction anything so drastic. The new bill will probably propose that every chemist's shop

whether owned by an individual or a company, should be managed by a registered pharmacist, and that in the case of companies owning more than one shop the pharmaceutical portion of the whole concern should have a qualified general manager. Breaches of the regulation would render the owner liable to a fine. Another proposal is that none but qualified individuals should be allowed to assume the title of chemist. A bill such as this would have a fair chance of becoming law. At present the actual person who sells a poison must be qualified, but owing to a defect in the law, although individuals cannot carry on business for the sale of poisons or assume the title of chemist, companies can do so, and even when a poison is sold by any unqualified assistant, the assistant alone can be proceeded against, the company being exempt from prosecution.

The School of the Pharmaceutical Society.

The fifty-ninth session of the Pharmaceutical Society School was opened on October 1 at 17 Bloomsbury Square, London. The president, G. T. W. Newsholme, F. C. S., occupied the chair. Professor Green, D. Sc., Dean of the school, read a satisfactory school report and the president then distributed the prizes to the successful students. The principal awards were, among the school prizes: Practical chemistry, silver medal, H. Finnemore; theoretical chemistry, silver medal, J. F. Young; materia medica, silver medal, H. Finnemore; botany, silver medal, E. W. Pollard; pharmacy, silver medal, Chas. T. Allen, a son of the vice-president. Among the prizes open to young pharmacists generally, the Pereira medal fell to F. J. Young and the society's silver medal to Edwin Griffiths. The Bell scholarships were awarded to R. A. Robinson and A. G. C. Paterson, the Burroughs scholarship, in memory of S. M. Burroughs, to J. Lenton and the Salters' Research Scholarship to W. Carsed.

Prof. Wm. Ramsay, D. Sc., F. R. S., of Argon and Krypton fame, then delivered the inaugural sessional address to the students. He was received with enthusiasm, and after a few introductory remarks, went on to say that in the old days chemistry and pharmacy were closely united and he could not see any reason why pharmacy should not contribute at present some original researches in the domain of chemistry. He severely criticised the present methods of teaching chemistry, which he considered tended to crush out individuality and make the man a mere machine. It was a pity that in this country pharmacists did not, as was the practice in most continental countries, go through a university course, as such training was always of great value. With regard to the suggested degree of pharmacy, he attached little importance to a degree in itself; it should be merely an incident in the course of study, not an end for the gaining of which all study was shaped. Prof. Ramsay, at the conclusion of his address, was cordially thanked.

The Pharmaceutical Society of Ireland.

The annual meeting was held on October 1, the president, G. D. Beggs, presiding. There was no contest for the seven seats on the council, five of the old members and two new candidates only coming forward. The income for the year ending September 30, 1900, was \$1,295, against \$5,040 last year. The number of subscribing members is 153 (203 last year) and of associates thirty-seven (forty-five last year). There were ninety-two candidates for the preliminary examination during the year and fifty-seven passed. For the pharmaceutical licence sixty-one persons entered and twenty-four passed, while for the registered druggist examination there were forty-one entries and twenty-six passes, and for the pharmaceutical assistant's certificate thirteen entries and seven passes. Owing to the fact that no candidate obtained a sufficient number of marks, the medals offered by the council were not awarded. There are now on the register 619 licentiate pharmacists (qualified to dispense physicians' prescriptions) and 767 registered druggists who are qualified to retail poisons but not to dispense prescriptions. In point of numbers the licentiates are slowly but surely overtaking the druggists, so that it seems probable that the latter body, who are mostly located in the northern portion of the island, will gradually die out. A discussion followed the delivery of the presidential address, in which several speakers urged that the society's preliminary examination

might with advantage be brought into line with those accepted by the General Medical Council and other bodies. It was pointed out on the other side that however much the examination were altered it was improbable that the medical and veterinary bodies would recognize it and altogether it seems that the best course for the society to pursue would be to follow the example of the English Pharmaceutical Society and abolish its own examination, accepting in its place the tests of those bodies recognized by the General Medical Council. Following on this discussion Dr. McWalter raised the question of the small number of councillors who were Catholics and suggested that some persons might consider that owing to this Catholic candidates did not receive fair play at the examinations. Several speakers warmly resented this and there appears no ground for supposing that the predominance of Protestants on the council is anything but accidental and the suggestion of unfairness in the examination room is evidently not warranted.

The Patent Medicine Tax.

For the year ending March 31 last the sale of medicine stamps brought the Government the sum of £288,777 4s. 6d. There were sold 129,569,576 1½d. stamps (for articles not exceeding 1s. in value); 5,866,138 3d. stamps (2s. 6d. articles); 943,080 6d. stamps (4s. articles); 99,170 1s. stamps (10s. articles); 4,277 2s. stamps (20s. articles), and 11,180 3s. stamps (30s. articles).

PHARMACY IN AUSTRALASIA.

Sydney, N. S. W., Sept. 28, 1900.

The accomplishment of federation has given a flip to the question of pharmaceutical reciprocity between the States. In 1897 a strong movement in this direction emanated from the Victorian Pharmacy Board, but the New South Wales Board killed the agitation by opposing the recognition of English pharmacists, besides insisting on the inclusion in any reciprocal measure of all the registered men in the country, whether examined or not, in strict terms of the law. Victoria felt it could not swallow the 200 assistants and apprentices granted registration in New South Wales under the Pharmacy Act of 1897 and the deadlock thus created destroyed all mutual possibilities. Now the Victorian Board has agreed to recognize the unexamined 200 and there is little doubt the New South Wales body will forego their objections to the Englishmen admitted to practice there. Thus the main difficulty will be overcome.

Once the two big States fall into harmony the others will come in most agreeably, for it is to the benefit of their pharmacists to have Victoria and New South Wales open to their ambitious young pharmacists. Slight alterations will require to be made in most of the pharmacy acts and these will necessitate small trouble. Strong representations are still to be made to the Pharmaceutical Society of Great Britain to recognize the Colonial certificates and bring about a mutual interchange of diplomas with the mother country.

"Condy's Crystals" cases are very much in evidence in Melbourne and Sydney. The successful prosecutions in the first named State have been so numerous that a test case was recently brought before the Supreme Court on the strength of a chemists' combine. The plaintiffs, Condy & Mitchell, Ltd., of London, finding it was the intention of the trade to fight them seriously, appealed to the Court for authority and a commission to examine witnesses in England in support of their trade mark. The arguments excited the interest of pharmacists in all the colonies, for they all sell permanganate of potash as "Condy's Crystals." Fearful of loading the case with heavy costs the Court asked the plaintiffs for specific information as to the witnesses they wished to examine on commission in England. This could not be given, and the application was allowed to stand over until the names of the English witnesses were provided. The Court set its face against granting a general commission for fear of ruining the defendant pharmacist (and his supporters) with costs.

There have been so many deaths in recent times from the administration of chloroform that proposals are afoot in the different hospitals for the examination of every bottle of it that comes into the Colonies. Dr.

Edward Alleyne Cook, of Melbourne, says: "From personal experience not a single maker's product is fit to be used unless each new bottle is tested and the defects remedied."

A "cut rate" chemist from Sydney recently opened at Wellington, New Zealand, and startled every other pharmacist in the place with striking newspaper advertisements announcing his intention to sell everything at Sydney prices. It brought about the most representative meeting of the trade ever gathered together in the capital of Maoriland and a deputation from it waited upon the "cut rate" man, but without avail. Then all the pharmacists advertised the same low prices and they are now bawling the fact that one man can do a lot of people a great deal of harm without doing himself much good.

The pharmacists of New South Wales are not content with the ramifications of their own business and are seeking to be included in the Dental bill before Parliament, as qualified dentists. The recognized dentists are very properly opposed to every pharmacist being admitted to registration and practice as a dentist because they occasionally draw a tooth. Hundreds of them have never drawn a tooth, yet they also wish to be classed as dentists. Very few pharmacists have had anything to do with dentistry; only an odd one here and there in out-of-way districts ever having followed the business. The bill is so amended that it compels pharmacists to pass a dental examination before the board to entitle them to registration.

A glass manufacturing company for New Zealand has been successfully launched at Auckland with a capital of \$60,000 in 12,000 shares of \$5 each. It is reckoned that there is a splendid field for the company, as in respect of fruit preserving alone an enormous quantity of glass is annually imported. Both Victoria and New South Wales have excellent and extensive glass factories.

The New Zealand premier sprang a surprise on the public during the month by announcing in his budget speech a reduction and removal of various duties. Kerosene no longer pays duty, patent medicines have been reduced from 40 per cent. to 15, and drugs and chemicals from 20 to 15 per cent., this including tinctures and medicinal spirits.

It has only recently been made known that a very singular arrangement exists between the doctors and pharmacists of Auckland, New Zealand. Every chemist in Queen street permits a medical man the use of a consulting room for two hours per day and the idea appears to work well for both, the chemist sending patients inside to the doctor and the latter sending them out to the dispensary for their physic.

It is rumored in Sydney that Parke, Davis & Co. purpose adding largely to their business here under the Federal tariff and that they will in all probability build a branch laboratory in Sydney.

IS MATTER INDESTRUCTIBLE?—The whole system of modern chemistry is based upon the axiom of the indestructibility of matter, and that indestructibility is proved by the permanence of the weight of a given substance through all the physical or chemical changes it is made to undergo. Any experiments, therefore, which shake our belief in that primary property of matter must have a far-reaching effect. Landolt's classical researches in 1893 embodied the first work done with all the modern instruments of precision. Certain minute changes of weight were then placed in evidence and these have since been confirmed. A. Heydweiller has endeavored to trace some connection between the change of weight and the changes in other physical properties, such as magnetic permeability, electrolytic dissociation and material or optical density. He has failed to trace any such connection, though he has distinctly established a diminution of weight of about 1 part in 50,000,000 in a number of reactions, such as the mixture of copper sulphate with water, where a loss of weight of 1 milligramme was observed. Researches such as these take place in the extreme borderland of science, but the logical outcome of the results would be nothing less than the destruction of matter.—A. Heydweiller in the *Physikalische Zeitschrift* (Sci. Am.).

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the *Era*. Copies of these may be obtained at ten cents each.

Cider Preservatives.—(H. R. J. T.) See this journal, April 5, 1900, page 372.

Fading Ink.—(H. R. J. T.) The *Techno-Chemical Receipt Book* is authority for this formula: Boil some gall nuts in nitric acid, and add to the infusion some gum arabic and a little sulphuric acid. It is stated that however plain the writing may be at first, it will entirely disappear from the paper in a few days.

Silver Plating and Cleaning.—(E. W. H.) In further reply to your query, this journal, October 11, 1900, page 398, a California correspondent sends the following formula with the statement that "though it is not celebrated," he thinks it just what you want. He says it is an excellent cleaning and plating preparation. It is:

Silver nitrate	2 ounces
Potassium carbonate	1 ounce
Potassium cyanide	10 ounces
Prepared chalk	10 ounces
Distilled water, to	80 ounces

Binding Material for Emery.—(R. R. D.) L. Wagner, Jr., submits the following additional information in reply to your query published in this journal October 18, 1900, page 427: "I use to clean spatulas and sharpen knives a brick made of a mixture of 1 part of plaster of paris and 4 parts of emery flour (by measure). These substances are thoroughly mixed, the mixture moistened and put into a mould (I use a paper box as a mould, removing it when thoroughly dry) and allowed to "set." I generally moisten the mixture with water, using an excess and allowing it to penetrate the mass. Pour off the excess of water and allow to dry. Remove the mould and the brick is ready to use. This mixture makes a black, hard whetstone, but it is so brittle it must be made thick. The use of shellac varnish in place of water will overcome the brittleness. Prepared in this way the composition makes a superior block for cleaning and sharpening knives, etc."

A Dry Powder.—(Subscriber) sends in the following formula:

Potassium nitrate	6 ounces.
Epsom salts	5 ounces.
Sodium sulphate	5 ounces.
Iron sulphate	3 ounces.
Cream tartar	3 ounces.
Nux vomica	2 ounces.

He writes: "This formula was brought into my store and after we had made it up into a nice powder the customer handed out a powder or rather a paste like the sample we send you, claiming that it was taken from the mixture as compounded from the same formula at another store. I want to know what the other druggist put up to get such a paste?"

We do not find it practicable to make a chemical analysis of the sample, which to all physical appearances seems to be quite identical with that made from the above formula. The sample is not in the form of a "paste," however, but is in small dry lumps having a caked appearance and which are easily reduced to powder. This seems to indicate that the powder has been kept for a long time in a damp place. The mixture when compounded does form a dry powder.

Preserving Mucilage of Irish Moss.—(G. F. R.)

The National Formulary is authority for the statement that mucilage of Irish moss may be preserved for some time by transferring it, while hot, into bottles, which should be filled to the neck, then pouring a layer of olive oil on top, securely stoppering the bottles and keeping them in an upright position in a cool place. When the mucilage is wanted for use the layer of oil may be removed by means of absorbent cotton.

Irish moss gelatin is readily made by first washing Irish moss with cold water, then placing it in a suitable vessel and adding hot water, then heating the decoction on a water bath for fifteen minutes, frequently stirring. The decoction is then strained while hot through a strong muslin strainer, the strained mucilaginous liquid returned to the water bath and evaporated to a semi-fluid consistence. It is then transferred to shallow, flat-bottomed trays and further evaporated at a temperature not exceeding 30° C., so that the gelatin may become detached in scales. From this gelatin a mucilage may be prepared like that made directly from the moss itself. See National Formulary, formula No. 275.

Hair Grower.—(H. R. J. F.) Most of the preparations

recommended for this purpose contain cantharides. Sometimes fluid extract of jaborandi is added to stimulate the growth. Of course, if the hair bulbs are destroyed or badly diseased a stimulating wash or application is not of much service. Here are some formulas:

- | | | |
|-------------------------------|----|--------|
| (1) Ammonium carbonate | 30 | grains |
| Distilled water | 10 | drams |
| Tincture of cantharides | 2½ | drams |
| Eau de Cologne | 10 | drams |
| Bay rum | 7½ | ounces |
| Oil of lavender | 5 | drops |

Dissolve the ammonium carbonate in the water and add to the other ingredients mixed together.

- | | | |
|----------------------------------|----|------------|
| (2) Quinine sulphate | 20 | grains |
| Tincture of cantharides | 2 | fl. drams |
| Fluid extract of jaborandi | 2 | fl. drams |
| Alcohol | 2 | fl. ounces |
| Glycerin | 2 | fl. ounces |
| Bay rum | 6 | fl. ounces |
| Rose water, enough to make | 16 | fl. ounces |

Dissolve the quinine sulphate in the alcoholic liquids, add the other ingredients and filter.

Hager is authority for this one:

- | | | |
|-------------------------------------|-----|-------|
| (3) Tincture of cantharides | 1 | part |
| Oleo balsamic mixture (N. F.) | 50 | parts |
| Tannic acid | 5 | parts |
| Rose water | 50 | parts |
| Alcohol | 100 | parts |
| Glycerin | 100 | parts |

Make a solution and filter.

Redness of the Eye Lids.—(H. R. J. F.) A redness

of the eye lids indicates an inflammation of these parts, the seriousness of which the pharmacist is unable to accurately determine. Any treatment therefore should be upon the advice of a competent medical practitioner. A person may think that he has merely a bloodshot eye, when in reality he has an affection which requires treatment that no one but an oculist can properly prescribe. However, a useful recipe for a salve for inflamed or granulated eyelids is:

- | | | |
|-------------------------------|---|-------|
| Yellow oxide of mercury | 1 | grain |
| Petrolatum | 4 | drams |

A loti n employed for the same purpose is made by dissolving 1 grain of borax in an ounce of camphor water or the alcoholic eye-wash of the National Formulary (Spiritus Ophthalmicus) may be used as an application.

To prevent the loss of eyelashes and also to stimulate their growth A. Trouseau recommends the following ointment:

- | | | |
|-----------------------|-------|-------|
| Petrolatum | 10 | parts |
| Castor oil | 4 | parts |
| Gallie acid | 1 | part |
| Oil of lavender | q. s. | |

Eye-Brow Loti n.

- | | | |
|-----------------------------|----|--------|
| Common salt | 1 | dram |
| Ammonium chloride | 10 | grains |
| Camphor | 5 | grains |
| Oil of rosemary | 10 | drops |
| Alcohol | 1 | dram |
| Water, enough to make | 1 | ounce |

Dissolve the oil and camphor in the alcohol, and the salts in the water, and mix.

Detection of Paraffin and Spermaceti in Beeswax.

(H. B. M.) The U. S. P. gives a special test for determining the absence of paraffin in beeswax which we think you have overlooked. Practically this test is that "if 5 grains of yellow wax be heated in a flask for fifteen minutes with 25 Cc. of sulphuric acid to 160° C. and the mixture then diluted with water, no solid, wax-like body should separate (absence of paraffin)." Adulteration with paraffin may also be detected as follows: The wax, in form of shavings, is macerated half a day with twenty times its weight of ether, in a tightly corked bottle. Since ether dissolves only about 50 per cent. of wax, a solution of considerably more than half by the ether may be considered as an indication of adulteration. It must be taken in consideration that it is not likely any one would take the trouble to melt a quantity of wax to add less than 30 to 50 per cent. of an adulterant, as it would not pay for his labor. Adulterations with only a few per cent. of paraffin, therefore, need hardly be expected, and solubility in ether may be looked upon as a fairly reliable means of detection, notwithstanding the fact that different samples of pure wax vary in ether-solubility within narrow limits. The presence of paraffin in wax may be indicated by the melting point, which in pure beeswax is 63° to 64° C. Paraffin melts at temperatures ranging between 45° and 51° C.

In addition to the methods here indicated, an extremely useful method consists in the determination of the "acid number," and of the "ether number," and also certain other numbers. The acid number denotes the number of milligrams of potassium hydrate required to saturate the free acids contained in gram of wax. The ether number is the number of milligrams of the same reagent necessary to saponify the ethers of 1 gram of wax. As the numbers vary only between narrow limits for pure wax, it is evident that any admixture of an adulterant like resin, for example, which has a high acid number, may be easily recognized by titration with this reagent. These numbers also afford a means of recognizing additions of spermaceti, a substance which at the present price is not likely to be employed as an adulterant. Both paraffin and spermaceti lower the melting point of beeswax, both decrease the acid number and paraffin greatly decreases the ether number. For the purposes of comparison we give the following data embodying the properties of beeswax, paraffin and spermaceti: Beeswax—Melting point, 62–64° C.; sp. gr., 15° C., .961–.964; acids soluble in water, 0–1; acid number, 19–21; ether number, 73–76; total, 91–97; iodine fixed by one gram of wax, 8–11; volume of hydrogen at 0° C. per gram, 53–57.5; hydrocarbon from one gram of wax, 12.5–14.5. Paraffin—Melting point, 38–74° C.; sp. gr., 913–914; acids soluble in water, none; acid number, none; ether number, none; total, none; iodine fixed by one gram, 17–31; volume of hydrogen, etc., none; hydrocarbons from one gram, etc., 100. Spermaceti—Melting point, 40–50° C.; sp. gr., .945–.960; acids soluble in water, none; acid number, 0–2; ether number, 136–142; total, 136–144. Stearin is detected as follows: The wax is boiled during five minutes with twenty times its weight of alcohol, the mixture then cooled and allowed to stand several hours, until the wax is completely solidified. The alcohol is then filtered and water added to the clear filtrate. In presence of stearin the addition of water causes a milky turbidity. Another method of testing for stearin consists in boiling the wax for two minutes with a solution of 1 part of sodium carbonate in 50 parts of water. The solution does not affect pure wax, but in presence of stearin effervescence takes place and the mixture becomes slimy. It is stated that 2 per cent. of stearic acid may be detected by this means.

The analysis of beeswax has been discussed at various times in the Era and you will do well to consult the indexes of previous volumes. For an outline of the various commercial quantitative methods see this journal, December 20, 1898, page 872.

WYETH'S PREPARED FOOD

—OF—
MALT, MILK and CEREALS, INFANTS, INVALIDS and CHILDREN
—FOR—
WHOLESAME, NOURISHING, ECONOMICAL.

THE SUPERIOR OF MOTHER'S MILK; a combination affording the physician every advantage and embodying the established principles of infant feeding and hygiene.

ITS DIASTASIC PROPERTIES prevent curdling, correct the ills of malnutrition and tone the weak and wasted organs of digestion.

WYETH'S PREPARED FOOD is not a predigested Food, but one that when prepared for use immediately exerts upon itself that power of digestion which has been carefully preserved in its constituents—the Malt, rich in diastase, acting in conjunction with the pancreatic secretions, digests the fats and albuminoids of the milk, converting the starch of the cereals into sugar (Maltose) and neutralizing the tendency of the acids of the stomach to form curds; thus rendering the Food of infinite value to the infant and invalid alike, supplying the necessary nutrition and material to strengthen and build up the human economy, at the same time relieving the stomach of the infant or invalid from that expenditure of energy necessary to the digestion of ordinary food.

Offers every advantage to the Druggist: { GREATER PROFIT

Up-to-date Fountains Serve

BURNHAM'S CLAM BOUILLON

It is having a big run in all fine establishments where hot drinks are sold. A morning bracer, settles the stomach, clears the brain and quiets the nerves as nothing else will.

Attractive Fountain Signs for same mailed on application ✂

HOW TO SERVE IT:--

One third hot water, one third milk or cream, one third Clam Bouillon. Mix the hot milk and water first in a small glass, then add the Clam Bouillon. Season to taste with a small lump of butter, pepper and salt. Remember, a small hot drink makes a long drink and gives satisfaction.

Era Readers.

FOREIGN.

China.

The Chinese Minister at Washington notified the State Department last week that two of the Government leaders in China, whose punishment had been demanded by the Powers, had committed suicide. Negotiations for peace are proceeding in Peking.

A St. Petersburg dispatch says the Chinese Emperor has asked the Czar to take the conquered provinces in Manchuria under Russian protection.

A Washington dispatch says it has been definitely decided that the foreign ministers in Peking shall conduct any negotiations that may be necessary with the Chinese Government in place of confiding these to slow moving commissions to be sent from each country to Peking.

The Boxers continue active in their depredations in China, and their lawless acts are being partially checked by the allied troops. Two thousand villagers were slain last week by the rebels, who captured and burned towns.

The rice crop has failed in Kwang-Si Province, and robbers are pillaging. Rebellion and famine there are expected.

The rebels in southern China now number 10,000 men. Great Britain has leased the harbor works of Ching-Yan-Tao for eight months, with the object of landing men and stores there and utilizing the railroad to Peking.

The Philippines.

Gen. MacArthur last week reported from Manila details of an engagement in northern Luzon on Wednesday, when a force of 100 Americans attacked a position held by 1,000 Filipinos. The Americans were obliged to withdraw, losing five killed, including Lieut. Febiger, four missing and nine wounded. The Filipinos lost over 150 killed.

C. M. Cotterman, assistant superintendent of the Railway Mail Service, has been selected as Director-General of Posts in the Philippines.

The students of the University of California who served in the Spanish and Philippine wars, have formed an organization intended to be the nucleus of a national association of student veterans.

South Africa.

The Transvaal was formally proclaimed a part of the British Empire at Pretoria last week.

Boer activity in the conquered colonies is increasing, successful raids being reported at several points.

Dr. Leyds says that President Krueger will probably spend the winter near Nice.

Other Foreign News.

In the new British Cabinet to be formed as a result of the recent elections, Lord Salisbury will retain the double office of Prime Minister and Secretary of State for Foreign Affairs, and Joseph Chamberlain will retain the portfolio of Secretary of State for the Colonies.

It is announced that the Austrian heir apparent will shortly renounce his right of succession to the throne. Gen. Azcarraaga has formed a new Spanish ministry.

Gen. Weyler, the former Captain-General of Cuba, has been appointed Captain-General of Madrid. Two Spanish ministers have resigned in consequence.

DOMESTIC.

Pettles.

The political outlook continues to give strong indications of Republican success next Tuesday.

The main battle ground of the two parties was transferred last week from Indiana to New York, and the latter State was the scene of some very active campaigning.

Mr. Bryan has been devoting himself very assiduously to New York of late, campaigning all through the State and holding another night of speechmaking in New York City last Saturday. Tammany is evidently making a sincere and earnest effort to carry the State for Bryan.

For the Republicans, Gov. Roosevelt has been touring New York State, the climax of his trip taking place in New York City on Friday evening of last week in a tremendous celebration.

The Republicans expect to have 150,000 men in line in a monster "sound money" parade in New York City next Saturday. The Democrats will hold mass meetings the same evening.

Senator Chauncey M. Depew made a spellbinding tour of New York State last week.

Archbishop Ireland has come out for McKinley.

Secretary Root, in a speech at Canton, Ohio, last week quoted a number of Filipino documents not before made public, showing that the Filipinos did not consider our troops their allies in 1898, that they intended to rise treacherously in Manila and massacre all the Americans, and that they are placing great hopes in the election of Bryan.

The Coal Strike.

President Mitchell, of the United Mine Workers of America, has declared at an end the anthracite coal miners' strike as far as it affects operators offering the 10 per cent. increase in wages and the abolishment of the sliding scale. The employees of these companies were authorized to return to work Monday. Against those operators continuing their opposition to the strikers' demand after Monday, the strike will be continued until they yield.

Other Domestic News.

The gold in the United States Treasury amounts to over \$451,475,000, the highest point ever reached. It is the largest gold fund in the world.

John Addison Porter, formerly secretary to President McKinley, is dangerously ill at his residence in Pomfret, Conn.

The bulk of John Sherman's estate, amounting to \$2,500,000, is willed to his adopted daughter and five nephews.

Another feud has broken out in Clay County, Kentucky, between the Philpots and the deputy sheriffs, under Sheriff Ben White, headed by the friends of Felix Davidson on the other side. In a fight last week, David Davidson and David Philpot were killed.

The Peruvian Senate has approved the extradition treaty with the United States, with a slight amendment, fixing \$200 as the limit of the sum allowing extradition.

The population of the State of California is 1,485,053, against 1,208,130 in 1890. This is an increase of 276,923, or 22.9 per cent.

Charles L. Alvord, Jr., note teller of the First National Bank, of New York, is a fugitive and a defaulter to the extent of \$700,000. It is thought most of the money was lost in stock speculation. Alvord has been employed in the bank twenty years, and his false accounts had passed several critical examinations. The bank has charged off the defalcation from its reserve fund. [Alvord was arrested in Boston, Monday].

The barkentine Morning Star arrived at San Francisco last week with \$1,000,000 worth of gold dust from the mines of Dawson.

A filibustering expedition is said to be preparing at Kingston, Jamaica, for the overthrow of the government of President Sam. of Hayti.

The complete suppression of the revolution in San Domingo is officially announced. Gen. Garcia, the rebel leader, has surrendered unconditionally.

The Kentucky Legislature has passed and the Governor has signed, a new election law to replace the Goebel law, which caused so much trouble last year.

"CASCARET" OFFER STIMULATES OTHER MANUFACTURERS.

The offer of Harry L. Kramer, of the Sterling Remedy Company, made to the trade throughout the United States some time ago to contribute \$1.00 of every \$10 order received by him from the druggists in the United States, has stimulated other manufacturers to make overtures to the Executive Committee of the N. A. R. D. Mr. Kramer's offer was to run for 60 days, and expires December 18. Since that time three manufacturers have asked the Executive Committee to be allowed to operate a plan like that of the Sterling Remedy Company's, and the Board has the proposition of one manufacturer under consideration at the present time.

Crosher Bobs Up Again.

Henry P. Crosher, the notorious drug swindler, still keeps hammering away from his headquarters in this city at No. 166-168 Greenwich street. Recently he has been operating in Pennsylvania, where he all but succeeded in bilking the Landon Manufacturing Company, of Scranton, out of 25 gross of two-ounce black ink. In response to an order from Crosher, the Landon Company had arranged the goods for shipment when Albert Schultz, a pharmacist and chemist of Scranton, who has acquaintances with a member of the Landon firm, put a stop to the transaction by informing his friend of Crosher's record, as published in the Era. The goods were not shipped.

EDWARD R. SQUIBB.

Dr. Edward Robinson Squibb, the well-known manufacturing pharmacist and chemist, died suddenly, after a short illness caused by the rupture of a blood vessel of the heart, at his residence, No. 152 Columbia Heights, Brooklyn, October 25.

Dr. Squibb was born in Wilmington, Del., in 1819 and was of Quaker parentage. After graduating from the Jefferson Medical College, Philadelphia, in 1844, he was appointed a surgeon in the United States Navy, serving in the war with Mexico. He was subsequently appointed passed surgeon in charge of the Brooklyn Navy Yard station, where he remained until after the beginning of the Civil War manufacturing pharmaceuticals for the Government. Not receiving the necessary financial support from the authorities for the active prosecution of his work, he resigned and started a laboratory on Furman street, Brooklyn, removing later to Doughty street, where his laboratory now is. In 1892 he announced the admission of his sons, Edward H., M. D., and Charles F., to the co-partnership of E. R. Squibb & Sons, which has since conducted the business established by him. His laboratory was three times destroyed by fire. In one of these fires, which occurred more than thirty years ago, he was severely burned by an explosion of ether and his face was permanently disfigured.

Dr. Squibb was married to Miss Caroline F. L. Cook, of Philadelphia, in 1852, and she, with his two sons, Edward H., M. D., and Charles F., and one daughter, Mrs. John C. Munro, of Philadelphia, survive him. Originally and before he went into the Navy, Dr. Squibb was a member of the Society of Friends, but as his services for the Government were looked upon as contrary to the doctrines of the denomination, he withdrew from it. For a great many years he was a regular attendant of the Holy Trinity Episcopal Church, Brooklyn, where the funeral exercises were conducted last Monday at 2 P. M., Rev. Dr. S. D. McConnell, assisted by Rev. Mr. Steele, officiating. The interment was made in Greenwood cemetery.

The death of Dr. Edward R. Squibb removes from the ranks of medicine and pharmacy a unique and distinguished personality. An indefatigable worker and careful observer, of high intellectual attainment and positive convictions, a voluminous writer, he made for himself a place but few men attain in these professions. He was above all other things a pioneer manufacturer of pharmaceuticals and chemicals, entering the field of American pharmacy at a period marked by the organization of the American Pharmaceutical Association. The originality, directness and simplicity of his methods early attracted attention, and many of his processes became official in the U. S. Pharmacopœia. His studies and work in improving the process of percolation are now classic, and his modifications of the process induced the introduction of the term "repercolation," a process which consists essentially of submitting the same menstruum to different and fresh portions of the drug to be exhausted. His various papers on this subject form an important part of the Proceedings of the A. Ph. A. for the years 1865, 1866, 1867 and 1872.

In 1858 Dr. Squibb joined the American Pharmaceutical Association at its seventh annual meeting, held in Washington, D. C., and was elected its first vice-president for the following year, the only office he appears to have ever held in that association. He immediately took an active part in the deliberations of that body, contributing a paper of more than forty printed pages, entitled, "Notes and Suggestions Upon Some of the Processes of the U. S. Pharmacopœia, especially directed to the Committees of Revision." This paper is most noteworthy from the fact that it contains in outline his process for the manufacture of ether, spirit of nitrous ether, etc., and is a plea for the introduction into the Pharmacopœia of "that which relates to simple, reliable tests of purity for its materials and products." He took the advanced position that there were in this country no other means of controlling the manufacture and sale of bad articles, than by disseminating the means of critical scrutiny and discrimination through authoritative

channels. He was immediately appointed a delegate from the New York Medical Society and the New York Academy of Medicine to the Pharmacopœial Convention of 1860, by which body he was elected a member of the Committee of Revision and Publication of the Pharmacopœia. He was a delegate to the Pharmacopœial Convention of 1870, and was elected a member of the Committee of Revision for 1880, a position he soon resigned. His contributions to medical literature are equally voluminous.

In later years his natural aggressiveness and independence toward the "commercial" element in various organizations caused him to be the subject of much harsh criticism, and more than one journal took issue with his assertion that cascara sagrada owes its reputation to "florid advertising." His attitude toward cocaine and other additions to the materia medica was denounced by other manufacturers. This controversy, which took place in the latter part of the '80's, was intensely acrimonious, and he was accused of seeming to believe "that no one was competent to discover, study or manufacture anything medical or pharmaceutical until he (Squibb) had sanctioned the proceeding." Another writer of the period records his opinion in these words: "He is not a reliable authority in pharmaceutical science, inasmuch as he does not seem able to separate the interests of trade from those of progressive pharmacy, and has been guilty of gross misrepresentation, either from ignorance or sordidness, both of which are equally culpable in a man in his profession." This discussion was soon dropped, however, only to be recalled now by the pharmacists of that period as an episode in the life of a man whose genius and originality did so much for medicine and pharmacy.

In January, 1832, as noted above, he announced the admission of his two sons to copartnership under the firm name of E. R. Squibb & Sons. As throwing a sidelight upon his character and business relations, the following words are taken from his announcement: "They (the sons) having adopted the established policy of the business, and having gained the needful experience, are justly entitled to the position they now assume, and are earnestly recommended to the favorable consideration of those who for so many years have given their confidence and support to the work of this laboratory." About the same time he adopted the metric system of weights in his price list, a practice which has been continued to this day.

Another phase of his character is worthy of record. In 1860 he delivered a course of lectures on pharmacy in the New York College of Pharmacy, bringing the illustrative apparatus from his laboratory in Brooklyn. The lectures he continued for three years with great acceptance to the students, the conditions he imposed for this service being that he should receive no remuneration and should not be called professor. In 1896 it became necessary to amputate his left hand to save him from blood poisoning, a consequence, it was believed, of the ether explosion which nearly thirty years previously almost terminated his career. Although a man of nearly seventy-seven, he took the matter very coolly, arranged everything just as though he were the physician in the case, and when all was ready, administered the ether with his own hands. Many other interesting incidents of his life and personality might be related.

Dr. Squibb was a charitable man, though his charity was of the unostentatious sort. He would not offend those he helped, and he helped many, by giving publicity to an act which his own modesty bade him keep to himself. As a citizen he was public spirited and benevolent, discharging the duties of life with great fidelity. In personal appearance he was of medium stature and weight. He was a man of very positive convictions, and his manner of speaking, while not eloquent, was earnest and convincing. He was a member of the American Medical Association, the New York State Medical Association, Kings County Medical Society, a life member of the American Pharmaceutical Association, American Philosophical and American Chemical Societies, the Metropolitan Museum of Art and many other societies of allied character.

THE DRUG NEWS.

New York and Vicinity.

FIRE AND EXPLOSION.

Destruction of Tarrant & Co.'s and Many Other Buildings—Members of the Firm Safe. Loss of Life Is Considerable.

A fire, accompanied by a series of terrific explosions, wrecked the building of Tarrant & Co. with nearly a dozen neighboring structures, on Greenwich and Warren streets, last Monday afternoon. It is believed the debris hides the bodies of many persons who were engaged in the building and could not escape before the places collapsed, although the fire was discovered some time before the explosions occurred, and in apparently enough time to allow a large number to get out of harm's way.

It is hinted that the explosions may have been caused by alcohol, chlorate of potash, nitrate of strontium and other chemicals stored in the Tarrant building by Tarrant & Co. and other firms.

Some incline to the belief that crossed electric light wires were the means of starting the fire. At all events the ruin that has resulted is great and may be permanent, for it will take a long time to replace the buildings that are lost, if they be replaced at all.

After one has contemplated the dreadful havoc the catastrophe caused, the possibility of a great loss of life appals one. Fortunately, however, this has been comparatively small as far as can be ascertained at this time, and while it was at first believed that many members of the drug trade had been lost, assurances came that all were safe, although in some instances the escape from immediate death had been nothing short of wonderful.

Charles Sinclair, a salesman in this city for the Ammonoid Chemical Company, was in the office of Tarrant & Co. at the time of the fire, and was blown from the building with several others as they were escaping. It was from Mr. Sinclair that the first information of the safety of Thomas F. Main, president of Tarrant & Co., was learned. Mr. Sinclair was very much excited when seen by an Era reporter, but he gave his story as follows: "I was seated in the office, which was located in the rear of the building, talking with Mr. Main and W. C. Allen, treasurer of the company, when Mr. St. John, who was in the building, informed us that the upper stories were afire, and to get out as soon as we could. We lost no time in following his advice, and just as we reached the front door the first explosion occurred, knocking us into the street. Fortunately, none of us was injured, and hastily scrambling to our feet, we escaped, but not before the second explosion had occurred were we far enough away to be safe. I don't know where Messrs. Main, Allen or St. John went. I saw M. J. Breitenbach and Edward Wells, of the M. J. Breitenbach Company, and know they are not injured."

While Mr. Sinclair thus accounted for the principal members of the drug firms that were in the wreck, he did not mention anything of any of the employees of either concern, many of whom are reported missing. Tarrant & Co. employed about 100 girls and a few men, and it was thought many of these were lost. Inquiries have been made at the police station and Hudson Street Hospital for persons employed by Tarrant & Co., of whom the police have no record, and the hospital attendants cannot find the names on the injured list. President Main is, however, confident that most of his help escaped.

The M. J. Breitenbach Company, manufacturers of "Pepto-Mangan Gude," at No. 100 Warren street, in the Tarrant building, sustained a complete loss, but fortunately M. J. Breitenbach and Edward Wells both escaped uninjured, although Mr. Breitenbach was reported as seriously hurt by the daily papers. Mr. Breitenbach stated that all of his employees succeeded in getting out of the building, and he was of the opinion that most

THE MOUNT VERNON CHEMICAL CO.

The drug trade has for some time past been very curious concerning the peculiar business methods of the Mount Vernon Chemical Co., of Mount Vernon, N. Y., of which the president is P. B. Hudson of rather unsavory record.

The company was organized about two years ago, occupying a loft in a building in Mount Vernon, until it was burned out during January of the first year. The June following the company began operations anew, when it secured a small parcel of land at Fourteenth avenue and Third street, where a two-story frame building was erected with the money obtained from their insurance.

In July Hudson began to establish a credit by purchasing small bills from reputable concerns in this city and playing the houses against each other as references. Many of the firms after awhile grew suspicious, and investigations led them to refuse credit to the President of the Mount Vernon Chemical Co. Mr. Hudson's visit to this city, with a view to establishing cordial relations with these firms, was a signal and dismal failure, and when he returned to "the works" at Mount Vernon his indignation was intense.

So intense it was that he could not furnish much information to a reporter for the Era, but fumed instead at a published article which questioned the standing of his firm. He did state that the Mount Vernon Chemical Co. was incorporated under the laws of the State of New York and had a paid-in capital stock of \$10,000. Then ensued another tirade against the paper in which the damning items were published.

He refused to allow an inspection of his "works," which, in fact, contained very little of importance that could be seen. Posters flaunting the merits of "I-Want-2," a new remedy for malaria, etc., were very much in evidence. The Uwanta Medical Co., of Mount Vernon, Mr. Hudson said, prepared the article, but the names of the officers of this company, singly or collectively, Mr. Hudson refused to divulge. His company was only an agent for the Uwanta Co., he said.

The fact that his firm was not reported very favorably by the financial agencies did not appear to trouble Mr. Hudson. He insisted that his company's business was all right, and he was firmly convinced that people were persecuting him.

For the benefit of the trade the following article, taken from the Pharmaceutical Era, under date of December 9, 1897, is appended:

"The name of Jesup & Co. is not, and never has been, on the directory of the Downing Building. Room 718 has the name of P. B. Hudson on its door. Repeated efforts on the part of the Era's reporter to see Mr. Hudson have been futile. From the janitor of the building it was learned that all mail directed to Jesup & Co. reached the hands of P. B. Hudson. The janitor said he had seen a man named Jesup in company with Hudson, but that Jesup himself had never occupied a room in the Downing Building. Room 718 has been closed for several days. Last Saturday a truckman came and asked for the desk from that room. It was refused him. He was told that nobody could get it except Hudson. It was rumored in the building that a detective was looking for Hudson, and it is alleged that this is the reason he is keeping away. This man's record also is interesting. On August 11, 1896, he announced himself as a dealer in olive oils, etc., at No. 101 Beekman street. About September 15, 1897, he announced himself as a dealer in druggists' sundries, etc., at No. 108 Fulton street, room 718. About a month after that, although Hudson's name has always remained on the door, the business carried on in room 718 was done under the name of Jesup & Co."

Mount Vernon Chemical Co., of which P. B. Hudson is president and J. P. Scheippe is secretary and treasurer.

In the blacklist of crooks printed by this office in 1898, in an expose of more than a score of swindlers who had usually carried on a fraudulent mail order business, the firm of Jesup & Co., in the Downing Building, in Fulton street, was named, and also the fact that P. B. Hudson occupied the office of that company, but his name did not appear in any of the transactions of Jesup & Co.

This concern was exposed with a number of others as carrying on a business of swindling retail druggists and others out of old patent medicines. The searchlight of publicity caused its destruction.

DRUGGISTS ORGANIZE IN HOBOKEN.

With a view to bringing about better conditions in the drug trade in Hoboken, N. J., about ten of the most prominent retailers in that city met in Nageli's Hotel, corner of Hudson and Third streets, Thursday afternoon, October 25, and laid the foundation of what promises to be a flourishing and successful reform movement. The movement was started a week or two ago by J. C. Gallagher and F. O. Cole, of the Jersey City Druggists' Association who as a committee enlisted the services of William Kamlah, Charles Sunkel, Hugo Mueller, Gustav Brandt and Victor Schmidt to send out a call for the meeting of Thursday.

Not only was each member of the committee on hand at the appointed time, but there were also about five other druggists of the total of 29 doing business in Hoboken. Mr. Cole started the meeting by stating briefly the purposes of like organizations and immediately William Kamlah was named chairman and F. W. Traeger was chosen secretary. Mr. Gallagher explained the purposes and plans of the N. A. R. D., following which an informal discussion took place. August Frank, of the town of Union, and chairman of the North Hudson Druggists' Association, spoke at length of his organization, which is comparatively a new one, having been in operation but three months. Mr. Frank with the help of E. Lang, secretary of the association, traversed the district lying between Guttenberg and the Jersey City line, comprising Union Hill, West Hoboken, Guttenberg and West New York, and was successful in getting all of the twenty-one druggists in the territory to join the association. Already this organization has put into effect an early closing plan by which stores close at 10 o'clock in the evening and the druggists without exception are obeying it faithfully.

The association has also adopted a scale of prices, which will go into effect November 1. It has not become a part of the N. A. R. D. yet but will at an early date. Mr. Frank counseled the Hoboken druggists to go slow; also not to raise the prices of goods too rapidly. Chairman Kamlah thought it would be wise to divide the city into districts and endeavor to secure other members of the trade to unite with the society, and for the purpose of interviewing these druggists on the subject he assigned Victor Schmidt to look after those on First street, Gustav Brandt to see those on Washington street and W. F. Traeger to consult all others. It was also decided to have the society represented at the meeting of the Joint Committees of the Pharmaceutical Associations of Greater New York and Jersey City to devise ways and means for beginning the operation of the N. A. R. D. plan in this city. The following committee was named: William Kamlah, Victor Schmidt, Otto Raubenheimer, Charles Sunkel and F. W. Traeger. As many more as can will also attend. Mr. Frank promised also to be present with a delegation of his colleagues. The meeting then adjourned to November 5.

WHOLESALE DRUG TRADE HOWLERS.

The second day's games of the season of the Wholesale Drug Trade Bowling occurred Saturday afternoon on Reid's alleys in Church street. The results follow: Merck & Co. 770, Seabury & Johnson 781; Merck & Co. 683, General Chemical Co. 631; Seabury & Johnson 656, General Chemical Co. 631; Dodge & Olcott 783, Church, Dwight & Co. 733; Parke, Davis & Co. 811, Church, Dwight & Co. 739; Dodge & Olcott 712, Parke, Davis & Co. 808.

THE GALVESTON STORM.

Effect on the Drug Trade; General Damage.

Col. J. W. George, with Schieffelin & Company, was recently deputized by that firm to make a trip to Galveston and learn correctly the condition of the drug trade and suggest a remedy for its re-establishment. A few days ago Col. George returned with a story of the flood that is highly interesting from one who has been to the spot and especially gratifying in that the drug trade of Galveston was the least disturbed of any of the large commercial interests of the place. The narrative, in the words of Col. George, follows:

"The first glimpse I secured of the effects of the flood was at Houston, but here the damage was comparatively small. Two churches visible from the train had been robbed of their steeples, and all around there were buildings with the tin roofs rolled up on them by the wind. The city hall cupola was also partially gone. After leaving Houston on the G. I. and H. Railroad for Galveston, evidences of the terrible wreck began to show rapidly. The large yellow pine trees that bordered the path of the railroad were twisted and broken, some uprooted, others bent in all sorts of shapes. About half way to the destroyed city some of the railroad stations had been lifted from their foundations and others had been smashed to bits. For miles there was debris of every kind. On one side of the track, high and dry and some distance from any water, lay a U. S. Government dredge and an English tramp steamer. Then there were almost innumerable empty freight cars that had been blown from the tracks some distance away, while others, loaded, were piled up in the ditch beside the tracks.

"When the train came to one of the trestles leading to Galveston I saw the English steamer Roma lying in about three feet of water; she had been lifted over three railroad trestles and deposited there. She is a vessel of about 4,000 tons burden and ordinarily draws about twenty feet of water. It is doubtful if she will ever be removed, because of the difficulty attached to the operation. Coming into Galveston was a sight I shall never forget; on all sides lay wreckage of every description; there were boats and ships piled along the shore mixed with wreckage, and along the water front to Broadway, which is the residential street of Galveston, many elegant homes had been destroyed. Most of the public buildings were gone, and from the jetties to the intersection of O street and Forty-fifth street, a space about three miles long by about a half-mile wide, nearly 3,600 houses were destroyed. The drug trade generally suffered but slight damage compared with the awful havoc wrought elsewhere. In nearly all of the stores, which are clustered together in one locality, there was more or less water, ranging in depth from 24 to 34 inches, according to location, the stores in the eastern part of the city suffering more than those in the central portion, which is slightly higher. All goods stored in drawers and showcases below the shelves were entirely ruined, and in some cases this loss amounted to considerable. When the water receded, a deposit of mud was left that made saving any of the submerged stuff out of the question.

All of the druggists are cheerful, however, and say they will resume as soon as they can clean up. J. J. Schott, whose store is on Market street, between Twentieth and Twenty-first streets, perhaps sustained the greatest individual loss. He carried an immense stock of goods, with a value of about \$30,000, and the storm destroyed about \$12,000 of this. He also suffered loss to his building by portions of the opera house and City Hall falling on it. This will amount to \$2,000, and with other incidental losses his total damage will reach close to \$20,000. Michaelis & Wilder, Tremont and Post Office streets, lost goods to the value of \$2,000; F. George Leinbach, Twenty-second and Market streets, lost about \$500; Browse & Ogilvie, Market street, between Twenty-seventh and Twenty-eighth streets, lost \$200; the old drug store of Dr. T. McGourk, now owned by Mrs. E. Doyle, Twenty-seventh and Market streets, sustained a loss of \$2,000; W. A. Schuchard, O and Thirty-third streets, lost about \$2,000, with a loss of their building; J. M. Parker, Twenty-first and Market streets, lost less than \$500 worth. I was informed that a branch of the Behrens Drug Co., of

Waco, which is located in Galveston, sustained a loss of nearly \$40,000. I understood also that a branch of the Houston Drug Company, of Houston, sustained slight damage. None of the druggists lost any relatives. They are all working toward re-establishing their stores, and expect before long to be going the same as usual."

MEMORIAL TO FORMER PRESIDENT EDWARD KEMP.

Some months ago and shortly after the retirement of Edward Kemp, of the firm of Lanman & Kemp, as president of the New York College of Pharmacy, the officers and trustees of the college decided to show in a formal way their appreciation of his services. Accordingly, on Thursday of last week a committee consisting of Oscar Goldman, chairman; C. O. Bigelow, Thomas F. Main and William M. Massey and Prof. C. F. Chandler, the present president, visited Mr. Kemp at his office and presented to him certain resolutions officially adopted and which were in the form of a handsomely Morocco bound, moiré silk lined volume. On the cover of the memorial are Mr. Kemp's initials, "E. K.," in solid gold letters in a monogram two inches square; the reading matter is beautifully engrossed. Prof. Chandler made a fitting speech of presentation, to which Mr. Kemp, though greatly surprised, responded in a feeling manner, including in his remarks an expression of gratitude to the donors. The resolutions in full follow:

"Whereas, We, the officers and trustees of the College of Pharmacy of the City of New York desire to place on record our high appreciation of the services rendered to the college by

MR. EDWARD KEMP

during the four years he has acted as president; and,

"Whereas, We also desire to convey to him our hearty thanks for his generosity in donating much-needed apparatus and for his many expenditures for the betterment of the college property; therefore, be it

"Resolved, That this expression of our appreciation be spread in full on our minutes and that a suitably engrossed copy of the same be signed by the members of the board and presented to Mr. Kemp at an early day.

"Officers: C. F. Chandler, first vice-president; John R. Caswell, second vice-president; A. C. Searles, third vice-president; Clarence O. Bigelow, treasurer; Thomas F. Main, secretary; O. J. Griffin, assistant secretary.

"Trustees: D. Master, Jr., Charles Erb, Walter E. Faber, Oscar Goldman, George Massey, Ernest Molwitz, W. M. Massey, Otto P. Amend, J. N. Carpenter, T. J. Macmahon, Charles Rice, Reuben R. Smith, Adolph Henning, Herbert D. Robbins, Samuel W. Fairchild.

REGISTRATION UNDER NEW PHARMACY LAW.

Not the least of the many important features attendant upon organization and mapping out rules of government which the new All-State Board of Pharmacy has under consideration are those relating to the registering of the pharmacist and apprentice. A member of the board gave the position of the board in relation to these two matters to a reporter for the Era last week. He said the idea of having all the druggists register was to secure a list of the pharmacists in the State and also to prevent fraudulent practice. When a pharmacist registers the board wants him to understand that it is a misdemeanor to make any false representations and this also applies to a person who is not entitled to register and who presents statements which on investigation prove him to have attempted fraud.

In the matter of registering the apprentice this is done with an idea to better pharmacy. By this registration the board becomes acquainted with all the young men and it is proposed to seek out these young men from time to time with a view to learning if they are being properly schooled or if the drug stores they are in do not offer educational advantages in keeping with the ideas of the board. This work may be done through the agency of the board's inspectors and where cases of improper relationship of the drug store to the apprentice are found the board will undertake to remedy matters.

Already the board has informally adopted rules of procedure and forms of registration. On the blank for pharmacists the following marginal notes will appear: "This application should be written out in full and forwarded to the secretary at least ten days prior to date

of examination and must be accompanied by the proper fee. Fees:

Licensed Pharmacist by examination.....	\$10.00
" Druggist by examination.....	5.00
" Pharmacist on previous examination.....	1.00
" Druggist on previous examination.....	1.00

Remittance must be either by P. O. money order, express order, registered letter or New York draft, payable to the order of the secretary. No checks received.

To be eligible to an examination as a licensed pharmacist the applicant must state over his affidavit that he has had practical experience of four or more years "where drugs, medicines and poisons were dispensed and retailed and prescriptions compounded, of which experience one year must have been had within the five years preceding the date of such application," etc.

(The same applies to examination for licensed druggist, only the time specified is three years, and two years of the applicant's experience must have been obtained within five years last preceding the date of his application.)

Candidates who fail to pass the first examination are entitled to a second examination without payment of an additional fee, but such second examination will not be given until three months after the date of the first examination, a requisite ten days' notice having been given."

"EDMOND DANTES" IN PRISON AGAIN.

In April, 1899, Gerald Levine, a drug clerk for Charles H. Hall, pharmacist of Plainfield, N. J., succeeded in stealing about \$200 from Mr. Hall, and incidentally he took Mr. Hall's college of pharmacy diploma. He cut Mr. Hall's name from the sheet and in its place inserted the name "Edmond Dantes," which he had assumed. He was but poorly qualified as a drug clerk, and failed to pass the examinations of the Board of Pharmacy on two occasions. With the "doctored" certificate he tried to register in Connecticut, but the Board of Pharmacy of that State refused to recognize him, and inquired of the New York College of Pharmacy concerning him, as the work on the diploma was so bungling as to arouse suspicion. This put the New York College on the track, and the forged certificate was found in the drug store of William T. Cox, at No. 382 Tenth avenue, where Levine had been employed for a short time. He deceived Mr. Cox by placing the certificate on the ceiling in the rear of the store, where, in the dim light, his clumsy work did not plainly show.

While the detective was looking for Levine, he was arrested on a charge of forgery preferred by Isador Meyer, of No. 784 Washington street, where he had been working, and had been caught affixing the name of Mr. Meyer to a check for \$25.

In police court Levine waived examination on Mr. Meyer's charge, and the additional one by the New York College of Pharmacy, and demanded counsel. He pleaded guilty to the forgery charge of Mr. Meyer, but not guilty to the one of the New York College of Pharmacy. He was sentenced to one year in the penitentiary. After the trial the District Attorney moved for the removal of the College of Pharmacy charge from the calendar, and the motion was granted.

Levine served a year in prison, and last Thursday was convicted before Judge Cowing, in Part III., General Sessions, on the college charge, sentence to be pronounced on Wednesday.

NOTES.

—Prof. W. C. Anderson, president of the N. A. R. D., stated to a reporter for the Era recently that since the Detroit convention of the National organization the work of the retail druggists in different sections of the country had been pressed more energetically than ever before, and that the outlook for the organization was decidedly encouraging. When questioned as to the purport of his remarks to be given before the German Apothecaries Society at the meeting, November 8, Prof. Anderson said: "I shall endeavor to show them how the N. A. R. D. can be their friends and why they should stand by it as an organization. I shall tell them that any movement they may make with regard to withdrawing will not defeat the N. A. R. D., but will only tend

to delay the work in and about this city. It is not the purpose of the N. A. R. D. to antagonize them or the Consolidated Drug Company, but on the contrary to benefit them. It is my purpose to endeavor to bring them to an understanding of this view of the situation." Prof. Anderson said further that a new organization is to be started shortly in Long Island through the influence of Dr. A. G. Rave.

—Arthur K. Ridley, employed as errand boy by S. G. McCotter & Co., presented a check for \$92.07 to the Era on Friday night. The check was payable to Stallman & Fulton and had their endorsement on the back. With the check was an order also signed by them for a copy of "One Hundred Years of American Commerce" and a request to return the change by the messenger. The signature of Stallman & Fulton is known at this office and both the endorsement on the check and the order were pronounced to be forgeries. The boy got away that night, although the papers were retained, but he was caught Saturday noon. How he got the check, which had been mailed to Stallman & Fulton by an out-of-town customer, was not discovered, but when the boy was searched at the station other papers also taken from their mail were found upon him, as well as a paper upon which he had practiced writing their names. He was arraigned before Magistrate Flammer and held in \$1,000 for the Grand Jury.

—Among the druggists who visited the trade last week were: D. A. Deming, with the Iseman Drug Co., Georgetown, S. C.; E. D. Bauman, Bainbridge, N. Y.; F. A. Morse, West Rutland, Vt.; W. H. Sheldon, Middlebury, Vt.; F. Abel, buyer for W. J. Gilmore & Co., Pittsburg; C. H. Wiberly, Troy, N. Y.; H. W. Wood, Lansingburg, N. Y.; I. A. Solomons, of Solomons & Co., Savannah, Ga.; F. R. Pease, New Bedford, Mass.; W. Sautter, Albany, N. Y.; F. E. Wingate, Boston, Mass.; C. T. Boswell, Rockford, Ill.; C. L. Meyer, Baltimore; J. H. Hopkins, Denver, Col.; Mr. Hyler, Port Chester, N. Y.

—A meeting of the Joint Committee of the Manhattan Pharmaceutical Association, Retail Druggists' Association, Kings County Pharmaceutical Society and Jersey City Druggists' Association, has been called for Monday, November 5, at the New York College of Pharmacy. The purpose of the meeting is to devise ways and means for the adoption of the N. A. R. D. plan in Greater New York and Jersey City. It is possible that this territory will be enlarged, as other societies in New Jersey have already taken up the plan and the addition of these will strengthen the movement in this city.

—Fred. Miller, druggist, and formerly at Second street and Willow avenue, Hoboken, N. J., has sold his store to Mr. Halle. Mr. Miller shared a rough experience with a brother pharmacist (Victor Schmidt) recently. The pair were hunting in the marshes in Hudson County and were in a small row boat when that terrific wind storm which visited this section recently broke upon them. They tried to weather it, but it was impossible and they finally were forced to abandon their boat and paddle through mud and water knee-deep and over for a half mile to a place of safety.

—A meeting of the faculty and directors of the Brooklyn College of Pharmacy was held Wednesday evening, October 24, at which time matters relative to the proposed new college were discussed. The committee of the Kings County Pharmaceutical Society which has the matter of the building in charge is working hard to secure a plot, when it is assured the time will not be long before the work on the building will be commenced. Plans have been drawn, and when these are formally adopted further steps will be taken in the work.

—The regular meeting of the Manhattan Pharmaceutical Association will be held at the College of Pharmacy building, 115 West Sixty-eighth street, New York City, November 19, at 9 P. M. G. C. Diekman, M. D., Ph. D., will analyze the new pharmacy law which goes into effect January 1, 1901. As there are many points in the law which are not clearly understood by pharmacists in general, every pharmacist of Greater New York, whether a member of the association or not, is invited to be present at this meeting.

—N. C. Nelson, with F. M. Parker, druggist of St. Paul, Minn., was in the city last week, having come

to meet his parents who were on the way to this country from Denmark. Mr. Nelson devoted some time to an inspection of the trade conditions in the city and was an interested visitor at some of the retail stores. He is a young man of that sturdy type which is settling the northwestern section of the country and is himself deeply concerned in pharmaceutical matters.

—The next meeting of the Drug Trade Section of the Board of Trade and Transportation will be held November 17, and as this will be the first meeting of the fall season, the October meeting having adjourned for want of a quorum, it is assumed that important matters will come up for consideration. Among these the recent attention given to the movement for the repeal of the stamp tax law will occupy an important part.

—Walter S. Rockey has recently added to his staff of employees the following: T. Bruce Fernival, Instructor in Physics at the New York College of Pharmacy and formerly with Spangenberg & Boyd, Columbus avenue and Eighty-second street, and H. D. Huntsman, for the last five years with the St. Cloud Pharmacy, of Philadelphia, Pa.

—H. M. Muhlenburg, the drug swindler of Ephrata, Pa., who was exposed in the Era of last week, is now said to be located at Sinking Springs, Pa., a suburb of Reading, still engaged in his fraudulent practices. Muhlenburg is using the name of Dr. H. M. Muhlenburg, a reputable physician of Reading and a large buyer.

—It is hinted that the druggists of Newark are cultivating the N. A. R. D. bee and that it is buzzing with such persistence about their ears that there is likely to be a strike in the direction of an association in that city before long. Matters are said to be assuming a similar shape in Bayonne.

—William Egler, president of the Drug Clerks' Association of Chicago, Ill., is in the city in the interest of his association and incidentally to stir up some enthusiasm in the local Pharmaceutical Clerks' Association. Mr. Egler also represents the Drug Clerks' Journal.

—The Randolph Chemical Co. has incorporated in New Jersey to manufacture foot powder. Its capital stock is \$25,000 and the incorporators are M. C. Smith, J. R. Stafford, J. F. Reid and J. Connor, all of Newark. The offices of the company are located at Newark.

—J. L. Baldauf, a well-known druggist of Henderson, Ky., who has been spending some time in the city with his bride, was taken ill a short time since and is now in the Presbyterian Hospital. It is expected that he will be able to leave for home by Saturday.

—W. E. Dreyfus, formerly well known as "the farmer druggist of Hoboken," has recently returned from Europe, where he has been the last four years studying bacteriology, and has accepted a chair as instructor in the science at Columbia College.

—Alexander Hall, of Barnes & Hall, druggists at Lexington, Ky., was in town during last week visiting the trade. Mr. Hall had not been to the city before in twenty years, and he was astonished at the improvements which had taken place.

—The first lecture in the series of "Practical Business Talks" to be given before the students of the Brooklyn College of Pharmacy by W. L. Perkins, an attorney of this city, during the current term, was given last evening.

—The organization movement is spreading with such rapidity in New Jersey that practically all of the Hudson County retail druggists are under its soothing influences and there is the prospect of a county body in sight.

—Among those who have visited the Drug Trade Club recently are: G. M. Howell, Paterson, N. J.; E. Boyd Martin, Louisville, Ky.; R. M. Harrison, D. D., Brooklyn, and S. W. Williams, East Orange, N. J.

—Imports of drugs, chemicals, etc., to this port for the week ending October 26 amounted to \$987,792. The largest imports of articles were: Gum kauri, \$102,646; nitrate of soda, \$103,577.

—Charles N. Crittenton, of the C. N. Crittenton Company, is in the city for a brief visit. During last week he conducted a series of religious meetings in the Simpson Tabernacle.

—The West Side Pharmacy Co., of Catskill, N. Y., has incorporated with a capital stock of \$5,000. Incorpora-

tors: T. E. Ferrier, D. M. Post and F. C. Thompson, all of Catskill.

—It is proposed to have space reserved for retail druggists in the Sound Money parade of Saturday, as a large number have signified a willingness to join in the celebration.

—J. H. Whittet, formerly with Neidlinger Bros., is now representing the William S. Merrell Chemical Company in Brooklyn.

IN AND ABOUT BOSTON.

A Drug Store Wrecked by an Explosion.

Boston, Oct. 27.—Serious damage was done recently to the Godall Drug Company's store at Holyoke, which is run by James J. Curran, as the result of an explosion of several gallons of asphalt varnish in the basement. Prompt action on the part of the firemen prevented a serious conflagration. One of the clerks and a boy went into the basement to get some of the varnish and the boy struck a match, which was contrary to all rules. The varnish became ignited and an explosion that shook the building followed. An alarm was at once given. A second alarm was sent in, as the varnish made great volumes of smoke that prevented near approach to the flames, and the smoke penetrated the entire building. The firemen had rather a hard fight of it. Preparations were made by the tenants of the block for a quick retreat if necessary, but fortunately they were not forced to move. Mr. Curran finds it difficult to estimate his loss, but he knows that fully \$5,000 worth of materials were stored in the basement. The loss may equal \$2,000, fully insured.

NOTES.

—An injunction has been asked for in the bill in equity brought in the Superior Court by John McDonald against Ensign E. Howes to restrain the defendant from an alleged threatened foreclosure of a chattel mortgage upon a stock of goods in a druggist's store at New Bedford and for an accounting from the defendant under the mortgage. The case has been heard by Judge Braley, whose decision was reserved. The defendant claimed that the plaintiff had broken the conditions of the mortgage in regard to having the property insured and with regard to selling the goods without the mortgagee's consent.

—Luther L. Jenkins, the apothecary so long established in Leverett street, is especially interested in the Howard Benevolent Society, the annual meeting of which, just held, marked the eighty-eighth year of its existence. In comparing the reports of 1812 with those of the present year the great growth of the society is most noticeable, as shown by Mr. Jenkins, the secretary. His annual report gave an excellent pen picture of the work that is being constantly accomplished. Officers were elected for the coming year.

—The Ryecroft Pharmacy Company at Cambridge in a recent statement to the Commissioner of Corporations in Massachusetts, shows its condition to be as follows: Cash and debts receivable, \$7,500; manufactures, merchandise and fixtures, \$25,000; a total of \$32,500. Against this is capital stock, \$25,000; debts, \$4,000; profit and loss, \$3,500; total, \$32,500. A. D. Ryecroft is treasurer of the company.

—Charles G. Reed, who formerly was a druggist in Holbrook, took his own life this week, whether by accident or intentionally is not known, by an overdose of chloroform. His wife found him dead in bed on her return from a visit to Boston. Mr. Reed was fifty-five years of age. Besides his wife, a daughter survives him.

—The drug store of H. D. Smith, Warren street, Roxbury, was used as a temporary hospital the other day, two ladies being brought in who had been thrown from a carriage by a runaway horse, breaking the arm of one and bruising the other pretty badly.

—Charles Clare, who has been acting as manager for the Sumner Drug Co., Huntington avenue, corner Exeter street, Boston, will resign November 1 and take a position with Fraser & Co., of New York, as salesman.

—The drug store of Timothy D. Cronin, 251 Highland

avenue, Malden, was entered one night this week and about \$8 in money and fifty cigars were taken. Entrance was effected through a rear window.

—The week's exports from the Port of Boston include, among other things, drugs and chemicals, \$8,541; india rubber manufactures, \$16,007; soap, \$1,140; tobacco, \$3,163; wax, \$680; spirits, \$26,410.

—W. C. Chamberlain, the manager of the Bristol County Drug Store at Taunton, and his wife recently have been the guests of his parents, Mr. and Mrs. B. F. Chamberlain at Sandwich.

—H. W. Davis, of Billings, Clapp & Co., manufacturing chemists at Fall River, has recovered from injuries received several weeks ago and is now out and about.

—Extensive repairs recently have been completed in the chemical laboratory of the Perley Free School at Georgetown and the place is now in use again.

—A. C. Barrows, a druggist in the Bradford district at Haverhill, is soon to remove to the store formerly occupied by LeBosquet Bros., Main street.

—The fixtures in the Morgan drug store in the Minton block in the Forest Hills district, this city, are to be used to fit a drug store in Canton.

—Harry H. Tozier has been in Haverhill from Nepera Park, N. Y., where he is connected with the Nepera Chemical Company.

—A. B. Toward, a druggist at Boylston, is confined to his home with illness.

ELSEWHERE IN NEW ENGLAND.

—An early morning fire recently at McNeil's drug store at Torrington, Conn., did some damage, though not of a serious character. W. Palmer, a clerk at the store, discovered it where it had started in a pile of old papers. It gained sufficient headway before the arrival of the department to scorch badly the adjoining buildings.

—O. W. Kimball, a Lewiston, Me., druggist, came near death from accident recently. In attempting to cross the street he was struck by an electric car which threw him to the side, instead of in front, of the car, thus preventing a fatality.

—Frank W. Buckham, a druggist at Yarmouth, Me., has purchased the pharmacy of Bixby & Buck at Skowhegan and has taken possession of the place. Arthur Merrill is to manage the Yarmouth store.

—W. W. Hall, of the Elm Pharmacy at West Springfield, Vt., has recently been in New York. In his absence J. P. Reagan, of Windsor Locks, has taken his place.

—H. W. Getchell, who took his vacation late this year, spending it in Auburn, is now again attending to his duties at Cook's drug store in Lewiston, Me.

—A. P. Fitch, a druggist at Concord, N. H., lately made a change whereby he gets a much finer store, formerly occupied by the Postal Telegraph Company.

—Joseph Lenneux, the manager of the People's drug store in the Washington Hill district of Waterbury, Conn., recently has been ill.

—At Wallace's drug store at Nashua, N. H., a special window display of posters has attracted much attention.

—Dwight R. Judson, of Willow Brook, Conn., has been granted a license qualifying him to be a druggist.

—Dr. H. E. Dunton has purchased an interest in the Carrol Park Pharmacy at Swanton, Vt.

A New Prescription Blank.

We illustrate on another page the Eureka Prescription Blank Pad and Cover offered to the trade by J. B. Burr & Co., Hartford, Conn. This is something entirely new. The pad locks securely into the cover and yet each leaf is easily detached. It is neat, strong and exceedingly simple to adjust. They have met with great favor among physicians who have used them and are so handsome in appearance that they will be used by physicians in preference to ordinary pads. They are made in many styles and sizes, and there is also furnished a desk blank and cover with the same patent attachment, with sterling silver corners, also made in several styles. A doctor would appreciate a desk pad that could be placed before him ready for use. We suggest correspondence with Messrs. Burr & Co. and know that a small order will bring better results than anything else you have got

PHILADELPHIA.

A SHAKE-UP FROM THE STATE BOARD.

Philadelphia, Oct. 27.—In the issue of the Era of September 27 were printed the instructions from the State Pharmaceutical Examining Board to its agents, these being given in full so that every reader of the Era in Philadelphia would know just what he must do to keep within the requirements of the State Pharmacy law. The tip was also given that a visitation of the State Board inspectors was to take place in the near future and all concerned were warned of the penalties of neglect.

Well, it seems that there are a good many retail druggists in Philadelphia who either do not take the Era or if they do, do not read its local columns, for the visit of these inspectors has resulted in a very large number of indictments being laid before the magistrates. Most of these indictments are based on the charge that the druggist was not complying with that section of the State Pharmacy law requiring the display of his certificate and certificate of renewal in a prominent place in his store. It is rumored that there are a number of serious charges made, however, such as conducting a drug store without registered clerks, violations of the "Poison law" in the sale of non-registry of poisons, substitution in prescriptions and the sale of drugs below the U. S. P. standards. To the credit of Philadelphia druggists be it said, these charges are made against the very class of druggists against which the local association has been complaining for a long time, men who daily violate every legal and ethical statute in their eagerness to reap a few dollars profit and who have been responsible for much of the dirty work that has cast a blot on the good name of pharmacy.

Quite a number of summonses have already been issued. Louis Genois, of Twelfth and Chestnut streets, has been summoned to appear before the magistrate Monday for violation of an act of Assembly, the offence being that he did not have his certificate of registration exposed to public view as required by law. Much prominence has been given this case in the daily papers, and some astonishing information has been sprung on the public by the reporters, such as the fact that "when a clerk passes the State Board he is registered and when he enters the employ of a druggist he must communicate this to the board and have it entered in their registry!"

Talks with many of the leading retail druggists of the city indicate that there has been a good deal of hard feeling aroused by the present action of the State Board. The general opinion is that it is rather derogatory to the dignity of such a body to descend to petty persecution, such being the name given to the indictment of men for non-display of certificates in a prominent place, and that the board could be putting its time and powers to better use if it would devote them to combatting with more serious evils. As one prominent retailer said: "It would not surprise me a bit if the 'crusade of the State Board resulted in defeating the enactment of a new State Pharmacy law by the next Legislature, for a vast amount of antagonism has been aroused all through the State.'"

The present State Board is composed of exceptionally able men, so it is hard to believe that it is acting unfairly.

It is reported that most of the evidence in these cases has been collected by a firm of private detectives, Perkins, who have sent men out to hunt for violators of the State law. The Philadelphia Press of the 28th is authority for the statement that this firm of detectives is to receive half of the fines collected as payment for their services. If this is so it would explain the zeal in the pursuit of cases of non-display of certificates and would at the same time relieve the State Board from the position of petty persecution with which a great many druggists now charge it.

It is very unfortunate that this state of things should exist, for a State Board ought to receive the hearty support of its State druggists. In the present case if the over zeal of its agents has caused it to be the object of adverse comment, many will be made antagonistic to the further powers that the hoped for new legislation will confer on the proposed new State Board.

Taking the view that there are many cases in which

a simple explanation before the magistrate will set matters aright, the P. A. R. D. has engaged counsel to defend such cases in which it is evident that no violation of the State law was thought of by the accused parties. There will be no "war," as the papers term it, but an effort will be made to protect those guilty of a mere technical oversight or omission; also those in whose cases the agents of the board have overstepped their instructions and powers in reported violations of the law on a strained interpretation of its provisions.

NOTES.

—The Philadelphia Association of Retail Druggists is greatly interested in the offer of the Sterling Remedy Company, made at the Detroit Convention. Letters have been sent by the Association to all the listed jobbers asking for their co-operation to make the local orders as large as possible and very favorable replies have been received.

—A party who travels out Lancaster avenue very often remarked the other day: "I am always on the lookout for Perry's place as I pass, for every time I see something new and attractive in his window display. He has got the art of making his windows pay his rent down pretty fine."

—R. M. Green & Sons have bought the property at 1421 Vine street with the intention of rebuilding and making large additions to their present quarters. The damage caused by the recent fire at Green's will soon be completely repaired.

BALTIMORE.

Reception to Students.

Baltimore, Oct. 27.—A reception to students was given last evening by the trustees and the faculty of the Maryland College of Pharmacy. Both the senior and junior classes of the institution were largely represented, the event taking place in the college hall on Aisquith street. Farson's Fifth Regiment band played a number of selections during the evening and other musical talent had also been engaged. Addresses were made by the representative presidents of the two classes, by President Charles E. Dohme, of the college; by members of the faculty and by Charles H. Ware, the secretary of the institution. Refreshments had been provided and the time passed in the pleasantest manner. The speeches dealt chiefly with the progress made by the college, the opportunities given to students and the efforts of instructors to fit the matriculates for the duties of their professional career. The success of the occasion was largely due to the special efforts made by the Committee of Arrangements, which consisted of Charles H. Ware, chairman; John G. Beck and Edwin H. Hengst.

With the Drug Trade Bowlers.

Baltimore, Oct. 26.—The unexpected does not always happen, but often it is the unlooked-for which claims attention. No one, for instance, would have supposed that Muth Bros. & Co., the tail-enders in last season's bowling, would shut out the Winkelmann & Brown Drug Company quintette, but this came to pass to-night, when the former team took all three games. On last Tuesday night the Root and Herb men took all three games from Parke, Davis & Co. by 762, 722 and 674 to 630, 634 and 633 points respectively. The week's games leave the several teams in the following positions:

	Games Won.	Games Lost.	Per-centage.
McCormick & Co.	5	1	.833
James Bailly & Son.	5	1	.833
Root and Herbs.	4	2	.667
Winkelmann & Brown Drug Co.	3	6	.333
Sharp & Dohme.	2	4	.333
Muth Bros. & Co.	3	6	.333
Parke, Davis & Co.	1	5	.167

The Wedgewood Club.

Baltimore, Oct. 25.—The members of the Wedgewood Club, an organization composed of druggists, spent some very enjoyable hours at the Hotel Stafford to-night, the occasion being the monthly dinner of this aggregation of congenial souls. Charles E. Dohme presided and Owen C. Smith acted as secretary in the absence of the club's

regular scribe and poet laureate, J. Webb Foster. The fun was fast if not furious and everyone present was called on to make a speech, whether he happened to be an orator or not. The invited guests included Dr. John C. Hemmeter, who has just returned from a long European trip, and Dr. W. A. B. Selman. In the course of the business meeting, which preceded the dinner, H. P. Hynson, Dr. A. R. L. Dohme and Owen C. Smith were appointed a committee to place themselves in communication with absentee members and ascertain if the latter intend to retain their affiliation. Unless such members are more regular in their attendance they will be dropped. The list is limited to thirty and there are now a number of applications on hand, from among which any vacancies which may arise can be readily filled.

NOTES.

—Thomas Hogshead, senior member of the drug firm of Hogshead Bros., of Staunton, Va., and Miss Annabel Timberlake, the daughter of a prominent citizen there, were married on the morning of October 25 in the Presbyterian Church. The wedding was a swell affair and attracted many spectators and friends of the young couple. Harry Hogshead, the groom's brother and partner in the firm, was best man. The couple went on a tour north after the ceremony.

—Among the out-of-town druggists in Baltimore last week were Joseph A. Jeffries, Warrenton, Va.; Mr. White, of White & Leonard, Salisbury, Md.; Mr. Allen, manager for P. Spottswood Bird, King and Queen Courthouse, Va.; Dr. S. C. Finley and Dr. T. Dale Stewart, Delta, Md.; H. Ringgold, of Ringgold, Reinhart & Co., Cumberland, Md., and C. S. Henry, of Cambridge, Md.

—Much interest is being taken in the proposed co-operative plan agitated by some of the leading retail druggists here. A number of East Baltimore pharmacists look upon the matter with great favor. Among those said to be attracted by it are D. R. Millard, J. Fuller Frames, H. C. Speltzler and John G. Beck.

PITTSBURG.

Druggists' Bowling League.

Pittsburg, Oct. 27.—About the best contest which there has so far taken place among the druggists' league was that played on Monday night, October 22. The Walther-Robertson and George A. Kelly clubs participating in an exciting contest of three games rolled on the Henry alleys. The grand totals were: Walther-Robertson, 1,472; Kelly, 1,416. The second game of the week and the fifth of the season was rolled on Friday night by the Pharmaceutical and the Allegheny Druggists' teams.

Headache Powder Suit Appeal.

Pittsburg, Oct. 27.—Among the cases argued before the Supreme Court last week was the appeal of Mary E. West against Louis Emanuel. Mrs. West seeks to recover damages for the death of her twenty-year-old daughter, who, she alleges, purchased Kohler's headache powders at Mr. Emanuel's drug store and died as the result of having taken them. The girl, who died on November 27, 1898, the appellant alleges, was her chief support. The evidence of the plaintiff showed that an analysis of the headache powders showed them to contain 5.17 grains of acetanilid, "a poison operating as a powerful and immediate depressant on the heart action." The court below granted a non-suit and Mrs. West appealed.

NOTES.

—Considerable interest is being manifested by the druggists of this city in the great Industrial parade to be held November 3 in this city. An effort is being made to get together a temporary McKinley-Roosevelt Club for the day to participate in the affair. Over fifty druggists have signified their intention to join the ranks. George P. Sichelstell, of the firm of W. J. Gilmore & Co., has been elected captain, with the following lieutenants: Sherman Massingham, of Geo. A. Kelly & Co.; A. L. Johnson, resident agent of Parke, Davis & Co., and Charles Miller, of the Walther-Robertson Company. Hugh J. Canney will carry the banner, the only emblem to

be carried in the parade. Negotiations are on between Innes and his band, who play in the city and nearby towns during the week, to act as escort to the druggists' club. No particular uniform will be worn.

—An explosion occurred recently in the Hayden Pharmacy, Greensburg, Pa., occasioned by a leaking gas jet in a book vault and a lighted match struck by and to the regret of Samuel Nowlin, clerk. He is recovering from his astonishment and a few incidental burns.

—The Red Cross pharmacy on Penn avenue has been purchased by a real estate dealer and will be transferred to the Hazelwood district at the corner of Flowers and Second avenues in a new room, with W. H. Bilhartz as manager.

—Miss Byrde Urben, youngest daughter of druggist J. P. Urben, of Allegheny, was married on October 24 to Horace Hays. They will be at home at 3213 Kennett Square, Pittsburg, after November 28.

LOUISVILLE.

Louisville, Ky., Oct. 26.

—Theodore Frantz, a druggist at Sixth and Green streets, claims that he was very neatly victimized out of several hundred dollars by Walter Kahn, a young Hebrew, on Thursday. Mr. Frantz, besides conducting a drug store, also owns a baking powder factory, and Kahn several days ago made a proposition to take it off his hands. The druggist and the Hebrew entered into negotiations which lasted for several days, but on Thursday evening the deal was closed and the price agreed upon was \$800. A bill of sale binding both parties was drawn up and signed and Kahn promised to return the following day with the money and assume control of the factory. On Thursday morning he arrived, but instead of paying the money he started an argument. He requested the privilege of copying the contract and the druggist readily consented. They retired to a private room, but instead of copying the original Kahn tore the contract into shreds. Then he ran and the druggist pursued him. It is probable that a suit for damages will follow.

—Thomas Kelly, who has charge of Minor's drug store at Sixteenth and Walnut streets, and his wife have been figuring in a very sensational suit recently. Kelly's wife disappeared from her home on Sunday night after threatening to commit suicide. Her mother accused Kelly of murdering her and the whole neighborhood rang with the sensation. A woman was found in the river a day later and it was thought that she was the missing woman. Then Mrs. Kelly returned home and made a sensational charge against her husband. Kelly retaliated by bringing suit for divorce on the charge of infidelity. Mrs. Kelly swore out a warrant charging her husband with disorderly conduct. But they settled their difficulties and both suits were dismissed. Mrs. Kelly is only nineteen years of age and has been married two years.

—The meeting of the Kentucky Board of Pharmacy in Somerset last week was the annual gathering of the members of the board and its importance was increased by the examination of candidates who wish to become registered pharmacists. The session lasted two days and all members of the board were present. Eight candidates presented themselves and answered the questions. The outcome of the examination has not yet been announced. The following officers were elected: President, C. Louis Diehl, Ph. M., of Louisville; secretary, J. W. Gayle, of Frankfort. The other members of the board are John E. Storms, Ph. G., of Lancaster; E. L. Pieck, Ph. G., of Covington, and Addison Dinmitt, of Louisville. The next meeting will be held in Bowling Green.

The Century Perfume Company, whose business was established a short time ago, have found it necessary to remove from their quarters at Broadway and Canal street, New York City, to No. 296 Broadway, where they will have ample facilities for attending to their rapidly increasing business. Mr. Chas. C. Gardner, formerly secretary of Lazell, Dalley & Co., and Mr. A. M. Linnett, formerly secretary of the Paas Dye Co., of Newark, N. J., are devoting all their energies to the development of this business and are achieving very flattering results.

CINCINNATI.

Druggists' Bowling Club.

Cincinnati, Oct. 27.—The Druggists' Bowling Club inaugurated the fourth season of their existence at the Lastime Bowling Alleys yesterday. New officers were elected for the season of 1900 and 1901. President, J. H. Nicholas; vice-president, H. W. Streithorst; treasurer, August Rendigs; secretary, Ralph Freiberg. A vote of thanks was tendered the retiring officers for their efforts during the past year. Two new members were admitted, Charles Diehl and M. A. Hanna (known better as "Mark"). The club will bowl every Friday afternoon, and extend an invitation to any visiting druggist or physician to join them when in the city and partake of the club's hospitality. During the past season many traveling men visited the club and participated in the games. The boys will be glad to give them a welcome this year. The scores made by the two teams were as follows. The teams were designated as The Minims, captained by Ralph Freiberg, who weighs 83 lbs., and the Maximums, captained by Joe Nicholas, who tips the beam at 248:

MINIMUMS.			MAXIMUMS.		
1st.	2d.	3d.	1st.	2d.	3d.
Muehlburg ...144	150	219	Knemoeller 188	152	132

Freiburg 133	122	120	Diehl, Sr. 138	172	134
Diehl, Jr. 128	168	136	Linneman 137	130	125
Streithorst ...143	140	177	Hanna 144	144	119
Totals 873	898	929	Totals 952	926	780

NOTES.

—August Rendigs, Joe Nicholas, Vic. Muehlburg and one or two other druggists who take delight in hunting will start Monday for the wilds of Indiana. The locality is kept a secret, but as in addition to their guns and ammunition, they are laying in a supply of wet goods, it is inferred that the place is in a prohibition district. Rendigs, who is a crack shot, has promised the members of the Bowling Club a fine "Hassenpfeffer" lunch when they return, but a committee has been appointed by the club to first inspect the rabbits before the invitation be accepted. The reason for this action dates back several years ago, when Gus issued a similar invitation, and after the lunch was partaken of, it was discovered that several members of the feline family were missing in the neighborhood where Gus resides. Nicholas, who is the leader of the party and knows the location of the hunt and all of the natives, although an ardent Democrat himself, confided to the writer that he intends to wear a McKinley button for protection, as the inhabitants are all Republicans.

—A few weeks ago the daily papers published a sensational item that a druggist on one of the hill tops sold laudanum in place of extract of vanilla and very nearly caused the death of several persons. Since the publication several druggists have remarked about the decrease in their sales of extract of vanilla. One prominent druggist said the sale of vanilla at his store has fallen off at least 50 per cent., his customers purchasing it from the grocers, who sell it ready put up in five and ten cent bottles. Meeting a former customer coming from the grocery with a bottle of the extract, he inquired why she purchased it from a grocer, and received in answer that she was sure she would not be given poison instead. Druggists should see if the Tr. Opil bottle is next to the Ext. Vanilla bottle. In this way the above mistake occurred, and has caused loss of sales not only to the pharmacist who made the mistake, but to all the druggists in Cincinnati.

—W. T. Ford, while lighting the gas in his drug store at Eighth and Vine streets, narrowly escaped serious injuries a few days ago. Mr. Ford was standing on a chair, which tipped, throwing him through a glass case, making a cut in the fleshy part of his left leg. The cut required several stitches to close, and kept Mr. Ford away from business for several days. His physician states it will take some time to completely recover the use of the limb.

—Emil Zorn's pharmacy was robbed a few nights ago of a cigar box containing about \$6 in pennies. The

pennies were to be used in the slot machines, and the sight of so much money tempted several boys to steal it. Mr. Zorn has under suspicion several boys, among them the son of a well known policeman. Zorn immediately sent for a new supply of coppers, and the merry click of the slot machine still continues.

—As a result of the stand taken by the Hamilton County Association of Druggists and the Wholesale Druggists, one of the best known cutters at one of the most prominent corners, took down his sign as cut rate drug store and replaced it with one stating that the store was run under "progressive methods."

—Andrew E. Diebold has gone back to his old love, and is conducting John Bauer's store, to whom he sold out some time ago. All of Andy's old customers gave him a great welcome.

DETROIT.

Sad Death of a Druggist's Son.

Detroit, Oct. 27.—An unusually sad bereavement has come to the home of Druggist C. P. Taylor of Mount Pleasant, Michigan, in the death by accident of little Harold Taylor, the only son. It seems that the little chap, who was only seven years old, was missed from the house early last Sunday evening. As time went by some anxiety was felt and a search instituted, which led to the discovery of his dead body under a barrel back of Mr. Taylor's store. He had been shot through the heart and then dragged to the hiding place under the barrel. Investigation revealed the fact that the deed had been done by two little boys of the neighborhood, aged eleven and thirteen years. Their mother is dead and their father is a caretaker of a bank. It would appear that the boys went to the bank with their father on Saturday and helped themselves to a revolver with which they played on Sunday and which caused the death of little Harold. In their terror at the deed they thought of the scheme of hiding the child. The whole community was horrified at the act and yet do not seem to know what ought to be done to them. Mr. and Mrs. Taylor have the deep sympathy of everybody. The boy was unusually bright and a great favorite in the town.

NOTES.

—Gerald J. McCoy, city travelling salesman among the manufacturers for the Michigan Drug Co., has become secretary and treasurer of the Modern Match Manufacturing Co., Detroit, in which he has been a stockholder for some time. Upon leaving the drug company a banquet was tendered him last Tuesday evening at the Griswold House. Plates were laid for thirty, including members of the firm and office employees. C. E. Knight, of the city department, acted as toastmaster and did it as he does everything else—in the happiest, most cheerful manner possible. Some of the toasts had a decided flavor of the drug business, M. O. Williams responding in a very brilliant and witty speech to "Liverettes, Charles Davis to "Kermott's Kidney Pills" and James Schlitz to "Johnson's Sure Shot." Others were more political in character, E. E. Appleton responding to "Prosperity and Progress" and W. H. Dodds to "Imperialism." The event of the evening was C. W. Hill's toast, "A Good Employee," which meant Mr. McCoy in particular. At the close of his speech Mr. Hill, in behalf of the firm and the employees of the Michigan Drug Company, presented Mr. McCoy with a handsome roll-top office desk, which was placed in his office at the Modern Match Company's building the next morning. At a late hour the party broke up, having had a thoroughly enjoyable time. Mr. McCoy is very popular with his fellow employees, who wish him unlimited success in his new position.

—Over one hundred of the drug clerks of Detroit availed themselves of Parke, Davis & Co.'s invitation to inspect the plant and lunch with them on Thursday last. A very delightful afternoon was spent.

—Edward H. Trillick, formerly with the Bertram Pharmacy, Detroit, has taken a position with A. P. Breitenbach, same place.

CHICAGO.

PATENT MEDICINE CLAUSE IN PHARMACY LAW
UNCONSTITUTIONAL.

Chicago, Oct. 27.—The Supreme Court last week decided in the case of the State of Illinois v. Noel that the clause in the pharmacy law limiting the sale of patent and proprietary medicines to registered pharmacists or those under the immediate supervision of registered pharmacists, is class legislation and as such unconstitutional. It appears that the experts at the trial in the lower court had testified that the sale of patent medicines required no professional supervision. Noel, the defendant, made and sold or mined and sold—what he claimed was a mineral for the cure of rheumatism and kindred diseases. If your correspondent's information is correct, this decision is a knockout for the patent medicine clause of the pharmacy law. Kitt Gould, the attorney for the Board of Pharmacy, on behalf of the State, will at once petition for a rehearing.

NOTES.

—John F. Matthes, Chicago manager for Whitall, Tatum & Company, has invented a device for lighting show globes by electricity. It is about the most effective thing on the market. He now engages some of his leisure moments in getting up a red, white and blue liquid for show globes.

—Albert Zimmerman, of Peoria, former member of the Board of Pharmacy, was in Chicago on the 27th of October buying fixtures, stock, etc., for a new drug store to be located on lower Adams street in Peoria.

—G. W. Mathison, Chicago manager of the Emerson Drug Company, has refitted and redecorated his office at 171 Randolph street. It presents a very neat and handsome appearance.

—At Des Moines, Ia., J. Reed Hurlbut has bought the interest of F. H. McArthur in the Hurlbut & McArthur drug store. The new company to be formed will be incorporated.

—W. E. Myers has bought Lew. H. Young's interest in the drug store of W. E. Myers & Company at Leon, Ia. Mr. Myers will be the sole proprietor.

—James Stevenson, of Robert Stevenson & Company, will start on October 29 for the Northern woods, deer hunting.

—M. Stein has purchased the Lion pharmacy at Robey street and Lawrence avenue.

THE NORTHWEST.

Retail Druggists Meet.

St. Paul, Minn., Oct. 26.—The St. Paul Retail Druggists' Association held its annual meeting at Odd Fellows' Hall, Wednesday evening. A. A. Campbell was elected president to succeed H. W. Reitzke, Joseph J. Conger vice-president, and A. Stierle second vice-president. A. W. Bork was re-elected secretary and the treasurer's position was filled by the selection of Jenilek. The members of the new Executive Committee are F. M. Parker, R. A. Becker and A. J. Schumacher. The problem of meeting department store competition was discussed at much length, but no action was taken. H. W. Reitzke, delegate to the Detroit convention of the N. A. R. D., explained the system in vogue in Eastern cities and recommended the establishment of arbitrary differentials in prices. The question will be discussed further at a meeting scheduled for November 14.

NOTES.

Successions: Gardiner & Co., Akeley, Minn., by E. M. Irish; Hill & Spenser, Montrose, S. D., by E. W. Collieran & Co.; J. W. Culbertson, Center Point, Ia., by H. H. Lexvold; H. A. Daubenberger, Fonda, Ia., by Daubenberger Bros.; W. E. Myers & Co., Leon, Ia., by W. E. Meyers; Honnold Drug Store, Leon, Ia., by W. C. Stample & Co.; Hammer & Larson, S. D., by Larson & Friedberg; Summers & Co., Lone Tree, Ia., by James W. Brown; the J. H. Luers Drug Co., Cresco, Ia., by the Shuttleworth Drug Co.

—Scallin Bros., who for five years have been one of the

leading business firms of Scotland, S. D., have sold their drug store in that town to A. A. Woodward and B. F. Filbert, of Clark. The name of the new firm will be Woodward & Filbert.

—A new store has been started at Sault Ste. Marie, Mich., by J. J. Masse; another at Montpelier, Idaho, by F. A. Lyman, and still another at Stewart, Minn., by Hartman & Schmitz.

—Carter & Hemstock, Collins, Ia.; J. W. Sampson, Ottumwa, Ia., and C. A. Hoover, Montpelier, Idaho, have sold.

—The Baisch Drug Co., it is reported, will supplant Baisch & Young at Dickinson, N. D.

—It is reported that Roberts & Bridgman, Great Falls, Mont., have dissolved.

—An attachment has been issued against Joseph Greulich, Appleton, Wis.

—D. L. Scanlan has retired from T. A. Jenson & Co., Vienna, S. D.

—John G. Hartwell, Prosser, Idaho, has sustained a fire loss.

—J. S. Griffin & Co., Winthrop, Minn., have gone out of business.

—D. Turngreen will resume at Salt Lake City, Utah.

ST. LOUIS.

PREPARING TO ENFORCE THE N. A. R. D. PLAN.

St. Louis, Oct. 27.—Making arrangements for the enforcement of the N. A. R. D. plan in this city is occupying the attention of the officers and leading members of the St. Louis Apothecaries' Association just at present. They are determined to give the plan a fair trial and are not wasting time, expense or energy in seeing that every detail of the preparations is carried out. The officers of the local association are taking turns and in sections of two they call on the druggists of the city and explain just what the N. A. R. D. has done and what it proposes to do and what they desire the local druggists to do. They have only been out a few days but have called upon over two hundred druggists, and of that number only two have seen fit to remain out of the local organization. All the others have paid up their dues and become members in good standing. They calculate that within two weeks they will have over ninety per cent. of the local druggists as members and every one of them desirous of establishing full prices upon the patent and proprietary preparations manufactured by the seventy-five manufacturers who have made a compact with the N. A. R. D. There are some four or five "radical cutters" in this city who are not at all likely to display a friendly feeling, as they always have refused to concert with the other druggists in these movements. They are now very indifferent when interviewed upon the subject, but betray their belief in the inability of the local organization to carry out the plans of the N. A. R. D. Evidently they think the local druggists will not stick together or else the wholesale druggists will not live up to their compact, and one of them has already stated so much to your correspondent.

NOTES.

—The Centaur Company, of New York, manufacturers of Castoria, recently unearthed a counterfeit scheme in this city. For several days they had special agents at work endeavoring to locate the counterfeit plant and finally their efforts were rewarded and the principals are now under bond awaiting trial in the Court of Criminal Correction on the first Monday in November. The Palestine Drug Co., of 107 South Second street, is the firm which has laid itself liable, and President John Bick and chemist Benjamin Chiraem are the parties who were arrested. It is claimed that several thousands of the counterfeit labels and a large quantity of the imitation preparation were found in possession of the company when the officers were arrested. [The fraudulent practices of this concern were exposed in the Era in April last.]

—Major A. G. Anderson, for over twenty years a traveling representative of the J. S. Merrell Drug Co. in Missouri did at his home in this city on Friday, October 26. Major Anderson was a Kentuckian by birth. At the

outbreak of the Civil War he linked his fate and fortune with the Southern cause and was appointed second lieutenant of Volunteers. He rose step by step until he became a major on the staff of Gen. Cockrell. After the close of the civil strife he entered the tobacco business, which he followed for over ten years, and then accepted the position which he held until the final bugle call was sounded. He leaves a wife and eight children. He belonged to that type of old Southern gentlemen who linger long in the memory and history of their friends and country.

—A. F. Barth, of North Alton, and Miss Louise K. Schaub, of the same place, were quietly married in this city on October 26. Mr. Barth is a well-known druggist of that place. A few years ago he was a popular drug clerk of this city.

—Isaac Reinholdt has purchased the drug store at Vandeventer street and Washington avenue formerly belonging to J. E. Hilby.

A Handsome Show Case.

Probably the finest thing ever offered in this line is the handsome glass show case which is offered in the advertisement of Dentomyr Tooth Paste on another page. This Tooth Paste is being advertised extensively and back of it is the reputation for high quality that has placed the dentifrices made by the Chas. Wright Chemical Co., of Detroit, in the front rank. They make a special offer of two show cases such as are illustrated here, both of them an ornament to any drug store. The goods are attractively put up, they are being pushed very hard and any druggist who will use it may have a special lot of some new and up-to-date advertising matter.

Hunter Baltimore Rye.

Physicians are careful to prescribe a pure article when an alcoholic stimulant is needed. It therefore behooves the druggist to carry in stock a whiskey which has long been known to physicians, the drug trade and the public as the standard of excellence in respect to age, purity and flavor, all of the particular requirements which must be met by the perfect article. We do not hesitate to declare that druggists will find in the ten-year-old Hunter Baltimore Rye, bottled by William Lanahan & Son, Baltimore, a whiskey of this description. It is the purest type of the purest class. It is particularly to be recommended for the use of women who require a stimulant. Be sure that your stock is not deficient in this respect, for physicians who have used it will want it again, and physicians who have not used it will be apt to learn of its merits and want it.—New England Druggist.

Griffith's Mixture, Guaiac and Stillingia, has been a staple preparation for over thirty years. The wholesale prices are as follows: 8 ounce, \$10.50 per dozen; 16 ounce, \$20.00 per dozen. Physicians and druggists can order it through their jobber, as it is carried in stock by nearly every wholesaler in the United States. If ordered direct, express charges will be prepaid. It is still made by the originator, Wm. H. Griffith, 67 Third avenue, New York.

Business Record.

We desire to make this a complete record of all new firms, all changes in firms, deaths, fires and assignments which occur among houses connected with the drug trade in the United States. Our readers will confer a favor by reporting promptly such items from their respective localities.

Subscribers to the ERA DRUGGISTS DIRECTORY can correct their copies from the record, and the term "D. D. List," used here, refers to this directory.

We exercise due care to insure the authenticity of items here recorded but they are obtained from such a variety of sources that their absolute correctness cannot be guaranteed.

Address, THE PHARMACEUTICAL ERA,
New York.

CALIFORNIA.—Fresno.—M. Webster, No. 1917 Mariposa street, sold to J. J. De Gloria.

ILLINOIS.—Chicago.—Sorrow Drug Company, Forty-ninth street and Indiana avenue, sold to George W. McDonald.

INDIANA.—Dyer.—M. W. Peterson, sold to Mrs. Catherine Baker.

Letts Corner.—Griffin Lehman, sold to Sheets & Hoover.

New Albany.—Bruno Knoefel, succeeded by Bruno Knoefel & Son.

IOWA.—Center Point.—J. W. Culbertson, sold to H. H. Lexvold.

Fonda.—H. A. Daubenberger, succeeded by Daubenberger Bros.

Leon.—W. J. Honnold & Co., sold to W. C. Stemple & Co.—W. E. Myers & Co., succeeded by W. E. Myers.

Lone Tree.—M. H. Summers & Co., succeeded by James W. Brown.

Valley Junction.—H. L. Seyfert, sold to E. J. Askew & Co.

KANSAS.—Leroy.—C. A. Sahland & Son, sold to H. C. Towson.

Russell.—N. Wolcott, sold to G. F. Dawson.

MASSACHUSETTS.—Holyoke.—Curran Bros., No. 466 Main street, damaged by fire; insured.

Northampton.—Niquette & Farrar, No. 273 Main street, new store.

MICHIGAN.—Charlotte.—Emery Bros., succeeded by Fred H. Emery.

MINNESOTA.—Waverly.—O'Hair & Walsh, burnt out.

MISSOURI.—Marceline.—N. L. Bolles, sold to B. B. Putman.

St. Louis.—L. J. Lehmann, No. 1451 Old Manchester road, sold to J. B. Hicks.

Wyaconda.—Frank Shane, sold to William Malloy.

NEBRASKA.—Page.—H. A. Skelton, sold to A. H. Farnsworth.

Prosser.—John G. Hartwell, damaged by fire.

NEW YORK.—Canton.—C. W. Gully, succeeded by Mead & Goodnough.

New York City.—Max Mayer, No. 41 Avenue C, removed to No. 335 Grand street, Brooklyn Borough.

Smith & Stage, No. 901 Seventh avenue, succeeded by Reuben R. Smith.

Jamestown.—C. A. Swanson & Co., No. 200 Main street, damaged by fire; insured.

Rochester.—F. H. Drake, No. 200 Alexander street, sold to Elmer E. Chilson.

Rome.—J. G. Bissell, No. 45 Dominick street, deceased.

OHIO.—Cleveland.—The Lickes Drug Company, No. 574 Kinsman street, removed to No. 2988 Superior street.

Hillsboro.—Woodrow & Williamson, succeeded by W. C. Woodrow.

Rushville.—Lewis Baker & Co., sold to Kerr, Shaw & Co.

PENNSYLVANIA.—Saltsburg.—H. H. Robinson, deceased.

TENNESSEE.—Martin.—Askew & McGill, succeeded by J. A. Askew.

TEXAS.—Dawson.—Johnson & Chenault, succeeded by S. N. Chenault.

Iredell.—J. C. Phillips, sold to Kimmins & Gordon.

Lone Oak.—W. H. Patillo, deceased.

WISCONSIN.—Markesan.—Thomas Atkinson, succeeded by Thomas Atkinson & Son.

Milwaukee.—B. F. De Hasson, Ellen street and Russell avenue, sold to W. A. Biebesheimer.

PRINCE EDWARD ISLAND.—Tignish.—H. L. Higgs & Co., new store.

The seamless rubber goods manufactured by the Miller Rubber Manufacturing Co., of Akron, O., have long been noted for their excellence, but the trade will be pleased to know that they have received the highest award at the Paris Exposition on their Standard Seamless Rubber Gloves and specialties in competition with the world, where rubber gloves made by France and other countries were exhibited.

PATENTS

Trade-Marks, Designs, Etc.

PATENTS.

Issued October 23, 1900.

- 660,091.—Charles A. Doremus, New York, N. Y. Treating kryolith.
 660,151.—Wilbrod Derval, Binghamton, N. Y. Filter.
 660,164.—John Nageldinger, New York, N. Y. Apparatus for drawing effervescent liquids.
 660,212.—Emanuel E. Erstman, Chicago, Ill. Syringe.
 660,251.—Philander R. Gray, Elizabeth, N. J. Apparatus for separating wax from paraffin oil.
 660,322.—Charles G. Bauer, assignor to American Stopper Company, New York, N. Y. Bottle-capping machine.
 660,331.—John Nageldinger, New York, N. Y. Device for drawing effervescent liquids.
 660,434.—Carl G. Illgenberg and H. R. Loper, Baltimore, Md., assignors to Carr-Lowrey Glass Company, Baltimore, Md., and New York, N. Y. Dentifrice bottle.

TRADE MARKS.

Registered October 23, 1900.

- 35,285.—Certain named medicine. Fred E. Francisco, Lexington, Ky. The word "Privatine" and a monogram formed of the letters "P C C."
 35,286.—Certain named medical compounds. The Vapo-Cresolene Company, Stanley, N. J., and New York, N. Y. The representation of a censor or vaporizer giving off a cloud of vapor and of a reclining figure in connection therewith.
 35,287.—Certain named liniment. Thomas F. Laing, Bound Brook, N. J. The letters "L M L" and the representation of an hour glass.
 35,288.—Ointments. The Cook Chemical Company, Milwaukee, Wis. The word "Lanikol."
 35,289.—Ointment. Edward J. Brewer, Mullin's Station, Tenn. The word "Microfuge."
 35,300.—Soaps. Munyon's Homeopathic Home Remedy Company, Philadelphia, Pa. The representation of a man, a woman and a branch of leaves, which latter the woman is apparently in the act of presenting to the man.
 35,303.—Prescription bottles. Obeur-Nester Glass Company, St. Louis, Mo., and East St. Louis, Ill. The word "Rex" blown or cast in a bottle.
 35,304.—Prescription bottles. Obeur-Nester Glass Company, St. Louis, Mo., and East St. Louis, Ill. The word "Banner" blown or cast in a bottle.
 35,305.—Prescription bottles. Obeur-Nester Glass Company, St. Louis, Mo., and East St. Louis, Ill. The word "Victor" blown or cast in a flask.

DESIGNS.

- 33,447.—Surgical stocking. Charles J. Sadler, St. Louis, Mo., assignor to the Bleesmore Instrument Company, same place. Filed August 20, 1900. Serial No. 27,502. Term of patent, 11 years. The design for a surgical stocking.

LABELS.

- 7,851.—Title: "Rocky Bracer." (For a medicine.) Emil Kraft, New York, N. Y. Application filed September 29, 1900.
 7,852.—Title: "Gallagher's Hair Elixir." (For hair elixir.) Edward J. Gallagher, Boston, Mass. Application filed September 27, 1900.
 7,853.—Title: "Paride's Odontale." (For a preparation for treatment of the teeth.) Grasso Paride, Philadelphia, Pa. Application filed August 31, 1900.
 7,854.—Title: "Chappene." (For a lotion.) Filler & Wolf, Philadelphia, Pa. Application filed September, 29, 1900.

Phillips' Latest Production.

On another page we illustrate an illuminated show case, the latest production of John Phillips & Co., Detroit, Mich. Although the illustration in the advertisement shows the case filled with gent's furnishing goods, this case is equally valuable to the druggist as it will display toilet articles to the best advantage; in fact, nothing could be better for displaying perfumery in fancy packages, brushes, combs, toilet preparations, etc. This case is made in three different grades, either with or without their patent lighting device and prices are made accordingly and to suit the druggist's pocketbook. A descriptive circular will be sent to anyone interested enough to inquire for it.

Salesmen Wanted.

Travelling salesmen who visit the drug trade and who want a profitable side line would do well to consult the advertisement of the Chicago Wood Finishing Co. on page 16 of this issue. Exclusive territory is given to good men.

BUFFALO COLLEGE OF PHARMACY.

The fall session opened on Tuesday evening, October 2, with a large attendance of students and friends of the institution. Rev. O. P. Gifford, D. D., pastor of Delaware Avenue Baptist Church, delivered the address of welcome. It was full of wholesome advice, though so pleasantly told as not to seem a sermon.

The matriculation is fully equal to last year's classes at the opening. Following the formal exercises, the newcomers were further introduced into college life and ways by the members of the senior class. An interested crowd of spectators lined the street on either side while the open air exercises were taking place.

In the "rush" with the freshman "medics" of twice their number the next day, the junior "pharmics" held their own until the medics were reinforced with half the senior medics, and forced them to give way.

Prof. Gregory has placed an improved water heater in his supply room for the use of the pharmaceutical laboratory adjoining.

The football season has fairly opened at the U. of B., and the teams are fast getting into shape.

Alpha Chapter, Beta Phi Sigma, has moved into more suitable quarters in the new Catholic Institute Building, on the site of the old Buffalo Medical College, where, by the way, the chapter was first installed eleven years ago.

TORREY BOTANICAL CLUB.

At the regular meeting, Tuesday evening, October 9, Mr. Harper reported collections in Georgia during three and a half months, traversing all the geological formations from the mountains to the sea, and collecting 754 numbers. Dr. Rydberg reported two months spent in southern Colorado, with several new species, among them an interesting cactus from an elevation of 8,000 feet in the Bitter Root Mountains, now growing at the Botanic Gardens. Dr. Howe reported nine weeks spent in collecting marine algae at three very different stations, Bermuda, Martha's Vineyard (at Edgartown), and at Seguin Island, near the mouth of the Kennebec, an island four miles from the mainland, its only inhabitants the three lightkeepers and families. Dr. Howe discussed the Bermuda flora in the light of the Challenger report, which recognizes 326 species, of which 144 are indigenous (in 109 genera and 50 families); of the 144, 109 occur in the southeastern United States and 108 in the West Indies. The Bermuda vegetation is essentially West Indian in character, and includes only eight endemic species. Practically the only trees are the Palmetto and the Bermudan Cedar, the latter 20 to 50 feet high and only 1 or 2 feet thick, though some old shells are 5 feet. The oleander is naturalized, and in some quarters covered the whole landscape with bloom. Because of the practical absence of frost, tropical trees are acclimated with surprising success. The coffee tree has run wild in the sinkholes. About 25 ferns were known, and 8 Musci and 6 Hepaticae had been already observed. There is nowhere any brook, and only one moss and one hepatica are common; the others are in the Devonshire marsh and the sinkholes of the Walsingham region. These are open caves 30 or 40 feet deep, with more moisture and shade and less wind, and therefore showing quite a different flora. There Dr. Howe discovered as many as 15 Hepaticae. He also greatly increased the number of the marine algae beyond the 132 of the Challenger report. The marine flora is practically that of southern Florida and the West Indies.

Dr. MacDougal reported work in northern Idaho in the Priest River basin, which had perhaps never been visited by a botanist before. There was frost nearly every night. The tangled wildwood could not be penetrated more than four miles a day, except as it is entered by meadows stretching back from the lake. Beaver dams a quarter mile long cross these meadows and convert the upper portions into sedge marshes. A colony of beavers was active within 400 yards of his camp. Great stretches of Drosera carpet the marshes. Interesting plants were collected to 325 numbers.

Mrs. Britton sent in a brief report of her discovery of the protonema of Schizaea, observed as a green mat on thread-like bodies on the ground.

Prof. Lloyd reported upon work on the Gulf coast

begun after the close of his classes at the Columbia University summer school. Prof. Lloyd and Prof. Tracy procured a barge at Biloxi, Miss., by which they explored the flora of the islands of the Mississippi Sound, and of the delta proper. It was necessary to sail for miles in two feet of water, and occasionally to jump out and push. Always a furrow of mud followed in their wake. The islands bear a pine-barren and a sand dune flora. The island surfaces are flat, and form remnants of the tertiary Mississippi delta; they average only two feet above water, with a ridge a foot higher on the seaward side, composed of shell-fragments and continually shifted inward by the wind, the waves meanwhile gnawing off the seaward edge at the same rate.

Prof. Burgess reported his continued observations on certain asters at stations near Lake Erie, Boston, the White Mountains, New York City, etc., at each of which he has kept certain varying species under scrutiny for some years to determine their range of variation under changed environment.

Prof. Underwood reported herbarium work at Kew, the British Museum and Paris, with particular reference to the herbarium of Cosson, which is very rich in ferns, especially of South America and the West Indies. An interesting description was given of a trip to Biarritz, Spain and the Landes, with views of the turpentine industry now flourishing among pine forests of the Landes, originally planted as a protection from the sand dunes. These pines average about 10 inches in diameter. Maize was seen cultivated in the Basque Provinces, and to Bordeaux, the tops being cut off to favor the ripening of the ears, as in our South.

—The Oklahoma Board of Pharmacy held its regular quarterly session for the examination of candidates for registration at Kingfisher, on Oct. 9, all members of the Board being present. C. A. Dow presented Pharmacy; E. E. Howendobler, Chemistry; F. B. Lillie, Materia Medica. Thirty specimens were presented for identification, consisting of organic and inorganic drugs and official preparations. A class of twenty-seven took the examination. The following passed and received certificates of registration: Alexander, M. A., Okeene; Brown, R. W., Kingfisher; Bassett, Geo. R., Kingfisher; Jones, Roy D., El Reno; Jeffers, C. N., Yukon; Overstreet, Dr. J. A., Kingfisher; Pendleton, Geo. D., Vernon, Texas; Powell, Claude E., Stillwater; Renfro, Chas. R., Guthrie. The next meeting of the Board was set for Jan. 8th, at Guthrie. The secretary is receiving a great many letters asking in regard to the requirements of the Board, and for the benefit of those who desire to know he here gives the rules of the Board on the granting of certificates: The fee for examination is \$5.00. To those who fail a second opportunity will be given at the next meeting of the Board without extra cost. In order to pass the examination 75 per cent. of the questions must be answered correctly for a registered pharmacist, and 60 per cent. for assistant pharmacist. The Board does not grant registration except upon examination. Those who desire to go into business or to secure a position in the territory, can secure a temporary certificate from the secretary, provided they are registered and in good standing in some other State. This certificate is good, however, only until the first meeting of the Board after same is granted. The fee for same is \$2.50 and the application for examination must be filed and examination fee be paid before same is issued by the secretary. The branches covered by the examination are Pharmacy, Chemistry, Materia Medica and Pharmacognosy. The secretary will supply applications and any needed information upon request. Application should be filed at least ten days prior to date of meeting. F. B. Lillie, Secretary, Guthrie.

—The regular quarterly meeting of the Tennessee Board of Pharmacy was held at Nashville, October 16, 17 and 18. All members of the board were present except A. B. Rains, Columbia. A class of thirteen presented themselves for examination. The following received grades entitling them to certificates as registered pharmacists: C. A. Kelly, Clarksville; Wm. A. Halstan, Nashville. Edward A. Cooke attained the required grade, but not having the required four years' experience was granted certificate as assistant pharmacist. Certificates as as-

sistant pharmacist were granted to E. P. Berkshire, Nashville; Thos. D. Herrick, Nashville; Ralph D. Miller, Greenville; Henry B. McGill, Martin. The board has during the last quarter had analyses made of laudanum, tr. nux vomica and Fowler's solution obtained from retail druggists of Nashville. These examinations were not as a whole satisfactory, but good results are anticipated from the work done, as the druggists have been notified that they are expected to bring their deficient goods to the standard. The question of legislation for the restriction of the sale of cocaine was taken up and carefully considered by the board. Many of the cities have passed laws governing the sale of this drug, but the laws are not satisfactory as they only cover the corporate limits of the place. A full comprehensive State law is what is needed. The cocaine habit in this section is confined almost wholly to the negro race, possibly 90 per cent. of the cocaine sold is to that class. No drug is so demoralizing. These people are in our midst and from them we obtain a good portion of our help. It becomes us to preserve their integrity in this respect for their good as well as our own. Again, what is more debasing to our profession than the selling of this drug to these poor unfortunates. The board have instructed their attorney to draw up a bill restricting the sale of this drug, to be presented at the next Legislature. They will make every endeavor to have it passed. In this undertaking they will be heartily endorsed by the medical fraternity and every good citizen in the State. The next meeting of the Board will be at Nashville the third Tuesday in January, 1901.—Robert L. Eves, secretary.

—The Wisconsin State Board of Pharmacy held its regular meeting at Madison October 24. Secretary Heimstreet reported one case only in the courts since the last meeting. This case was at Oconto—no registered pharmacist in the store at any time. The druggist was fined \$50 and costs. C. H. Heck, of Racine, was given certificate No. 2248 from Illinois. Twenty-nine applicants were present at the examination. Of this number the following received their full grade or licentiate certificates: R. L. McDonald, De Pere; M. Becker, Winneconne; W. L. Kaiser, Sheboygan. Assistant certificates: G. W. Pradell, Wausau; Theo. Mueller, Milwaukee; A. M. Cope, Milwaukee; E. Haven, Neenah. The resolutions passed at the State meeting of druggists at Waupaca last month asking for a building at Madison for the Pharmacy School and the one prohibiting the hawking of medicines and appliances, were discussed and approved by the board. The next meeting of the board for examination of candidates will be held at the Pfister Hotel, Milwaukee, Wednesday and Thursday, December 5 and 6.

—The Board of Pharmacy for Missouri held a meeting in St. Louis on Monday, October 8, 1900. The following are the successful candidates: W. S. Barnickel, W. Bueneman, R. M. Crooks, C. O. Gill, R. F. Guedeman, J. R. Dennis, Spickard, Mo.; J. Hinds, Narborn, Mo.; W. W. Johnson, Douphand, Mo.; F. M. Nash, Clinton, Mo.; D. H. Palmer, Lewistown, Mo.; E. W. Rentfro, Rayville, Mo.; C. C. Reynolds, Springfield, Mo.; W. P. Smith, Troy, Mo.; J. B. Thurston, Versailles, Mo. Aug. F. Fleischman, secretary.

—At the regular quarterly meeting of the New Hampshire Commission of Pharmacy, held at the State House, Concord, on October 24, the following candidates passed the senior examination: Leon T. Foster, Keene, N. H.; Frank E. Bronson, Lisbon, N. H. For the junior examination the following were successful: Harry M. Porter, Ashland, N. H.; Robert W. Cushing, Manchester, N. H.; Joseph J. Feeney, Berlin, N. H.; Cleon D. Tufts, Manchester, N. H. The next meeting of the board will be held in the city of Manchester on Wednesday, January 23, 1901.—George F. Underhill, secretary.

—At the meeting of the Erie Co. (N. Y.) Board of Pharmacy held last month, the following licenses were granted: Assistant Pharmacist, George W. Lindner; Pharmacists, Walter Irwin Strong, Jesse Monroe Parker, Clifford Eugene Anthony, Howard Nelson Church, Herman Albert Dedo, Albert Foster Veeder. Next meeting of Board, Saturday, Nov. 3. Geo. Reimann, Secretary.

—At the meeting of the New York City Board of Pharmacy, held October 15, the successful candidates were: Max Auerbach, Bernard Berg, John J. Menzies, Jennie A. McCormick, Storrs H. Seeley, Bernard C. Stevenson, Harry T. Collins, Gustave Abrahamson, R. Edwin Blak-slee, David Feine, Jacob A. Feldberg, Martin A. Forster, Edward Hoenig, Frank Kircher, Louis Lasser, Viggo Lind, Oliver R. Maboe, Michael J. Madden, Morris Moses-son, Adelbert F. Siebertz, Alexander Silverman, Richard E. Walsh, William F. E. White, Albert E. Williams, Theodore Wrede. Twenty-five passed out of a class of fifty-six. Statistics: Passed at first examination, 4; at second, 11; at third, 4; at fourth, 3; at eighth, 2; at twelfth, 1; total, 25. Rejected at first examination, 13; at second, 8, at third, 5; at fourth, 2; at fifth, 1; at sixth, 1; at seventh, 1; total, 31. Nationality of applicants: United States, 26; Russia, 18; Germany, 4; Great Britain, 5; Austria, 2; Denmark, 1.

HARRY H. ROBINSON, one of the most prominent druggists of West Pennsylvania, died suddenly of paralysis at his home in Pittsburgh on October 13, aged 40 years. Mr. Robinson had for years been an active factor in State politics in Pennsylvania, and was prominently concerned in one of the most dramatic features of the famous combine fight in 1895. While always actively interested, Mr. Robinson never sought a salaried office. He is survived by a wife and daughter. His funeral was the largest ever known in Saltsburg.

G. KREVATSHY, a well known druggist at No. 4800 Ashland avenue, Chicago, died on Wednesday, October 17. The deceased was 49 years old, and had been in the drug business in Chicago eleven years. He leaves a wife and one daughter. The funeral took place on the Friday following his death.

An Advertising House Boat.

The Lightning Medicine Co., which was organized some time ago at Muscatine, Iowa, has been making rapid strides. The business has grown with great rapidity and it has been a race on the part of the management to keep up with it in office room. They have recently increased the capital stock of the company to \$50,000 and have moved into a new building arranged to meet their present requirements. One of their schemes for advertising their remedies is a peculiarly shaped boat built especially for a trip which will be made down the Mississippi from Muscatine to New Orleans. The boat is about 12 x 22 feet, is divided into store rooms, sleeping rooms, etc., and also has accommodations for a large amount of advertising matter and samples of Lightning Remedies which will be distributed along the route. The boat is manned by a crew of four Muscatine young men who will distribute the samples of Lightning Remedies from house to house in all cities between Muscatine and New Orleans. It is expected that not less than six months will be required to make the trip and that it will be one of the most profitable advertising schemes ever put into operation to advertise proprietary medicines.

The most up-to-date fountains serve Clam Bouillon, and those which are best acquainted with the proper methods for making and serving it use Burnham's Clam Bouillon. It is having a big run in all the fine establishments where hot drinks are sold. Burnham's Clam Bouillon is made by the E. S. Burnham Co., 53 Gansevoort street, New York. It has been on the market for several years, and has become staple in the hot soda fountain trade. Attractive fountain signs for it are mailed to druggists who are interested; all that is necessary to do is to write for them. In their advertisement in this issue they give full instructions for the proper way of serving it.

Chas. Lippincott & Co., 930 Arch street, Philadelphia, Pa., advertise on another page of this issue a large stock of second-hand and shop-worn soda water apparatus which they offer at very low prices in order to reduce stock. They include fountains of every make, style and system, but service and appearance are guaranteed. They will furnish an illustrated price list on application.

STATE OF TRADE.

General Conditions Satisfactory.

New York, Oct. 30.—Affairs incident to the approaching Presidential election have continued to receive considerable attention, but commercial matters have not been wholly neglected, and business in a jobbing way has continued of satisfactory volume, and values of nearly all leading commodities have had fairly steady support. Opium has remained inactive, but the market has gradually hardened under the influence of the unfavorable crop news from Turkey, and quotations from first hands have advanced fully 5c. per pound, with holders inclined to sell only small parcels. Cables report continued drought in the growing districts and consequent further damage to autumn sowings, with holders in primary markets quoting higher prices.

The quinine situation has not improved, so far as the volume of business is concerned, but interest is expected to revive shortly, as there is to be an auction sale of 4,000 kilos in Batavia to-morrow, and the regular monthly bark sale will take place in Amsterdam on Thursday. On the latter day the shipments of bark from Java for the month of October will be announced, and if the quantity should prove to be small, lively bidding may be expected at the Amsterdam sale. Meanwhile manufacturers' prices are firmly maintained on the old basis, and outside speculative holders have modified their views somewhat owing to lack of demand. Cocaine and caffeine continue firm under the influences heretofore noted, but former quotations are still current. Cream tartar and tartaric acid have undergone no further quotable change, and leading manufacturers report a fair volume of business at the recently reduced prices.

Among the essential oils, interest has been centered chiefly in peppermint, which has continued to harden steadily both here and in producing markets of the West. There is no longer any doubt that the yield this year will be considerably less than for several years past, and a rumor is current that one or two of the leading bottlers are short of stock. Consequently the market is stronger in tone, and quotations are fully 10c. per pound higher than they were a week ago. Wormwood also is firmer owing to reports from producing districts to the effect that the output this season will be much smaller than usual. Sassafras continues firm under light stocks, and natural wintergreen is held with a fair degree of steadiness.

Lack of demand has imparted an easier feeling among holders of cubeb berries, and quotations for both whole and powdered have been reduced 1c. per pound. Grains of paradise are in better supply and obtainable at lower figures. Prickly ash berries are scarce and higher. New crop juniper berries have begun to arrive and are moving freely into channels of consumption at full quoted prices. Arnica flowers of prime quality are in light supply, both here and abroad, and quotations show a fractional advance. Colchicum and coriander seeds are both firmer under a similar influence, and flaxseed is higher in sympathy with primary markets, where substantial advances have recently been established. All varieties of cantharides are higher, owing to steadily diminishing stocks, and only small lots are obtainable. Ergot has developed increased activity, and a decidedly firmer feeling is manifested on the part of holders, it having transpired that stocks in Europe have been reduced to a minimum. Senega root has moved upward in price both here and in the West, and the available spot supply is under close control. Brazil wax is dull, and lower quotations are named for all grades. In the heavy chemical line, continued unsettled markets are reported for yellow prussiate of potash and prussiate of soda.

Unusual Amount of Illness Affects Prescription Trade.

Boston, Oct. 27.—Records show that the death rate this week is higher than it was last week, and that there is considerable general illness in the community hereabout. Diphtheria is especially prevalent. Typhoid fever is also found, with far more cases than the Board of Health likes to see. These diseases and other forms of sickness have been instrumental in making some extra business for druggists in general. Prescriptions have been a natural consequence. Other than for these immediate causes, business has been fairly good.

Prices keep rather steady, sales for the most part being for absolute needs. Opium is somewhat firmer. Quinine is not specially active. No special feature in essential oils, balsams, beans and others on the list is found. Election plays some part in the present trade conditions and causes buyers to wait awhile. Prices for chemicals show little change, although business in them is pretty good, some dealers being well satisfied with present trade. Cream of tartar has shown a decline, other than which there are no marked changes. There is not much demand for dyewoods. Gambler is a bit higher. Indigo is fairly well sought. Cutch is slow and all in all there is not much life to these things. Grain alcohol keeps steady and is in good demand, wood alcohol moving less freely. Waxes show little change. Sales are fair at steady prices.

Brisk in Baltimore.

Baltimore, Oct. 29.—Reports from wholesalers show the city trade to have been very fair during the past week. Orders were numerous, and the aggregate of transactions ran up to large figures. The out-of-town business, however, did not assume marked proportions, and the various houses as a rule experienced no pronounced pressure from this direction. The manufacturers of pharmaceuticals are busy and large quantities of goods are being distributed. The market for botanicals continues on the rise with respect to different articles, among them heliopsis dioica, aletis farinosa, wormwood (American), sassafras bark of root, prickly ash berries and oil of birch and sassafras. In some directions a slight decline is being noted. The movement in heavy chemicals continues to be of normal dimensions, at satisfactory figures. The retail trade continues to be devoid of special features.

Western Trade Prosperous.

Chicago, Oct. 27.—The drug trade has been very busy this week. The demand from outside sources has been large, and the manufacturers and jobbers have been busy all the week filling orders. There is a free movement in holiday goods and in sundries, though the demand for the former is slackening up, owing to the lateness of the season. This year, even though a Presidential year, is one of good business in the West. Never before has an impending Presidential election seemed to cut so small a figure in the actual business situation. The result of the election is quite generally regarded as certain—the question is one of majorities. Business is good, and doubtless will remain so all winter.

Fairly Good in Philadelphia.

Philadelphia, Oct. 27.—Business has been fairly good during the week past; while not at all brisk, the average amount of sales is better than was expected for a time so near election day. A number of dealers have settled the Presidential problem to their satisfaction, and are going ahead placing orders in the firm conviction that President McKinley will be re-elected. The big wholesale houses are now hustling for orders for the holiday trade, but most reports indicate that people are holding off their purchases until after election.

In the retail trade a good week is reported, the present unsettled weather creating quite a demand for seasonable remedies. Prescription business is fairly good.

The settlement of the coal strike has been received with much rejoicing all around, and the next few weeks will show a decided improvement in the orders of firms who supply the coal regions.

A Little Complaint from Detroit.

Detroit, Oct. 27.—It would be hard to imagine more beautiful weather for October, but it does not seem to be the best kind for a good drug trade. Druggists are complaining a little, and asking merchants in other lines how it fares with them. They report that even the grocers say they are doing a light business, in spite of the fact that people are supposed to eat whether the weather is unseasonable or not. On the whole, the month has not gone behind the Octobers, but it is not expected to show a very flattering gain over them.

Brightening Prospects in the Northwest.

St. Paul and Minneapolis, Minn., Oct. 26.—There has been an unexpected brightening of prospects the past week so far as jobbers are concerned; not only a brightening of outlook, but an improvement in conditions. The most noticeable feature has been an increase in the number of out-of-town orders received. In addition the jobbing houses of these cities have added not a little to their territory, particularly in Iowa. But the retailers, if not in a cave of gloom, are lurking not far from the entrance thereto. Only one of those questioned reported a satisfactory state of trade since the Era's last report. The one exception was a druggist who said his prescription business has held up as well as ever, though his general trade had fallen off somewhat. Hardly anybody is satisfied with his collections. Linseed oil went up again yesterday, this time two cents, making the price for boiled 76 cents, the highest ever yet reached.

C. H. Evans & Sons, Hudson, N. Y., now provide their Ale and Stout in half pint bottles in addition to the regular full pint size. This innovation provides a small bottle for a short drink, with the guarantee that goes with the brewery bottling, and enables an invalid to enjoy a glass of ale or stout without involving any waste. These half pints ought to be quick sellers. There is good profit on them, and if any druggist will put them in stock and let his local trade know that they have them they will prove to be business winners. For particulars in regard to prices, etc., address the manufacturers directly.

MARKET REPORT.**NEW YORK MARKET.**

New York, Oct. 30.—The volume of business continues of satisfactory proportions, notwithstanding the excitement incident to the approaching Presidential election, and the general market retains a steady undertone.

OPIUM.—Although foreign markets are firm, the slow demand for consumption has influenced an easier feeling, and jobbers have reduced quotations to \$3.40@3.50 for 9 per cent., and \$3.50@3.60 for 11 per cent., as to quantity.

POWDERED OPIUM.—Small lots are moving fairly on consuming orders, and jobbing prices continue steady at \$4.50@4.65 for 13 per cent., and \$5.10@5.25 for 16 per cent., as to quantity, the outside figures for single pounds.

MORPHINE.—The market continues moderately active, and jobbing quotations remain nominally steady on the basis of \$2.40@2.60 for eighths, according to brand and quantity.

QUININE.—Only a moderate inquiry was reported, and the market has ruled quiet with values unchanged but steady on the basis of 44@45c. in ounces, as to brand.

ARNICA FLOWERS.—Prime grades are in light supply and firmer, with jobbers' quotations advanced to 20@25c. for whole, 25@28c. for ground and 30@33c. for powdered.

COLCHICUM SEED.—Values are slightly higher, owing to reduced stocks, and the revised jobbing quotations are 35@40c. for whole, 38@42c. for ground and 40@45c. for powdered.

FLAXSEED.—Primary markets are decidedly stronger, and jobbers have advanced quotations to \$7.75 per barrel and 5@6c. per lb. for less. Ground, 4 1/4@4 1/2c. by the barrel and 5 1/4@7c. for smaller quantities.

OIL PEPPERMINT.—Values are again higher, and jobbing quotations show a further advance to \$1.60@1.80 for Wayne County, \$1.35@1.60 for Western, \$1.60@1.75 for H. G. H. and \$1.70@1.85 for redistilled.

CORIANDER SEED.—Bleached is in reduced supply, and jobbers have advanced quotations to 8@11c. for whole, 11@13c. for ground and 15@17c. for powdered.

CANTHARIDES.—Quotations for the better grades have been further advanced to 75@85c. for whole and 80@90c. for powdered.

ERGOT.—Market stronger in sympathy with corresponding conditions abroad and jobbers have advanced their prices to 70@80c. for whole and 80@90c. for powdered.

SENEGA ROOT.—Primary markets are higher and quotations for jobbing quantities show an advance to 55@65c. for whole and 60@70c. for powdered.

CHRYSOGRAPHIC ACID.—Manufacturers' prices have been advanced and the revised jobbing range is \$2.60@2.75 per lb. and 27@32c. per oz. according to quantity.

SODIUM PHOSPHATE.—Quotations have been reduced to 7@10c. for crystals and 9@10c. for granular. The latter in 5-lb. boxes, 10@12c., and in 1-lb. cartons 12@14c.

SANTONIN.—Jobbers have further advanced their quotations to \$4.25@4.50 per lb. and 33@36c. per oz.

ALMONDS.—Light crops have stimulated a firmer feeling among holders and quotations for jobbing quantities have been marked up to 40@45c. for sweet and 41@45c. for bitter.

CHLORIDE OF LIME.—A firmer feeling has developed and jobbing quotations have been advanced to 2 1/4@3c. by the drum and 5@7c. for less.

POTASSIUM CYANIDE.—Easier in sympathy with raw material and the reduced quotations are 25@30c. for 30 per cent., 35@40c. for No. 1, and 40@45c. for C. P.

OIL CEDAR.—Pure has been marked up to 80@90c. and ordinary to 70@80c., as to quantity.

DRAGON'S BLOOD.—Powdered is firmer with an advance to \$1.50@1.65 for small parcels.

ERGOTINE.—Stronger in sympathy with ergot and jobbers are holding at \$4.50@4.75 per lb. and 37@40c. per ounce.

CALCIUM LACTOPHOSPHATE.—Jobbers have reduced quotations to \$1.25@1.40 for powdered and \$1.65@1.80 for soluble crystals.

PAPAIN.—Market easier with sellers in a jobbing way at \$1@1.25, as to quantity.

LINSEED OIL.—Under the influences noted last week prices have been further advanced to 75@79c. for raw by the barrel and 88@95c. for less, 80@81c. for boiled by the barrel and 90 1/2@1 for less.

A New Tooth Powder Top.

We illustrate on another page in this issue a fine detachable metal tooth powder top which has just been patented by the Saltsburg Bottle Works Co., Pittsburg, Pa. It is one of the best and most economical devices yet offered to the trade. It is easily closed by simply pushing down and opened by pulling up. Its use will absolutely prevent waste and all spilling of powder, except upon the brush, and will increase the sales of any tooth powder. Druggists who put up their own tooth powder and are interested in such a device should write for sample and prices.

THE ERA COURSE IN PHARMACY.

Students whose applications are received after Novem-
ber 1 are put in the November class.

NEXT CLASS BEGINS NOVEMBER 10.

Students who matriculate for the November class will
receive the lectures on General Chemistry contained in
Part I. Students who began the work in the October
class will receive on November 10 Part II. of the lectures,
or that part of the work known as "Pharmaceutical
Processes Involving Masses and Volumes."

TOTAL EXPENSES FOR THE FULL COURSE, \$10.00.

If you are interested in this work, you should send
in your order at once. For fuller particulars, see an-
nouncement facing third cover.

Write for new descriptive Prospectus. Address

THE PHARMACEUTICAL ERA,

396 Broadway, New York.

MATRICULATE FOR THE NOVEMBER CLASS.

The October class in the Era Course in Phar-
macy is now a full month on its way and no
more matriculates can be accepted for this
class. The November class, however, is now
forming and matriculates can be received up to
the last day of the month. It is important that
students enroll as promptly as possible. The
first lectures to the November class will be
mailed on the 10th, and if students do not ma-
triculate until subsequent to that date, of course
they lose several days which might have been
devoted to the work. We want to have as large
a November class as is that which started in
October. We shall be pleased to send to any one
interested a copy of the prospectus of the course
fully describing it, its extent, cost, manner of
conducting it, and also specimen pages of lec-
tures and list of books which the student may
at his option secure.

The October class will now receive Part II.
of the lectures, consisting of that portion of
general pharmacy devoted to a discussion of
pharmaceutical processes involving masses and
volumes. Part I., to be sent to November ma-
triculates, discusses general and analytical chem-
istry.

Matriculate now, for, in regard to the Era
Course in Pharmacy in particular, procrastina-
tion is the thief of time.

OPPOSED TO PATENTED ARTICLES IN THE U. S. P.

At a special meeting of the Massachusetts
State Pharmaceutical Association held recently,
the following resolution was adopted:

Resolved, That the Massachusetts State Pharmaceu-
tical Association go on record as protesting against the
admission into the Pharmacopoeia of the United States of
1900 of all articles that are patented or with trade marks,
believing that it is detrimental to the profession of phar-
macy to make official any product which the pharmacist
has not the right to manufacture.

We do not know whether this action will or
can have any effect upon the Revision Com-
mittee, which must be governed by the formal
rules adopted at the decennial convention held
in Washington last May. But, be this as it may,
the Massachusetts association has certainly
voiced in a very clear and emphatic manner the
real desire of the majority of the retail drug
trade. We do not know that the argument
against the admission of patented articles could
be made any stronger than as set forth in this
resolution, which to our mind amply covers all
phases of the case in question. In brief, the re-
tail druggist believes the Pharmacopoeia should
contain no preparation which he is debarred

from manufacturing himself *secundum artem*. Of course, attached to the discussion of this very important matter and closely connected too, is the consideration of the character and force of the United States patent and trade mark laws. If we could secure a revision of these laws whereby patents on products themselves would be no longer issued, the muddle would be very largely cleared up. Very many of these patented preparations objected to are by no means secret articles, but are substances of known and uniform composition, definite chemicals, and through their real virtue have won a place in the regard of the medical fraternity as medicaments of high value. It makes no difference what the drug trade may say or resolve, the physicians will employ these articles, and the question is whether it be better to hedge them about with all the restrictions possible under the circumstances (meaning inclusion in the Pharmacopoeia) or by denying them official recognition place them beyond the pale of legitimacy. The whole trouble is that our United States laws are at fault. This problem would not have arisen were product patents not in existence.

We are in thorough sympathy with the position assumed by our Massachusetts friends, but what will be the result thereof, so far as the action of the U. S. P. Revision Committee is concerned—that is another question.

THE NEXT N. W. D. A. MEETING.

The editorial from the Canadian Pharmaceutical Journal republished in the Era of October 25, which referred to the invitation extended to and accepted by the N. W. D. A. to hold its next annual meeting in Montreal, has caused quite a little commotion in the trade. The position assumed by our Canadian contemporary is very adversely commented upon and its accuracy denied by some of the parties in interest. For instance, the secretary of the Proprietary Association of America, Mr. Joseph Leeming, of this city, states that the invitation to the N. W. D. A. came through a member of the Canadian branch of the firm with which he is connected and that the invitation was in all due and proper form and presented with full authority. The Canadian delegate, Mr. Miles, is first vice-president of the Montreal Board of Trade, which gave him authority to extend the invitation. He is also one of the vice-presidents of the Proprietary Articles Trade Association of Canada, from which body he brought credentials also. Some have stated that the position of the Canadian Pharmaceutical Journal was due to the fact that Mr. Miles conducts an opposition drug paper, and that the whole matter is merely one of personal rivalry.

It is just as well, however, to have it brought up at this time for discussion. Members of the wholesale trade in this city quite generally look with favor upon Montreal as a meeting place, and it makes little difference to them whether they receive a formal invitation or not. As one prominent wholesaler said: "We go where the majority at the convention think we want to go.

We are assessed for the entertainment furnished wherever we go, and as we pay this without calling for outside assistance, we have a right to go to any city we choose. Still, if it should develop that the Montreal proposition is not favored, the Board of Control has it within its power to change the meeting place at its discretion."

And so endeth this lesson. The matter is worth no more talk.

THE SITUATION IN DETROIT.

A valued friend, a prominent retail druggist in Detroit, writes us a letter from which we extract the following:

I wish to call your attention to the inconsistency in the two articles on the Detroit situation, as they appear in your issue of October 25 on pages 445 and 466.

The article on page 466 is substantially correct so far as conditions exist. I cannot see how it could have inspired the editorial on page 445, or in the event of its not having inspired it, why two such directly opposite reports should appear in one issue.

Your editorial, should it happen to come to the notice of the party referred to (while not by name, so plainly that there can be no mistake in the inference), can have only one tendency, and that is to arouse an old feud which every effort is being made by the local druggists to wipe out.

There has been no plan adopted here to fight the cutters. Personally I have been for and anxious to have the N. A. R. D. plan tried and have held considerable confidence in its success, if carefully carried out, but the majority of our local druggists have favored the conciliatory plan, and your Detroit notes state the situation in this wise, with further comment that in all probability the conciliatory plan will be carried out in Detroit.

We had a meeting of the Detroit and Wayne County Retail Druggists' Association yesterday, at which time the report of the special committee referred to in your issue (page 466) was made and adopted.

I am enclosing price schedule and letter sent our local druggists to-day, which will explain our position. You will see there are no signs of "fight." I feel that you have done the local druggists an injustice in your last issue, and only hope that no harm comes to us from same. I should suggest that there is opportunity for explanation in your next issue.

We are very glad indeed to make an explanation, if such is needed. We confess, however, that we see no inconsistency or contradiction between the two articles to which our correspondent refers. The editorial was written, in type and printed some days before the news report was received. It accurately represented the conditions of affairs at that time, as reported to us from different sources in Detroit. The news story was a later development, and it will be seen that while the majority of members of the local association's executive committee favored an aggressive policy, one of fight, the minority, who desired conciliatory measures, succeeded in gaining their point to the extent of carrying the question along for farther consideration. On October 29 the local association had another meeting and adopted the plan of the minority of the committee, and accepted a price schedule, to go into effect November 1, which all of the druggists in the city are expected and, if we are not mistaken, have agreed to observe. Bearing in mind, therefore, that the editorial was written some days before the latter action reported was taken, it will be seen that it was only one portion of a continued story. It was at first proposed to fight the cutter, later to conciliate him, and finally, the third stage, the conciliatory method is adopted. Looking at the affair in this light, and under the circumstances as explained, we can detect no inconsistency or contradiction.

We congratulate the Detroit retail trade on having effected this amicable settlement of the difficulty. That city has suffered long enough from the evils of cutting practices and we believe even the most aggressive have become heartily sick of doing business at little or no profit, to say nothing of the retail trade at large, which has suffered so severely from the warfare. While the prices on the new schedule are not so greatly advanced as most would wish, they still afford a little more profit than heretofore, place all dealers on the same level, and are at least a starting point for better and more remunerative business in the future.

PRACTICAL EXAMINATIONS BY THE BOARD.

Although the new Board of Pharmacy for the entire State of New York has not yet come into legal existence, there have been some informal meetings of the newly-elected members of the board to talk over matters and do a little preliminary work. Rules of procedure have been roughly mapped out and general principles laid down and discussed. Among the more important actions decided upon is the decision that the new board will make provisions for the examination of candidates in practical dispensing

pharmacy. It is proposed to secure quarters where it will be possible to place before the applicant for registration all the apparatus, appliances and materials necessary for a practical demonstration of his capabilities as a compounder. In carrying out this idea numerous very considerable difficulties will of necessity be encountered. It is one thing to say we will give a practical examination and an altogether different thing to do it. It requires the fitting up of a laboratory and abundantly equipping it, and the selection of a permanent meeting place. Such a laboratory as is necessary cannot be transported from place to place, but must be in a permanent location. This is only one of the difficulties which the board will have to adjust. Just what is a fair and appropriate practical examination is a vexatiously difficult problem, and there are others which will make the board members do a whole lot of thinking. But the principle, that of testing the candidate's true facility as a dispensing pharmacist, is an eminently proper one and the decision of the board to establish such an examination will be very generally commended. There are some State boards now which have for years conducted such a practical examination, and there is no reason why in this great State it cannot be similarly carried out with success.

Petition to the Congress of the United States.

We, members of the drug trade of the United States in its several branches, retail druggists, wholesalers and jobbers, and manufacturers of proprietary preparations, herewith respectfully petition the Honorable Congress of the United States to repeal the special tax imposed under Schedule B, Section 25, and its dependent sections of the War Revenue Act of 1898, now in force, so far as such tax is laid upon medicinal preparations.

We seek this repeal for the following reasons:—

- 1.—This tax on medicines is class legislation, unjust and unduly burdensome.
- 2.—The tax is unequally distributed, being placed upon medicinal preparations which are necessities, and at the same time allowing to escape taxation a large number of articles which are as truly proprietary and which enjoy special protection under the copyright and trade mark laws.
- 3.—The revenue created by the enforcement of the law is no longer necessary, and the amount collected under this Schedule B is but a small proportion of the total revenue derived.
- 4.—The drug trade is already heavily taxed. Alcohol, which enters so largely into the manufacture of the preparations sold by us, is already taxed about 1,000 per cent., and the imposition of further taxation, as provided by this act, makes its operation oppressive.
- 5.—The intent of the law was to tax proprietary medicines only, but owing to its peculiar phraseology and the construction placed upon it by the officials, it does not reach nor apply to a large class of medicinal chemicals protected by trade mark, while on the other hand, it applies to nearly all drugs and medicines which are a necessity to the sick.

We ask relief, believing that the honorable members of Congress will realize the justice of our claims by repealing these unjust and burdensome provisions of the War Revenue Act.

NAME.

ADDRESS.

THE STAMP TAX AGITATION.

We print in this issue the names of a very few, comparatively, of the large number of firms and individuals in the several branches of the drug trade who have signed the petition for the removal of the stamp tax, and who not only have individually written their names, but have taken

enough interest in the matter to go out and canvass for signatures. Many hundreds of these signatures have been forwarded and they are coming in by scores and hundreds in every mail. Succeeding issues of this paper will present more of them, though it will of course be impossible to print more than a small minority thereof.

We have made a rough classification of these signatures into manufacturers, wholesalers and retailers. It will be seen also how wide is the geographical distribution. There is very evident a strong desire on the part of the drug trade to secure the removal of this stamp tax, and all agree that it is burdensome, unjust and unnecessary; three reasons than which none could be better for its abolition. The only point of difference is that brought out by our retail friends when they inquire whether, should the tax be removed, the manufacturers of proprietary preparations, who increased their price because of the tax, will see fit to reduce their figures to the previous level. Of course the manufacturing interests are a unit in their desire to secure the removal of the tax. The retailers are divided, but would be a unit also could they be assured of any resulting benefit to them in the matter of prices, etc. This, surely, is a matter of much moment which concerns the relations between the manufacturers and the retailers, and one which must be left to them to adjudicate satisfactorily.

One thing is certain; if the tax be removed, the drug trade in all its branches cannot be in any worse position than at present, while the pros-

pects are that it would be materially benefited.

Besides the names of signers taken wholly at random we print a number of letters from retailers, jobbers and proprietors. In these communications numerous points of interest are brought forth which certainly call for farther discussion and elucidation. We want to hear from every one in the trade who has any opinion and desire in this matter. We shall be pleased to supply copies of the blank petition to any one who will take the trouble to send us a postal card request. We have received full reports from many towns and cities, from individuals who have gone to the trouble of making a personal canvass to secure signatures. If there is any weight in numbers, the monster petition which the drug trade is preparing in this way for presentation to Congress ought certainly to exert a force which our representatives at Washington cannot afford to belittle or disregard. Now that the election is over and we know whom to address on this matter, it should be the personal duty of every member of the trade to urge his Congressman to do all in his power to secure the removal of this stamp tax. Here is a case where "influence" can be appropriately exerted.

A FEW SIGNATURES.

WHOLESALE DRUGGISTS.

NEW YORK.—Lehr & Fink, Henry Klein & Co., R. W. Robinson & Son, Bruen, Ritchey & Co., Patterson & Purdy, Scheffelin & Co., McKesson & Robbins, Orlando H. Jadin, Tarrant & Co.

WHAT THE TRADE THINKS.

In my opinion the latest number of the Era to hand, that of the 18th inst., is the best one ever published. There is more business in it than in any number I have ever read.

It is not my purpose to discuss any particular subject under consideration in the Era of the 18th, but I think that we ought to get together as druggists of these United States, without regard to past party affiliations and laying aside our political prejudices as to race, color or previous condition of servitude (I served five years as apprentice to learn the drug trade, as per indentures, signed, sealed, delivered and stamped) and by button-holing and wire-pulling simply and naturally compel our representatives and senators in Congress assembled to repeal the Stamp Tax. Your petition will help, but we must go further and that at once.

Now, sirs, "I want t' know," as the Yankees of Massachusetts say, if you are in favor of the whole hog in regard to the repeal of the Stamp Tax, that is, are you in favor of the retailers making a demand on the manufacturers to put prices back to what they were before the Spanish War and enforcing that demand?

To give a couple of cases in point: There is Captain Ayer who charges us a dollar a dozen more for his sarsaparilla than he did two years and a half ago, while at the same time he pays out as per requirement of the Stamp Tax law only thirty cents per dozen more; and there is also Judge Hood, who "propriets," to use an Artemus Ward expression, Hood's Sarsaparilla, he also puts by a little more out of the wholesale price than he used to "befoh de wah," if he does not it is not our fault, for he certainly gets seventy-five cents per dozen more for his production than he used to and the stamps cost him thirty cents per dozen only in dozen lots.

The remarks "For applicants for State Board Examinations" are right to the point, especially that particular question as to how paregoric is made, and the answer that the applicant "always consults the Dispensatory when in doubt," is one that we hear bobbing up serenely and ubiquitously.

I would be willing to wager, Mr. Era, that if you were to mail the question, "Which is the authority for official preparations, the U. S. Pharmacopoeia or the U. S. Dispensatory?" to every druggist in business in these United States, one-half the replies would read, "the U. S. Dispensatory." The Pharmacopoeia should be used more generally than it is and every druggist should be trained so as to require no medium between him and his authority.

The contribution, "What Kind of a Library should a Pharmacist Seek to Possess?" is very good and applies with force to the supposed paregoric question, especially if the pharmacist has any apprentices who are being instructed by him with a view to their ultimate registration, either with or without a course in any school or college of pharmacy, who should be trained to consult various authorities when in doubt.

J. M. STANSFIELD.

Braidentown, Fla.

Your request for opinions on the repeal of the Stamp Tax deserves a reply, hence I would say I believe this to be unjust taxation. First, because it singles out one class of proprietary goods, perhaps owing to the fact of the over modesty and apathy of the drug trade, especially the retail trade, for as is well known there are too many of us who are always ready to criticise what others are doing or have done in obtaining legislation, etc., but very few who are ready to give either time or thought to such matters. Secondly, it should be repealed because there is no longer any necessity for it, as the Government has more than enough to pay for the results of the late war without it.

However, if repealed through the efforts of the retailer it looks about as though it might be a repetition of the chestnut and cat fable, for what assurance have we that the manufacturers of proprietaries, who were so prompt to charge us two and even six cents for a 25 cent stamp, will return to ante-bellum prices?

It is true the N. A. R. D. assures us that the manufacturers are now willing to come to proper terms with the retailer, but even that seems to mean only so long as the manufacturer and jobber get the "chestnuts;" for I recall being one of the organizers of the N. A. R. D. at St. Louis and that a resolution was passed at that meeting fixing the price not to exceed \$2 per dozen for 25 cent, \$4 per dozen for 50 cent, and \$8 per dozen for \$1 articles, which was reaffirmed at Cincinnati about a year later, and about six weeks after the chairman of the Executive Committee (who in the mean time had seen the gold of the N. W. D. A.) made an agreement with the Ayer Co. whereby they charge \$2.00 per dozen for a 25 cent article and only very few who had raised their prices higher than the scale decided upon at St. Louis have reduced them up to the present time. Hence it seems the N. A. R. D. has been captured by the N. W. D. A. and P. A. again through the apathy of the retailer. And while encouraging the retailer to work for the repeal of the Stamp Tax, can you not at the same time give him a good dose of anti-apathetic serum of some kind that will cause him to wake up and truly look after his own interests by either constituting himself a committee to organize the trade in his locality or joining and working with such organizations as already exist?

Hoping to receive a blank petition from you and wishing you success, I remain,

Sincerely,

LOUIS SCHULZE.

Baltimore, Md.

We herewith enclose petition filled out. We are heartily in sympathy with the movement, and shall make it a point to interview our member of Congress and urge upon him the importance of helping us to repeal this unjust tax. Thanking you in the name of the drug trade for your interest in this matter, we are,

THE BROWN MEDICINE CO.,

A. N. DANIELS, Secretary.

Eric, Pa.

We hope some steps may be taken to induce the manufacturers to sign a petition to Congress in which they will agree to return to old prices. Why should any retail druggist want the tax removed when he continues to pay the advance price to the manufacturer? Your petition says the "drug trade" is already heavily taxed, and that this tax makes it burdensome. This is true, but will the repeal of the Stamp Duty relieve any one of the 40,000 retail druggists? I see that Mr. Willet, of Augusta, Ga., has the same idea of the matter that we have. Those who are taking an interest in it and sending in signed petitions are manufacturers. In the name of humanity and for the love of justice let the Era bend its efforts to the relief of the class that is really suffering from this taxation, thousands of whom make only a bare living out of their business.

W. S. JOHNSON & SON.

Henderson, Ky.

We hand you herewith petition to Congress, signed by Messrs. Langley, Michael's & Co. and ourselves. We intended making an exhaustive canvass for signatures, but have been forestalled by our friends, Messrs. Mack & Co., who have their canvasser now at work securing signatures of every druggist in this city. Deeply appreciating your efforts in this important and just measure, and hoping that success will crown your efforts, placing the proprietary medicine concerns of the United States under lasting obligation to you, we remain, sincerely yours,

THE CALIFORNIA PHARMACAL CO.,

By F. A. HABER, President.

San Francisco, Cal.

In your issue of The Era for October 25th we note that you are circulating among the druggists of this country a petition favoring the abolition of the Stamp Tax Act. As we are in favor of any well considered plan looking to the accomplishment of that desirable end, if you will send us copies of that petition, we shall be pleased to distribute them among our traveling salesmen and enlist their services in securing signatures.

HANCE BROS. & WHITE.

Philadelphia, Pa.

You certainly have our co-operation in your effort to repeal these laws, and you can rest assured we will render you any assistance possible in the matter. We attach our signature as requested. With best wishes,

Dallas, Tex. **PATTON-WORSHAM DRUG CO.,**

Per W. J. WORSHAM, V. P. and Manager.

We have signed the petition you sent; also have got all of the druggists in town to do likewise, and return the petition to you. Trust you will have success in this undertaking.

THE NORWICH PHARMACAL CO.,

Per O. G. BELL.

Norwich, N. Y.

We have been noticing the efforts that you have been making to get the obnoxious war tax taken off the patent medicines, and if we can aid you in any way in bringing this about, you can count on our co-operation.

J. & C. MAGUIRE MEDICAL CO.

St. Louis, Mo.

Herewith petition received from you a few days since with reference to repealing War Tax on proprietary medicines. If this petition had been longer and we had had time, we would have obtained more names.

THE DR. S. A. RICHMOND NERVINE CO.,

St. Joseph, Mo.

JOHN F. IMEL, Gen. Mgr.

We take pleasure in returning to you herewith petition, which we have signed. Anything further we can do for you in this connection, kindly advise.

Denver, Colo.

W. A. HOVER & CO.

I wrote the chairman of the Ways and Means Committee; also our members of Congress. Got a favorable reply from all.

DR. JOHN LEESON.

Cadillac, Mich.

I take great pleasure in handing you enclosed signed petition to Congress in favor of the repeal of the war tax. It bears the names of the best drug and proprietary people in the lower part of the city.

H. B. HARDING.

New York.

We enclose you herewith signed petition to Congress, as per your request. We sincerely hope you will be successful in your efforts in having the stamp tax on medicines removed.

THE S. B. MEDICINE CO.

South Bend, Ind.

Alcohol, etc., is taxed extremely. Most manufacturers of medicine use it, and they pay the tax on it, and afterward on their preparations—two taxes on alcohol.

A. J. KALB.

Quincy, Ill.

Enclosed please find petition signed by the druggists of Knoxville.

CHAPMAN, WHITE, LYONS CO.

Knoxville, Tenn.

THESE WANT PETITIONS.

Please send me a number of petitions to Congress to repeal the tax on proprietary medicines. I believe we can do some good in Philadelphia, as you have said. It will be a splendid opportunity to have an expression from the candidates for Congress.

Philadelphia, Pa.

JAMES C. PERRY.

Please send me copy petition to the Congress of the United States to repeal unjust War Revenue Act and you will much oblige. I have always thought this an unjust tax.

Bellefonte, Pa.

C. M. PARRISH.

We have but two drug stores in our town, but if you will send me copy of petition to Congress on War Tax repeal I will sign it and get the other druggist's signature as well.

Oxford, Pa.

CLEM B. McCULLOUGH.

Please send us one dozen petitions to Congress regarding special tax schedule B. I want to send them to the different druggists in this county.

Graham, N. C.

J. C. SIMMONS.

Your effort to secure the repeal of the Stamp Act has my approval. If you will send blank will sign and endeavor to have others do so.

D.W. HUTCHINSON.

East Downingtown, Pa.

Send petition for my signature to present to next Congress to repeal Stamp Act, which is a burden to the drug trade.

J. P. ROTHERMEL.

Lewistown, Pa.

Please send me a petition for Congress of the United States. I think this attempt is O. K.

C. G. SPENCE.

McKees Rocks, Pa.

Please send me copy of petition to Congress relating to repeal of Stamp Tax.

Ashbourne, Pa.

M. M. OSBORNE.

Please send us the petition to remove Stamp Tax as published in your Era of 25th. We will sign and return.

Clarksville, Tenn.

FLETCHER & ELLIS.

Please send blank for petition to Congress to repeal the Stamp Tax.

U. M. FRIEDMANN.

Brooklyn, N. Y.

Please mail half dozen petitions for repeal of Stamp Tax.

Northumberland, Pa.

S. M. G. WENCK & SON.

(Specially Prepared for the Era).

THE EARLY DAYS OF PHARMACY.

(Continued from page 116, Aug. 2.)

THIRD PAPER.

THE FIRST FRENCH APOTHECARIES.

The science of Cordova and Salerno found its way to Montpellier as early as the seventh century. It is claimed that at this epoch some kind of a medical school was established in this city, one of the busiest in Southern France at that period. Here the merchants of Lombardy and Sicily, Spain, Morocco, Tunis, Egypt met to transact business with the French, Anglo-Saxons, etc. Doubtless drugs and spices were among the wares thus exchanged and the Moorish civilization of Spain thus worked its way northward.

As invasion and persecution drove the Arabs and Jews from Spain and other parts, many took refuge in

The Most Ancient English Prescription in Existence.

But, prescription or laws of health, its antiquity renders it worthy of quotation:

"**This** is good for to smelle to for ye brayn: Camomyll, violet flowris, reed rose flowris. These ben good for ye brayn also: To drynke wyyn mesurably hot to yool wyyn. To eat sauge (sage) namely ye poudre (the powder). To eat notmegis (nutmegs?) actuable. To kebe youre heed ofte. To waissche youre hondis and feet ofte asesurably wakyng, asesurably slepige. To heere mesurably likyng noise, as mynstalse (minstrelsy) or song. To eate ofte mustard. To ete ofte amanger pep. to ete letuaries (lettucaries?) made of rede rosis" (red roses).

A FOURTEENTH CENTURY PHARMACY.

(From Guy de Chauliac).

Languedoc, and the city of Montpellier continued to be an important centre for doctors and pharmacists. When the Popes formally founded the University in the Thirteenth century medicine formed almost the exclusive study.

In the British Museum (Sloane MS. No. 100) one may still read the medical advice "written from Montpelers to Quene Isabel of Yngland, at ye preler (prayer) of ye Kyng of Fraunce."

Isabel, wife of King Edward II. of England (1307-1327) was sister of the King of France, and were these directions of a more particular and less general nature, we might claim for this quaint old document the title of

MONTPELLIER SCHOOL OF PHARMACY.

The Quadrangle.

This lengthy and curious treatment may or may not have improved Isabel's brain power, but in any case she had sufficient intelligence to avoid, if not actually to plot, her wretched husband's doom. But to return to

Montpellier and Its University.

We learn from the city statutes that pharmacies were inspected as early as 1340. The "Grande Chirurgie" of Guy de Chauliac, master surgeon at the University, which was published in 1362, contains some 750 medications, mostly drawn from Galen, Serapion and Avicenna. It is from a miniature in this ancient work that our artist has reproduced the costumes and attributes of the French doctor and apothecary of the Fourteenth century shown in the illustration which heads this article.

In 1496 Charles VIII. decreed the yearly inspection of pharmacies by the chancellor and procurator of the University of Medicine and the "Bayle" or chief of the Corporation of Apothecaries. There were about 1,000 students at Montpellier in those days, from Languedoc, Burgundy, Spain, Italy, Flanders, Germany and the Rhineland. Rabelais studied at the School of Medicine, a building which stood on the site now occupied by the Montpellier Superior School of Pharmacy. In 1572 a College of Pharmacy was established and the apothecaries separated from the grocers, and in 1593 the first

MUSEE. N. 21.

THE OATH ON THE GOSPELS.

Royal Jardin des Plantes was founded at Montpellier. This ancient botanical garden still exists, and (though the instruction in botany and pharmacy at Montpellier now-a-days is quite up-to-date) one's thoughts run back to the days of monastic study as one paces its quiet paths or as one strolls up the steep narrow pebble-paved streets to the School of Pharmacy and enters the quiet cloistered quadrangle. Rabelais, Renoulet and Rondelet, the Catelans and de Candolle, Balard, the Plancheons—how many famous names cluster around this ancient site.

But to proceed.

The Apothecary-Grocers

came into existence some eight or nine centuries ago, at any rate in the South of France, for the statutes of Arles, which date from 1150, contain an article to the effect that these "speciadores," as they were called, should prepare prescriptions in accordance with the Antidotary.

The Apothecary's Oath.

taken in Languedoc in the Thirteenth century, has also been preserved; it is conjectured by some to have been based on certain writings of Hippocrates. The more elaborate form of oath, quoted by Brice Bauderon and other writers, is perhaps of somewhat later date, but is sufficiently curious to quote at full length. This was the formula sworn to by the pharmacist of the Middle Ages when, after passing his examination, he was received formally into the corporation as a "Christian and God-fearing Master of Apothecary." It is evidently drawn up by the Faculty of Medicine of the epoch.

I swear and promise before God, Author and Creator of all things, essentially One and distinguished in three eternally blessed Persons, that I will observe exactly all the following articles:

And first, I swear and promise to live and die in the Christian faith.

Item: To love and honor my parents as much as possible.

Item: To honor, respect and serve, as far as possible, not only the doctors who have instructed me in the knowledge of the precepts of Pharmacy, but also the preceptors and Master Pharmacists under whom I have learnt my calling.

Item: Not to slander any of my former doctors, master pharmacists, or any others whatever.

Item: To do all I can for the honor, glory, ornament and majesty of medicine.

Item: Not to teach its secrets and rareties to idiots and ingrates.

Item: To do nothing rashly without consulting a doctor, or merely in hopes of gain.

Item: To give no medicament or purgative to invalids afflicted with a malady without first taking counsel of some learned doctor.

Item: Not to touch the shameful and forbidden parts of women except by great necessity; i. e., when it is necessary to apply remedies thereupon.

Item: To reveal to no one the secrets confided to me.

Item: Never to give any person any kind of poison to drink, and never to advise any one to give it, even to his greatest enemies.

Item: Never to administer any abortive potion.

Item: Never to try to perform midwifery in any fashion, except by doctor's instructions.

Item: To execute exactly the prescriptions of doctors, neither adding nor diminishing, so long as they are drawn up according to the rules of the art.

Item: Never to use any substitute without the advice of some one wiser than myself.

Item: To disavow and avoid like the plague itself the scandalous and totally pernicious style of practice used by charlatans, empirics and alchemic bellows-blowers to the great shame of the magistrates who tolerate them.

Item: To give aid and assistance indifferently to all who employ me, and finally to keep no stale or bad drug in my shop.

And may God bless me always so long as I observe these promises.

Thirteenth Century Drugs.

Jean de Garlande, who lived about 1250, tells us that in his time the apothecaries sold "confectiones," electuaries, "radices cum herbis," ginger, pepper, cummin, cloves, cinnamon, aniseed, fennel, wax, candles, sugar and liquorice. In the very earliest days of pharmacy in France the grocers' and even the chandlers' business was intimately linked with the drug trade. In this connection we may quote the

First Historical Allusion to Apothecaries at Paris,

which is to be found in the "Livre de Métiers" of Etienne Boileau Prevot (Mayor) of Paris, who was charged by Louis IX. to reorganize the city guilds about 1268. It runs as follows:

"Wax dealers, Pepperers and Apothecaries owe no tax or duty on the articles named if they sell at the King's Balance." And further on we read that "these are the Free Guilds of the city of Paris, and owe not the King's Watch (police duty); also the estaveurs, all apothecaries, vendors of bowls and platters, etc." And as late as 1484 the the Grocer - Apothecaries' Corporation of Paris appears to have included four classes — the "druggists," the "apothecaries," the "wax dealers" and the "confectioners." For sugar and sweetmeats were also an important item of the apothecary-grocers' stock.

The Charlatan (By Gerard Pow).

The First French Apothecary

whose name is on record appears to have been Guillaume Testart, who supplied (in 1400) "sugar, aniseed, coriander and apothecaries" (presumably medicaments) to the children of King Charles VI. of France and his queen, Isabel of Bavaria. Did they have too much candy and too little "apothecaries" or was it the other way about? History is silent on this subject, but they all died young except one lad, who was crowned—thanks to Joan of Arc—King of France at Rheims in later years.

Nor did our French forefathers despise the profits of veterinary medicine. Guion Moreau, "apothecary of the king," in 1480, sends in a bill for drugs and medicines, also ointments, plasters and powders for "sick and wounded dogs." The apothecaries were, however, something more than mere traders, even in the earliest ages, for we find them called in as experts in cases of actual or suspected poisoning. Thus, in 1375, when Blanche of Navarre, sister of Charles V. of France, died at Evreux, an apothecary in that Norman town known as Simon the Lombard, was appointed to examine the viscera and reported that the cause of death was not poisoning, as

Candy for the Princes.

suspected, but probably heart disease. Again, when the Englishman Woudreton was tried for poisoning in 1484, five Parisian apothecaries as well as five surgeons were appointed to examine and report on the arsenic which he employed and gave full replies on the subject. Of this Paris Corporation of Apothecaries we shall speak more fully in our next article.

THE METRIC SYSTEM.*

The Metric System is a decimal system. The entire civilized world uses the decimal system of notation, and the fact that our arithmetic is founded on the scale of ten is the main reason why our money and our weights and measures should be reckoned on that scale. If our notation were duodecimal, then it would be **advantageous** and (as time goes on and calculations become more complicated) **imperative**, that money, lineal dimensions, volumes, weights, time units and all other measurements should be expressed in the same duodecimal scale.

The advantages of a duodecimal system over the decimal are usually recognized among mathematicians, if for no other reason because 12 can be divided by 2, 3, 4 and 6, whereas 10 is divisible by only 2 and 5. We are told that if our ancestors had had 12 fingers instead of 10, our system of notation would have been duodecimal. But the decimal scale of numbers is so strongly fixed on civilization that it will probably never be displaced. Once let a people adopt its **arithmetic scale** and fix its radix, and every computation by arithmetic will eventually be forced into that scale. And so the man who introduced the decimal notation into Europe from Arabia, in the twelfth century, made it impossible for any system of money, or of weights and measures other than the decimal to subserve the best interests of mankind. This statement seems too nearly axiomatic to need elucidation, and yet the strongest objection ever raised against the use of the Metric System—and it even now occasionally rears its head—is that duodecimal measures are better than decimal. There is no question that with a **duodecimal notation**—the superiority of which in some respects is granted—any measurement scale should also be duodecimal, but there is no harmony with decimal notation and duodecimal measures. Measurements and their computation must go hand in hand, or, briefly put, **like notation scale, like measure scale.**

The origin of this notation is lost in antiquity, and has not been definitely traced further back than the seventh century of our era, it being known to have been used in India in 600 A. D., though probably much older than this. It was introduced into Europe during the twelfth or early thirteenth century, and by the end of the thirteenth century all scholars had become acquainted with it. The decimal point did not come into general use till the beginning of the eighteenth century, four hundred years later.

Leaving the middle ages and arithmetic, we proceed to speak briefly of the history of Metric Weights and Measures. In the light of subsequent events it seems singular that the United States should have been the first country in the world to make a scale for its money to correspond with its arithmetic, and should be one of the last to swing into line its other standards of measurement. But such is the fact. In 1786 our decimal system of money was adopted.

From time to time attempts were made to have Congress adopt a decimal system of measurements. In 1817, John Quincy Adams, then Secretary of State, was requested by the Senate to report on the Metric System. His voluminous report—some 235 pages, including appendices—was submitted four years later. He strongly

favored the ultimate use of the so-called French system, but thought it unwise to adopt it at that time.

France was the first nation to adopt such a system, which at the time of Adam's report had been in operation there for a quarter of a century. In 1790 Prince de Talleyrand proposed to the Constituent Assembly of France that the many systems in use in that country be changed into one system, and that that be a decimal one, founded on the pendulum. This was adopted by the Assembly and sanctioned by Louis XVI. It was proposed that the French Academy and the Royal Society of Great Britain appoint a joint Commission. England declined, but Spain, Italy, the Netherlands, Denmark and Switzerland were finally represented in the proceedings of the Academy.

Three plans for a lineal standard were proposed by the Commission—which consisted of the ablest living mathematicians—(1) a pendulum beating seconds; (2) a quadrant of the equator; (3) a quadrant of the meridian. The last was selected, and it was decided that the ten-millionth part of this quadrant should be the unit—a meter. Multiples and divisors of this, and volumes and weights dependent upon it, were provided for. The system was provisionally established by law, August 1, 1793, the **nomenclature** nearly two years later, April 7, 1795. For seven years the survey of the meridian went on, and in 1799 representatives from ten countries assembled in France to settle the details from the result of the survey and to fix a "definite meter." The Metric System thus went into operation in France. But the example was not quickly followed by other states. About twenty years later the Netherlands appears to have been the first to adopt it. In 1869 an International Commission of Weights and Measures, consisting of representatives of nineteen leading nations, reported in its favor, and many adopted it. One after another, different countries have joined in, until practically all the States of Europe, except Russia and England, use the system, either exclusively or very generally. The same can be said of the States of South America, of our new West India possessions, of Mexico and the States of Central America, as well as parts of Asia and Africa. Germany in 1870 enacted a compulsory law to go into effect in two years. Before the expiration of the two years everybody was using the system.

In England an Act passed in 1864 allowed the use of the meter and its companions if any persons chose to use them. In 1868 there was almost enacted a compulsory Metric System measure, the bill having passed the second reading in the House of Commons, which usually means adoption, but it was suddenly withdrawn. In 1878 Parliament passed an act forbidding the use of any weights or measures not the Board of Trade standards, thus legalizing the Metric System. This continued till 1897, when another act was passed which re-established permissive use. The British Pharmacopœia, published in 1890, gives the metric weights after the Imperial, and in the next revision will give the metric first. The Educational Department in Great Britain has recently made the teaching of the Metric System compulsory in the elementary schools. In 1895 a Committee of Parliament, after an exhaustive report, recommended its exclusive use. Pres. Mendenhall recently stated that the Metric System had in five years made more progress in England than in thirty years in the United States.

Russia has lately issued a permissive law similar in purport to that of England and the United States. It went into effect January 1, 1900, of their era.

The Russian Ukase of 1894 directs that after a certain date the system shall be used by all druggists in the empire. It has been used in the medical department of the Russian Army since 1896. A bill is in preparation by the Minister of Finance of that country for its compulsory use throughout the Russian Empire in every department of trade. The bill has received the approbation of the State Council, and soon we expect this vast empire of over 100,000,000 people to use the International system exclusively, for in that country it takes but a short time for a "bill" to become a "law." Then there will be left only the United States and Great Britain with her possessions using an antiquated time-wasting system.

In our own country one of the many interesting at-

*A paper read by Mr. Rufus P. Williams, President of the New England Association of Chemistry Teachers, at a meeting of the American Chemical Society.

tempts at a Decimal Scale was made in 1857 by a joint special committee of the Chamber of Commerce of New York and the American Geographical and Statistical Society. After denouncing the French system as being atheistic in its origin, and as requiring a knowledge of Latin and Greek and the acquisition of a "noisy vocabulary," this committee proposed to have Congress adopt a Decimal System with English names. These names were never written in Uncle Sam's Statute Books. The first legislation by Congress was July 28th, 1866, an Act which legalized Metric Weights and Measures, but did not make their use compulsory. It is the only important Act ever passed on the subject by the national legislative body. Thus the three conservative countries—Russia, England and United States—are believers in the international system to the extent of allowing its use, if their citizens elect to use it, and the tendency in the two former countries is rapidly towards its exclusive use. In 36 nations the Metric System is now the standard; in three its use is permissive, in no civilized country is it prohibited, and in every one there is some enactment regarding the system. Every decade its use more nearly approaches the exclusive, and no instance is recorded of a nation's going back to the old system after once adopting the new. According to the report of the **Decimal Association of England**, 1898, there are 448,000,000 people who use the system with at least theoretical exclusiveness.

Though our Congress has never passed any measure on the subject more radical than the permissive Act of 1866, bills have been reported for several years by the Committee on Coinage, Weights and Measures, who have used the most cogent arguments in favor of passing a law requiring Government use of the system in all its transactions with the people, such as in custom houses, but Congress has not yet complied. Two such bills were reported at the last Session of Congress, and are now in Committee. They are almost identical, except as to the date assigned for adoption of the system. One of these will be reported at the next Session of Congress, with possible changes of dates, and the members of the Committee express hope of its passage at that time. The first one, H. R. 104, introduced by Rep. Littauer, December 4th, 1899, is as follows: "Be it enacted, etc. That from and after the 1st of July, 1902, all the Departments of the Government of the United States, in the transaction of all business requiring the use of weights and measurement, except in completing the survey of public lands, shall employ and use only the weights and measures of the Metric System; and from the said 1st day of July, 1902, the Metric System of weights and measures shall be the legal standard of weights and measures recognized in the United States." The main feature of these bills is compulsory use by the Government, which it is thought will result in accelerated voluntary use by the people. For years the various heads of departments have expressed themselves in favor of such a law.

It seems desirable to examine briefly the results at the present time to ascertain whether permissive legislation alone—as shown by a 34 years' experiment—is sufficient, or whether we need a compulsory law. A brief statement will be made of the chief industries in which the Metric System has been employed and the extent of its use, so far as it has been possible to ascertain.

It is impossible to state to what extent the system is taught in **grammar schools** side by side with "compound numbers." In science teaching—particularly in physics and chemistry, as taught in high schools, academies and colleges, medical and technological schools—the new system has wholly supplanted the old. Our college text books of physics and chemistry first adopted the Metric System for their experimental work during the years from 1860–1870. High school texts followed, though nearly 20 years later, the first one to make the change being in 1878. Not a single text book of any scope in these subjects now uses anything but the International System, and probably not a school where science is studied employs the old system. This alone is a tremendous advance in a quarter of a century.

The system has been adopted in metallurgy, assaying, pharmacy, electricity, biology, and to some extent in coinage and medicine. The basis of micrometer measurements under the microscope, as, for example, in bacteriological work, is the $\frac{1}{1000}$ of a millimeter; for finer work, $\frac{1}{100000}$ of a millimeter, the English divisions never being em-

ployed. While medical and pharmaceutical schools have long employed the decimal scale in general chemistry and analysis, prescriptions have until lately been written in grains, scruples and drams. A change is rapidly coming. One large drug firm says that now half its prescriptions are written in metric terms, and the number is on the increase. Another firm says fully three-quarters are thus written; in smaller cities, it is not over ten per cent. This change is mainly due to the fact that the 1890 United States Pharmacopœia, issued in 1893, adopted exclusively the Metric System. It seems certain that all medical schools and colleges of pharmacy will soon follow, and that the English system will become obsolete with the profession, except among the older physicians.

A few wholesale dealers and manufacturers of drugs and chemicals employ it. E. R. Squibb & Sons, of Brooklyn, use the International System exclusively throughout, and have done so for eight years. They say: "If we were back to avoirdupois, we should change again as in 1892."

The very extensive works of the Solvay Process Company of Syracuse, N. Y., employ the system in every possible way in the manufacture of soda ash and bicarbonate. They use it for weighing coal and other supplies, for water and other liquids, for the calculation of heat units and measurements of temperatures, in fact for everything except linear measurements and such drawings as go outside of their works. Their sales are necessarily made by the English System. They say: "We find no disadvantages, and would be very glad could our entire work be upon the Metric System."

The Merrimac Chemical Company of Massachusetts, in 1893, built a factory for their extensive sulphuric acid works, in which all the tanks were made on Metric dimensions, so that one centimeter in depth equals some number of liters, e. g., 100 or 150. They say: "We have found this to be a great convenience, both in taking stock and in the daily work. There was no difficulty in instructing the workmen to use the system."

The Penn. Salt Manufacturing Company has just built a large plant entirely upon Metric dimensions.

The Waltham Watch Company has used the Metric System exclusively since 1869. They say: "It has proved to be exceedingly convenient and satisfactory."

William Sellers & Co. have used it for injector work more than forty years.

The system is used almost entirely in the manufacturing of electrical goods, and in electrical engineering.

Makers of gauges, measuring implements, draughtsman's supplies and the like, have some call for Metric instruments.

Dealers in chemical and physical supplies for schools and colleges have to use both the English and the French systems. These dealers prefer the latter, and use it whenever it is possible. All importations of glassware, etc., must be made on that scale. Certain goods are always made on the Metric plan; as, e. g., rubber stoppers. Teachers of science might, in a small way, aid the cause by ordering all their supplies according to the international system, instead of the English.

The Library Bureau of Boston, which has branch offices in the leading cities of the world, is helping the cause. All its millions of cards and its thousands of cases have exact Metric dimensions. Even the paper which is made for the company is of Metric dimensions, and each variety is made of a definite number of grams per square meter. They say there is not the least difficulty in the application of these measures by the hundreds of workmen employed in the manufacture of their goods. The system has been in use for twenty-five years by the American Library Association, whose headquarters are at Albany. In the State Library and other departments of the University of the State of New York, it is used for all blanks and other measurements.

It is the concurrent testimony of the concerns that have reported on its use that the system is perfectly simple and easy of application, and that it has great advantages over the English.

In the annual reports of the Curator of Classical Antiquities of the Boston Museum of Fine Arts, the measurements of statuary and all other objects and specimens are expressed in meters and decimals, and have been since the first issue in 1876. It is so much simpler to write 1.32 M. than 4 ft. 3 $\frac{3}{16}$ in., that all museums will be likely sooner or later to adopt this plan.

The large steel and iron companies use the English measures except for export trade. But exports seem likely to have an important bearing on this use, since for the thirty days of April, 1900, more than \$40,000,000 worth of manufactured goods were exported from the United States. The opinion of large iron and steel manufacturers is shown by the adoption, in 1896, by the Association of American Steel Manufacturers of resolutions strongly indorsing the bill then before Congress. Here were twelve of the great steel and iron manufacturers urging their members individually to ask their Representatives in Congress to support the Metric Bill.

Opinions of many persons qualified to judge—not only in this country and England, but in Germany—are to the effect that the exports of Great Britain and the United States have suffered, and those of Germany have increased, by reason of the non-use of this system in the two former countries. "Made in Germany" is the trademark of that country. A few years ago, the Dry Goods Economist of New York asked an opinion of leading houses all over the country as to the merits of the International system. One hundred and eighty-seven favorable replies were received from 29 States and not one adverse reply. Trade organizations and scientific societies of all sorts have time and again expressed themselves in favor of the meter.

The 1866 law is supposed to allow the Government to use Metric measurements in its contracts, if it so chooses. It has done so in the following departments and cases:

(1) In the Department of the Coast and Geodetic Survey, the meter was adopted as the standard in the beginning and has been so used ever since.

(2) In the Agricultural Department, in all scientific work in chemistry, etc.; and in the Natural History work Metric measurements are exclusively used.

(3) The Post Office Department uses it for foreign mails to metric countries, but not for domestic. Postal cards are of metric dimensions, and certain coins have been made to Metric weights and measures.

(4) In the Department of Surgeon-General of the Army and also that of the Navy, all contracts for medical supplies embody the Metric System, and all containers—boxes and bottles—are of metric dimensions.

(5) Regulations for U. S. Marine Hospital Service, 1897, made its use compulsory.

(6) In Cuba and Porto Rico the Government uses the system exclusively in all official and domestic work. These countries adopted it years ago.

The people want the example of Government before they will generally make use of the system, and Congress must legislate before the Governmental Departments will adopt.

How can we aid the cause? Is it worth while to try?

It is a conservative estimate that every child would save a year in education if the International System were exclusively used in this country, and some claim two or three years. Seventy million years lost during the lifetime of one generation of men is a fairly strong argument; but this youthful loss is little when compared to that in practical life. John Quincy Adams, who studied the Metric System as few men have, said: "It is in design the greatest invention of human ingenuity since that of printing." President Mendenhall some years ago computed that there are in this country every year from forty to fifty thousand million transactions requiring measuring or weighing, and he says: "Nothing else is so universal as the use of weights and measures, and in nothing else would an improvement be so universally felt."

Now if this International System is such an enormous "time saver"—as every man who has ever used it knows—what a tremendous waste of time and energy the American people are undergoing because they are behind the rest of the world. No legislative progress has been made in the direction of weights and measures for thirty-four years, and in this respect we stand to-day below every other nation in Christendom.

National legislation is the thing most needed. How can men, individually or as a body, aid in promoting legislative action? In two ways:

(1) By taking favorable action as Associations, not merely by passing resolutions that the given society favors the passage of the Metric Bill—though that is essential—but by appointing a permanent committee,

whose members are vitally interested in Metric reform, and will correspond with metrologists, congressmen and Metric committees similarly appointed in other associations, so that all may work for the desired result. There are thousands of clubs, societies and associations—scientific, educational, manufacturing, trade, social and popular—many of whose members are more or less interested in this question. If every interested organization would take that sort of action, the Bill, which will probably be reported in December, 1900, might easily become law, for no "politiques" can be urged against it.

(2) By individual effort—writing to Members of Congress and Senators, stating the facts and asking for favorable action, and by showing the public the superiority of the new system over the old. **Enlightened sentiment in this country is overwhelmingly in favor of the adoption and use of this system,** not only among scholars and scientists, but among tradespeople and manufacturers, but it is safe to say that a majority of our congressmen do not know this fact and will not realize it till organized societies and individuals make it a part of their duty to force Congress to **remember the Metric System.** Uncle Sam has fallen asleep over his weights and measures, while his neighbors are stealing a march on him.

QUESTION BOX.

The object of this department is to furnish our subscribers and their clerks with reliable and tried formulas and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc.

Requests for information are not acknowledged by mail, and ANONYMOUS COMMUNICATIONS RECEIVE NO ATTENTION; neither do we answer queries in this department from non-subscribers. In this department frequent reference is necessarily made to information published in previous issues of the Era. Copies of these may be obtained at ten cents each.

Liquid Shampoo.—(W. J. J.)—Try one of the following: (1) Oil of lavender, 10 minims; rectified spirit, ½ ounce; soft soap, U. S. P., 2 ounces; distilled water, enough to make 6 ounces. The preparation may be perfumed as desired by dissolving the essential oil or other odoriferous substance in the alcohol. (2) Potassium carbonate, 1 ounce; spirit of ammonia, 2 ounces; soft soap, U. S. P., 1 ounce; glycerin, 1 ounce; tincture of cantharides, 1 ounce; tincture of capsicum, ½ ounce; alcohol, 10 ounces; water, enough to make 1 quart. Dissolve, mix and perfume. After standing 24 hours the liquid may be filtered. (3) Tincture of quillaja, 10 fl. ounces; cologne water, 4 fl. ounces; glycerin, 3 fl. drams; fluid extract of jaborandi, 4 fl. drams; orange flower water, enough to make 32 fl. ounces.

Hair Grower.—(A. M.)—See last week's Era, page 484. Here are some other formulas:

(1) Castor oil	2	fl. drams
Oleo-balsamic mixture	3	fl. ounces
Tincture of cantharides	3	fl. drams
Benzole acid	2	drams
Tannic acid	1½	drams
Alcohol	8	fl. ounces

Mix and filter.

(2) Quinine sulphate	15	grains
Cologne water	3	fl. drams
Ram	3½	fl. ounces
Alcohol	4	fl. ounces
Glycerin	3	fl. ounces
Rose water	21	fl. ounces

Alkannin, sufficient to color.

Mix and filter (Dietrich).

A French formula for a clear solution containing lead is the following:

(3) Lead acetate	1	dram
Saturated solution of hyposulphite of sodium, a sufficiency		
Glycerin	1	ounce
Rectified spirit	½	ounce
Rose water, to	20	ounces

To the lead salt dissolved in 2 ounces of water add the solution of sodium hyposulphite until the precipitate formed is redissolved. Continue to add half as much more hyposulphite, then the rest of the ingredients.

Repairing Mirrors.—(J. H. M.)—The method of repairing a mirror depends entirely upon its character. If it is a silver mirror it is best to remove the entire coating and re-silver it. Here is a process:

Dissolve 1 ounce of silver nitrate in 3 ounces of distilled water, add 1 ounce of water of ammonia and 3

ounces of alcohol. Let the solution stand for about four hours and then filter. When ready to use, add to each ounce of this liquid which is to be employed, $\frac{1}{4}$ ounce of glucose previously dissolved in a mixture of equal parts of alcohol and water. Having cleaned the glass thoroughly, cover it with the liquid at a temperature of 100° F., which temperature must be maintained until deposition of the silver is complete. When quite dry, coat the surface with mastic varnish.

If the mirror has a mercury back, you may be successful in a trial of one of the following methods:

(1) Clean the bare portion of the glass by rubbing it gently with fine cotton, taking care to remove any trace of dust and grease. If this cleaning be not done very carefully, defects will appear around the place repaired. With the point of your knife cut upon the back of another looking glass around a portion of the silvering of the required form, but a little larger. Upon it place a small drop of mercury; a drop the size of a pin's head will be sufficient for a surface equal to the size of the head of a nail. The mercury spreads immediately, penetrates the amalgam to where it was cut off with the knife, and the required piece may now be lifted and removed to the place to be repaired. This is the most difficult part of the operation. Then press lightly the renewed portion with cotton; it hardens almost immediately, and the glass presents the same appearance as a new one.

(2) Pour upon a sheet of tinfoil about 3 drams of quicksilver to the square foot of foil. Rub smartly with a piece of buckskin until the foil becomes brilliant. Lay the glass upon a flat table, face downward; place the foil upon the damaged portion of the glass; lay a sheet of paper over the foil, and place upon it a block of wood or piece of marble with a perfectly flat surface; put upon it sufficient weight to press it down tight; let it remain in this position a few hours. The foil will adhere to the glass.

THE PRESENT CONDITION OF THE COAL-TAR INDUSTRY.*

By H. W. JAYNE.

As the end of the century approaches it is interesting and instructive to look back and note the wonderful growth of the chemical industries and the great changes they have undergone, especially in the last few years, in which many of them have been revolutionized.

It may be of interest to some to consider the growth and present condition of one of the greatest of these, that of coal-tar and its products.

This industry, which originated in the endeavor to utilize a troublesome by-product, has grown to be one which without doubt employs more scientific men in its study and development than any other, and a description of all its products and their manufacture would be a review of the greater part of the organic chemistry of to-day.

About 1822 coal-tar was first distilled in England, but it was not until 1856, the date of the discovery of the first aniline colors, that the industry became an important one, and it is in the last twenty years only that it has attained its present gigantic proportions.

At first the entire supply of tar was derived from the distillation of coal in the manufacture of illuminating gas, but under the constantly increasing demand new sources have been developed, and these latter may in time become our main supply.

The coal-tar produced in modern gas plants is quite different from that of some years ago. Cast iron retorts were then used and the temperature of carbonization was comparatively low. The tar in consequence was generally quite fluid and contained considerable toluene, xylene and phenols, some naphthalene and free carbon. With the introduction of fire clay retorts a marked change was noted and to-day the extreme high heat produced by the use of regenerators yields a tar which, considered from the standpoint of the distiller, is of much poorer quality.

The aim of the gas manufacturer is to get the largest amount of gas of good quality that can be obtained from the kind of coal carbonized. The high temperatures employed to do this cause the volatile products as they are evolved during the distillation to be decomposed in contact with the intensely heated sides of the retort with separation of free carbon, and, as exhausters are universally used, this is drawn out with the gases and deposited with the tar.

The higher phenols and hydrocarbons are split up with formation of large quantities of naphthalene; therefore, the tar is heavier in gravity and thicker in consistency on account of the presence of more naphthalene and carbon and less of the liquid portions.

As the use of coal-tar products became more general, the demand for tar increased and in consequence the price advanced. The supply being to a certain extent fixed manufacturers were stimulated to look for other sources of supply. Several plants were built in Europe and one in America having the production of tar and ammonia as their chief aim, but these were soon found to be unprofitable. Attention, however, had been called at an early date to the waste of these by-products in the manufacture of coke, and inventors without number entered the field with ovens designed to produce a good coke and at the same time save the tar and ammonia. A number of these, varying in minor details of construction, have been found to work well in practice; besides, many beehive ovens have been provided with condensing plants for collecting the by-products. The tar obtained from these latter ovens and also from the gases of blasting furnaces is, however, quite different in composition from that obtained from gas works or improved coke ovens.

The temperature at which the coal is carbonized in the former being much lower, the tar contains practically no aromatic bodies, and when distilled yields oils which are free from naphthalene, benzene and phenol, but instead contains compounds of the paraffin series, large amounts of higher complex phenols and paraffin. Such tars are, therefore, of no value to the manufacturer of refined coal-tar products.

In the United States, owing to the extended use of oil and carburetted water gas, the output of coal-tar has been very much less in proportion to the population than in Europe, and it has been heretofore necessary to make up the deficiency by importing creosote oil and pitch. In the last few years, however, there has been a considerable addition to the domestic supply. A number of beehive ovens have been fitted with condensing plants and large batteries of improved coke ovens have been erected and from these a fine grade of coke and considerable tar is obtained. The American coals appear to be much richer than those carbonized abroad.

In these ovens none of the charge is burnt to supply the heat necessary for the carbonization as is the case with the older forms of ovens and therefore the yield of coke is very much larger and may even amount to more than the analysis of the coal would seem to warrant, this being due to the deposition of carbon on the surface of the coke by the decomposition of a part of the tar as it is distilled.

The fact of a larger yield and purer quality of coke must, it seems, finally force other manufacturers to adopt improved ovens, and if even a part of the 20,000,000 tons of coke yearly produced in this country was made in such ovens with recovery of tar, we would pass from the condition of a shortage of supply to a veritable flood of tar, for even a small portion of which there would not appear to be a market.

One of the forms of ovens successfully introduced is the Semet-Solvay, of which about 400 are in operation in this country. Those interested in the subject will find a full description of them in an article by J. D. Pennock, which appeared in this journal in 1899.

The Otto-Hofmann ovens are used very extensively abroad, and through the kindness of Dr. Schniewind, chemist of the company, I am informed that 680 ovens are in operation in the United States, and that 400 are now being erected in Canada. The most interesting of these plants is that at Everett, near Boston, Mass., where 400 ovens are in successful operation. These have been fully described and illustrated by Dr. Schniewind in

*Chairman's address at the annual meeting of the Philadelphia Section American Chemical Society, May 17, 1900. (Jour. Am. Chem. Soc.)

articles which have appeared in the *Progressive Age*. The plant is so situated that coal from Nova Scotia can be discharged directly from the steamers and labor is reduced to a minimum by use of every modern appliance for handling the materials used and produced.

The gas as it distils being higher in candle-power in the first hours of carbonization, this portion is collected by itself and after removal of tar and ammonia is supplied to the city of Boston and vicinity. The gas coming off in the latter part of the distillation is used, after the tar has been removed, to heat the ovens. The coke is equal in quality to the best metallurgical coke, and is sold for this purpose or broken into various sizes for domestic use.

It would seem that this novel and interesting application of the coke oven is destined to come into general use for large cities.

The tar from these ovens resembles the average retort tar except that it does not contain as much low-boiling hydrocarbons or phenol.

A certain amount of tar is also obtained from the manufacture of oil and water gas, but these are of much less value than pure coal tar. The water-gas tar is especially difficult to utilize as it contains from 50 to 75 per cent. of water in the state of an emulsion which will not separate on standing.

In the United States tar is usually distilled into light oil, heavy oil and pitch. The light oil comprises the first portions of the distillate until the oil, as it runs off, sinks in water. The entire distillate when mixed has a gravity of from 0.83 to 0.98. Its nature has varied with the change in the tar as noted above, formerly they were quite fluid, but now in most cases they are semisolid from naphthalene.

The pitch remaining in the still after the distillation is known as soft pitch, and is adapted for roofing or paving purposes.

Formerly it was customary to run to hard pitch which was sent abroad to be used in the manufacture of compressed fuel; the anthracene oil obtained by this distillation was filtered and the anthracene pressed in hydraulic presses, making 40 per cent. anthracene. This was shipped to England and used in the manufacture of alizarin. At that time anthracene was one of the most valuable of the crude tar products, but the price has now fallen so low that it does not pay to export it, and there is very little sale for hard pitch as the manufacture of briquettes for fuel is carried on in a limited way only. The manufacture of anthracene has, therefore, been abandoned for some years.

The demand for creosote oil has, on the contrary, been constantly increasing owing to its extensive use in creosoting lumber, a number of plants for this purpose being in operation here.

Oil for this purpose is required to conform to certain specifications; formerly it was deemed necessary to have a large amount of tar acids, but now it is recognized that the naphthalene is a much more important agent in the preservation of lumber, and in consequence specifications require 40 to 50 per cent. to be present and in cold weather the oils are often entirely solid from separated naphthalene. In this connection it is well to call attention to the fact that many specifications call for 50 per cent. of naphthalene and yet require the oil to be limpid at 90° F., which is an impossibility when such a large amount of naphthalene is present.

When we come to consider the refined products of coal-tar we can, in the short time at our disposal, mention only the most important. In general it may be said that each year greater purity is demanded by consumers and a large number of commercial products are practically chemically pure.

This branch of the industry has not made as great strides in the United States as it should. A severe blow was dealt when nearly all the protective duties were removed a few years ago. Formerly there was on the most of them a duty of 20 per cent., which enabled the American manufacturer to compete notwithstanding the higher wages ruling here.

The use of special labor-saving machinery which has done so much to enable our manufacturers to enter the markets of the world is not an important factor in this industry which, owing to its nature, does not permit the

extensive use of such labor-saving devices, and where machinery can be used we find the German manufacturers, who are our chief competitors, have the most improved devices in this line.

If we compare the estimates of cost of manufacture by American and German experts, the item of labor is seen to be a very serious one. For ordinary labor we must pay from 14 to 15 cents per hour; German estimates are based on 5 to 7 cents. In the pay of skilled mechanics the difference is even more striking: Carpenters, masons, machinists, boiler and tank makers receive from 30 to 45 cents per hour, while the prices abroad are scarcely 50 per cent. of these. This has a two-fold effect on the industry: First, in increasing the item of repairs and maintenance, which, owing to the nature of the business, is a very large one, necessitating the constant renewal of parts destroyed in the processes. Second, it handicaps the manufacturer by requiring a larger outlay of capital to erect the plant than is the case abroad. A conservative estimate would be that an average plant would cost twice as much here as in Germany.

Of all the refined products, benzene has probably been subject to the greatest fluctuations. The demand for this article increased so rapidly that the price became very high, and efforts were made in all directions to perfect processes which would produce it independently of the gas works. It was at this time that the endeavor was made both in Europe and America to distill coal in retorts at the mines with the making of benzene as their prime object; but, as already stated, these were soon abandoned. A plant was also built in Ohio to manufacture benzene and its homologues from petroleum residues, but without success.

Attention had been called at an early day to the large amount of benzene present in the coal gas, amounting to about twenty times as much as is present in the tar from the same gas. It was manifestly impossible to remove it from the gas without destroying, to a large extent, its illuminating power, but this objection did not hold good with the gas obtained from the improved coke ovens, and appliances were added to these plants to remove this benzene. A large number of such plants are in operation abroad at this time; the gas from the ovens after removal of tar and ammonia is forced through specially designed towers, in which the gas is brought into intimate contact with a fraction of oil from coal tar. This oil absorbs the benzene, and when saturated is heated and the crude benzene driven out. The product thus obtained is equal to about 90 per cent. benzene; that is to say, consists of about 70 per cent. benzene, 20 to 25 per cent. of toluene, and the balance of higher bodies. The introduction of these benzene extracting plants may be said to have been too successful, as the price has fallen to such an extent that the extraction at present is hardly remunerative. We are, however, assured of a source of supply which can be readily increased as the demand warrants. The present supply is undoubtedly more than the demand; toluene, however, is not obtained in such large quantities by this method and as the demand is steadily increasing owing to many new uses, among them the manufacture of artificial indigo, the price has been advanced so that it is now selling abroad at a higher price than benzene, while formerly the reverse was the case. At the present time there is no plant in operation in this country extracting the benzene from gas.

The low price of benzene permits it to be used in many industries as a solvent for the extraction of chemicals and drugs, and immense quantities are used abroad for enriching gas.

Naphthalene is one of the coal-tar products which is now manufactured on a very large scale in a great degree of purity. This article has advanced considerably in price, owing both to the great demand, and to the fact that crude naphthalene is now readily sold without removal from the creosote oil for reasons stated above. Before the duties were removed there were three factories manufacturing the article in this country; since it has been placed on the free list only one of these survives. The output is chiefly used as a substitute for camphor for destroying moths.

Crystal carbolic acid or phenol is one of the few tar products which has not suffered the general decline.

In all the varied new sources of supply of other tar

products, none has been found which promises increased output of phenol. The coke oven tar does not appear to yield much phenol, so that while the supply is constant or perhaps increasing slightly, it does not keep pace with the large demand, the chief of which is for the manufacture of picric and salicylic acids. A limited amount of phenol is made in this country, and considerable refined from imported materials, but the great bulk comes to us in a finished condition from Europe.

Nitrobenzene, nitrotoluene and other nitro compounds are made in one factory, the output being mainly used by manufacturers of colors and explosives. A certain quantity of rectified nitrobenzene, known as oil of myrbane, is used by manufacturers of soaps and oils.

Aniline oil, which is made in such large quantities abroad, is not made at present in this country. Its manufacture was undertaken a number of years ago by makers of colors, but abandoned, as it was found the article could be imported at less cost. A factory, however, is now being equipped for its manufacture, and in a few weeks will be in operation.

Acetanilide is made by two or three factories and they supply nearly all the requirements of this market.

When the tariff on coal tar products was revised and most articles placed on the free list, for some reason salicylic and benzoic acids were singled out from all other compounds and favored with the specific duty of 10 cents per pound. In consequence a number of works are now producing the former acid, using imported phenol.

The finer organic compounds are apparently not produced except vanillin, which is being made by at least two if not three firms.

Notwithstanding the great competition of Europe in aniline colors, the American manufacturers have in the last few years made decided strides, although as yet they appear to have confined themselves to the older standard colors. They are aided by a duty of 20 per cent. with practically all their raw materials free. They still labor, however, under the disadvantage of having to import a great deal of their supplies. There are at present five factories in operation.

It will be seen from this rapid review that there is still a wide field for the chemist and manufacturer in this country; and with a gradual increase in the output of crude materials, it is to be hoped and expected that in a few years we will produce a large amount of the enormous quantity of these products now imported.

England appears to have fallen out of the race in the competition for the American trade, especially in the finer coal-tar products, and Germany is now in the lead, even competing with England in the cruder preparations. To show the important position held by Germany, attention is called to the statistics compiled by the German Government up to July, 1898, on which date there were twenty-five factories devoted to anilin and anilin dyes, and forty-eight establishments which made dye-stuffs, carbolic acid and other coal-tar preparations. Among the exports for 1898 were:

9,321 metric tons alizarin.

18,712 metric tons coal tar colors.

12,360 metric tons aniline oil and salts.

In this latter class the exports of 1898 were nineteen times as much as in 1883.

FOR PURE FOOD AND DRUGS.

St. Louis, Nov. 1.

To the Editor: It was with much pleasure I read in your recent issue your comments on the report submitted at the last meeting of the N. W. D. A. by the committee on Adulterations and am, indeed, glad to note your recommendations in favor of the Brosius Pure Food and Drug bill.

Such articles as that written by you have a very beneficial effect, as it acts as a caution to both the jobber and the retailer, although some dealers will try to continue doing business "at the old stand in their own way," as illustrated by a shipment of Thymol, which we have just received from New York, which is quite freely mixed with borax.

They seem to be impervious to everything but their own greed for profit, but I believe I am safe in saying

that the time is short in which such practices will be tolerated, as, with the help of such journals as yours we will surely succeed in our efforts to make such actions criminal.

I am confident that the party who made this shipment of Thymol had no excuse to offer, for I understood some weeks before this shipment was made to us that such goods were on the New York market.

With the assurance of my high regard, I am,

Yours very truly,

JOHN F. QUEENY.

RE PROFITED FROM THE ERA COURSE.

Wooster, Ohio, Oct. 28.

To the Editor: I finished the Era Course in June, 1900, and received a fine diploma, which I feel proud of. Then four months after receiving my diploma I went before the Ohio State Board examination at Columbus, Ohio, held October 9, 1900, and passed it O. K. I consider the Era Course a friend, a good way to fit one for State Board examinations, and advise all if not able to attend a school of pharmacy to take the Era Course to prepare themselves for the State Board examinations. I recommend the Era Course.

Yours respectfully,

CHAS. E. BIXLER.

BRICKS FROM GLASS WORKS REFUSE.

In modern times so much of the profit in industrial establishments comes from the bye-products that it is interesting to learn of any new process. The glass works industry of this country is so important that a report of Consul Boyle, of Liverpool, calling attention to a discovery in making bricks from glass works refuse in England is particularly valuable. He says that Dr. Ormandy, of St. Helen's, formerly master of science at the Gamble Technical Institute, that city, has recently discovered a process by which good furnace bricks can be made from glass works refuse. St. Helen's, which is a few miles from Liverpool, is not only the centre of the English chemical trade, but contains a number of large glass works. The millions of tons of refuse which have been accumulating around the glass works heretofore have been treated as of no commercial value. The refuse consists mainly of spent sand, minute particles of glass and about 3 per cent. of iron from the various processes, and it has hitherto been considered that the presence of the iron prevented the use of the material for the manufacture of bricks. Patents have been taken out to protect the process, and a large firm has engaged Dr. Ormandy's services. After making various experiments the firm is now putting up an extensive plant for the manufacture of bricks. It is claimed that the bricks will stand a great amount of heat. They are about the color of silica bricks and can be glazed. Considerable secrecy is observed as to the process.

JAPAN WAX is contained in the berries—between the kernel and the outer coat—of several species of Rhus, the most important being *R. succedanea*, which flourishes especially in the western provinces of Japan. The berries are stored in straw until mature, then crushed by a wooden hammer in a wooden funnel-shaped trough and winnowed to separate the chaffy husk. The powder, after sifting and fanning, is steamed in hempen sacks and the latter then subjected to pressure in wooden wedge-presses. The flow of wax is sometimes accelerated by the addition of a small quantity of oil of *Perilla ocimoides*. The crude wax thus obtained consists of a coarse, greenish, tallow-like mass (yield about 15 per cent. of the weight of the berries). It is used in the manufacture of candles. The crude article is refined by melting, pressing through strong cotton sacks and allowing to drop into cold water. The thin flakes of wax thus obtained are bleached by exposure to the sun in shallow baskets, the material being frequently turned and sprinkled with water, and, if necessary, being subsequently remelted. The refined wax melts at 42° to 55° C.

NEWS AND TRADE DEPARTMENT.

THE NEWS OF THE WORLD.

FOREIGN.

China.

Private letters from German soldiers in China tell of frightful tortures and slaughter of Chinese in battles with German troops. No quarter was given, and after being compelled to dig their own graves, the Chinese were beaten, shot or sabred to death. The scenes are said to be indescribable.

Five of the powers have agreed to the Chinese policy of the open door, and the integrity of the Empire, as embodied in the Anglo-German compact, reserving action on the third clause of the agreement.

Secretary Hay has cabled Commissioner Rockhill his appointment as Councillor of the American Legation at Peking to assist Minister Conger in the negotiations for final settlement.

It is reported from Washington that the great nations in settling the Chinese complications, have decided to hold the Imperial Government responsible for the Boxer outrages, and that the Empress is consequently to be excluded in the reorganization of the government of the Empire. The indemnity question is also receiving attention.

A French detachment has occupied the Imperial tombs at Si-Ling; the allies have as prisoners about one hundred members of the Imperial harem, and they have recovered the body of the favorite wife of Emperor Kwang-Su, who was drowned by order of the Empress Dowager.

After the capture of the Chinese city of Pao-Ting-Fu by the allied forces, it was divided into districts, and looting was forbidden in the British quarter, but the German, French and Italian troops have sacked their districts.

It is rumored at Canton that the French are prepared to send 1,000 troops from Saigon to Canton. This report, together with the presence of numerous French war ships, has aroused suspicions among the Chinese regarding French designs. The reformers threatened that if the French attempt to seize Canton, the Cantonese will lay the city in ruins.

By the unanimous verdict of the foreign Ministers at Peking, eleven high Chinese officials, including Prince Tuan, are condemned to death. Three of the Boxer leaders have already taken their own lives.

Other Foreign News.

Queen Victoria has approved the appointment of Lord Salisbury as Premier and Lord Privy Seal, the Marquis of Lansdowne as Foreign Secretary, William St. John Broderick as Secretary for War, the Earl of Selborne as First Lord of the Admiralty and C. T. Ritchie as Home Secretary.

The Carlist agitation in Spain, according to the Spanish Ministry of the Interior, is declining, but press dispatches say it is increasing.

Spain is to have a new navy; it will be built by French firms.

Serious anti-tax riots have occurred in Roumania.

Severe fighting is reported between Austro-Hungarian and Montenegrin troops over a boundary dispute.

The German government has adopted the American system of Consular reports.

Count Tolstol is writing a new drama entitled "A Corpse." The Mexican census shows that the city of Mexico has more than 400,000 population. The population of the Federal district, including the capital city, is in excess of half a million.

The Duke of the Abruzzi has chartered a vessel to proceed to Franz Josef Land in search of three missing exploration expeditions.

A Venezuelan town was destroyed by an earthquake last Monday and twenty-five lives were lost. The people of Caracas are camping out of doors, as the earth tremors continue.

Gen. Botha is reported to be marching with a strong force of Boers to invade Cape Colony.

Stern measures are being taken to suppress guerillas in South Africa by the British military authorities. Boer women are being imprisoned at Bloemfontein.

The welcome to the returning City Imperial Volunteers in London last week was the greatest town show since the Queen's Jubilee; the tremendous crush of the throngs led to many accidents and to a panic in Fleet street, eight or ten people being killed outright, and more than two hundred seriously injured; at night the city was given over to a saturnalia of drunkenness.

DOMESTIC.

Politics.

Theodore Roosevelt, in his campaign tours, traveled through twenty-four States, appeared in 567 towns and made 673 speeches. His audiences aggregated 5,000,000 people.

Mr. Bryan broke the spellbinding record on Monday of last week, when he made thirty speeches in one day.

Other Domestic News.

In a pitched battle last week between the strikers at the Riverside works of the National Tube Company, at Wheeling, West Va., and the men who have taken their places, Walter Davis was fatally injured.

Ex-Mayor Strong, of New York City, under whose administration Col. Waring made his famous improvements in the street cleaning departments, and the public schools were greatly improved, died in New York last week of heart failure.

The Cuban Constitutional Convention is in session in Havana this week.

The four men charged with being responsible for the death of Jennie Bosschiet in Paterson, N. J., were indicted for murder last week by the Grand Jury.

The Naval Construction Board has adopted a programme for 1901 which contemplates the building of thirty-two vessels—three battleships, two armored cruisers, twenty-two gunboats and five auxiliary vessels.

Representative Hardin, of Wilkes, a member of the Georgia Legislature, was seriously wounded, and Representative Cann and two other legislators were cut severely in a fight with knives, which took place last week aboard a special train occupied by the members of the Legislature on the way to Valdosta to attend the State Fair. Senator Hardaway is said to have done the stabbing.

The monthly comparative statement of the Government receipts and expenditures shows that the total receipts for October were \$51,626,067, and the expenditures \$47,993,637, leaving a surplus for the month of \$3,632,430.

Miners in several anthracite collieries where work was resumed struck last week, excessive docking being alleged in one case, violation of wage agreement in another and refusal to reinstate union engineers.

The Indian Bureau finds that the new system of transporting Indian supplies by dealing directly with the railroads instead of through contractors, has effected a saving of 20 per cent., or \$40,000, in transportation expenses for the last fiscal year.

The Civil Tribunal at Paris has appointed George J. Gould trustee for his sister, the Countess of Castellane, whose husband is alleged to have spent 23,000,000 francs in four years.

The total population of the United States is 76,295,220, an increase of 13,235,464 in the past ten years, or nearly 21 per cent.

New York State has a population of 7,268,000, more than the entire Union had by the census of 1810. At that time the population of the United States was 7,239,881. New York is more populous now than any kingdom of Europe, outside the circle of the great powers, Turkey and Spain. It has more inhabitants than the two kingdoms of Sweden and Norway, more than the Netherlands and Denmark combined, more than Ireland and Wales, and nearly twice as many as Scotland.

Congress will probably admit Oklahoma, New Mexico and Arizona as States. There are eight States, including one of the original thirteen, which have fewer inhabitants than Oklahoma. The 398,245 people of that Territory would entitle it to two Representatives in Congress. New Mexico, with 193,777 inhabitants, ranks ahead of the States of Delaware, Idaho, Nevada and Wyoming, and Arizona, with 122,212, is ahead of the last two. The Indian Territory has 391,960 inhabitants, and as soon as an arrangement can be made with the tribes that now control its government, it will be entitled to admission as a State, too.

The War Department last week made an order discontinuing the "Division of Cuba" with its two departments, and establishing "The Department of Cuba" to the command of which Governor-General Wood is assigned. Gen. Fitzhugh Lee is ordered to the Department of the Missouri, and Gen. Elwell S. Otis to the Department of the Lakes.

The Philippine Commission has prepared, and will soon promulgate a new customs tariff for the islands.

"77" Breaks Up Colds, that "Hang On" Grip.

The season is now ripe for the rapid sale of "77" and it will pay you to keep a good supply on hand. A remedy for an acute disease is wanted quickly and unless supplied when called for the sale is lost, the customer going elsewhere to obtain his wants. We, therefore, ask that each druggist carry a stock of at least a dozen vials and send to us for posters and snipes for his window; also a supply of Dr. Humphreys' Manual telling all about Humphreys' Specifics and a handsome sign sent free. A postal card will do. Address the Humphreys' Homeo-Medicine Company, William and John streets, New York.

THE DRUG NEWS.

GROCERS MAY SELL PATENTS.

Supreme Court of Illinois So Holds in Recent Cases.

Chicago, Oct. 31.—In the case of Theo. Noel vs. The People of Illinois, the Supreme Court recently handed down a decision which declares void and unconstitutional that part of the pharmacy law which forbids the sale of patent medicines by other persons than registered pharmacists. The decision is in part as follows:

Mr. Justice Magruder delivered the opinion of the Court. "Upon the trial of the case in the court below, the appellant asked the court to hold as law in the decision of the case several propositions of law, questioning the constitutionality of Sections 2 and 8 of the act of the Legislature of Illinois, entitled: 'An Act to Regulate the Practice of Pharmacy in Illinois, as amended and in force July 1, 1895.' These propositions were refused by the trial court, and to the ruling of the court in this regard exception was duly taken by appellant. The question thus presented for our consideration is the constitutionality of said sections 2 and 8 of the Pharmacy Act.

"The proviso to Section 2 provides that nothing contained in the act shall apply to or interfere with the sale of patent and proprietary medicines and domestic remedies by retail dealers in localities as 'hereinafter provided.' The words 'as hereinafter provided' refer to Section 8 of the act.

"* * * * It is manifest that Section 8 vests an arbitrary power in the Board of Pharmacy to say who shall, and who shall not, sell the usual domestic and proprietary remedies in villages and other localities, and just exactly what they are allowed to sell. Section 8 in no way regulates or controls the discretion vested thereby in the board. The official discretion, conferred upon the board, is unregulated, and not subject to any permanent provisions operating generally and impartially. No conditions are prescribed upon which the permit authorizing the sale of the usual domestic remedies and proprietary medicines is to be issued. A law which thus invests any board or body of officials with a discretion which is purely arbitrary and which may be exercised in the interest of a favored few, is invalid. * * * * Laws thus conferring discretionary and arbitrary power upon statutory officials, are not only invalid for the reasons stated, but amount in effect to a delegation by the Legislature of its legislative functions to the board or officials in question.

* * * * *

"The act contains nowhere any provision for the inspection or analysis of these patent or proprietary medicines by the registered pharmacists, who are clothed with the power to sell them.

"Undoubtedly the Legislature has the right, under the police power, to pass enactments for the benefit and promotion of the public health. But it is well settled that the exercise of the police power must be limited to such measures as are designed to promote the public health, the public morals, the public safety or the public welfare. When it can be seen from the provisions of a statute that it has no tendency to promote the public health, safety, morals, comfort or welfare, the courts are authorized to declare it invalid. It is unquestionably true that the State has as much right to regulate the sale of patent and proprietary medicines and domestic remedies as it has to regulate the sale of any other kinds of medicines and remedies. But these patent and proprietary medicines and remedies are generally put up in sealed packages. In this form they can as well be sold by any person as by a registered pharmacist. The vice of the present Pharmacy act is that it gives to the registered pharmacists the exclusive privilege of selling these patent and proprietary medicines and remedies, and excludes all other persons from doing so, while at the same time it makes no requirement of such registered pharmacists that they make any analysis, inspection or examination of the same. In this regard the act gives to registered pharmacists a monopoly of the business of selling patent medicines without in any manner protecting the public health. * * * * Counsel for the People claim that registered pharmacists are more likely to know the qualities of these patent medicines than other persons, who are not registered pharmacists. But registered pharmacists will be as apt as other men to sell such patent medicines as there is a public demand for, when they are relieved of all responsibility for the character of such medicines, and are not required in any way to guarantee their character or adaptability to the cures which they claim to effect.

"Section 2 of Article 2 of the Constitution of this State provides that 'no person shall be deprived of life, liberty or property without due process of law.' Involved in the right to own property is the right to sell it; and when the owner is deprived of the right to sell his property he is deprived of his property within the meaning of the Constitution, because there is thereby taken from him one of the incidents of ownership."

The Court goes on to point out that the restriction placed upon the sale of proprietary medicines is special legislation favoring one class to the exclusion of others, creating a monopoly, and is therefore unconstitutional and void. The Court is careful to point out that only sections 2 and 8 of the law are held invalid—all the rest of the law is good.

The same principles governed the decision in *C. O. Overland v. The People of Illinois*, decided last week. Overland was a grocer who was fined for selling patent medicines. He appealed to the Supreme Court and won.

New York and Vicinity.

DRUG TRADE PARADES FOR SOUND MONEY.

The members of the drug trade turned out en masse in the great Sound Money parade of Saturday last, and of the many organizations of business men in line, the appearance the drug men presented, not only in point of numbers—for the rain had little effect—but in military bearing, was of the first quality. At the head of the swinging columns, heedless of the disagreeable weather, marched Major General Edward L. Moineux, and his appearance all along the line of march was greeted with cheers. Behind the diminutive gray-haired veteran came the solid ranks of marching men from every manufacturing and jobbing house, from retail stores and from the New York College of Pharmacy. Of course the rain
